Acknowledgments

I wish to thank those who gave valuable help in the preparation of this manuscript. This includes Larry Blythe, Steve Bright, Mac Craig, Mark Dorsett, Jeff Drauden, Scott Henderson, Holly Hood, Kenny Hood, David Johnson, Eric LaRock, Trevor Mander, Doug Potter, Steve Puryear, Jeff Spencer, and Frank Turek.

I am especially grateful to Joan Cattell for the untold sacrificial hours of her valuable editing of the complete manuscript. Special thanks are also due to my son, David Geisler, who put together the vast bibliography and for my faithful secretary, Laurel Maugel, who carefully typed and proofed it.

Most of all, I would like to thank my devoted wife, Barbara, for her love, support, and sacrifice that made this volume possible.

Absolute Truth. ***See*** **TRUTH, NATURE OF .**

Absolutes, Moral. ***See*** **MORALITY, ABSOLUTE NATURE OF .**

Accommodation Theory. In apologetics, *accommodation theory* can refer to either of two views, one acceptable and one objectionable to evangelical Christians. It can refer to God's accommodation of his revelation to our finite circumstances to communicate with us, as in Scripture or the incarnation of Christ (*see* BIBLE, EVIDENCE FOR ; CALVIN, JOHN ; CHRIST, DEITY OF). Both of these are forms of divine self-limiting accommodation in order to communicate with finite creatures.

Negative critics of the Bible (*see* BIBLE CRITICISM) believe that Jesus accommodated himself to the erroneous views of the Jews of his day in their view of Scripture as inspired and infallible (*see* BIBLE, JESUS' VIEW OF). Orthodox scholars reject this form of accommodation.

Two Kinds of Accommodation. Legitimate accommodation can be more accurately called "adaptation." God, because of infinitude, *adapts* himself to our finite understanding in order to reveal himself. However, the God who is truth never accommodates himself to human error. The vital differences are easily seen when these concepts are compared:

Adaptation	Accommodation
Adaptation to finite understanding	Accommodation to finite error
Finitude	Sinfulness
Partial truths	Actual errors
Disclosed truth in human language	Disguised truth in human language
Condescension with truth	Compromise with truth
Anthropomorphisms necessary	Myths necessary
God's nature revealed	God's activity revealed
What really is	What seems to be

The Bible teaches the transcendence of God. His ways and thoughts are far beyond ours (Isa. 55:9 ; Rom. 11:33). Human beings are infinitesimal in view of God's infinity. God must "stoop down" in order to speak to us. However, this divine act of adaptation to our finitude never involves accommodation to our error. For God cannot err (Heb. 6:18). God uses anthropomorphisms (a true expression of who God is that is couched in human terms) to speak to

us, but he does not use myths. He sometimes gives us only part of the truth but that partial truth is never error (1 Cor. 13:12). He reveals himself progressively, but never erroneously (*see* PROGRESSIVE REVELATION). He does not always tells us *all* , but all that he tells us is true.

Jesus and Accommodation. It is well known that Jesus expressed a high view of Scripture in the New Testament (*see* BIBLE, JESUS' VIEW OF). He accepted the divine authority (Matt. 4:4 , 7 , 10), imperishability (Matt. 5:17–18), divine inspiration (Matt. 22:43), unbreakability (John 10:35), supremacy (Matt. 15:3 , 6), inerrancy (Matt. 22:29 ; John 17:17), historical reliability (Matt. 12:40 ; 24:37–38), and scientific accuracy (Matt. 19:4–5). To avoid the conclusion that Jesus was actually affirming all this to be true, some critics insist that he was merely accommodating himself to the accepted Jewish belief of the day without attempting to debunk their views. These erroneous views were a starting point for what he wanted to teach about more important matters of morality and theology.

Accommodation Contrary to Jesus' Life. Everything that is known about Jesus' life and teaching reveals that he never accommodated to the false teaching of the day. On the contrary, Jesus rebuked those who accepted Jewish teaching that contradicted the Bible, declaring: "And why do you break the command of God for the sake of your tradition? . . . Thus you nullify the word of God for the sake of your tradition" (Matt. 15:3 , 6b).

Jesus corrected false views about the Bible. For instance, in his famous Sermon on the Mount, Jesus affirmed emphatically: "You have heard that it was said to the people long ago, 'Do not murder, and anyone who murders will be subject to judgment.' But I tell you that anyone who is angry with his brother will be subject to judgment" (Matt. 5:21–22). This or the similar formula of "It has been said. . . . But I say unto you . . ." is repeated in following verses (cf. Matt. 5:23–43).

He rebuked the famous Jewish teacher Nicodemus: "You are Israel's teacher," said Jesus, "and do you not understand these things?" (John 3:10). This is far from accommodating his false views. He even rebuked Nicodemus for not understanding empirical things, saying, "I have spoken to you of earthly things and you do not believe; how then will you believe if I speak of heavenly things?" (John 3:12). Speaking specifically about their erroneous view of Scripture Jesus told the Sadducees bluntly, "You are in error because you do not know the Scriptures or the power of God" (Matt. 22:29).

Jesus' denunciations of the Pharisees were scarcely accommodating. "Woe to you, blind guides! . . . Woe to you, teachers of the law and Pharisees, you hypocrites! . . . You blind guides! You strain out a gnat but swallow a camel. Woe to you, teachers of the law and Pharisees, you hypocrites! . . . You snakes! You brood of vipers! How will you escape being condemned to hell?" (Matt. 23:16–33).

Jesus went so far from accommodating to the false beliefs and practices in the temple that "he made a whip out of cords, and drove all from the temple area, both sheep and cattle; he scattered the coins of the money-changers and overturned their tables. To those who sold doves he said, 'Get these out of here! How dare you turn my Father's house into a market!' " (John 2:15–16).

Even Jesus' enemies recognized that he would not compromise. The Pharisees said: "Teacher, we know you are a man of integrity and that you teach the way of God in accordance with the truth. You aren't swayed by men, because you pay no attention to who they are" (Matt. 22:16). Nothing in the Gospel record indicates that Jesus accommodated to accepted error on any topic.

Accommodation Contrary to Jesus' Character. From a purely human standpoint, Jesus was known as a man of high moral character. His closest friends found him impeccable (1 John 3:3 ; 4:17 ; 1 Peter 1:19). The crowds were amazed at his teaching "because he taught as one who had authority, and not as their teachers of the law" (Matt. 7:29).

Pilate examined Jesus and declared, "I find no basis for a charge against this man" (Luke 23:4). The Roman soldier crucifying Jesus exclaimed, "Surely, this was a righteous man" (Luke 23:47). Even unbelievers have paid high tribute to Christ. Ernest Renan, the French atheist, declared about Jesus: "his perfect idealism is the highest rule of the unblemished and virtuous life" (Renan, 383). Renan also wrote, "Let us place, then, the person of Jesus at the highest summit of human greatness" (ibid., 386) and remains an inexhaustible principle of moral regeneration for humanity" (ibid., 388).

From a biblical point of view, Jesus was the Son of God and as such could not deceive. For God "does not lie" (Titus 1:2). Indeed, "It is impossible for God to lie" (Heb. 6:18). His "word is truth" (John 17:17). "Let God be true and every man a liar" (Rom. 3:4). Whatever divine self-limitation is necessary in order to communicate with human beings, there is no error, for God cannot err. It is contrary to his very nature.

An Objection Answered. Admittedly, God adapts to human limitations to communicate with us. Indeed, Jesus, who was God, was also a human being. As a human being he was limited in his knowledge. This is borne out by several passages of Scripture. First, as a child "he grew in wisdom" (Luke 2:52). Even as an adult he had certain limitations on his knowledge. According to Matthew, Jesus did not know what was on the fig tree before he got to it (Matt. 21:19). Jesus said he did not know the time of his second coming: "No one knows about that day or hour, not even the angels in heaven, *nor the Son* , but only the Father" (Matt. 24:36 , emphasis added).

However, despite the limitations on Jesus' human knowledge, limits on understanding differ from misunderstanding. The fact that he did not know some things as man does not mean he was wrong in what he did know. It is one thing to say Jesus did not know as a man the J-E-P-D theory of the authorship of the Law. But it is quite another to say Jesus was wrong when he affirmed that David wrote Psalm 110 (Matt. 22:43), that Moses wrote the Law (Luke 24:27 ; John 7:19 , 23), or that Daniel wrote a prophecy (Matt. 24:15 ; *see* BIBLE, JESUS' VIEW OF). Jesus' limitations on things he did not know as a man did not hinder him from affirming truly the things he did know (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF ; PROPHECY, AS PROOF OF THE BIBLE).

What Jesus did know he taught with divine authority. He said to his disciples: "All authority in heaven and on earth has been given to me. Therefore go and make disciples of all nations, baptizing them in the name of the Father and of the Son and of the Holy Spirit, and teaching

them to obey everything I have commanded you. And surely I am with you always, to the very end of the age" (Matt. 28:18–20). He taught with emphasis. In the Gospel of John, Jesus said twenty-five times "Truly, truly . . ." (John 3:3 , 5 , 11). Indeed, he claimed his words were on the level of God's, declaring, "Heaven and earth will pass away, but my words will never pass away" (Matt. 24:35). What is more, Jesus taught only what the Father told him to teach. He said, "I do nothing on my own but speak just what the Father has taught me" (John 8:28b). He added, "By myself I can do nothing; I judge only as I hear, and my judgment is just, for I seek not to please myself but him who sent me" (John 5:30). So to charge Jesus with error is to charge God the Father with error, since he spoke only what the Father told him.

Summary. There is no evidence that Jesus ever accommodated himself to human error in anything he taught. Nor is there any indication that his self-limitation in the incarnation resulted in error. He never taught anything in the areas in which the incarnation limited him as a man. And what he did teach, he affirmed with the authority of the Father, having all authority in heaven and earth.

Acognosticism. Acognosticism should not be confused with *agnosticism* . Agnosticism claims that we cannot *know* God; acognosticism asserts that we cannot *speak meaningfully* (cognitively) about God. The view is also called "non-cognitivism" or "semantical atheism."

***The Acognosticism of A. J. Ayer* .** Following Hume's distinction between definition and empirical statements, A. J. Ayer offered the principle of empirical verifiability. This affirmed that, in order for statements to be meaningful, they must be either analytic (David Hume's [1711–1776]) "relation of ideas" or synthetic (Hume's "matter of fact"); that is, definitional or empirical (Ayer, chap. 1). Definition statements are devoid of content and say nothing about the world; empirical statements have content but tell us nothing about any alleged reality beyond the empirical world. They are only probable in nature and are never philosophically certain (*see* CERTAINTY/CERTITUDE). Definitional statements are useful in empirical and practical matters but not at all informative about reality in any metaphysical sense.

The Nonsense of God-talk. The result of Ayer's logical positivism is as devastating to theism as is traditional agnosticism. God is unknowable and inexpressible. In fact, the term *God* is meaningless. Hence, even traditional agnosticism is untenable, since the agnostic assumes that it is meaningful to ask the question whether God exists. For Ayer, however, the word *God* or any

---

ISBE *International Standard Bible Encyclopedia*

transcendent equivalent, has no meaning. Hence, it is impossible to be an agnostic. The term *God* is neither analytic nor synthetic. It is neither offered by theists as an empty, contentless definition corresponding to nothing in reality, nor is it a term filled with empirical content, since "God" is allegedly a supra-empirical being. Hence, it is literally nonsense to talk about God.

Ayer came to revise his principle of verifiability (see ibid., 10f.). This form admitted the possibility that some empirical experiences are certain, such as those of a single sensory experience, and that there is a third kind of statement with some analytic or definitional verifiability. He did not come to allow for the meaningfulness of God-talk. The verifiable experiences would be neither true nor false nor factual, but simply meaningfully definitional. Ayer acknowledged that an effective elimination of metaphysics needs to be supported by detailed analysis of metaphysical arguments (Ayer, 16). Even a revised principle of empirical verifiability would make it impossible to utter meaningfully true statements about a transempirical reality such as a God. There is no cognitive knowledge of God; we must remain "a-cog-nostic."

Inexpressible or Mystical. Following the lead of Ludwig Wittgenstein's (1889–1951) *Tractatus* , Ayer held that, while God might be experienced, such an experience could never be meaningfully expressed. Wittgenstein believed that "how things are in the world is a matter of complete indifference for what is higher. God does not reveal himself in the world." For "there are indeed, things that cannot be put in words . . . They are what is mystical," and "what we cannot speak about we must consign to silence." If God could express himself in our words, it would indeed be "a book to explode all books," but such is impossible. Hence, there not only is no propositional revelation, but there is no cognitively transcendent being. Hence, whether one take the more strict logical positivist's principle of verifiability or the broader Wittgensteinian linguistic limitations, God-talk is metaphysically meaningless.

Wittgenstein believed that language games are possible, even religious language games. God-talk can and does occur, but it is not metaphysical; it tells us nothing about the existence and nature of God.

It is disastrous to the theist, whether God cannot be known (as in Immanuel Kant) or whether he cannot be spoken of (as in Ayer). Both traditional agnosticism and contemporary acognosticism leave us in the same dilemma philosophically: There are no bases for truth statements about God.

Unfalsifiability of Religious Beliefs. The other side of the principle of verifiability is that of falsifiability. Taking his cue from John Wisdom's parable of the invisible gardener, Antony Flew posed a challenge to believers as follows: "What would have to have occurred to constitute for you a disproof of the love of, or of the existence of, God?" (Flew, 99). For one cannot allow anything to count for his belief in God unless he is willing to allow something to count against it. Whatever is meaningful is also falsifiable. There is no difference between an invisible, undetectable gardener and no gardener at all. Likewise, a God who does not make a verifiable or falsifiable difference is no God at all. Unless the believer can show how the world would be different if there were no God, conditions in the world cannot be used as evidence. It matters

little whether theism rests on a parable or a myth, the believer has no meaningful or verifiable knowledge of God. This is little or no improvement over Kant's traditional agnosticism.

Evaluation. Like its cousin agnosticism, acognosticism is vulnerable to serious criticism.

Reply to Ayer's Acognosticism. As already noted, the principle of empirical verifiability set fourth by Ayer is self-defeating. It is neither purely definition nor strictly fact. Hence, on its own grounds it would fall into the third category of non-sense statements. Ayer recognized this problem and engaged a third category for which he claimed no truth value. Verifiability, he contended, is analytic and definitional, but not arbitrary or true. It is *metacognitive* , that is, beyond verification as true or false. It is simply useful as a guide to meaning. This is an ill-fated move for two reasons. First, it no longer eliminates the possibility of making metaphysical statements. Rather, it admits that one cannot arbitrarily legislate meaning, but must consider the meaning of alleged metaphysical statements. But that means it is possible to make meaningful statements about reality, a denial of complete agnosticism and acognosticism. Second, to restrict what is meaningful is to limit what could be true, since only the meaningful can be true. Hence, the attempt to limit meaning to the definitional or the verifiable is to make a truth claim that must itself be subject to some test. If it cannot be tested, then it is itself unfalsifiable and a meaningless belief by its own standards.

Reply to Wittgensteinian Mysticism. Ludwig Wittgenstein engages in a self-stultifying acognosticism. He attempts to define the limits of language in such a way that it is impossible to speak cognitively about God. God is literally inexpressible. And that whereof one cannot speak, he should not attempt to speak. But Wittgenstein can be no more successful in drawing the lines of linguistic limitation than was Kant in delimiting the realm of phenomena or appearance. The very attempt to deny all expressions about God is an expression about God.

One cannot draw the limits of language and thought without transcending those very limits. It is self-defeating to express the contention that the inexpressible cannot be expressed. In like manner even to think the thought that the unthinkable cannot be thought is self-destructive. Language (thought) and reality cannot be mutually exclusive, for every attempt to completely separate them implies some interaction between them. If the ladder was used to get on top of the house, one cannot stand up there to deny the ability of the ladder to get one there (*see* TRUTH, NATURE OF).

Reply to Flew's Falsifiability. Two things must be said about Flew's principle of falsifiability. First, in the narrow sense of empirical falsifiability, it is too restrictive. Not everything need be empirically falsifiable. Indeed that very principle is not empirically falsifiable. But in the broader sense of testable or arguable, surely the principle is alive and helpful. For unless there are criteria for truth and falsity, then no truth claims can be supported. Everything, including opposing views, could be true.

Second, not everything that is verifiable need be falsifiable in the same manner. As John Hick pointed out, there is an asymmetrical relation between verifiability and falsifiability. One can verify personal immortality by consciously observing his own funeral. But one cannot falsify personal immortality. One who does not survive death is not there to falsify anything. Nor could

another person falsify one's immortality without being omniscient. But if it is necessary to posit an omniscient mind or God, then it would be eminently self-defeating to use falsification to disprove God. So we may conclude that every truth claim must be testable or arguable, but not all truth claims need be falsifiable. A total state of nonexistence of anything would be unfalsifiable, for example, since there would be no one and no way to falsify it. On the other hand, the existence of something is testable by experience or inference.

Acts, Historicity of. The date and authenticity of the Acts of the Apostles is crucial to the historicity of early Christianity (*see* NEW TESTAMENT, HISTORICITY OF) and, thus, to apologetics in general (*see* APOLOGETICS, ARGUMENT OF ; NEW TESTAMENT APOLOGETIC CONCERNS).

- If Acts was written before A.D . 70 while the eyewitnesses were still alive (*see* NEW TESTAMENT DOCUMENTS, DATING OF), then it has great historical value in informing us of the earliest Christian beliefs.

- If Acts was written by Luke, the companion of the apostle Paul, it brings us right to the apostolic circle, those who participated in the events reported.

- If Acts was written by A.D . 62 (the traditional date), then it was written by a contemporary of Jesus, who died in 33 (*see* NEW TESTAMENT, DATING OF).

- If Acts is shown to be accurate history, then it brings credibility to its reports about the most basic Christian beliefs of miracles (Acts 2:22 ; *see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE), the death (Acts 2:23), resurrection (Acts 2:23 , 29–32), and ascension of Christ (Acts 1:9–10).

- If Luke wrote Acts, then his “former treatise” (Acts 1:1), the Gospel of Luke, should be extended the same early date (within the life-time of apostles and eye-witnesses) and credibility.

The Testimony of a Roman Historian. While New Testament scholarship, long dominated by higher criticism (*see* BIBLE CRITICISM) has been skeptical of the historicity of the Gospels and Acts, this has not been true of Roman historians of the same period. Sherwin-White is a case in point (e.g., Sherwin-White).

Another historian added the weight of his scholarship to the question of the historicity of the book of Acts. Colin J. Hemer lists seventeen reasons to accept the traditional early date that would place the research and writing of Acts during the lifetime of many participants. These strongly support the historicity of Acts and, indirectly, the Gospel of Luke (cf. Luke 1:1–4 ; Acts 1:1):

1. There is no mention in Acts of the fall of Jerusalem in A.D . 70, an unlikely omission, given the content, if it had already occurred.

2. There is no hint of the outbreak of the Jewish War in A.D . 66, or of any drastic or specific deterioration of relations between Romans and Jews, which implies it was written before that time.

3. There is no hint of the deterioration of Christian relations with Rome involved in the Neronian persecution of the late 60s.

4. The author betrays no knowledge of Paul’s letters. If Acts were written later, why would Luke, who shows himself so careful of incidental detail, not attempt to inform his narrative by relevant sections of the Epistles. The Epistles evidently circulated and must have become available sources. This question is beset with uncertainties, but an early date is suggested by the silence.

5. There is no hint of the death of James at the hands of the Sanhedrin in ca. 62 recorded by Josephus (*Antiquities* 20.9.1.200).

6. The significance of Gallio’s judgment in Acts 18:14–17 may be seen as setting a precedent to legitimize Christian teaching under the umbrella of tolerance to Judaism.

7. The prominence and authority of the Sadducees in Acts belongs to the pre-70 era, before the collapse of their political cooperation with Rome.

8. Conversely, the relatively sympathetic attitude in Acts to Pharisees (unlike that in Luke’s Gospel) does not fit well in the period of Pharisaic revival after scholars of Jamnia met, ca. 90. As a result of that meeting, a phase of escalated conflict with Christianity was led by the Pharisees.

9. Some have argued that the book antedates the coming of Peter to Rome, and also that it uses language which implies that Peter and John, as well as Paul himself, were still alive.

10. The prominence of "God-fearers" in the synagogues in Acts would seem to point to the pre–Jewish War situation.

11. The insignificant cultural details are difficult to place with precision, but may best represent the cultural milieu of the Julio–Claudian Roman era.

12. Areas of controversy within Acts presuppose the relevance of the Jewish setting during the temple period.

13. Adolf Harnack argued that the prophecy placed in Paul's mouth at Acts 20:25 (cf. 20:38) may have been contradicted by later events. If so it presumably was penned before those events occurred.

14. Primitive formulation of Christian terminology is used in Acts which fits an early period. Harnack lists christological titles, such as *Insous* and *ho kurios* , that are used freely, whereas *ho Christos* always designates "the Messiah," rather than a proper name, and *Christos* is otherwise used only in formalized combinations.

15. Rackham draws attention to the optimistic tone of Acts, which would not have been natural after Judaism was destroyed and Christians martyred in the Neronian persecutions of the late 60s. [Hemer, 376–82]

16. The ending of the book of Acts. Luke does not continue Paul's story at the end of the two years of Acts 28:30 . "The mention of this defined period implies a terminal point, at least impending" (Hemer, 383). He adds, "It may be argued simply that Luke had brought the narrative up to date at the time of writing, the final note being added at the conclusion of the two years" (ibid., 387).

17. The "immediacy" of Acts 27–28 :

> This is what we have called the "immediacy" of the latter chapters of the book, which are marked in a special degree by the apparently unreflective reproduction of insignificant details, a feature which reaches its apogee in the voyage narrative of Acts 27–28 . . . . The vivid "immediacy" of this passage in particular may be strongly contrasted with the "indirectness" of the earlier part of Acts, where we assume that Luke relied on sources or the reminiscences of others, and could not control the context of his narrative. [ibid., 388–89]

Other Support for Historicity. The traditional argument for historical veracity based on "undesigned coincidences" is a debatable concept. However, the following may be seen as a more refined development of that approach. The book of Acts contains:

1. *Geographical details* that are assumed to be generally known. It remains difficult to estimate the range of general knowledge that should be expected of an ancient writer or reader.

2. *More specialized details* that are assumed to be widely known: titles of governors, army units, and major routes. This information would have been accessible to those who traveled or were involved in administration, but perhaps not to others.

3. *Local specifics* of routes, boundaries, and titles of city magistrates that are unlikely to have been known except to a writer who had visited the districts.

4. *Correlation of dates* of known kings and governors with the ostensible chronology of the Acts framework.

5. *Details appropriate to the date* of Paul or Luke in the early church, but not appropriate to conditions earlier or later.

6. *"Undesigned coincidences"* or connective details that connect Acts with the Pauline Epistles.

7. *Latent internal correlations* within Acts.

8. *Independently attested details* which agree with the Alexandrian against the Western texts. Since there are differences between textual families, independent corroboration can help determine when changes were imported into the textual tradition of Acts. A secondary reading may refer to conditions of a later period, and so indirectly help discriminate time periods.

9. *Matters of common geographic knowledge* , mentioned perhaps informally or allusively, with an unstudied accuracy which bespeaks familiarity.

10. *Textual stylistic differences* that indicate Luke's use of different sources.

11. *Peculiarities in the selection of detail* , such as the inclusion of details that are theologically unimportant but that may bear on historical concerns.

12. *Peculiarities in details from "immediacy"* that suggest the author's reference to recent experience. Such details are not so readily explained as the product of longer-term reflective editing and shaping.

13. *Cultural or idiomatic references* that suggest a first-century atmosphere.

14. *Interrelated complexes* combining two or more kinds of correlation. Such a range of connections makes it possible to accurately reconstruct a fragment of history from the jigsaw of interlocking bits of information.

15. Instances where new discoveries and expanded knowledge shed more light on the background information. These are of use to the commentator, but do not bear significantly on historicity.

16. Precise details which lie within the range of contemporary possibilities, but whose accuracy cannot be verified.

Knowledgeable Author. Some examples of the first three categories illustrate how such connections help place Luke's writing and analyze its accuracy. Acts reflects a thorough understanding of what was generally known in A.D . 60, what might be called specialized knowledge of the world in which Paul and Luke traveled, and accurate knowledge of the locales they visited.

Common Knowledge. The emperor's *title* "Augustus" is rendered formally *ho Sebastos* in words attributed to a Roman official (Acts 25:21 , 25), whereas "Augustus," as the *name* bestowed on the first emperor, is transliterated *Augoustos* in Luke 2:1 . This distinction may be illustrated *from other texts as well* .

General facts of navigation and a knowledge of the empire's corn supply are part of the narrative of the voyage of an Alexandrian ship to the Italian port of Puteoli. The state system of supply was instituted by Claudius. These are samples of a large body of trivia. Luke appears in general to be careful in his rendering of common places, and numerous small points of terminology could be illustrated from the inscriptions reproduced. Luke thinks it necessary to explain some terms to his reader but not others. Points of Judean topography or Semitic nomenclature are glossed or explained (Acts 1:12 , 19), whereas basic Jewish institutions are not (1:12 ; 2:1 ; 4:1).

Specialized Knowledge. Knowledge of the topography of Jerusalem is shown in 1:12 , 19 , and 3:2 , 11 .

In 4:6 Annas is pictured as continuing to have great prestige and to bear the title high priest after his formal deposition by the Romans and the appointment of Caiaphas (cf. Luke 3:2 ; *Antiquities* 18.2.2.34–35; 20.9.1.198).

Among Roman terms, 12:4 gives detail on the organization of a military guard (cf. Vegetius, *de Re Milit* . 3.8); 13:7 correctly identifies Cyprus as a proconsular (senatorial) province, with the proconsul resident at Paphos.

The part played by Troas in the system of communication is acknowledged in 16:8 (cf. Section C, pp. 112f., 16:11). Amphipolis and Apollonia are known as stations (and presumably overnight stops) on the Egnatian Way from Philippi to Thessalonica, as in 17:1 . Chapters 27–28 contain geographic and navigational details of the voyage to Rome.

These examples illustrate the range of places and contexts in the narrative of which Luke possesses information. The author of Acts was well traveled in the areas mentioned in the narrative or had access to special sources of information.

Specific Local Knowledge. In addition, Luke manifests an incredible array of knowledge of local places, names, conditions, customs, and circumstances that befits an eyewitness contemporary recording the time and events. Acts 13–28 , covering Paul's travels, particularly shows intimate knowledge of local circumstances. The evidence is strongly represented in the "we-passages," when Luke was accompanying Paul, but extends beyond them. In some cases, specific local knowledge must be discounted because evidence is not available. Some scholars also find Luke's remarks occasionally to be at odds with existing knowledge (for example, in the case of Theudas). Numerous things are confirmed by historical and archaeological research.

1. A natural crossing between correctly named ports (13:4–5). Mount Casius, south of Seleucia, stands within sight of Cyprus. The *name* of the proconsul in 13:7 cannot be confirmed, but the *family* of the Sergii Pauli is attested.

2. The proper river port, Perga, for a ship crossing from Cyprus (13:13).

3. The proper location of Lycaonia (14:6).

4. The unusual but correct declension of the name *Lystra* and the correct language spoken in Lystra. Correct identification of the two gods associated with the city, Zeus and Hermes (14:12).

5. The proper port, Attalia, for returning travelers (14:25).

6. The correct route from the Cilician Gates (16:1).

7. The proper form of the name *Troas* (16:8).

8. A conspicuous sailors' landmark at Samothrace (16:11).

9. The proper identification of Philippi as a Roman colony. The right location for the river Gangites near Philippi (16:13).

10. Association of Thyatira with cloth dyeing (16:14). Correct designations of the titles for the colony magistrates (16:20 , 35 , 36 , 38).

11. The proper locations where travelers would spend successive nights on this journey (17:1).

12. The presence of a synagogue in Thessalonica (17:1), and the proper title of *politarch* for the magistrates (17:6).

13. The correct explanation that sea travel is the most convenient way to reach Athens in summer with favoring east winds (17:14).

14. The abundance of images in Athens (17:16), and reference to the synagogue there (17:17).

15. Depiction of philosophical debate in the agora (17:17). Use in 17:18–19 of the correct Athenian slang epithet for Paul, *spermologos* , and the correct name of the court (*areios pagos*); accurate depiction of Athenian character (17:21). Correct identification of altar to "an unknown god" (17:23). Logical reaction of philosophers who denied bodily resurrection. Areopogites the correct title for a member of the court (17:34).

16. Correct identification of the Corinthian synagogue (18:4). Correct designation of Gallio as proconsul (18:12). The *bema* (judgment seat) can still be seen in Corinth's forum (18:16).

17. The name *Tyrannus* , attested on a first-century inscription (19:9).

18. The cult of Artemis of the Ephesians (19:24 , 27). The cult is well attested, and the Ephesian theater was the city meeting-place (19:29).

19. Correct title *grammateus* for the chief executive magistrate and the proper title of honor, *Neokoros* (19:35). Correct name to identify the goddess (19:37). Correct designation for those holding court (19:38). Use of plural *anthupatoi* in 19:38 is probably a remarkably exact reference to the fact that two men jointly exercised the functions of proconsul at this time.

20. Use of precise ethnic designation *beroiaios* and the ethnic term *Asianos* (20:4).

21. Implied recognition of the strategic importance assigned to Troas (20:7–13).

22. Implication of the danger of the coastal trip in this area that caused Paul to travel by land (20:13). Correct sequence of places visited and correct neuter plural of the city name Patara (21:1).

23. The appropriate route passing across the open sea south of Cyprus favored by persistent northwest winds (21:3). The proper distance between Ptolemais and Caesarea (21:8).

24. Purification rite characteristic of pious Jewish (21:24).

25. Accurate representation of the Jewish law regarding Gentile use of the temple area (21:28).

26. The permanent stationing of a Roman cohort in the Fortress Antonia to suppress disturbances at festival times (21:31). The flight of steps used by guards (21:31 , 35).

27. The two common ways of obtaining Roman citizenship (22:28). The tribune is impressed with Paul's Roman rather than Tarsian citizenship (22:29).

28. The correct identifications of Ananias as high priest (23:2) and Felix as governor (23:34).

29. Identification of a common stopping point on the road to Caesarea (23:31).

30. Note of the proper jurisdiction of Cilicia (23:34).

31. Explanation of the provincial penal procedure (24:1–9).

32. Agreement with Josephus of the name *Porcius Festus* (24:27).

33. Note of the right of appeal by a Roman citizen (25:11). The legal formula of *de quibus cognoscere volebam* (25:18). The characteristic form of reference to the emperor (25:26).

34. Correct identification of the best shipping lanes at the time (27:4).

35. Use of the commonly joined names of Cilicia and Pamphylia to describe the coast (27:4). Reference to the principal port at which to find a ship sailing to Italy (27:5). Note of the typically slow passage to Cnidus in the face of a northwest wind (27:7). The locations of Fair Havens and neighboring Lasea (27:8) and correct description of Fair Havens as poorly sheltered for wintering (27:12).

36. Description of the tendency in these climes for a south wind to suddenly become a violent northeaster, the *gregale* (27:13). The nature of a square-rigged ship to have no option but be driven before a gale correctly stated (27:15).

37. Precise name and place given for the island of Clauda (27:16). Appropriate sailors' maneuvers at the time for a storm (27:16–19). The fourteenth night judged by experienced Mediterranean navigators, to be an appropriate time for this journey in a storm (27:27). The proper term for this section of the Adriatic Sea at this time (27:27). The precise term, *bolisantes* , for taking soundings. The position of probable approach of a ship running aground before an easterly wind (27:39).

38. Correct description of the severe liability on guards who permitted a prisoner to escape (27:42).

39. Accurate description of the local people and superstitions of the day (28:4–6).

40. The proper title *protos* (*tes nesou*) for a man in Publius's position of leadership on the islands.

41. Correct identification of Rhegium as a refuge to await a southerly wind to carry a ship through the strait (28:13).

42. Appii Forum and Tres Tabernae as stopping-places along the Appian Way (28:15).

43. Common practice of custody with a Roman soldier (28:16) and conditions of imprisonment at one's own expense (28:30–31).

Conclusion. The historicity of the book of Acts is confirmed by overwhelming evidence. Nothing like this amount of detailed confirmation exists for another book from antiquity. This is not only a direct confirmation of the earliest Christian belief in the death and resurrection of Christ, but also, indirectly, of the Gospel record, since the author of Acts (Luke) also wrote a detailed Gospel. This Gospel directly parallels the other two Synoptic Gospels. The best evidence is that this material was composed by A.D . 60, only twenty-seven years after the death of Jesus. This places the writing during the lifetime of eyewitnesses to the events recorded (cf. Luke 1:1–4). This does not allow time for an alleged mythological development by persons living generations after the events. The Roman historian Sherwin-White has noted that the writings of Herodotus enable us to determine the rate at which legends develop. He concluded that "the tests suggest that even two generations are too short a span to allow the mythical tendency to prevail over the hard historic core of the oral tradition" (Sherwin-White, 190). Julius Muller (1801–1878) challenged the scholars of his day to produce even one example in which an historical event developed many mythological elements within one generation (Muller, 29). None exist.

Adam, Historicity of. Critical scholars generally consider the first chapters of Genesis to be myth (*see* ARCHAEOLOGY, OLD TESTAMENT ; FLOOD, NOAH'S ; MIRACLES, MYTH AND), not history. They point to the poetic nature of the text, the parallel of the early chapters of Genesis to other ancient myths, the alleged contradiction of the text with evolution (*see* EVOLUTION, BIOLOGICAL ; EVOLUTION HUMAN), and the late date for Adam in the Bible (ca. 4000 B.C .) which is opposed to scientific dating that places the first humans much earlier. All of this they consider as evidence that the story of Adam and Eve is mythical. However, the Bible presents Adam and Eve as literal people, who had real children from whom the rest of the human race descended (cf. Gen. 5:1f .).

Historical Adam and Eve. There is good evidence to believe that Adam and Eve were historical persons. First, Genesis 1–2 presents them as actual persons and even narrates the important events in their lives. Second, they gave birth to literal children who did the same (Genesis 4–5). Third, the same phrase ("this is the history of"), used to record later history in Genesis (for example, 6:9 ; 10:1 ; 11:10 , 27 ; 25:12 , 19), is used of the creation account (2:4) and of Adam and Eve and their descendants (Gen. 5:1 ; *see* PENTATEUCH, MOSAIC AUTHORSHIP OF). Fourth, later Old Testament chronologies place Adam at the top of the list (Gen. 5:1 ; 1 Chron. 1:1). Fifth, the New Testament places Adam at the beginning of Jesus' literal ancestors (Luke 3:38). Sixth, Jesus referred to Adam and Eve as the first literal "male and female," making their physical union the basis of marriage (Matt. 19:4). Seventh, the book of Romans declares

that literal death was brought into the world by a literal "one man"—Adam (Rom. 5:12 , 14). Eighth, the comparison of Adam (the "first Adam") with Christ (the "last Adam") in 1 Corinthians 15:45 manifests that Adam was understood as a literal, historical person. Ninth, Paul's declaration that "Adam was first formed, then Eve" (1 Tim 2:13–14) reveals that he speaks of real persons. Tenth, logically there had to be a first real set of human beings, male and female, or else the race would have had no way to get going. The Bible calls this literal couple "Adam and Eve," and there is no reason to doubt their real existence.

Objections to Historicity. *The Poetic Nature of Genesis 1* . Despite the common assumption to the contrary and the beautiful language of Genesis 1 and 2 , the creation record is not poetry. Although there is possible parallelism of ideas between the first three and last three days, this is not in the typical form of Hebrew poetry, which involves couplets in parallel form. A comparison with the Psalms or Proverbs readily shows the difference. Genesis 2 has no poetical parallelism at all. Rather, the creation account is like any other historical narrative in the Old Testament. The account is introduced like other historical accounts in Genesis with the phrase, "This is the history of . . ." (Gen. 2:4 ; 5:1). Jesus and New Testament writers refer to the creation events as historical (cf. Matt. 19:4 ; Rom. 5:14 ; 1 Cor. 15:45 ; 1 Tim. 2:13–14). The Ebla tablets have added an early nonbiblical witness of a monotheistic *ex nihilo* creation (*see* CREATION, VIEWS OF).

Contradiction with Evolution. The Genesis creation account contradicts macro-evolution. Genesis speaks of the creation of Adam from the dust of the ground, not his evolution from other animals (Gen. 2:7). It speaks of direct immediate creation at God's command, not long natural processes (cf. Gen. 1:1 , 3 , 6 , 9 , 21 , 27). Eve was created from Adam; she did not evolve separately. Adam was an intelligent being who could speak a language, study and name animals, and engage in life-sustaining activity. He was not an ignorant half-ape (*see* EVOLUTION, THEISTIC).

However, granted that the Genesis record conflicts with macro-evolution, it begs the question to affirm Genesis is wrong and evolution is right. In fact, there is substantial scientific evidence to critique macro-evolution on its own merits. See articles under Evolution.

The Late-Date Objection. The traditional biblical date for the creation of Adam (ca. 4000 B.C .) is much too late to fit the fossil evidence for early human beings, which ranges from tens of thousands to hundreds of thousands of years. The early date for humankind is based on scientific dating and analysis of bone fragments.

However, there are false or challengeable assumptions in this objection. First, it is assumed that one can simply add all the genealogical records of Genesis 5 and 11 and arrive at an approximate date of 4000 B.C . for Adam's creation. But this is based on the false assumption that there are no gaps in these tables, which there are (*see* GENEALOGIES, OPEN OR CLOSED).

This objection also assumes that the dating method for early human-like fossil finds is accurate. Yet these dating methods are subject to many variables including the change in atmospheric conditions, contamination of the sample, and changes of rates of decay (*see* SCIENCE AND THE BIBLE and SCIENTIFIC DATING).

It assumes that early human-like fossil finds were really human beings created in the image of God. But this is a questionable assumption. Many of these finds are so fragmentary that reconstruction is highly speculative. The so-called "Nebraska Man" was actually an extinct pig's tooth! Identification had been based on a tooth. "Piltdown Man" was a fraud. Identifying a creature from bones, especially bone fragments, is extremely speculative.

There may have been human-like creatures that were morphologically similar to human beings but were not created in the image of God. Bone structure cannot prove there was an immortal soul made in God's image inside the body. Evidence for simple tool making proves nothing. Animals (apes, seals, and birds) are known to use simple tools.

This objection also assumes that the "days" of Genesis were twenty-four-hour solar days. This is not certain, since *day* in Genesis is used of all six days (cf. Gen. 2:4). And "day seven," on which God rested, is still going on, thousands of years later (cf. Heb. 4:4–6 ; *see* GENESIS, DAYS OF).

It is impossible to affirm that Genesis is not historical. In fact, given the unproven assumptions, the history of misinterpretation of early fossils, and the mistaken assumption that there are no gaps in the biblical genealogies of Genesis 5 and 11 , the arguments against the historicity of Adam and Eve fail.

Agnosticism. *Agnosticism* comes from two Greek words (*a* , "no"; *gnosis* , "knowledge"). The term *agnosticism* was coined by T. H. Huxley. It literally means "no-knowledge," the opposite of a Gnostic (Huxley, vol. 5; *see* GNOSTICISM). Thus, an agnostic is someone who claims not to know. As applied to knowledge of God, there are two basic kinds of agnostics, those who claim that the existence and nature of God are not known, and those who hold God to be unknowable (*see* ANALOGY, PRINCIPLE OF ; GOD, EVIDENCE FOR). Since the first type does not eliminate all religious knowledge, attention here will center on the second.

Over 100 years before Huxley (1825–1895), the writings of David Hume (1711–1776) and Immanuel Kant (1724–1804) laid down the philosophical basis of agnosticism. Much of modern philosophy takes for granted the general validity of the types of arguments they set forth.

Skepticism of Hume. Even Kant was a rationalist (*see* RATIONALISM) until he was "awakened from his dogmatic slumbers" by reading Hume. Technically Hume's views are skeptical but they serve agnostic aims. Hume's reasoning is based in his claim that there are only two kinds of meaningful statements.

"If we take into our hands any volume, of divinity or school metaphysics for instance, does it contain any abstract reasoning concerning quantity or number? No. Does it contain any experimental reasoning concerning matter of fact and existence? No. Commit it then to the flames, for it can contain nothing but sophistry and illusion" (*Enquiry Concerning Human Understanding*).

Any statement that is neither purely a relation of ideas (definitional or mathematical) on the one hand or a matter of fact (empirical or factual) on the other is meaningless. Of course all statements about God fall outside these categories, hence knowledge of God becomes impossible (*see* ACOGNOSTICISM).

Empirical Atomism. Furthermore, all sensations are experienced as "entirely loose and separate." Causal connections are made by the mind only after one has observed a constant conjunction of things in experience. All one really experiences is a series of unconnected and separate sensations. Indeed, there is no direct knowledge even of one's "self," for all we know of ourselves is a disconnected bundle of sense impressions. It does make sense to speak of connections made only in the mind *a priori* or independent of experience. Hence, from experience there are no known and certainly no necessary connections. All matters of experience imply a possible contrary state of affairs.

Causality Based on Custom. According to Hume "all reasoning concerning matters of fact seems to be founded on the relation of *cause and effect* . . . . By means of that relation alone can we go beyond the evidence of our memory and senses" (Hume IV, 2; *see* CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES). And knowledge of the relation of cause and effect is not *a priori* but arises entirely from experience. There is always the possibility of the *post hoc* fallacy—namely, that things happen after other events (even regularly) but are not really caused by them. For example, the sun rises regularly *after* the rooster crows but certainly not *because* the rooster crows. One can never know causal connections. And without a knowledge of the Cause of this world, for example, one is left in agnosticism about such a supposed God.

Knowledge by Analogy. Even if one grants that every event has a cause, we cannot be sure what the cause is like. Hence, in his famous *Dialogues Concerning Natural Religion* , Hume contends that the cause of the universe may be (1) different from human intelligence since human inventions differ from those of nature; (2) finite, since the effect is finite and one only need infer a cause adequate for the effect; (3) imperfect, since there are imperfections in nature; (4) multiple, for the creation of the world looks more like a long-range trial and error product of many cooperating deities; (5) male and female, since this is how humans generate; and (6)

anthropomorphic, with hands, nose, eyes, and other body parts such as his creatures have. Hence, analogy leaves us in skepticism about the nature of any supposed Cause of the world.

Agnosticism of Kant. The writings of Hume had a profound influence on the thinking of Kant. Before reading them, Kant held a form of rationalism in the tradition of Gottfried Leibniz (1646–1716). Leibniz, and Christian Freiherr von Wolff (1679–1754) following him, believed reality was rationally knowable and that theism was demonstrable. It was the pen of Kant that put an abrupt end to this sort of thinking in the philosophical world.

The Impossibility of Knowing Reality. Kant granted to the rational tradition of Leibniz a rational, *a priori* dimension to knowledge, namely, the form of all knowledge is independent of experience. On the other hand, Kant agreed with Hume and the empiricists that the content of all knowledge came via the senses. The "stuff" of knowledge is provided by the senses but the structure of knowledge is attained eventually in the mind. This creative synthesis solved the problem of rationalism and empiricism. However, the unhappy result of this synthesis is agnosticism, for if one cannot know anything until after it is structured by sensation (time and space) and the categories of understanding (such as unity and causality), then there is no way to get outside one's own being and know what it really was before he so formed it. That is, one can know what something is to him but never what it is in itself. Only the phenomenal, but not the noumenal, can be known. We must remain agnostic about reality. We know only that it is there but can never know what it is (Kant, 173f.).

The Antinomies of Human Reason. Not only is there an unbridgeable gulf between knowing and being, between the categories of our understanding and the nature of reality, but inevitable contradictions also result once we begin to trespass the boundary line (Kant, 393f.). For example, there is the antinomy of causality. If everything has a cause, then there cannot be a beginning cause and the causal series must stretch back infinitely. But it is impossible that the series be both infinite and also have a beginning. Such is the impossible paradox resulting from the application of the category of causality to reality.

These arguments do not exhaust the agnostic's arsenal, but they do lie at the heart of the contention that God cannot be known. However, even some who are unwilling to admit to the validity of these arguments opt for a more subtle agnosticism. Such is the case with the school of thought called logical positivism.

Logical Positivism. Logical positivism or logical empiricism is a philosophy of logic and language that seeks to describe all reality in terms of the senses or experience. Its foundational ideas were developed by the nineteenth-century philosopher Auguste Comte (1798–1857). Its theological implications were described by A. J. Ayer (1910–1989) in his principle of empirical verifiability. Ayer alleged that human beings cannot analyze or define the infinite God, so it is impossible to speak more than gibberish about God. The idea of knowing or speaking of a noumenal being is preposterous. One may not even use the term *God* . Hence, even traditional agnosticism is untenable. The agnostic asks the question of whether God exists. For the positivist, even the question is meaningless. Hence, it is impossible to be an agnostic.

Oddly, Ayer's acognosticism does not automatically negate the possibility of religious experience, as does agnosticism. Someone might experience God, but such a touching of infinitude could never be meaningfully expressed, so it is worthless to anyone except the recipient of its wonder. The logical positivist Ludwig Wittgenstein (1889–1951) was perhaps more consistent in placing a deist type of restriction on positivistic thought (*see* DEISM). If it is meaningless for us to speak of a God or even to use the term, then any infinite being would have the same problem regarding the physical. Wittgenstein denied that God could be concerned about, or revelatory within, the world. Between the noumenal and phenomenal spheres there can be only silence. In summary, for religious noncognitivists Ayer and Wittgenstein, metaphysical acognosticism is the net result of language analysis (*see* ANALOGY, PRINCIPLE OF).

Unfalsifiability. Antony Flew develops an agnostic philosophy by taking another angle on the limitations of language and awareness of the divine. There may or may not be a God; one cannot prove either thesis empirically. Therefore, one may not legitimately believe either thesis. To be verifiable, an argument must be falsifiable. God must be shown, one way or the other, to make a difference. Unless the theist can answer the challenge head-on, it would appear that he must have what R. M. Hare called a "blik" (Flew, 100). That is to say, he has an unfalsifiable belief in God despite all facts or states of affairs.

Logic of Agnosticism. There are two forms of agnosticism: The weak form simply holds that God is unknown. This of course leaves the door open that one may know God and indeed that some possibly do know God. As such, this agnosticism does not threaten Christian theism. The stronger form of agnosticism is mutually exclusive with Christianity. It claims that God is unknowable, that God cannot be known.

Another distinction must be made: There is unlimited and limited agnosticism. The former claims that God and all reality is completely unknowable. The latter claims only that God is partially unknowable because of the limitations of human finitude and sinfulness. The latter form of agnosticism may be granted by Christians as both possible and desirable.

This leaves three basic alternatives with respect to knowledge about God.

1. We can know nothing about God; he is unknowable.

2. We can know everything about God; he can be exhaustively known.

3. We can know something, but not everything; God is partially knowable.

The first position is agnosticism; the second, dogmatism, and the last, realism. The dogmatic position is untenable. One would have to be infinite in order to know an infinite being exhaustively. Few if any informed theists have seriously held this kind of dogmatism.

However, theists (*see* THEISM) sometimes argue as though partial agnosticism is also wrong. The form this argument takes is that agnosticism is wrong simply because one cannot know something is unknowable about reality without having knowledge about that something. But this is faulty reasoning. There is no contradiction in saying, "I know enough about reality to

affirm that there are some things about reality that I cannot know." For example, we can know enough about observation and reporting techniques to say that it is impossible for us to know the exact population of the world at a given instant (unknowability in practice). Likewise, one may know enough about the nature of finitude to say that it is impossible for finite beings to know exhaustively an infinite being. Thus, the Christian holds a controversy only against the complete agnostic who rules out in theory and practice all knowledge of God.

Self-defeating Agnosticism. Complete agnosticism reduces to the self-destructing (*see* SELF-REFUTING STATEMENTS) assertion that "one knows enough about reality to affirm that nothing can be known about reality" (*see* LOGIC). This statement is self-falsifying. One who knows something about reality cannot affirm in the same breath that all of reality is unknowable. And one who knows nothing whatsoever about reality has no basis for making a statement about reality. It will not suffice to say that knowledge of reality can only be purely and completely negative, that is, knowledge can only say what reality is not. For every negative presupposes a positive; one cannot meaningfully affirm that something is not and be totally devoid of a knowledge of the "something." It follows that total agnosticism is self-defeating. It assumes knowledge of reality in order to deny all knowledge of reality.

Some have attempted to avoid this critique by forming their skepticism as a question: "What do I know about reality?" However, this merely delays the dilemma. Both agnostic and Christian should ask this question, but the answer separates the agnostic from the realist. "I can know something about God" differs significantly from "I can know nothing about God." Once the answer is given in the latter form, a self-defeating assertion has been unavoidably made.

Neither will it help to take the mutist alternative by saying nothing. Thoughts can be as self-stultifying as assertions. The mutist cannot even think he or she knows absolutely nothing about reality without implying knowledge about reality.

Someone may be willing to grant that knowledge about finite reality is possible but not knowledge about infinite reality, the sort of knowledge at issue in Christian theism. If so, the position is no longer complete agnosticism, for it holds that something can be known about reality. This leaves the door open to discuss whether this reality is finite or infinite, personal or impersonal. Such discussion ventures beyond the question of agnosticism to debate finite godism and theism.

Kant's Self-defeating Agnosticism. Kant's argument that the categories of thought (such as unity and causality) do not apply to reality is just as unsuccessful. Unless categories of reality corresponded to categories of the mind, no statements can be made about reality, including the statement Kant made. Unless the real world were intelligible, no statement about it would apply. A preformation of the mind to reality is necessary whether one says anything about it—positive or negative. Otherwise, we think of an unthinkable reality.

The argument may be pressed that the agnostic need not be making any statement at all about reality but simply defining the limits of what we can know. Even this approach is self-defeating, however. To say that one cannot know any more than the limits of the phenomena or appearance is to draw a line in the sand while straddling it. To set such firm limits is to surpass them. It is not

possible to contend that appearance ends here and reality begins there unless one can see at least some distance on the other side. How can one know the difference between appearance and reality who has not seen enough of appearance and reality to make the comparison?

Another self-defeating dimension is implied within Kant's admission *that* he knows that the noumena is there but not *what* it is. Is it possible to know that something is without knowing something about what it is? Can pure "that-ness" be known? Does not all knowledge imply some knowledge of characteristics? Even a strange creature one had never seen before could not be observed to exist unless it had some recognizable characteristics as size, color, or movement. Even something invisible must leave some effect or trace in order to be observed. One need not know the origin or function of a thing or phenomenon. But it has been observed or the observer could not know that it is. It is not possible to affirm *that* something is without simultaneously declaring something about *what* it is. Even to describe it as the "in-itself" or the "real" is to say something. Further, Kant acknowledged the noumenal to be the unknowable "source" of the appearance we are receiving. All of this is informative about the real; there is a real, in-itself source of impressions. This is something less than complete agnosticism.

Other Forms of Skepticism. *Hume's Skepticism.* The overall skeptical attempt to suspend all judgment about reality is self-defeating, since it implies a judgment about reality. How else could one know that suspending all judgment about reality is the wisest course, unless he knows indeed that realty is unknowable? Skepticism implies agnosticism; as shown above, agnosticism implies knowledge about reality. Unlimited skepticism that commends the suspension of all judgments about reality implies a most sweeping judgment about the knowability of reality. Why discourage all truth attempts, unless one knows in advance that they are futile? And how can one be in possession of this advance information without already knowing something about reality?

Hume's contention that all meaningful statements are either a relation of ideas or else about matters of fact breaks its own rules. The statement fits neither category. Hence, on its own grounds it would be meaningless. It could not be purely a relation of ideas, for in that case it would not be informative about reality, as it purports to be. It is not purely a matter-of-fact statement since it claims to cover more than empirical matters. In short, Hume's distinction is the basis for Ayer's empirical verifiability principle, and the verifiability principle is itself not empirically verifiable (*see* AYER, A. J .).

Hume's radical empirical atomism that all events are "entirely loose and separate" and that even the self is only a bundle of sense impressions is unfeasible. If everything were unconnected, there would be no way of even making that particular statement, since some unity and connection are implied in the affirmation that everything is disconnected. To affirm "I am nothing but the impressions about myself" is self-defeating, for there is always the assumed unity of the "I (self)" making the assertion. But one cannot assume a unified self in order to deny it.

For replies to acognosticism, Wittgenstein's mystic form of it, and Flew's principle of falsifiability, *see* ACOGNOSTICISM .

Some Specific Agnostic Claims. Hume denied the traditional uses of both causality and analogy as means of knowing the theistic God. Causality is based on custom and analogy would lead to either a finite, human god or to a God totally different than the alleged analog.

The Justification of Causality. Hume never denied the principle of causality. He admitted it would be absurd to maintain that things arise without a cause (Hume, I.187). What he did attempt was to deny that there is any philosophical way of *establishing* the principle of causality. If the causal principle is not a mere analytic relation of ideas, but is belief based on customary conjunction of matter-of-fact events, then there is no necessity in it. One cannot use it with philosophical justification. But we have already seen that dividing all content statements into these two classes is self-defeating. Hence, it is possible that the causal principle is both contentful and necessary.

The very denial of causal necessity implies a causal necessity. Unless there is a necessary ground (or cause) for the denial, then the denial does not necessarily stand. And if there is a necessary ground or cause for the denial, then the denial is self-defeating; in that event it is using a necessary causal connection to deny that there are necessary causal connections.

Some have attempted to avoid this objection by limiting necessity to the reality of logic and propositions but denying that necessity applies to reality. This does not succeed; in order for this statement to exclude necessity from the realm of reality, it must be a necessary statement about reality. It must claim that it is necessarily true about reality that no necessary statements can be made about reality. This actually does what it claims cannot be done.

A Foundation for Analogy. Likewise, Hume cannot deny all similarity between the world and God, for this would imply that the creation must be totally dissimilar from the Creator. It would mean that effects must be entirely different from their cause. This statement too is self-destructive; unless there is some knowledge of the cause, there can be no basis for denying all similarity between cause and its effect. Even a negative comparison implies positive knowledge of the terms being compared. Hence, either there is no basis for the affirmation that God must be totally dissimilar, or else there can be some knowledge of God in terms of our experience, in which case God is not necessarily totally dissimilar to what we know in our experience.

One should be cautioned here about overdrawing the conclusion of these arguments. Once it has been shown that total agnosticism is self-defeating, it does not *ipso facto* follow that God exists or that one has knowledge of God. These arguments show only that, if there is a God, one cannot maintain that he *cannot* be known. From this it follows only that God *can* be known, not that we *do* know anything about God. The disproof of agnosticism is not thereby the proof of realism or theism. Agnosticism only destroys itself and makes it *possible* to build Christian theism. The positive case for Christian knowledge of God must then be built (*see* GOD, EVIDENCE FOR).

Kant's Antinomies. In each of Kant's alleged antinomies there is a fallacy. One does not end in inevitable contradictions by speaking about reality in terms of the necessary conditions of human thought. For instance, it is a mistake to view everything as needing a cause, for in this case there would be an infinity of causes, and even God would need a cause. Only limited,

changing, contingent things need causes. Once one arrives at an unlimited, unchanging, Necessary Being, there no longer is a need for a cause. The finite must be caused, but the infinite being would be uncaused. Kant's other antinomies are likewise invalid (*see* KANT, IMMANUEL).

Conclusion. There are two kinds of agnosticism: limited and unlimited. The former is compatible with Christian claims of finite knowledge of an infinite God. Unlimited agnosticism, however, is self-destructive; it implies knowledge about reality in order to deny the possibility of any knowledge of reality. Both skepticism and noncognitivisms (acognosticism) are reducible to agnosticism. Unless it is impossible to know the real, it is unnecessary to disclaim the possibility of all cognitive knowledge of it or to dissuade men from making any judgments about it.

Unlimited agnosticism is a subtle form of dogmatism. In completely disclaiming the possibility of all knowledge of the real, it stands at the opposite pole from the position that claims all knowledge about reality. Either extreme is dogmatic. Both are *must* positions regarding knowledge as opposed to the position that we *can* or *do* know something about reality. And there is simply no process short of omniscience by which one can make such sweeping and categorical statements. Agnosticism is negative dogmatism, and every negative presupposes a positive. Hence, total agnosticism is not only self-defeating; it is self-deifying. Only an omniscient mind could be totally agnostic, and finite men confessedly do not possess omniscience. Hence, the door remains open for some knowledge of reality. Reality is not unknowable.

Albright, William F. William Foxwell Albright (1891–1971) was called the dean of American biblical archaeologists. Born in Chili to Methodist missionaries, he received his Ph.D. from Johns Hopkins University in 1916. Among major works are *From Stone Age to Christianity* , *Archaeology and the Religion of Israel* , *The Archaeology of Palestine and the Bible* , *Yahweh and the Gods of Canaan, The Excavation at Tell Beit Mirsim* , and *Archaeology of Palestine* . He wrote numerous articles and extended his influence as editor of the *Bulletin of the American School of Oriental Research* from 1931 to 1968. He was a leader in the American School of Oriental Research (ASOR) for some forty years.

Apologetic Importance. Albright's influence on biblical apologetics was enormous and reflected his own theological movement from liberal Protestant to conservative. His work destroyed many old liberal critical views (*see* BIBLE CRITICISM), which now may be called pre-archaeological. Through his discoveries and research, Albright determined several vital affirmations:

Mosaic Authorship of the Pentateuch. "The contents of our Pentateuch are, in general, very much older than the date at which they were finally edited; new discoveries continue to confirm the historical accuracy of the literary antiquity of detail after detail in it. Even when it is necessary to assume later additions to the original nucleus of Mosaic tradition, these additions reflect the normal growth of ancient institutions and practices, or the effort made by later scribes to save as much as possible of extant traditions about Moses. It is, accordingly, sheer hypercriticism to deny the substantially Mosaic character of the Pentateuchal tradition" (*Archaeology of Palestine* , 225).

Historicity of the Patriarchs. "The narratives of the patriarchs, of Moses and the exodus, of the conquest of Canaan, of the judges, the monarchy, exile and restoration, have all been confirmed and illustrated to an extent that I should have thought impossible forty years ago" (*Christian Century* , 1329).

"Aside from a few die-hards among older scholars, there is scarcely a single biblical historian who has not been impressed by the rapid accumulation of data supporting the substantial historicity of patriarchal tradition" (*Biblical Period* , 1).

"Abraham, Isaac, and Jacob no longer seem isolated figures, much less reflections of later Israelite history; they now appear as true children of their age, bearing the same names, moving about over the same territory, visiting the same towns (especially Harran and Nahor), practicing the same customs as their contemporaries. In other words, the patriarchal narratives have a historical nucleus throughout, though it is likely that long oral transmission of the original poems and later prose sagas which underlie the present text of Genesis has considerably refracted the original events" (*Archaeology of Palestine* , 236).

Support for the Old Testament. "There can be no doubt that archaeology has confirmed the substantial historicity of the Old Testament tradition" (*Archaeology and the Religion of Israel* , 176).

“As critical study of the Bible is more and more influenced by the rich new material from the ancient Near East we shall see a steady rise in respect for the historical significance of now neglected or despised passages and details in the Old and New Testaments” (*From Stone Age to Christianity* , 81).

The Dead Sea Scrolls prove “conclusively that we must treat the consonantal text of the Hebrew Bible with the utmost respect and that the free emending of difficult passages in which modern critical scholars have indulged cannot be tolerated any longer” (*Recent Discoveries in Bible Lands* , 128).

“Thanks to the Qumran discoveries, the New Testament proves to be in fact what it was formerly believed to be: the teaching of Christ and his immediate followers between cir. 25 and cir. 80 A.D .” (*From Stone Age to Christianity* , 23).

“Biblical historical data are accurate to an extent far surpassing the ideas of any modern critical students, who have consistently tended to err on the side of hypercriticism” (*Archaeology of Palestine* , 229).

Unity of Isaiah. Of the long-popular theory that there were two writers of Isaiah (*see* ISAIAH, DEUTERO), Albright demurred in an interview:

Question: “Many passages in Isaiah 40–66 denounce idolatry as a current evil in Israel (for example 44:9–20 ; 51:4–7 ; 65:2 , 3 ; 66:17). How can these be reconciled with a theory of post-Exilic authorship, since idolatry admittedly was never reintroduced into Judah after the restoration . . . ?”

Answer: “I do not believe that anything in Isaiah 40–66 is later than the sixth century” (*Toward a More Conservative View,* 360).

Dating the New Testament. “In my opinion, every book of the New Testament was written by a baptized Jew between the forties and the eighties of the first century A.D . (very probably between about 50 and 75 A.D.” (ibid., 359).

“We can already say emphatically that there is no longer any solid basis for dating any book of the New Testament after about A.D . 80, two full generations before the date between 130 and 150 given by the more radical New Testament critics of today” (*Recent Discoveries in Bible Lands* , 136).

In the article “Recent Discoveries in Palestine and the Gospel of St. John,” Albright argued throughout that the evidence at Qumran shows that the concepts, terminology, and mindset of the Gospel of John, probably belonged to the early first century (*see* NEW TESTAMENT, DATING OF).

Conclusion. From an apologetic standpoint, the eminent and respected archaeologist strongly supports the pillars of historical apologetics. With some uncertainty about transmission of the oral record of the Pentateuch, Albright believes that both evidence to date and anticipated findings will show both testaments to be historically reliable. The dates of these books are early.

Both the predictive prophecy of the Old Testament and the historicity of the story of Christ and the early church in the New Testament are validated by modern archaeology (*see* ACTS, HISTORICITY OF ; BIBLE, EVIDENCE FOR ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF).

Alfarabi. Alfarabi or Al Farabi (870?–950) was an Arabian philosopher of Turkish descent who lived in Aleppo. He was one of the first monist or pantheist philosophers to introduce the Middle Ages to Aristotle and Plato. He influenced both Avicenna (Ibn Sina, 980–1037) and Averroes (1126–1198), whose views dominated the discussion in later Medieval times.

Alfarabi's thought was highly influential on later Christian forms of the cosmological argument (*see* GOD, EVIDENCE FOR ; KALAM COSMOLOGICAL ARGUMENT). He provided the heart of later scholastic arguments by his distinction between *what* a thing is and *that* it is. Alfarabi took this as a sign of the real distinction between a creature's essence and its existence—a concept later championed by Thomas Aquinas.

Alfarabi's Cosmological Argument. Implied in this real distinction is an argument for God's existence that takes this form:

1. Things exist whose essence is distinct from their existence. Called "possible beings," they can be conceived as not existing even though they do exist.

2. These beings have existence only accidentally, that is, it is not part of their very essence to exist. It is logically possible that they might never exist.

CT *Christianity Today*

3. Anything that has existence accidentally (and not essentially) must receive its existence from another. Since existence is not essential to it, there must be some explanation as to why it exists.

4. There cannot be an infinite regression of causes for existence. Since the existence of all possible beings is received from another, there must ultimately be a cause from which existence is received.

5. Therefore, there must be a First Cause of existence whose essence and existence are identical. This is a *Necessary* , and not a mere possible, Being. The First Cause cannot be a mere possible being (whose essence is not to exist), since no possible beings explain their own existence.

Evaluation of Alfarabi's Argument. Many criticisms of the cosmological argument have been leveled by atheists, agnostics, and skeptics. Most of these emanate from David Hume and Immanuel Kant and have been answered by theists (*see* GOD, OBJECTIONS TO PROOFS FOR).

Conclusion. If there are beings whose essence is not to exist, there must be a Being whose essence is to exist, for the possible beings are not possible unless there is a Necessary Being. No beings are given existence unless some Being gives this existence. Since a being cannot give existence to another when it is dependent for its own existence on another, there must be a first Being whose existence was not given to it by another, but who gives existence to all others. This is basically the same argument as that beneath the first three of Aquinas's "five ways" to prove God's existence (*see* THOMAS AQUINAS).

Altizer, Thomas J. J. G. W. F. Hegel (1770–1831) wrote that "God is dead" (Hegel, 506) and Friedrich Nietzsche (1844–1900) took the concept seriously. He wrote: "God is dead! God remains dead! And we have killed him" (Nietzsche, no. 125). In the 1960s Thomas J. J. Altizer drew out the radial implications of this form of atheism in his "Death of God" theology.

The Meaning of the Death of God. There are several kinds of atheism. The *traditional* atheist believes that there is not now, nor ever was, a God (*see* FEUERBACH, LUDWIG ; FREUD, SIGMUND ; SARTRE, JEAN-PAUL). The *semantical* atheists assert that the term God is dead, that religious language has no meaning (*see* AYER, A. J. ; ACOGNOSTICISM). The *mythological* atheists, of whom Nietzsche is representative, affirm that the myth God was once alive but died in the twentieth century. *Conceptual* atheists believe that there is a God but that he is hidden from our view, being obscured by our conceptual constructions (*see* BUBER, MARTIN). The *practical* atheists contend that God exists, but we should live *as if* he does not, not using God as

a crutch for our failure to act in a spiritual and responsible way. Altizer was a *dialectical* atheist. These held that God actually once lived, but then died in our century.

Stages of the Death. Altizer called Nietzsche the first radical Christian (Altizer, *The Gospel of Christian Atheism,* 25). Altizer believed that "only the Christian knows that God is dead, that the death of God is a final and irrevocable event" (ibid., 111). God is not merely hidden from our view, as Martin Buber believed. He actually died in three stages:

Death at the Incarnation. First, God died when he became incarnated in Christ. "To know that God is Jesus, is to know that God himself has become flesh; no longer does God exist as transcendent Spirit or sovereign Lord." As Spirit becomes Word, it empties itself. That is, "if Spirit truly empties itself in entering the world, then its own essential or original Being must be left behind in an empty and lifeless form" (ibid., 67–68). In brief, when God came to earth, heaven was emptied (*see* CHRIST OF FAITH VS. JESUS OF HISTORY ; JESUS, QUEST FOR HISTORICAL).

Death on the Cross. Further, God not only died in general in the incarnation, but he died in particular on the cross when Christ was crucified (and never rose from the grave). "Yes, God died in the Crucifixion: therein he fulfills the movement of the Incarnation by totally emptying himself of his primordial sacrality." In fact, only in the crucifixion, in the death of the Word on the Cross, does the Word actually and wholly become flesh. And "the incarnation is only truly actually real if it effects the death of the original sacred, the death of God himself" (ibid., 82–90, 113, 149–53; (*see* CHRIST, DEATH OF ; RESURRECTION, EVIDENCE FOR ; RESURRECTION, OBJECTIONS TO).

Death in Modern Times. Finally, God died in modern times. That is, God not only actually died in the incarnation and on the cross, but he died in our consciousness in our time as the reality of his death has worked its way out in Western culture. To understand this, one must speak of a dialectical process. "Progressively but decisively God abandons or negates his original passivity . . . becoming incarnate both *in* and *as* the actuality of world and history." Thus to cling to a belief in a transcendent God is to negate the historical reality of the incarnation. For "only the sacred that negates its own unfallen or primordial form can become incarnate in the reality of the profane." So, "dialectically, everything depends upon recognizing the meaning of God's total identification with Jesus and of the understanding that it is God who became Jesus and not Jesus who becomes God" (ibid., 46). Thus, it is the obligation of every Christian to will the death of God so that the dialectical process may continue.

Evaluation. Dialectical atheism denies the inspiration of the Bible (*see* BIBLE, EVIDENCE FOR), opting for an unfounded radical criticism (*see* BIBLICAL CRITICISM ; NEW TESTAMENT, HISTORICITY OF ; REDACTION CRITICISM). It denies the bodily resurrection of Christ against all the historical evidence (*see* RESURRECTION, EVIDENCE FOR).

This theology is based on a misunderstanding of the incarnation. Scripture affirms that when Christ came to earth it was not the subtraction of deity but the addition of humanity. God did not leave heaven; only the second person of the Godhead added another nature, a human one, with out discarding his divine nature (*see* CHRIST, DEITY OF ; TRINITY).

Philosophically it is impossible for a Necessary Being (God) to go out of existence. A Necessary Being cannot come to be or cease to be. It must always be.

The dialectical method at the basis of Altizer's view is unfounded. There is no basis for believing that reality operates through dialectical thesis, antithesis, and synthesis.

Conclusion. The "death of God" movement was short-lived, dominating the scene for only a decade or so. It was based on a dialectical theology, often attributed to Hegel. This thesis demands that every thesis, such as "God exists," calls forth its own antithesis, "God is not." This in turn becomes the basis for new synthesis. This always appears in a forward direction. Precisely what form it would take, Altizer did not know. He did believe, however, that one "must ever be open to new epiphanies of the Word or Spirit of God. . . . truly new epiphanies whose very occurrences either effects or records a new actualization or movement or the divine process" (ibid., 84, 105). In this sense, while Altizer appears to negate all forms of transcendence, in fact he negates only traditional forms which transcend backward or upward and replaces them with a forward transcendence. This has been called eschatological transcendence (see Geisler, 49–52).

Analogy, Principle of. Two *principles of analogy* sometimes affect Christian apologetics. One is a *rule of historicism* , laid down by historian and liberal theologian Ernst Troeltsch (1865–1923) that the only way the past can be known is by analogy in the present. The implication of this rule is that, since the kinds of miracles performed in the Bible are not taking place today, we cannot know that they took place in the past either. For a discussion of this principle and its difficulties, see the article TROELTSCH, ERNST . The other way in which this term is used is as a fundamental principle of reason (*see* FIRST PRINCIPLES). It is in this sense that the principle is considered here.

The Principle of Analogy. The principle of analogy states that an effect must be similar to its cause. Like produces like. An effect cannot be totally different from its cause. An act (or actor) communicates actuality. It affirms that the Cause of all being (God) must be like the beings he causes. It denies that God can be totally different (equivocal) from his effects, for the Being that causes all other being cannot bring into being something that does not have being like he is. Being causes being.

Likewise, analogy affirms that God cannot be totally the same as his effects, for in this case they would be identical to God. But the created cannot be identical to the uncreated, nor the finite to the Infinite. Hence, God the Creator of all being must be similar to the creatures he has made. Likewise, our judgments about God—if they are accurate—are neither totally the same nor totally different; they must be similar (analogous). Analogous religious language, then, is the only way to preserve true knowledge of God. Univocal God-talk is impossible and equivocal God-talk is unacceptable and self-defeating. Only analogy avoids the pitfalls of each and provides genuine understanding of God. As Thomas Aquinas declared "This name God . . . is taken neither univocally nor equivocally, but analogically. This is apparent from this reason—univocal names have absolutely the same meaning, while equivocal names have absolutely diverse meanings; whereas analogical, a name taken in one signification must be placed in the definition of the same name taken in other significations" (*Summa Theologica,* 1a. 13, 10).

The Basis for Analogy. Analogy preserves a true knowledge of God because it is rooted in the very nature of God's self-expressions. Of course, God can only express himself to his creatures in terms other than himself. Thus, by its very nature such expression or manifestation of God will be limited, whereas God himself is unlimited. Nonetheless, an expression about God must express God. Hence, analogy flows from the very nature of the process of God's self-revelation.

Analogy in Causality. The similarity between Creator and creature is based in the causal relation between them (*see* CAUSALITY, PRINCIPLE OF). Since God is pure existence (Being), and since he causes all other existence (beings), there must be a similarity between him as the efficient Cause and his effects. For a cause communicates itself to the effect. Being causes being. The Cause of being must be a Being. For it cannot give what it has not got; it cannot produce reality it does not possess. Therefore, even though the Cause is Infinite Being and the effect is finite being, the being of the effect is similar to the Being that caused it. Analogy is based in efficient causality. For "we can name God only from creatures. Hence, whatever is said of God and creatures is said according as there is some relation of the creature to God as to its principal cause, wherein all the perfections pre-exist excellently" (ibid., 1a. 13, 5).

The Witness of Analogy. The need for analogy is not only apparent in God's general revelation in nature; it is also essential to God's special revelation in Scripture (*see* BIBLE, EVIDENCE FOR). The Bible declares true knowledge of God (*see* BIBLE, EVIDENCE FOR). But this knowledge is contained in a book composed of human words and sentences based in finite human experience. Thus the question is: How can finite human concepts convey an Infinite God? Aquinas's answer is that they must do so analogically. God is neither identical to nor totally different from our expressions about him. Rather, he is similar to them.

Special Revelation in Analogy. The Bible is emphatic about two things in this connection. First, God is beyond our thoughts and concepts, even the best of them (cf. Rom. 11:33). God is infinite, our concepts are finite, and no finite concept can capture the infinite. It is also clear in Scripture that God goes way beyond the puny ability of human concepts to convey his ineffable essence. Paul said, "now we see as in a mirror dimly" (1 Cor. 13:12). John said of mortal man in this life, "no one has seen God at any time" (John 1:18). Second, yet human language is adequate for expressing the attributes of God. For in spite of the infinite difference between God

and creatures there is not a total lack of similarity, since the effect always resembles its efficient Cause in some way.

But if God is both adequately expressed in, and yet infinitely more than, human language—even inspired language—can express, then at best the language of Scripture is only analogous. That is, no term taken from human experience—and that is where all biblical terms come from—can do any more than tell us what God is *like* . None of them can expressive comprehensively what God really *is* . Religious language at best can make valid predications of God's essence, but it can never express his essence fully.

Language of Analogy. There are two reasons that statements made about God on the basis of general revelation (*see* REVELATION, GENERAL) are merely analogous. First is the matter of causality. The arguments for God's existence are arguments from effect to the efficient Cause of their being (ibid., 1a. 2, 3; *see* GOD, EVIDENCE FOR). Since the effects get their actuality from God (who is Pure Actuality), they must be similar to him. For Actuality communicates and produces actuality.

Second, Pure Actuality (God) cannot create another Pure Actuality. Pure Actuality is uncreated, and it is impossible to create an uncreated Being. But if uncreated Actuality cannot create another Pure Actuality, then it must create an actuality with potentiality (Aquinas, *On Being and Essence*). Thus, all created beings must be composed of actuality and potentiality. They have actual existence, and they have potential not to exist. Anything that comes into existence can pass out of existence. But if all created beings have a potential that limits their existence, then they are limited kinds of existence, and their uncreated Cause is an unlimited kind of existence.

Thus, there must be a difference between creatures and their Creator. They have limitations (potency), and he does not. It follows that, when making statements about God based on what he has revealed of himself in his creation, there is one big proviso: God is *not* like his creation in their potentialities, but only in their actuality. This negative element is called "the way of negation" (*via negative*), and all adequate God-talk must presume it. This conclusion emerges from the very nature of the proofs for God's existence.

We may state the positive and negative as two propositions:

God is a Cause.

This is the positive element of similarity in the creature-Creator analogy. Whatever actuality exists is like the Actuality that gave it.

God is an uncaused cause.

This is the negative element. The same negation must be taken into account when considering other attributes of God that emerged from the argument for his existence. As Aquinas said, "no creature being finite, can be adequate to the first agent which is infinite" (*On the Power of God,* 7.7). God is the infinite cause of all finite existence. But infinite means not-

finite; it too is a negation. God is the eternal, that is not-terminal or non-temporal, Cause. Some of the negations are not immediately obvious. God is the simple Source of all complex being. But "simple" here really means noncomplex. We know creatures are contingent and God is necessary, but by "necessary" we simply mean that God is *not* contingent. We have no positive concepts in our experience that can express the transcendent dimension of God's unlimited metaphysical characteristics.

Therefore, the analogy with which we speak of God will always contain an element of negation. The creature is *like* God because Actuality communicates actuality, but *unlike* God because it has a limiting potentiality God does not have. He is Pure Actuality.

Kinds of Analogies. Two basic kinds of analogy should be distinguished: *extrinsic* and *intrinsic* . The analogy between God and the creation is based in an intrinsic analogy. Otherwise, there would be no real similarity.

Extrinsic Analogy. There is no real similarity between two parties in an *extrinsic* analogy. Only one thing possesses the characteristic; the other is *called* that characteristic by its relation to it. This can best be explained by looking at the kinds of extrinsic analogy.

Extrinsic analogy is based on efficient causality. This analogy is called "analogy by extrinsic attribution." The characteristic is only *attributed* to the cause because the cause produces the characteristic in the effect. It does not really pos sesses the characteristic. Some food is *called* "healthy" because it encourages health in the body, not because any food in itself really is healthy.

This analogy does not provide any real basis for knowledge of God. It simply tells us what the cause can produce, not what characteristic it actually possesses. In this kind of analogy, God might simply be *called* good because he produces good things, but not because he actually *is* good in himself. Therefore, analogy based on extrinsic attribution leaves us in a state of agnosticism about God.

Extrinsic analogy is based on similarity of relations. An analogy based on similar relationships is sometimes called "the analogy of improper proportionality." It is "improper" because the relationship exists only in the mind doing the comparing. There is no real similarity between the "analogates" (the two things being compared). This kind of analogy declares that:

Smile / Face as *Flowers* / Meadow

A smile is not really like flowers. However, a smile brightens a face in the way flowers adorn a meadow. There is a perceived relationship between *smile* and *face* that corresponds to the perceived relationship between *flowers* and *meadow* . This is a relationship between two relationship.

Infinite Good / Infinite Being as *Finite Good* / Finite Being

Infinite good is related to an infinite Being the way finite good is related to a finite being. This, however, is not helpful, and could be misleading, in finding a relationship (similarity) between an infinite good and finite good. This is not the kind of analogy on which Aquinas based the similarity between Creator and creature.

Intrinsic Analogy. An intrinsic analogy is one in which both things possess the same characteristic, each in accordance with its own being. There are, again, two kinds: the analogy of proper proportionality and the analogy of intrinsic attribution.

Intrinsic analogy is based on similarity of relations. By subtly changing the statement of relationship in the analogy of improper proportionality, we can develop an "analogy of proper proportionality." In the analogy of proper proportionality two like things are being compared, not two like relationships. There is a proper relationship between the attribute they each possess and their own respective natures. Applied to God this analogy would declare that:

Infinite Good Infinite Being	as	*Finite Good* Finite Being

While this analogy does not explain a direct relationship between the attribute of goodness as it applies to both parties, it does compare the way an attribute in God relates to his essence and, by comparison, the way a similar attribute in man as a creature relate to his essence. The analogy tells us nothing directly about the similarity between God and creation. Rather, it informs us about the same relationship of goodness to being in an infinite being and in a finite being.

The analogy of intrinsic attribution. In the analogy of intrinsic attribution, the analogs possess the same attribute, and the similarity is based on a causal connection between them. For example, hot water causes the egg floating in it to become hot. The cause communicates itself to the effect. A mind communicates its intelligence to a book. The book, then, is the intelligible effect of the intelligent cause.

This is the kind of analogy on which Aquinas bases the similarity of Creator and creatures. What God creates must be like him because he communicates himself to the effect. Being communicates being. Pure Actuality creates other actualities. This kind of analogy of intrinsic attribution, where both the cause and the effect have the same attribute, is the basis for making true statements about God. These statements correspond to the way God really is because these characteristics were derived from him and communicated by him to his effects. In short, the similarity between Creator and creatures is derived from the characteristics the Creator gave to his creature.

Creatures do not possess a common characteristic (say, goodness) in the same way God does. An infinite being possesses goodness in an infinite way, and a finite being possesses goodness in a finite way. Nevertheless, they both possess goodness, because a Good Being can only communicate goodness. The extent to which the creature falls short of God's goodness is due to the finite and fallible mode of the creature's existence; it is not caused by the infinite goodness of its cause. But the degree to which a creature has *any* goodness, that goodness is like the attribute in its Creator, who *is* Goodness.

God and Creatures. All meaningfully descriptive talk about God is based on the analogy of intrinsic attribution, whereby creatures are like the Creator because of the causal relationship between them. Aquinas wrote, "Some likeness must be found between them [between effects and their cause], since it belongs to the nature of action that an agent produces its like, since each thing acts according as it is in act" (*Summa contra Gentiles,* I, 29, 2). Important features of this relationship should be understood.

A Causal Relationship. The relationship between God and the world is causal. In names given to both God and creatures "we note in the community of such names the order of cause and effect" (ibid., I, 33). Hence, "whatever is said of God and creatures is said according as there is some relation of the creature to God as to its principal cause" (ibid., I, 13, 5). Causality is a relation of dependency, not of dualism. The creatures possess the characteristic only because they got it from the Creator. To state the matter simply, *the Cause of being shared being with the beings it brought into being* . Apart from this causal relation of dependency, there would be no common, shared attribute between the Creator and creatures.

An Intrinsic Relationship. The causal relationship between God and human beings is real. Similarity is based on the fact that both cause and effect have the same characteristic, the effect getting it from the cause. God is not called good, for example, simply because he made good things. This would be an extrinsic causal relation, like hot air making clay hard. The air is not hard; it simply made the effect hard. The same hot air makes wax soft.

Rather God *is* good, and so a human being has a source of good. Both hot air and clay become hot, because heat communicates heat. Heat producing heat is an intrinsic causal relation. This kind of causal relation exists between God and creation.

All of creation is like God insofar as it is actual, but unlike God insofar as it is limited by its potentiality to receive his likeness. A sculptor, the cause, cannot get the same effect in pudding as in stone, even though the same form is imposed on both. Pudding simply does not have the same potential as stone to receive a stable and lasting form. The similarity between God and a creature will depend on the limited potential of the creature to receive his actuality. Thus, creatures *differ* from God in their potentiality, but are *like* (though not identical to) God in their actuality.

An Essential Relationship. The causal relationship between God and the world is *per se* , not *per accidens* . That is to say, it is an essential, not an accidental relationship. God is the cause of the *being* of the world, not merely the cause of its *becoming* .

An accidental causal relationship is one where there is only nonessential relation between the cause and the effect. Musicians give birth to non-musicians. Musical skill is not an essential element of the relationship between parent and child. So there cannot be said to be an essential relationship between two great violinists, even though they might be mother and daughter, and even if genetics and nurture did contribute to the daughter's accomplishments.

However, humans give birth to humans. Characteristics of humanness were essential to the relationship of those mother-daughter musicians. The daughter might have been born tone deaf,

but she could not have been born feline. Humanity is an essential causal relation. The essential characteristics of humanness are possessed by both the cause and the effect. This is the kind of causal relation that exists between God and his creatures.

An Efficient Cause. The *efficient cause* is a cause *by which* something comes to be. An *instrumental cause* is that *through which* something comes to be. The student is the efficient cause of the completed examination paper; the student's pen is only the instrumental cause. Therefore, the exam will resemble the student's thoughts, not any ideas in the pen, even if it were fitted with a powerful microcomputer. The garage resembles the plan in the carpenter's mind, not the carpenter's hammer. Hence, there is no necessary connection between an instrumental cause and its effect, only between the efficient cause and its effect.

The same can be said of the efficient cause as opposed to the *material cause* . The material cause is that *out of which* something comes to be. The sun produces heat, which is an efficient cause of the heat absorbed by the piece of clay baking on the stone. The sun's heat is a material cause of the hardness produced as the clay bakes on a rock. But the hardness is not caused by the sun's heat. The h0ardness is not even caused "efficiently" by the material conditions of the clay. That is another sort of material cause. The efficient cause of the hardened clay is the God who designed the physics by which clay reacts to heat.

Furthermore, just because God created Adam's body out of matter (its material cause) does not mean that God is a material being. Efficient causes do not need to resemble their effects any more than Wilbur and Orville Wright's minds had wings and a fuselage. An airplane is made of matter; the mind that designed it is not. The visible, material words on this page resemble my mind (their efficient cause), but my mind is not made of paper and ink. Likewise, the invisible God (efficient cause) is not like the visible world (material cause), nor is the material world like the immaterial God (John 4:24).

Criticisms of Analogy. A number of objections have been raised against the principle of analogy (for example, Ferre, 1:94–97). Many of these were answered by Aquinas or can be inferred from what he said. The following are responses to some significant objections.

A General Theory of Analogy Does Not Work. So long as analogy is tied to the metaphysics of intrinsic causality, analogy does work. In fact, analogy seems to be the only adequate answer to the problem of religious language. All negative God-talk implies positive knowledge of God. But positive affirmations of God are possible only if univocally understood concepts can be applied to both creatures and Creator (as Duns Scotus argued).

On the other hand, since God is infinitely perfect and creatures are only finitely perfect, no perfection found in the finite world can be applied univocally to both God and creatures. But to apply them equivocally would leave us in skepticism. Hence, whatever perfections are found in creation and can be applied to God without limits are predicated analogically. The perfection is understood univocally (in the same manner), but it is predicated analogously (in a similar manner), because to affirm it univocally in a finite way of an infinite Being would not truly describe the way he is. And to affirm it equivocally in an infinite way would not describe him at all. Hence, a univocal concept, drawn from the finite world, can speak of God only analogically.

Distinctions among Univocal, Equivocal and Analogical Are Obsolete. According to Ludwig Wittgenstein, expressions receive meaning from their use in language games based in experience. Each language game is autonomous. (It sets its own rules for establishing meaning.) insofar as there are no universal criteria for meaning. Words that carry over from game to game or words with similar meanings bear family resemblance, but we can never isolate a core meaning they must share. Thus, Wittgenstein believes that the separation of meanings into categories of *univocal* , *analogical* , or *equivocal* breaks down in dynamic usage of language.

Is meaning so arbitrarily established at the whim of the context? Unless there is an essential, as opposed to a purely conventional, meaning to language, then all meaning (and truth) is relative (*see* CONVENTIONALISM). But it is self-defeating to claim that "No meaning is objective," since even that statement would be without objective meaning. If there were no objective meaning, then anything could mean anything to anyone, even the opposite of what the communicator intended. This would be linguistic (and social) chaos.

Also, distinctions between *univocal* , *equivocal* , and *analogical* are not arbitrary. In fact, they are logically exhaustive; there are no other alternatives. A term is understood or applied in entirely the same way (univocally), in an entirely different way (equivocally), or in a similar way (analogically). Wittgenstein does not offer another alternative. Rather, as applied to objective reality, his view reduces to equivocal God-talk. For although he accepts meaningful God-talk, insofar as it is based in meaningful religious experience, nonetheless, it is not really talk about God. It is really talk about religious experience. God remains part of the mystical and inexpressible, at least so far as descriptive language is concerned.

Why Only Some Qualities Apply to God. Only these characteristics (authenticity, compassion, freedom, goodness, holiness, immanence, knowledge, love, righteousness, wisdom) apply to human actuality rather than to human potentiality. So only these flow from God's efficient, essential, principal, and intrinsic causality. Other beings *have* these qualities; God *is* these qualities. Only these characteristics may be appropriately applied to an unlimited Being. Things are like God in their actuality, but not in their potentiality, since God has no potentiality. He is Pure Actuality. So, only their actuality is like God.

Applying Words to the Infinite. Words divorced from their finite condition are devoid of meaning. This means that all God-talk about analogies or anything else is meaningless, since the concepts cannot apply to an infinite, transcendent Being. Such a criticism overlooks the distinction between a concept and its predication. The concept behind a word remains the same; only the way in which it is predicated changes. The meanings of the words *goodness* , *being* , and *beauty* can be applied to finite reality, and they can be applied to God; when used in the divine setting, the words are merely extended without limits. Being is still being, and goodness is still goodness; in application to the essence of God they are released from any limiting mode of signification. Since the perfection denoted by some terms does not necessarily imply any limitations, there is no reason why perfection cannot be predicated of an unlimited Being. In Aquinas's terms, that which is signified is the same; only the mode of signification is different.

Analogy and Causality. It is argued that analogy rests on the questionable premise of causality. It is true that Aquinas bases analogy in the similarity that must exist between an

efficient cause and its effect. This is true because Being communicates only being. The Cause of existence cannot produce perfection that it does not "possess" itself. If God causes goodness, then he must be good. If he causes existence, then he must exist. Otherwise the absurd consequence ensues that God gives what he does not have to give.

Tailoring Terms to the Infinite. An analogous predication of God fails to identify the univocal element. In drawing an analogy between the finite and the infinite, we must be able to isolate that "univocal" attribute or quality that both share. And we can identify the basic element, though we have to drop the limitations from our thinking when applying it to its Pure Actuality. For a predication of a perfection of an infinite Being cannot be done in the same way of a finite being because it does not have qualities in a finite way. The objection would hold for equivocal concepts, those that cannot be applied both to God and to creation, but it is not true of univocal concepts that have analogical predications. One must have a univocal understanding of what is being predicated. I must be careful of my definition of *love* when I say that "I love," and that "God is love." The only way to avoid equivocation when predicating the same quality to finite be ings and infinite Being is to predicate it appropriately to the mode of being that each is.

Relating Creator to Creature. The real relationship between Creator and creatures is not univocally expressible. This criticism fails to distinguish between the thing signified and the mode of its expression. The concept of *being* or *existence* is understood to mean the same thing, whether we are referring to God or a human being. It is "that which is or exists." God exists and a person exists; this they have in common. So the concept *being* is univocal to both. But God exists infinitely and independently, whereas a human being exists finitely and dependently; in this they are different. That they both exist is univocally conceived; how they each exist is analogically predicated. For God exists necessarily, and creatures exist contingently.

Conclusion. Religious language does not merely evoke an experience about God that tells us nothing about who "God" is. God-talk is either univocal, equivocal, or analogical. It cannot be equivocal since we do know something about God. The claim: "We cannot make any meaningful statements about God" implies that we know what the word *God* means in the context of other words. By the same token, God-talk cannot be univocal, since we cannot predicate an attribute of an infinite Being in the *same way* that we do of a finite being. God is "good," for example, in an unlimited way. Creatures can be "good" in a limited, reflective way. Both are good, but not in the same way.

But if God-talk is neither univocal or equivocal, then it *must* be analogical. This analogy of similarity is based in the Creator/creature relations. As Cause of being, God is Being. He cannot give what he does not have to give. Being produces being; Pure Actuality actualizes other actualities. Since God cannot produce another Necessary Being like himself, he must produce contingent beings. But contingent beings, unlike a Necessary Being, have the potentiality to not be. Hence, while God is pure Actuality, everything else is a combination of actuality and the limiting potentiality not to be.

Thus, when we predicate to God things from creation, we cannot predicate any of their limitations to him. We can only ascribe the actuality the creature received from the Creator. In

this sense, creatures are both like and unlike God. That opens the door to understanding by analogy.

The only alternatives to analogy are skepticism or dogmatism: Either we know nothing about God, or we assume that we know things in the same infinite way in which he knows them.

Annihilationism. *Annihilationism* is the doctrine that the souls of the wicked will be snuffed out of existence rather than be sent to an everlasting, conscious hell. The existence of the unrepentant will be extinguished, while the righteous will enter into everlasting bliss.

Support from Scripture. *“The Second Death.”* Annihilationists point to the Bible references to the fate of the wicked as “the second death” (Rev. 20:14) in support of their view. Since a person loses consciousness of this world at the first death (physical death), it is argued that the “second death”will involve unconsciousness in the world to come.

“Everlasting Destruction.” Scripture speaks of the wicked being “destroyed.” Paul said: “This will happen when the Lord Jesus is revealed from heaven in blazing fire with his powerful angels. He will punish those who do not know God and do not obey the gospel of our Lord Jesus. They will be punished with *everlasting destruction* and shut out from the presence of the Lord and from the majesty of his power” (2 Thess. 1:7b–9). Annihilationists insist that the figure of “destruction” is incompatible with a continued, conscious existence.

“Perdition.” The wicked are said to go into “perdition” (KJV) or “destruction” (NIV) (2 Peter 3:7), and Judas is called the “son of perdition” (John 17:12). The word *perdition*

---

kjv King James Version
niv New International Version

(apoleia) means to perish. This, annihilationists argue, indicates that the lost will perish or go out of existence.

Like Not Having Been Born. Jesus said of Judas, who was sent to perdition, that "It would be better for him if he had not been born" (Mark 14:21). Before one is conceived they do not exist. Thus, for hell to be like the prebirth condition it must be a state of nonexistence.

"The Wicked Will Perish." Repeatedly, the Old Testament speaks of the wicked perishing. The psalmist wrote: "But the wicked will perish: The LORD 's enemies will be like the beauty of the fields, they will vanish—vanish like smoke" (Ps. 37:20 ; cf. 68:2 ; 112:10). But to perish implies a state of nothingness.

Answering Arguments from Scripture. When examined carefully in context, none of the above passages proves annihilationism. At some points language may *permit* such a construction, but nowhere does the text demand annihilationism. In context and comparison with other Scriptures, the concept must be rejected in every case.

Separation, Not Extinction. The first death is simply the separation of the soul from the body (James 2:26), not the annihilation of the soul. Scripture presents death as conscious separation. Adam and Eve died spiritually the moment they sinned, yet they still existed and could hear God's voice (Gen. 3:10). Before one is saved, he is "dead in trespasses and sins" (Eph. 2:1), and yet he still carries God's image (Gen. 1:27 ; cf. Gen. 9:6 ; James 3:9). Though unable to come to Christ without the intervention of God, the "spiritually dead" are sufficiently aware that Scripture holds them accountable to believe (Acts 16:31), and repent (Acts 17:30). Continued awareness, but with separation from God and the inability to save oneself—these constitute Scripture's vision of the second death.

Destruction, Not Nonexistence. "Everlasting" destruction would not be annihilation, which only takes an instant and is over. If someone undergoes everlasting destruction, then they have to have everlasting existence. The cars in a junkyard have been destroyed, but they are not annihilated. They are simply beyond repair or unredeemable. So are the people in hell.

Since the word *perdition* means to die, perish, or to come to ruin, the same objections apply. In 2 Peter 3:7 *perdition* is used in the context of judgment, clearly implying consciousness. In our junkyard analogy, ruined cars have perished, but they are still junkyard cars. In this connection, Jesus spoke of hell as a dump where the fire would not cease and where a person's resurrected body would not be consumed (Mark 9:48).

In addition to comments on *death* and *perdition* above, it should be noted that the Hebrew word used to describe the wicked perishing in the Old Testament (דאבא) is also used to describe the righteous perishing (see Isa. 57:1 ; Micah 7:2). But even the annihilationists admit that the righteous are not snuffed out of existence. That being the case, they should not conclude that the wicked will cease to exist based on this term.

The same word דאבא is used to describe things that are merely lost but then later found (Deut. 22:3), which proves that lost does not mean nonexistent.

"It Would Have Been Better. . . ." When he says that it would have been better if Judas had not been born, Jesus is not comparing Judas's perdition to his nonexistence before conception but to his existence before *birth.* This hyperbolic figure of speech would almost certainly indicate the severity of his punishment, not a statement about the superiority of nonbeing over being. In a parallel condemnation on the Pharisees, Jesus said Sodom and Gomorrah would have repented had they seen his miracles (Matt. 11:23–24). This does not mean that they actually would have repented or God would surely have shown them these miracles— 2 Peter 3:9 . It is simply a powerful figure of speech indicating that their sin was so great that "it would be *more tolerable* " in the day of judgment for Sodom than for them (vs. 24).

Further, nothing cannot be better than something, since they have nothing in common to compare them. So nonbeing cannot be actually better than being. To assume otherwise is a category mistake.

Biblical Arguments. In addition to the lack of any definitive passages in favor of annihilationism, numerous texts support the doctrine of eternal conscious punishment. A brief summary includes:

The Rich Man in Hell. Unlike parables which have no real persons in them, Jesus told the story of an actual beggar named Lazarus who went to heaven and of a rich man who died and went to hell and was in conscious torment (Luke 16:22–28). He cried out, " 'Father Abraham, have pity on me and send Lazarus to dip the tip of his finger in water and cool my tongue, because I am in agony in this fire.' But Abraham replied, 'Son, remember that in your lifetime you received your good things, while Lazarus received bad things, but now he is comforted here and you are in agony' " (vss. 24–25). The rich man then begged that his brothers be warned "so that they will not also come to this place of torment" (vs. 27). There is no hint of annihilation in this passage; he is suffering constant and conscious torment.

A Place of Weeping and Gnashing of Teeth. Jesus repeatedly said the people in hell are in continual agony. He declared that "the subjects of the kingdom will be thrown outside, into the darkness, where there will be weeping and gnashing of teeth" (Matt. 8:12 ; cf. 22:13 ; 24:51 ; 25:30). But a place of weeping is obviously a place of conscious sorrow. Those who are not conscious do not weep.

A Place of Unquenchable Flames. Jesus repeatedly called hell a place of unquenchable flames (Mark 9:43–48) where the very bodies of the wicked will never die (cf. Luke 12:4–5). But it would make no sense to have everlasting flames and bodies without any souls in them to experience the torment.

A Place of Everlasting Torment. John the apostle described hell as a place of eternal torment. He declared that "the devil, who deceived them, was thrown into the lake of burning sulfur, where the beast and the false prophet had been thrown. They will be tormented day and night for ever and ever" (Rev. 20:10). Eternal torment indicates that the everlasting state of woe is conscious.

A Place for the Beast and False Prophet. In a clear example of beings who were still conscious after a thousand years of conscious torment in hell, the Bible says of the beast and false prophets that "The two of them were thrown *alive* into the fiery lake of burning sulfur" (Rev. 19:20) before the "thousand years" (Rev. 20:2). Yet after this period the devil, who deceived them, was cast into the lake of fire and brimstone where the beast and the false prophet [still] *are* " (Rev. 20:10 , emphasis added). Not only were they "alive" when they entered, but they were still alive after a thousand years of conscious torment.

A Place of Conscious Punishment. The fact that the wicked are "punished with everlasting destruction" (2 Thess. 1:9) strongly implies that they must be conscious. One cannot suffer punishment without existence. It is no punishment to beat a dead corpse. An unconscious person feels no pain.

Annihilation would not be a punishment but a release from all punishment. Job can suffer something worse than annihilation in this life. The punishment of evil men in the afterlife would have to be conscious. If not, then God is not just, since he would have given less punishment to some wicked than to some righteous people. For not all wicked people suffer as much as some righteous people do in this life.

A Place That Is Everlasting. Hell is said to be of the same duration as heaven, "everlasting" (Matt. 25:41). As the saints in heaven are said to be in conscious bliss (Luke 23:43 ; 2 Cor. 5:8 ; Phil. 1:23), so the sinners in hell are in conscious woe (cf. Luke 16).

Philosophical Arguments. *For Annihilation.* In addition to biblical arguments, many annihilationists offer philosophical reasons for rejecting everlasting conscious punishment. Granting a theistic perspective, most of them, however, are a variation on the one theme of God's mercy. Arguments by those who deny theism or human immortality are covered in those respective articles.

Annihilationists reason that God is a God of mercy (Exod. 20:6), and it is merciless to allow people to suffer consciously forever. We kill trapped horses if we cannot rescue them from burning buildings. We put other suffering creatures out of their misery. Annihilationists argue that a merciful God would surely do as much for his creatures.

Against Annihilationism. The very concept of an ultimately merciful God supposes that he is the absolute standard for what is merciful and morally right. Indeed, the moral argument for God's existence demonstrates this. But if God is the ultimate standard for moral righteousness, we cannot impose our concept of justice upon him. The very idea of injustice presupposes an ultimate standard, which theists claim for God.

Annihilation would demean both the love of God and the nature of human beings as free moral creatures. It would be as if God said to them, "I will allow you to be free only if you do what I say. If you don't, then I will snuff out your very freedom and existence!" This would be like a father telling his son he wanted him to be a doctor, but when the son chose instead to be a park ranger the father shot him. Eternal suffering is eternal testimony to the freedom and dignity of humans, even unrepentant humans.

It would be contrary to the created nature of human beings to annihilate them, since they are made in God's image and likeness, which is everlasting (Gen. 1:27). Animals are often killed to alleviate their pain. But (the euthanasia movement notwithstanding) we do not do the same for humans precisely because they are not animals. They are created in the image of God and, hence, should be treated with the greatest respect for their dignity as God's image bearers. Not to allow them to continue to exist in their freely chosen destiny, painful as it may be, is to snuff out God's image in them. Since free choice is morally good, being part of the image of God, then it would be a moral evil to take it away. But this is what annihilation does: It destroys human freedom forever.

Further, to stomp out the existence of a creature in God's immortal image is to renege on what God gave them—immortality. It is to attack himself in effigy by destroying his image-bearers. But God does not act against God.

To punish the crime of telling of a half-truth with the same ferocity as the crime of genocide is unjust. Hitler should receive a greater punishment than a petty thief, though both crimes affront God's infinite holiness. Certainly not all judgment proportionate to the sin is meted out in this life. The Bible speaks of degrees of punishment in hell (Matt. 5:22 ; Rev. 20:12–14). But there can be no degrees of annihilation. Nonexistence is the same for all persons.

Conclusion. The doctrine of annihilation rests more on sentimental than scriptural bases. Although, there are some biblical expressions that *can* be construed to support annihilationism, there are none that *must* be understood this way. Furthermore, numerous passages clearly state that the wicked will suffer consciously and eternally in hell (*see* HELL ; "HEATHEN," SALVATION OF ; UNIVERSALISM).

Anselm. Anselm of Canterbury (1033–1109) was born in Aosta, Piedmont (England). He became a prior in a Benedictine monastery and was later appointed archbishop of Canterbury (1093). Anselm’s major works include *Proslogion, Monologion, Cur Deus Homo?,* and *Truth* .

Philosophically, Anselm’s ideas were molded by Plato (428–348 B.C .). Theologically, the writings of Augustine were formative on his thought. Nonetheless, Anselm was an original thinker who originated one of the most creative, controversial, and enduring arguments for the existence of God—the ontological argument.

Anselm’s Views. *Faith and Reason.* Anselm’s view of faith and reason was influenced by Augustine’s “faith seeking understanding.” Nevertheless, Anselm’s establishment of reason on its own foundation had been unattained by Augustine. In fact, the late scholastic method of reasoning finds roots in Anselm’s philosophical dialectic. His arguments for God are a case in point, especially the ontological argument, which began in meditation and ended with one of the most sophisticated and subtle arguments for God ever devised (*see* GOD, EVIDENCE FOR ; GOD, OBJECTIONS TO PROOFS FOR).

In *Cur Deus Homo?* Anselm made it clear that reason must be used to explain and defend Christianity. He held that it is possible to disclose “in their true rationality, those things in Christian faith which seem to infidels improper or impossible” (ibid., 2.15). Even doctrines like the Trinity and the Incarnation (*see* CHRIST, DEITY OF) Anselm believed to be “reasonable and incontrovertible.” He concluded that “in proving that God became man by necessity . . . you [can] convince both Jews and Pagans by the mere force of reason” (ibid., 2.22).

Anselm saw a two-fold role of reason. First, he spoke of writing the proof of a certain doctrine of our faith, “which I am accustomed to give to inquirers” (ibid., 1.1). This, he said, was “not for the sake of attaining to faith by means of reason, but that they may be gladdened by understanding and meditating on those things which they believe; and that, as far as possible, they may be always ready to convince anyone who demands of them a reason of the hope which is in us” (ibid., 1.1).

JETS *Journal of the Evangelical Theological Society*

Truth. Few essays better defend the nature of truth than Anselm's work by the simple title, *Truth* . Anselm provides a strong defense of the correspondence view of truth and the absolute nature of truth (*see* TRUTH, ABSOLUTE NATURE OF ; TRUTH, NATURE OF).

God. Anselm was a Christian theologian. As such, he accepted the Bible as the infallible Word of God (*see* BIBLE, EVIDENCE FOR). From this he concluded that God is one in essence (*see* GOD, NATURE OF) and three in persons—the Trinity. But Anselm believed that the existence and nature of this one God (though not his tri-unity) could be demonstrated rationally apart from supernatural revelation. Contrary to popular understanding, Anselm had many arguments for God's existence. He elaborated many forms of the cosmological argument before he ever devised the ontological argument.

Anselm's cosmological type arguments (*see* MONOLOGION). Anselm argued from goodness to God:

1. Good things exist.
2. The cause of this goodness is either one or many.
3. But it can't be many, for then there would be no way to compare their goodness, for all things would be equally good. But some things are better than others.
4. Therefore, one Supreme Good (God) causes the goodness in all good things.

Anselm argued from perfection to God, an argument C. S. Lewis emulated in *Mere Christianity* :

1. Some beings are more nearly perfect than are others.
2. But things cannot be more or less perfect unless there is a wholly perfect to which they can be compared.
3. Therefore, there must be a Most Perfect Being (God).

Anselm argued from being to God:

1. Something exists.
2. Whatever exists, exists either through nothing or through something.
3. But nothing cannot cause something; only something can cause something.
4. And this something is either one or many.
5. If many, they are either mutually dependent or all dependent on one for their existence.

6. They cannot be mutually dependent for their existence, for something cannot exist through a being on which it confers existence.

7. Therefore, there must be one being through which all other beings exist.

8. This one being must exist through itself, since everything else exists through it.

9. And whatever exists through itself, exists in the highest degree of all.

10. Therefore, there exists a supremely perfect Being that exists in the highest degree of all.

With the exception of the last two premises, which are distinctly platonic in speaking of degrees of being, this argument could have been expressed (and to some degree was) by Thomas Aquinas.

Anselm's ontological argument(s) (*see* PROSLOGION). Anselm's most famous contribution was his ontological argument(s), though Anselm himself never so named them. Immanuel Kant did many centuries later, believing they contained an ontological fallacy.

The first form of the ontological argument of Anselm was from the idea of an absolutely perfect being. It takes this form:

1. God is by definition that than which nothing greater can be conceived.

2. It is greater to exist in reality than to exist only in the mind.

3. Therefore God must exist in reality. If he didn't exist, he wouldn't be the greatest possible.

The second form of the ontological argument emerged from Anselm's friendly debate with another monk named Gaunilo. It argues from the idea of a Necessary Being.

1. God is by definition a Necessary Being.

2. It is logically necessary to affirm what is necessary of the concept of a Necessary Being.

3. Existence is logically necessary to the concept of a Necessary Being.

4. Therefore, a Necessary Being (God) necessarily exists.

The pros and cons of the ontological argument(s) are discussed elsewhere (*see* ONTOLOGICAL ARGUMENT). Whatever its merits, the argument has had a long and illustrious career and is still alive a millennium later.

Christ. Anselm's work *Cur Deus Homo?* (*Why the God-Man?*) is a classic in the history of Christian thought. It is a rational defense of the need for the incarnation of Christ in general and the penal view of the atonement in particular. It is a landmark treatise of rational theology.

The Influence of Anselm. Anselm's popularity, especially through his ontological argument, continues, such detractors as David Hume and Kant notwithstanding. Anselm has had a positive impact on many modern and contemporary thinkers, including Rene Descartes, Benedict Spinoza, Charles Hartshorne, Norman Malcolm, and Alvin Plantinga.

Summary. Anselm is a model of traditional or classical apologetics . He believed in offering proofs for the existence of God. Further, he believed that historical evidence, confirmed by miracles, could be supplied to support the truth of the Christian religion (*see* MIRACLES, APOLOGETIC VALUE OF). Anselm is the antithesis of fideism and purely presuppositional apologetics.

Anselm was a child of his day, which was dominated by platonic philosophy. The idea of degrees of existence and existence as a perfection is usually rejected. But these are not crucial to his system of classical apologetics as a whole. Indeed, Anselm's cosmological argument from being compares with that of Aquinas.

Anthropic Principle. The *anthropic principle* (Greek: *anthropos,* "human being") states that the universe was fitted from the very first moment of its existence for the emergence of life in general and human life in particular (*see* BIG BANG ; EVOLUTION, BIOLOGICAL ; THERMODYNAMICS, LAWS OF). As agnostic astronomer, Robert Jastrow, noted, the universe is amazingly preadapted to the eventual appearance of humanity (see "A Scientist Caught"). For if there were even the slightest variation at the moment of the big bang, making conditions different, even to a small degree, no life of any kind would exist. In order for life to be present

today an incredibly restrictive set of demands must have been present in the early universe—and they were.

Supporting Evidence. Not only does the scientific evidence point to a beginning of the cosmos, but it points to a very sophisticated high tuning of the universe from the very beginning that makes human life possible. For life to be present today, an incredibly restrictive set of demands must have been present in the early universe:

1. Oxygen comprises 21 percent of the atmosphere. If it were 25 percent, fires would erupt, if 15 percent, human beings would suffocate.

2. If the gravitational force were altered by 1 part in 1040 (that's 10 followed by forty zeroes), the sun would not exist, and the moon would crash into the earth or sheer off into space (Heeren, 196). Even a slight increase in the force of gravity would result in all the stars being much more massive than our sun, with the effect that the sun would burn too rapidly and erratically to sustain life.

3. If the centrifugal force of planetary movements did not precisely balance the gravitational forces, nothing could be held in orbit around the sun.

4. If the universe was expanding at a rate one millionth more slowly than it is, the tem perature on earth would be 10,000 degrees C . (ibid., 185).

5. The average distance between stars in our galaxy of 100 billion stars is 30 trillion miles. If that distance was altered slightly, orbits would become erratic, and there would be extreme temperature variations on earth. (Traveling at space shuttle speed, seventeen thousand miles an hour or five miles a second, it would take 201,450 years to travel 30 trillion miles.)

6. Any of the laws of physics can be described as a function of the velocity of light (now defined to be 299,792,458 miles a second). Even a slight variation in the speed of light would alter the other constants and preclude the possibility of life on earth (Ross, 126).

7. If Jupiter was not in its current orbit, we would be bombarded with space material. Jupiter's gravitational field acts as a cosmic vacuum cleaner, attracting asteroids and comets that would otherwise strike earth (ibid., 196).

8. If the thickness of the earth's crust was greater, too much oxygen would be transferred to the crust to support life. If it were thinner, volcanic and tectonic activity would make life untenable (ibid., 130).

9. If the rotation of the earth took longer than 24 hours, temperature differences would be too great between night and day. If the rotation period was shorter, atmospheric wind velocities would be too great.

10. Surface temperature differences would be too great if the axial tilt of the earth were altered slightly.

11. If the atmospheric discharge (lightning) rate were greater, there would be too much fire destruction; if it were less, there would be too little nitrogen fixing in the soil.

12. If there were more seismic activity, much life would be lost. If there was less, nutrients on the ocean floors and in river runoff would not be cycled back to the continents through tectonic uplift. Even earthquakes are necessary to sustain life as we know it.

As early as the 1960s it was explained why, on anthropic grounds, "we should expect to observe a world that possesses precisely three spatial dimensions" (Barrow, 247). Robert Dicke found "that in fact it may be necessary for the universe to have the enormous size and complexity which modern astronomy has revealed, in order for the earth to be a possible habitation for living beings" (ibid.). Likewise, the mass, the entropy level of the universe, the stability of the proton, and innumerable other things must be just right to make life possible.

Theistic Implications. Jastrow summarized the theistic implications well: "The anthropic principle . . . seems to say that science itself has proven, as a hard fact, that this universe was made, was designed, for man to live in. *It's a very theistic result* " (Jastrow, "A Scientist Caught," 17, emphasis added). That is, the incredible balance of multitudinous factors in the universe that make life possible on earth points to "fine tuning" by an intelligent Being. It leads one to believe that the universe was "providentially crafted" for our benefit. Nothing known to human beings is capable of "pretuning" the conditions of the universe to make life possible other than an intelligent Creator. Or, to put it another way, the kind of specificity and order in the universe that makes life possible on earth is just the kind of effect that is known to come from an intelligent cause.

Astronomer Alan Sandage concluded that "the world is too complicated in all of its parts to be due to chance alone. I am convinced that the existence of life with all its order in each of its organisms is simply too well put together. Each part of a living thing depends on all its other parts to function. How does each part know? How is each part specified at conception. The more one learns of biochemistry the more unbelievable it becomes unless there is some kind of organizing principle—an architect for believers . . ." (Sandage, 54). And all of the conditions were set from the moment of the universe's origin.

Stephen Hawking described how the value of many fundamental numbers in nature's laws "seem to have been very finely adjusted to make possible the development of life" and how "the initial configuration of the universe" appears to have been "very carefully chosen" (cited by Heeren, 67). In spite of the fact that only an intelligent cause can "carefully choose" anything, Hawking at this writing remains skeptical about God. He saw the evidence clearly and asked the right question when he wrote: "There may only be a small number of laws, which are self-consistent and which lead to complicated beings like ourselves who can ask the question: What is the nature of God? And even if there is only one unique set of possible laws, it is only a set of equations. What is it that breathes fire into the equations and makes a universe for them to

govern? . . . Although science may solve the problem of how the universe began, it cannot answer the question: Why does the universe bother to exist?" Hawking adds, "I don't know the answer to that" (Hawking, 99).

Albert Einstein did not hesitate to answer Hawking's question when he said, "the harmony of natural law . . . reveals an intelligence of such superiority that, compared with it, all the systematic thinking and acting of human beings is an utterly insignificant reflection" (Einstein, 40). Even Nobel prize winner Steven Weinberg, an atheist, went so far as to say that "it seems to me that if the word 'God' is to be of any use, it should be taken to mean *an interested God, a creator and lawgiver who established not only the laws of nature* and the universe but also standards of good and evil, some personality that is concerned with our actions, something in short that is appropriate for us to worship" (Weinberg, 244, emphasis added). Thus, the Anthropic Principle is based on the most recent astronomical evidence for the existence of a superintelligent Creator of the cosmos. In short, it provides the evidence for an updated Teleological Argument for God's existence.

Antinomy. The word *antinomy* is used two ways. Strictly, it means an *actual* contradiction, paradox, or antithesis (*see* KANT, IMMANUEL). Often used to show the absurdity or impossibility of a view, as a *Reductio Ad Absurdum* . Loosely and popularly, it is used of only *apparent*

contradictions, as in the mysteries of the Christian Faith. It this sense it means something that goes beyond reason but not *against* reason (*see* FAITH AND REASON ; MYSTERY).

Apocrypha, Old and New Testaments. *Apocrypha* most commonly refers to disputed books that Protestants reject and Roman Catholics and Orthodox communions accept into the Old Testament. The word *apocrypha* means "hidden" or "doubtful." So those who accept these documents prefer to call them "deuterocanonical," or books of "the second canon."

The Roman Catholic View. Catholics and Protestants agree about the inspiration of the twenty-seven books of the New Testament. They differ over eleven pieces of literature in the Old Testament (seven books and four parts of books). These disputed works became an issue in the Reformation and, in reaction to their rejection by Protestants, were "infallibly" declared to be part of the inspired canon of Scripture in 1546 at the Council of Trent (*see* BIBLE, CANONICITY OF).

The Roman Catholic Council of Trent stated: "The Synod . . . receives and venerates . . . all the books [including the *Apocrypha*] both of the Old and the New Testaments—seeing that one God is the Author of both . . . as having been dictated, either by Christ's own word of mouth or by the Holy Ghost . . . if anyone receives not as sacred and canonical the said books entire with all their parts, as they have been used to be read in the Catholic Church . . . let him be anathema" (Schaff, 2:81). Another Trent document read: "If anyone, however, should not accept the said books as sacred and canonical, entire with all their parts, . . . and if both knowingly and deliberately he should condemn the aforesaid tradition let him be anathema" (Denzinger, *Sources* , no. 784). The same language affirming the *Apocrypha* is repeated by Vatican Council II.

The *Apocrypha* Rome accepts includes eleven books or twelve, depending on whether Baruch 1–6) is split into two pieces, Baruch 1–5 and The Letter of Jeremiah (Baruch 6). The Deuterocanon includes all the fourteen (or fifteen) books in the Protestant *Apocrypha* except the Prayer of Manasseh and 1 and 2 Esdras (called 3 and 4 Esdras by Roman Catholics. Ezra and Nehemiah are called 1 and 2 Esdras by Catholics).

Although the Roman Catholic canon has eleven more pieces of literature than does the Protestant Bible, only seven extra books, or a total forty-six, appear in the table of contents (the Protestant and Jewish Old Testament has thirty-nine). As noted in the accompanying table, four other pieces of literature are incorporated within Esther and Daniel.

The Literature in Dispute

Apocryphal Books	Deuterocanonical Books
The Wisdom of Solomon	Book of Wisdom (ca. 30 B.C .)
Ecclesiasticus (Sirach)	Sirach (132 B.C .)
Tobit (ca. 200 B.C .)	Tobit
Judith (ca. 150 B.C .)	Judith
1 Esdras (ca. 150–100 B.C .)	3 Esdras

1 Maccabees (ca. 110 B.C .)	1 Maccabees
2 Maccabees (ca. 110–70 B.C .)	2 Maccabees
Baruch (ca. 150–50 B.C .)	Baruch chaps. 1–5
Letter of Jeremiah	Baruch 6 (ca. 300–100 B.C .)
2 Esdras (ca. A.D . 100)	4 Esdras
Additions to Esther	Esther 10:4–16:24 (140–130 B.C .)
Prayer of Azariah (ca. 200–0 B.C .)	Daniel 3:24–90—"Song of Three Young Men"
Susanna (ca. 200–0 B.C .)	Daniel 13
Bel and the Dragon	Daniel 14 (ca. 100 B.C .)
Prayer of Manasseh (or second Prayer of Manasseh, ca. 100–0 B.C .)	

The Apocrypha as Scripture. The larger canon is sometimes referred to as the "Alexandrian Canon," as opposed to the "Palestinian Canon" which does not contain the *Apocrypha* , because it is alleged to have been part of the Greek translation of the Old Testament (the *Septuagint* , or LXX) prepared at Alexandria, Egypt. Reasons generally advanced in favor of this broader Alexandrian list are:

1. The New Testament reflects the thought of the *Apocrypha* , and even refers to events described in it (cf. Heb. 11:35 with 2 Maccabees 7 , 12).

2. The New Testament quotes mostly from the Greek Old Testament, the LXX , which contained the *Apocrypha* . This gives tacit approval to the whole text.

3. Some early church fathers quoted and used the *Apocrypha* as Scripture in public worship.

4. Such early fathers as Irenaeus, Tertullian, and Clement of Alexandria accepted all of the *Apocrypha* as canonical.

5. Early Christian catacomb scenes depict episodes from the *Apocrypha* , showing it was part of early Christian religious life. This at least reveals a great regard for the *Apocrypha* .

6. Important early manuscripts (*Aleph* , *A* , and *B*) interpose the *Apocrypha* among the Old Testament books as part of the Jewish-Greek Old Testament.

LXX Septuagint

7. Early church councils accepted the *Apocrypha* : Rome (382), Hippo (393), and Carthage (397).

8. The Eastern Orthodox church accepts the *Apocrypha* . Their acceptance shows it to be a common Christian belief, not one unique to Catholics.

9. The Roman Catholic church proclaimed the *Apocrypha* canonical at the Council of Trent (1546) in accord with the early councils noted and the Council of Florence not long before the Reformation (1442).

10. The apocryphal books continued to be included in the Protestant Bible as late as the nineteenth century. This indicates that even Protestants accepted the *Apocrypha* until very recently.

11. Apocryphal books in Hebrew were among Old Testament canonical books in the Dead Sea community at Qumran, so they were part of the Hebrew Canon (*see* DEAD SEA SCROLLS).

Answers to the Catholic Arguments. *The New Testament and the Apocrypha.* There may be New Testament allusions to the *Apocrypha* , but not once is there a definite quotation from any *Apocrypha* book accepted by the Roman Catholic church. There are allusions to Pseudepigraphical books (false writings) that are rejected by Roman Catholics as well as Protestants, such as the *Bodily Assumption of Moses* (Jude 9) and the *Book of Enoch* (Jude 14–15). There are also citations from Pagan poets and philosophers (Acts 17:28 ; 1 Cor. 15:33 ; Titus 1:12). None of these sources are cited as Scripture, nor with authority.

The New Testament simply refers to a truth contained in these books which otherwise may (and do) have errors. Roman Catholic scholars agree with this assessment. The New Testament never refers to any document outside the canon as authoritative.

The Septuagint and the Apocrypha. The fact that the New Testament often quotes from other books in the Greek Old Testament in no way proves that the deuterocanonical books it contains are inspired. It is not even certain that the *Septuagint* of the first century contained the *Apocrypha* . The earliest Greek manuscripts that include them date from the fourth century A.D .

Even if these writings were in the *Septuagint* in apostolic times, Jesus and the apostles never once quoted from them, although they are supposed to have been included in the very version of the Old Testament (the *Septuagint*) that the Lord and apostles usually cited. Even notes in the currently used Roman Catholic New American Bible (NAB) make the revealing admission that the *Apocrypha* are “Religious books used by both Jews and Christians which were not included in the collection of inspired writings.” Instead, they “. . . were introduced rather late into the collection of the Bible. Catholics call them ‘deuterocanonical’ (second canon) books” (NAB , 413).

Use by the Church Fathers. Citations of church fathers in support of the canonicity of the *Apocrypha* is selective and misleading. Some fathers did seem to accept their inspiration; other

fathers used them for devotional or homiletical (preaching) purposes but did not accept them as canonical. An authority on the *Apocrypha* , Roger Beckwith, observes,

> When one examines the passages in the early Fathers which are supposed to establish the canonicity of the *Apocrypha* , one finds that some of them are taken from the alternative Greek text of Ezra (1 Esdras) or from additions or appendices to Daniel, Jeremiah or some other canonical book, which . . . are not really relevant; that others of them are not quotations from the *Apocrypha* at all; and that, of those which are, many do not give any indication that the book is regarded as Scripture. [Beckwith, 387]
>
> *Epistle of Barnabas* 6.7 and Tertullian, *Against Marcion* 3.22.5, are not quoting Wisd. 2.12 but Isa. 3:10 LXX , and Tertullian, *On the Soul* 15, is not quoting Wisd. 1.6 but Ps. 139.23, as a comparison of the passages shows. Similarly, Justin Martyr, *Dialogue with Trypho* 129, is quite clearly not quoting Wisdom but Prov. 8.21–5 LXX . The fact that he calls Proverbs "Wisdom" is in accordance with the common nomenclature of the earlier Fathers. [Beckwith, 427]

Frequently in references, the fathers were not claiming divine authority for any of the eleven books infallibly canonized by the Council of Trent. Rather, they were citing a well-known piece of Hebrew literature or an informative devotional writing to which they gave no presumption of inspiration by the Holy Spirit.

The Fathers and the Apocrypha. Some individuals in the early church held the *Apocrypha* in high esteem; others were vehemently opposed to them. J. D. N. Kelly's comment that "for the great majority [of early fathers] . . . the deuterocanonical writings ranked as scripture in the fullest sense" is out of sync with the facts. Athanasius, Cyril of Jerusalem, Origen, and the great Roman Catholic biblical scholar and translator of the Latin Vulgate, Jerome, all opposed inclusion of the *Apocrypha* . In the second century A.D . the Syrian Bible (Peshitta) did not contain the *Apocrypha* (Geisler, *General Introduction,* chaps. 27, 28).

Catacomb Art Apocrypha Themes. As many Catholic scholars admit, scenes from the catacombs do not prove the canonicity of the books whose events they depict. Such scenes indicate little more than the religious significance the portrayed events had for early Christians. At best, they show a respect for the books containing these events, not a recognition that they are inspired.

Books in the Greek Manuscripts. None of the great Greek manuscripts (*Aleph* , *A* , and *B*) contain all of the apocryphal books. Tobit, Judith, Wisdom, and Sirach (Ecclesiasticus) are found in all of them, and the oldest manuscripts (*B* or *Vaticanus*) totally exclude the Books of Maccabees. Yet Catholics appeal to this manuscript in support of their view. What is more, no Greek manuscript has the same list of apocryphal books accepted by the Council of Trent (1545–63; Beckwith, 194, 382–83).

Acceptance by Early Councils. These were only local councils and were not binding on the whole church. Local councils often erred in their decisions and were later overruled by the universal church. Some Catholic apologists argue that, even though a council was not

ecumenical, its results can be binding if they were confirmed by a Pope. However, they acknowledge that there is no infallible way to know which statements by Popes are infallible. Indeed, they admit that other statements by Popes were even heretical, such as the monothelite heresy of Pope Honorius I (d. 638).

It is also important to remember that these books were not part of the Christian (New Testament period) writings. Hence, they were not under the province of the Christian church to decide. They were the province of the Jewish community which wrote them and which had, centuries before, rejected them as part of the canon.

The books accepted by these Christian Councils may not have been the same ones in each case. Hence, they cannot be used as proof of the exact canon later infallibly proclaimed by the Roman Catholic church in 1546.

Local Councils of Hippo and Carthage in North Africa were influenced by Augustine, the most significant voice of antiquity who accepted the same apocryphal books later canonized by the Council of Trent. However, Augustine's position is ill-founded: (1) Augustine himself recognized that the Jews did not accept these books as part of their canon (Augustine, 19.36–38). (2) Of Maccabees, Augustine said, "These are held to be canonical, not by the Jews but by the Church, on account of the extreme and wonderful sufferings of certain martyrs" (Augustine, 18.36). On that ground *Foxe's Book of Martyrs* should be in the canon. (3) Augustine was inconsistent, since he rejected books not written by prophets, yet he accepted a book that appears to deny being prophetic (1 Macc. 9:27). (4) Augustine's mistaken acceptance of the *Apocrypha* seems to be connected with his belief in the inspiration of the *Septuagint* , whose later Greek manuscripts contained them. Augustine later acknowledged the superiority of Jerome's Hebrew text over the Septuagint's Greek text. That should have led him to accept the superiority of Jerome's Hebrew canon as well. Jerome utterly rejected the *Apocrypha* .

The later Council of Rome (382) which accepted *Apocrypha* l books did not list the same books accepted by Hippo and Carthage. It does not list Baruch, thus listing only six, not seven, of the *Apocrypha* books later pronounced canonical. Even Trent lists it as a separate book (Denzinger, no. 84).

Acceptance by the Orthodox Church. The Greek church has not always accepted the *Apocrypha* , nor is its present position unequivocal. At the synods of Constantinople (1638), Jaffa (1642), and Jerusalem (1672) these books were declared canonical. But even as late as 1839 their Larger Catechism expressly omitted the *Apocrypha* on the grounds that they did not exist in the Hebrew Bible.

Acceptance at the Councils of Florence and Trent. At the Council of Trent (1546) the infallible proclamation was made accepting the *Apocrypha* as part of the inspired Word of God. Some Catholic scholars claim that the earlier Council of Florence (1442) made the same pronouncement. However, this council claimed no infallibility and neither council's decision has any real basis in Jewish history, the New Testament, or early Christian history. Unfortunately, the decision at Trent came a millennium and a half after the books were written and was an obvious polemic against Protestantism. The Council of Florence had proclaimed the *Apocrypha*

inspired to bolster the doctrine of Purgatory that had blossomed. However, the manifestations of this belief in the sale of indulgences came to full bloom in Martin Luther's day, and Trent's infallible proclamation of the *Apocrypha* was a clear polemical against Luther's teaching. The official infallible addition of books that support prayers for the dead is highly suspect, coming only a few years after Luther protested this doctrine. It has all the appearance of an attempt to provide infallible support for doctrines that lack a real biblical basis.

Apocryphal Books in Protestant Bibles. Apocryphal books appeared in Protestant Bibles prior to the Council of Trent, and were generally placed in a separate section because they were not considered of equal authority. While Anglicans and some other non-Roman Catholic groups have always held a high regard for the inspirational and historical value of the *Apocrypha* , they never consider it inspired and of equal authority with Scripture. Even Roman Catholic scholars through the Reformation period distinguished between deuterocanon and canon. Cardinal Ximenes made this distinction in his *Complutensian Polyglot* (1514–17) on the very eve of the Reformation. Cardinal Cajetan, who later opposed Luther at Augsburg in 1518, published a *Commentary on All the Authentic Historical Books of the Old Testament* (1532) after the Reformation began which did not contain the *Apocrypha* . Luther spoke against the *Apocrypha* in 1543, including its books at the back of his Bible (Metzger, 181f.).

Apocryphal Writings at Qumran. The discovery of the Dead Sea Scrolls at Qumran included not only the community's Bible (the Old Testament) but their library, with fragments of hundreds of books. Among these were some Old Testament *Apocryphal* books. The fact that no commentaries were found for an *Apocryphal* book, and only canonical books were found in the special parchment and script indicates that the *Apocrypha* l books were not viewed as canonical by the Qumran community. Menahem Mansoor lists the following fragments of the *Apocrypha* and *Pseudepigrapha* : Tobit, in Hebrew and Aramaic; *Enoch* in Aramaic; *Jubilees* in Hebrew; *Testament of Levi and Naphtali,* in Aramaic; *Apocrypha* l Daniel literature, in Hebrew and Aramaic, and *Psalms of Joshua* (Mansoor, 203). The noted scholar on the Dead Sea Scrolls, Millar Burroughs, concluded: "There is no reason to think that any of these works were venerated as Sacred Scripture" (Burroughs, 178).

The Catholic Arguments in Summary. At best, all that the arguments urged in favor of the canonicity of the apocryphal books prove is that various apocryphal books were given varied degrees of esteem by various persons within the Christian church, usually falling short of claims for the books' canonicity. Only after Augustine and the local councils he dominated pronounced them inspired did they gain wider usage and eventual infallible acceptance by the Roman Catholic church at Trent. This falls far short of the kind of initial, continual, and full recognition among Christian churches of the canonical books of the Protestant Old Testament and Jewish Torah (which exclude the *Apocrypha*). True canonical books were received *immediately* by the people of God into the growing canon of Scripture (see Geisler, *General Introduction,* chap. 13). Any subsequent debate was by those who were not in a position, as was the immediate audience, to know whether they were from an accredited apostle or prophet. Hence, this subsequent debate over the antilegomena was over their *authenticity* , not canonicity. They were already in the canon; some in subsequent generations questioned whether they belonged there. Eventually, all of the antilegomena (books later questioned by some) were retained in the canon. This is not true

of the *Apocrypha* , for Protestants reject all of them and even Roman Catholics reject 3 Esdras, 4 Esdras and The Prayer of Manasseh.

Arguments for the Protestant Canon. Evidence indicates that the Protestant canon, consisting of the thirty-nine books of the Hebrew Bible and excluding the *Apocrypha* , is the true canon. The only difference between the Protestant and ancient Palestinian Canon lies in organization. The ancient Bible lists twenty-four books. Combined into one each are 1-2 Samuel, 1-2 Kings, 1-2 Chronicles, Ezra–Nehemiah (reducing the number by four). The twelve Minor Prophets are counted as one book (reducing the number by eleven). The Palestinian Jews represented Jewish orthodoxy. Therefore, their canon was recognized as the orthodox one. It was the canon of Jesus (Geisler, *General Introduction,* chap. 5), Josephus, and Jerome. It was the canon of many early church fathers, among them Origen, Cyril of Jerusalem, and Athanasius.

Arguments in support of the Protestant Canon can be divided into two categories: historical and doctrinal.

Historical Arguments. The test of canonicity. Contrary to the Roman Catholic argument from Christian usage, the true test of canonicity is propheticity. God determined which books would be in the Bible by giving their message to a prophet. So only books written by a prophet or accredited spokesperson for God are inspired and belong in the canon of Scripture.

Of course, while God *determined* canonicity by propheticity; the people of God had to *discover* which of these books were prophetic. The people of God to whom the prophet wrote knew what prophets fulfilled the biblical tests for God's representatives, and they authenticated them by accepting the writings as from God. Moses' books were accepted immediately and stored in a holy place (Deut. 31:26). Joshua's writing was immediately accepted and preserved along with Moses' Law (Josh. 24:26). Samuel added to the collection (1 Sam. 10:25). Daniel already had a copy of his prophetic contemporary Jeremiah (Dan. 9:2) and the law (Dan. 9:11 , 13). While Jeremiah's message may have been rejected by much of his generation, the remnant must have accepted and spread it speedily. Paul encouraged the churches to circulate his inspired Epistles (Col. 4:16). Peter already had a collection of Paul's writings, equating them with the Old Testament as "Scripture" (2 Peter 3:15–16).

There were a number of ways for immediate contemporaries to confirm whether someone was a prophet of God. Some were confirmed supernaturally (Exodus 3–4 ; Acts 2:22 ; 2 Cor. 12:12 ; Heb. 2:3–4). Sometimes this came as immediate confirmation of their authority over nature or the accuracy of their predictive prophecy. Indeed, false prophets were weeded out if their predictions did not come true (Deut. 18:20–22). Alleged revelations that contradicted previously revealed truths were rejected as well (Deut. 13:1–3).

Evidence that each prophet's contemporaries authenticated and added his books to a growing canon comes through citations from subsequent writings. Moses' writings are cited through the Old Testament, beginning with his immediate successor, Joshua (Josh. 1:7 ; 1 Kings 2:3 ; 2 Kings 14:6 ; 2 Chron. 17:9 ; Ezra 6:18 ; Neh. 13:1 ; Jer. 8:8 ; Mal. 4:4). Later prophets cite earlier ones (e.g., Jer. 26:18 ; Ezek. 14:14 , 20 ; Dan. 9:2 ; Jonah 2:2–9 ; Micah 4:1–3). In the New Testament, Paul cites Luke (1 Tim. 5:18); Peter recognizes Paul's Epistles (2 Peter 3:15–

16), and Jude (4–12) cites 2 Peter. The Revelation is filled with images and ideas from previous Scripture, especially Daniel (see, for example, Revelation 13).

The entire Jewish/Protestant Old Testament was considered prophetic. Moses, who wrote the first five books, was a prophet (Deut. 18:15). The rest of the Old Testament books were known for centuries as "The Prophets" (Matt. 5:17 ; Luke 24:27). Eventually these books were divided into The Prophets and The Writings. Some believe this division was based on whether the author was a prophet by office or by gift. Others believe the separation was for topical use at Jewish festivals, or that books were arranged chronologically in descending order of size (Geisler, *General Introduction,* 244–45). Whatever the reason, it is clear that the original (cf. 7:12) and continual way to refer to the entire Old Testament up to the time of Christ was the twofold division of the "The Law and The Prophets." The "apostles and prophets" (Eph. 3:5) composed the New Testament. Hence, the whole Bible is a prophetic book, including the last book (for example, Revelation 20); this cannot be said for the *Apocryphal* books.

Nonauthenticated prophecy. There is strong evidence that the apocryphal books are not prophetic, and since propheticity is the test for canonicity, this fact alone eliminates them from the canon. No apocryphal books claim to be written by a prophet. Indeed, Maccabees disclaims being prophetic (1 Macc. 9:27). Nor is there supernatural confirmation of any of the writers of the apocryphal books, as there is for prophets who wrote canonical books. There is no predictive prophecy in the *Apocrypha* , as there is in some canonical books (e.g., Isaiah 53 ; Daniel 9 ; Micah 5:2). There is no new Messianic truth in the *Apocrypha* . Even the Jewish community, whose books these were, acknowledged that the prophetic gifts had ceased in Israel before the *Apocrypha* was written (see quotes above). Apocryphal books were never listed in the Jewish Bible with the Prophets or in any other section. Not once is an apocryphal book cited authoritatively by a prophetic book written after it. Taken together all of this provides overwhelming evidence that the *Apocrypha* was not prophetic and, therefore, should not be part of the canon of Scripture.

Jewish Rejection . In addition to the evidence for the propheticity of only the books of the Jewish and Protestant Old Testament, there is an unbroken line of rejection of the *Apocrypha* as canon by Jewish and Christian teachers.

Philo, an Alexandrian Jewish teacher (20 B.C .– A.D . 40), quoted the Old Testament prolifically from virtually every canonical book. However, he never once quoted from the *Apocrypha* as inspired.

Josephus (A.D . 30–100), a Jewish historian, explicitly excludes the *Apocrypha* , numbering the Old Testament as twenty two books (= thirty-nine books in Protestant Old Testament). Neither does he ever quote an *Apocrypha* l book as Scripture, though he was familiar with them. In *Against Apion* (1.8) he wrote:

> For we have not an innumerable multitude of books among us, disagreeing from and contradicting one another [as the Greeks have,] *but only twenty-two books, which are justly believed to be divine; and of them, five belong to Moses, which contain his law, and the traditions* of the origin of mankind till his death. This interval of time was little short

> of three thousand years; but as to the time from the death of Moses till the reign of Artaxerxes king of Persia, who reigned at Xerxes, *the prophets* , who were after Moses, wrote down what was done in their times in *thirteen books* . The remaining *four books contain hymns to God* , and precepts for the conduct of human life. [Josephus, 1.8, emphasis added]

These correspond exactly to the Jewish and Protestant Old Testament, which excludes the *Apocrypha* .

The Jewish teachers acknowledged that their prophetic line ended in the fourth century B.C . Yet, as even Catholics acknowledge, all apocryphal books were written after this time. Josephus wrote: "From Artaxerxes until our time everything has been recorded, but has not been deemed worthy of like credit with what preceded, because the exact succession of the prophets ceased" (Josephus). Additional rabbinical statements on the cessation of prophecy support this (see Beckwith, 370). Seder Olam Rabbah 30 declares "Until then [the coming of Alexander the Great] the prophets prophesied through the Holy Spirit. From then on, 'Incline thine ear and hear the words of the wise.' " Baba Bathra 12b declares: "Since the day when the Temple was destroyed, prophecy has been taken from the prophets and given to the wise." Rabbi Samuel bar Inia said, "The Second Temple lacked five things which the First Temple possessed, namely, the fire, the ark, the Urim and Thummin, the oil of anointing and the Holy Spirit [of prophecy]." Thus, the Jewish fathers (rabbis) acknowledged that the time period during which their *Apocrypha* was written was not a time when God was giving inspired writings.

Jesus and the New Testament writers never quoted from the *Apocrypha* as Scripture, even though they were aware of these writings and alluded to them at times (e.g., Heb. 11:35 may allude to 2 Maccabees 7 , 12 , though this may be a reference to the canonical book of Kings; see 1 Kings 17:22). Yet hundreds of quotations in the New Testament cite the Old Testament canon. The authority with which they are cited indicates that the New Testament writers believed them to be part of the "Law and Prophets" [i.e., whole Old Testament] which was believed to be the inspired and infallible Word of God (Matt. 5:17–18 ; cf. John 10:35). Jesus quoted from throughout the Old Testament "Law and Prophets," which he called "all the Scriptures" (Luke 24:27).

The Jewish Scholars at Jamnia (ca. A.D . 90) did not accept the *Apocrypha* as part of the divinely inspired Jewish Canon (see Beckwith, 276–77). Since the New Testament explicitly states that Israel was entrusted with the oracles of God and was the recipient of the covenants and the law (Rom. 3:2), the Jews should be considered the custodians of the limits of their own canon. As such they have always rejected the *Apocrypha* .

Early church council rejection. No canonic list or council of the Christian church accepted the *Apocrypha* as inspired for nearly the first four centuries. This is significant, since all of the lists available and most of the fathers of this period omit the *Apocrypha* . The first councils to accept the *Apocrypha* were only local ones without ecumenical force. The Catholic contention that the Council of Rome (382), though not an ecumenical council, had ecumenical force because Pope Damasus (304–384) ratified it is without grounds. It begs the question, assuming that Damasus was a Pope with infallible authority. Second, even Catholics acknowledge this council

was not an ecumenical body. Third, not all Catholic scholars agree that such affirmations by Popes are infallible. There are no infallible lists of infallible statements by Popes. Nor are there any universally agreed upon criteria for developing such lists. At best, appealing to a Pope to make infallible a statement by a local council is a double-edged sword. Even Catholic scholars admit that some Popes taught error and were even heretical.

Early fathers' rejection. Early fathers of the Christian church spoke out against the *Apocrypha* . This included Origen, Cyril of Jerusalem, Athanasius, and the great Roman Catholic Bible translator, Jerome.

Rejection by Jerome. Jerome (340–420), the greatest biblical scholar of the early Medieval period and translator of the Latin Vulgate, explicitly rejected the *Apocrypha* as part of the canon. He said the church reads them "for example and instruction of manners" but does not "apply them to establish any doctrine" ("Preface" to Vulgate *Book of Solomon* , cited in Beckwith, 343). In fact, he disputed Augustine's unjustified acceptance of these books. At first, Jerome even refused to translate the *Apocrypha* into Latin, but later made a hurried translation of a few books. After listing the exact books of the Jewish and Protestant Old Testament, Jerome concludes:

> And thus altogether there come to be 22 books of the old Law [according to the letters of the Jewish alphabet], that is, five of Moses, eight of the Prophets, and nine of the Hagiographa. Although some set down . . . Ruth and Kinoth among the Hagiographa, and think that these books ought to be counted (separately) in their computation, and that there are thus 24 books of the old Law; which the Apocalypse of John represents as adoring the Lamb in the number of the 24 elders. . . . This prologue can fitly serve as a Helmet (i.e., equipped with a helmet, against assailants) *introduction to all the biblical books* which we have translated from Hebrew into Latin, so that we may know that *whatever is not included in these is to be placed among the apocrypha* . [ibid., emphasis added]

In his preface to Daniel, Jerome clearly rejected the apocryphal additions to Daniel (Bel and the Dragon and Susanna) and argued only for the canonicity of those books found in the Hebrew Bible. He wrote:

> The stories of Susanna and of Bel and the Dragon are not contained in the Hebrew. . . . For this same reason when I was translating Daniel many years ago, I noted these visions with a critical symbol, showing that they were not included in the Hebrew. . . . After all, both Origen, Eusebius and Appolinarius, and other outstanding churchmen and teachers of Greece acknowledge that, as I have said, these visions are not found amongst the Hebrew, *and therefore they are not obliged to answer to Porphyry for these portions which exhibit no authority as Holy Scripture* . [ibid., emphasis added]

The suggestion that Jerome really favored the apocryphal books but was only arguing that the Jews rejected them is groundless. First, he said clearly in the above quotation that they *"exhibit no authority as Holy Scripture."* Second, he never retracted his rejection of the *Apocrypha* . Third, he stated in his work *Against Rufinus* , 33 that he had "followed the judgment of the churches" on this matter. And his statement "I was not following my own personal views"

appears to refer to "the remarks that they [the enemies of Christianity] are wont to make against us." In any event, he nowhere retracted his statements against the *Apocrypha* . Finally, the fact that Jerome cited apocryphal books is no proof that he accepted them. This was a common practice by many church fathers. He had stated that the church reads them "for example and instruction of manners" but does not "apply them to establish any doctrine."

Rejection by scholars. Even noted Roman Catholic scholars during the Reformation period rejected the *Apocrypha* , such as Cardinal Cajetan, who opposed Luther. As already noted, he wrote a *Commentary on All the Authentic Historical Books of the Old Testament* (1532) which excluded the *Apocrypha* . If he believed they were authentic, they certainly would have been included in a book on "all the authentic" books of the Old Testament.

Luther, John Calvin, and other Reformers rejected the canonicity of the *Apocrypha* . Lutherans and Anglicans have used it only for ethical/devotional matters but do not consider it authoritative in matters of Faith. Reformed churches followed *The Westminster Confession of Faith* (1647) which states: "The Books commonly called Apocrypha, not being of divine inspiration, are not part of the canon of the Scriptures; and therefore are of no authority in the Church of God, nor to be any otherwise approved, or made use of, than any other human writings." In short, the Christian church (including Anglicans, Lutherans, and Protestants) has rejected the deuterocanonical books as part of the canon. They do so because they lack the primary determining factor of canonicity: The apocryphal books lack evidence that they were written by accredited prophets of God. Further evidence is found in the fact that the apocryphal books are never cited as authoritative in Scripture in the New Testament, it was never part of the Jewish canon, and the early church did not accept the *Apocrypha* as inspired.

The Mistake of Trent. The infallible pronouncement by the Council of Trent that the apocryphal books are part of the inspired Word of God reveals how fallible an allegedly infallible statement can be. This article has shown that the statement is historically unfounded. It was a polemical overreaction and an arbitrary decision involving a dogmatic exclusion.

Trent's pronouncement on the *Apocrypha* was part of a polemical action against Luther. Its sponsors deemed an inspired *Apocrypha* necessary to justify teaching Luther had attacked, particularly prayers for the dead. The text of 2 Maccabees 12:46 reads "Thus he made atonement for the dead that they might be freed from his sin." Since there was an agenda for accepting certain books, the decisions were rather arbitrary. Trent accepted 2 Maccabees, which supported prayers for the dead and rejected 2 Esdras (4 Esdras in the Catholic reckoning), which had a statement that would not support the practice (cf. 7:105).

The very history of this section of 2 (4) Esdras reveals the arbitrariness of the Trent decision. It was written in Aramaic by an unknown Jewish author (ca. A.D . 100) and circulated in Old Latin versions (ca. 200). The Latin Vulgate printed it as an appendix to the New Testament (ca. 400). It disappeared from Bibles until Protestants, beginning with Johann Haug (1726–42), began to print it in the *Apocrypha* based on Aramaic texts, since it was not in Latin manuscripts of the time. However, in 1874 a long section in Latin (seventy verses of chap. 7) was found by Robert Bently in a library in Amiens, France. Bruce Metzger noted, "It is probable that the lost section was deliberately cut out of an ancestor of most extant Latin Manuscripts, because of

dogmatic reasons, for the passage contains an emphatic denial of the value of prayers for the dead."

Some Catholics argue that this exclusion is not arbitrary because this writing was not part of earlier deuterocanonical lists, it was written after the time of Christ, it was relegated to an inferior position in the Vulgate, and it was only included among the *Apocrypha* by Protestants in the eighteenth century. On the other hand, 2 [4] Esdras was part of earlier lists of books not considered fully canonical. According to the Catholic criterion, the date of writing has nothing to do with whether it should be in the Jewish *Apocrypha* but whether it was used by early Christians; it was used, alongside the other apocryphal books. It should not have been rejected because it held an inferior position in the Vulgate. Jerome relegated all these writings to an inferior position. The reason it did not reappear in Latin until the eighteenth century is apparently because some Catholic Monk cut out the section against praying for the dead.

Prayers for the dead were much on the mind of the clerics at Trent, who convened their council just twenty-nine years after Luther posted his Ninety-Five Theses against the sale of indulgences. Doctrines of indulgences, purgatory, and prayers for the dead stand or fall together.

Doctrinal Arguments. Canonicity . The true and false views of what determines canonicity can be contrasted as follows (see Geisler, *General Introduction,* 221).

Incorrect View of Canon	**Correct View of Canon**
Church Determines Canon.	Church Discovers Canon.
Church Is Mother of Canon.	Church Is Child of Canon.
Church Is Magistrate of Canon.	Church Is Minister of Canon.
Church Regulates Canon.	Church Recognizes Canon.
Church Is Judge of Canon.	Church Is Witness of Canon.
Church Is Master of Canon.	Church Is Servant of Canon.

Catholic sources can be cited to support a doctrine of canonicity that looks very much like the "correct view." The problem is that Catholic apologists often equivocate on this issue. Peter Kreeft, for example, argued that the church must be infallible if the Bible is, since the effect cannot be greater than the cause and the church caused the canon. But if the church is regulated by the canon, not ruler over it, then the church is not the cause of the canon. Other defenders of Catholicism make the same mistake, giving lip-service on the one hand to the fact that the church only discovers the canon, yet on the other hand constructing an argument that makes the church the determiner of the canon. They neglect the fact that it is God who caused (by inspiration) the canonical Scriptures, not the church.

This misunderstanding is sometimes evident in the equivocal use of the word *witness* . When we speak of the church as being a "witness" to the canon after the time it was written we do not mean in the sense of being an eyewitness (i.e., relating first-hand evidence). The proper role of

the Christian church in discovering which books belong in the canon can be reduced to several precepts.

Only the people of God contemporary to the writing of the biblical books were actual eyewitnesses to the evidence. They alone were witnesses to the canon as it was developing. Only they can testify to the evidence of the propheticity of the biblical books, which is the determinative factor of canonicity.

The later church is not an evidential witness for the canon. It does not create or constitute evidence for the canon. It is only a discoverer and observer of the evidence that remains for the original confirmation of the propheticity of the canonical books. Assuming that it is evidence in and of itself is the mistake behind the Roman Catholic view.

Neither the earlier nor later church is the judge of the canon. The church is not the final arbiter for the criteria of what will be admitted as evidence. Only God can determine the criteria for our discovery of what is his Word. What is of God will have his “fingerprints” on it, and only God is the determiner of what his “fingerprints” are like.

Both the early and later church is more like a jury than a judge. The jury listens to the evidence, weighs the evidence, and renders a verdict in accord with the evidence. The contemporary (First-Century) church looked at the first-hand evidence for *propheticity* (such as miracles), and the historic church has reviewed the evidence for the *authenticity* of these prophetic books which were directly confirmed by God when they were written (*see* MIRACLES IN THE BIBLE).

In a certain sense, the church does “judge” the canon. It is called upon, as all juries are, to engage in an active sifting and weighing of the evidence as it renders a verdict. But this is not what the Roman Church practiced in its magisterial role in determining the canon. After all, this is what is meant by the “teaching magisterium” of the church. The Roman Catholic hierarchy is not merely ministerial; it is magisterial. It has a judi cial role, not just an administrative one. It is not just a jury looking at evidence; it is a judge determining what counts as evidence.

Therein lies the problem. In exercising its magisterial role, the Roman Catholic church chose the wrong course in rendering its decision about the *Apocrypha* . First, it chose to follow the wrong criterion, *Christian usage* rather than *propheticity* . Second, it used *second-hand evidence* of later writers rather than the only *first-hand evidence* for canonicity (divine confirmation of the author’s propheticity). Third, it did not use *immediate confirmation* by contemporaries but the *later statements* of people separated from the events by centuries. All of these mistakes arose out of a misconception of the very role of the church as judge rather than jury, as magistrate rather than minister, a sovereign over rather than servant of the canon. By contrast, the Protestant rejection of the *Apocrypha* was based on an understanding of the role of the first witnesses to propheticity and the church as custodian of that evidence for authenticity.

New Testament Apocrypha. The New Testament *Apocrypha* are disputed books that have been accepted by some into the canon of Scripture. Unlike the *Apocrypha* of the Old Testament, the New Testament *Apocrypha* has not caused a permanent or serious controversy, since the church universal agrees that only the twenty-seven books of the New Testament are inspired (

see BIBLE, EVIDENCE FOR). Books of the *Apocrypha* have been enjoyed for their devotional value, unlike the more spurious (and usually heretical) books of the New Testament pseudepigrapha. Pseudepigraphal writings are sometimes called " *Apocrypha* ," but they have been universally rejected by all traditions of the church.

The New Testament *Apocrypha* includes *The Epistle of Pseudo-Barnabas* (ca. A.D . 70–79), *The Epistle to the Corinthians* (ca. 96), *The Gospel According to the Hebrews* (ca. 65–100), *The Epistle of Polycarp to the Philippians* (ca. 108), *Didache* or *The Teaching of the Twelve* (ca. 100–20), *The Seven Epistles of Ignatius* (ca. 110), *Ancient Homily* or *The Second Epistle of Clement* (ca. 120–140), *The Shepherd of Hermas* (ca. 115–40), *The Apocalypse of Peter* (ca. 150), and *The Epistle to the Laodiceans* (fourth century [?]).

Reasons for Rejecting. None of the New Testament *Apocrypha* have experienced more than a local or temporary acceptance. Most have enjoyed at best a quasi-canonical status, merely appended to various manuscripts or listed in tables of contents. No major canon or church council accepted them as part of the inspired Word of God. Where they were accepted into the canon by groups of Christians it was because they were believed wrongly to have been written by an apostle or referred to by an inspired book (for example, Col. 4:16). Once this was known to be false they were rejected as canonical.

Conclusion. Differences over the Old Testament *Apocrypha* play a crucial role in Roman Catholic and Protestant differences over such teachings as purgatory and prayers for the dead. There is no evidence that the *Apocryphal* books are inspired and, therefore, should be part of the canon of inspired Scripture. They do not claim to be inspired, nor is inspiration credited to them by the Jewish community that produced them. They are never quoted as Scripture in the New Testament. Many early fathers, including Jerome, categorically rejected them. Adding them to the Bible with an infallible decree at the Council of Trent shows evidence of being a dogmatic and polemical pronouncement calculated to bolster support for doctrines that do not find clear support in any of the canonical books.

In view of the strong evidence against the *Apocrypha* , the decision by the Roman Catholic and Orthodox churches to pronounce them canonical is both unfounded and rejected by Protestants. It is a serious error to admit nonrevelational material to corrupt the written revelation of God and undermine the divine authority of Scripture (Ramm, 65).

Apologetics, Argument of. There are many types of apologetics (*see* APOLOGETICS, TYPES OF). But according to classical apologetics, there are certain logical steps in the overall argument in defense of the Christian faith. Since each step is treated in detail in other articles, only the logic of the argument will be sketched here.

The Steps. The overall argument in defense of the Christian Faith can be put in twelve basic propositions. They flow logically one from another:

1. Truth about reality is knowable (*see* TRUTH, NATURE OF ; AGNOSTICISM).

2. Opposites cannot both be true (*see* FIRST PRINCIPLES ; LOGIC).

3. The theistic (*see* THEISM) God exists (*see* GOD, EVIDENCE FOR).

4. Miracles are possible (*see* MIRACLE).

5. Miracles performed in connection with a truth claim are acts of God to confirm the truth of God through a messenger of God (*see* MIRACLES AS CONFIRMATION OF TRUTH ; MIRACLES, APOLOGETIC VALUE OF).

6. The New Testament documents are reliable (*see* NEW TESTAMENT, DOCUMENTS, MANUSCRIPTS ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS).

7. As witnessed in the New Testament, Jesus claimed to be God (*see* CHRIST, DEITY OF).

8. Jesus’ claim to divinity was proven by an unique convergence of miracles (*see* MIRACLES IN THE BIBLE).

9. Therefore, Jesus was God in human flesh.

10. Whatever Jesus (who is God) affirmed as true, is true (*see* GOD, NATURE OF).

11. Jesus affirmed that the Bible is the Word of God (*see* BIBLE, EVIDENCE FOR ; BIBLE, JESUS' VIEW OF).

12. Therefore, it is true that the Bible is the Word of God and whatever is opposed to any biblical truth is false (*see* WORLD RELIGIONS AND CHRISTIANITY ; PLURALISM, RELIGIOUS).

The Application. If a theistic God exists and miracles are possible and Jesus is the Son of God and the Bible is the Word of God, then it follows that orthodox Christianity is true. All other essential orthodox doctrines, such as the Trinity, Christ's atonement for sin, the physical resurrection, and Christ's second coming, are taught in the Bible. Since all these conditions are supported by good evidence, it follows that there is good evidence for concluding that orthodox Christianity is true.

And since mutually exclusive propositions cannot both be true (*see* LOGIC), then all opposing world religions are false religions (*see* WORLD RELIGIONS AND CHRISTIANITY). That is, Buddhism, Hinduism, Islam, and other religions are false insofar as they oppose the teachings of Christianity (*see* articles related to ISLAM ; MONISM ; ZEN BUDDHISM). Therefore, only Christianity is the true religion (*see* PLURALISM).

Apologetics, Classical. ***See*** **CLASSICAL APOLOGETICS .**

Apologetics, Experiential. ***See*** **EXPERIENTIAL APOLOGETICS .**

Apologetics, Historical. ***See*** **HISTORICAL APOLOGETICS .**

Apologetics, Need for. *Apologetics* is the discipline that deals with a rational defense of Christian faith. It comes from the Greek word *apologia* which means to give a reason or defense. In spite of the objections to doing apologetics in this sense from fideists and some presuppositionalists (*see* FIDEISM ; PRESUPPOSITIONAL APOLOGETICS), there are important reasons to participate in the work of apologetics.

God Commands It. The most important reason to do apologetics is that God told us to do so. The classic statement is 1 Peter 3:15 , which says, "But in your hearts set apart Christ as Lord. Always be prepared to give an answer to everyone who asks you to give the reason for the hope that you have. But do this with gentleness and respect." This verse tells us to be ready. We may never run across someone who asks tough questions about our faith, but we should still be ready to respond if someone does. Being ready is not just a matter of having the right information available, it is also an attitude of readiness and eagerness to share the truth of what we believe. We are to give a reason to those who ask the questions. It is not expected that everyone needs pre-evangelism, but when they do need it, we must be able and willing to give them an answer.

This command also links the work of pre-evangelism with Christ's place as Lord in our hearts. If he is really Lord, then we should be obedient to him as "we demolish arguments and every pretension that sets itself up against the knowledge of God, and we take captive every thought to make it obedient to Christ" (2 Cor. 10:5). This means we should confront issues in our own minds and in the expressed thoughts of others that prevent us and them from knowing God. That is what apologetics is all about.

In Philippians 1:7 Paul speaks of his mission as "defending and confirming the gospel." He adds in verse 16 , "I am put here for the defense of the gospel." This implies that the defender of the gospel is out where he or she can encounter others and defend truth.

Jude 3 adds, "Dear friends, although I was very eager to write to you about the salvation we share, I felt I had to write and *urge you to contend for the faith* that was once for all entrusted to the saints." The people Jude addressed had been assaulted by false teachers, and he needed to encourage them to protect (literally agonize for) the faith as it had been revealed through Christ. Jude makes a significant statement about our attitude in verse 22 , that we "have mercy on some, who are doubting."

Titus 1:9 makes knowledge of Christian evidences a requirement for church leadership. An elder in the church should "hold firmly to the trustworthy message as it has been taught, so that he can encourage others by sound doctrine and *refute those who oppose it* ." Paul also gives us an indication of our attitude in this work in 2 Timothy 2:24–25 : "And the Lord's servant must not quarrel; instead, he must be kind to everyone, able to teach, not resentful. *Those who oppose him he must gently instruct* , in the hope that God will grant them repentance leading them to a knowledge of the truth." Anyone attempting to answer the questions of unbelievers will surely be wronged and be tempted to lose patience, but our ultimate goal is that they might come to a knowledge of the truth that Jesus has died for their sins. With so important a task at hand, we must not neglect obedience to this command.

Reason Demands It. God created humans to reason as part of his image (Gen. 1:27 ; cf. Col. 3:10). Indeed, it is by reasoning that humans are distinguished from "brute beasts" (Jude 10). God calls upon his people to use reason (Isa. 1:18) to discern truth from error (1 John 4:6) and right from wrong (Heb. 5:14). A fundamental principle of reason is that it should give sufficient grounds for belief. An unjustified belief is just that—unjustified (*see* FAITH AND REASON).

Socrates said, "The unexamined life is not worth living." He surely would have been willing to add that the unexamined belief is not worth believing. Therefore, it is incumbent upon Christians to give a reason for their hope. This is part of the great command to love God with all our mind, as well as our heart and soul (Matt. 22:36–37).

The World Needs It. People rightly refuse to believe without evidence. Since God created humans as rational beings, he expects them to live rationally, to look before they leap. This does not mean there is no room for faith. But God wants us to take a step of faith in the light of evidence, rather than to leap in the dark.

Evidence of truth should precede faith. No rational person steps in a elevator without some reason to believe it will hold him up. No reasonable person gets on an airplane that is missing part of one wing and smells of smoke in the cabin. People deal in two dimensions of belief: *belief that* and *belief in* . *Belief that* gives the evidence and rational basis for confidence needed to establish *belief in* . Once *belief that* is established, one can place faith *in* it. Thus, the rational person wants evidence that God exists before he places his faith in God. Rational unbelievers want evidence that Jesus is the Son of God before they place their trust in him (*see* CLASSICAL APOLOGETICS).

Objections to Apologetics. The most frequent opposition to apologetics is raised by mystics and other experientialists (*see* EXPERIENTIAL APOLOGETICS). Fideists (*see* FIDEISM) and some presuppositionalists also raise objections of two basic kinds: biblical and from outside Scripture. An apologist for apologetics can see in the Scripture texts usually quoted against the work some misunderstandings or misapplications, which do not really show apologetics to be unnecessary.

Objections to Apologetics from the Bible. The Bible does not need to be defended. One objection often made is that the Bible does not need to be defended; it simply needs to be expounded. "The Word of God is alive and powerful" (Heb. 4:12). It is said that the Bible is like a lion; it does not need to be defended but simply let loose. A lion can defend itself.

This begs the question as to whether the Bible is the Word of God. Of course, God's Word is ultimate and speaks for itself. But how do we know the Bible, as opposed to the *Qur'an* or the *Book of Mormon* , is the Word of God? One must appeal to evidence to determine this. No Christian would accept a Muslim's statement that "the *Qur'an* is alive and powerful and sharper than a two-edged sword." We would demand evidence (*see* BIBLE, EVIDENCE FOR).

The analogy of the lion is misleading. A roar of a lion "speaks for itself" with authority only because we know from previous evidence what a lion can do. Without tales of woe about a lion's ferocity, its roar would not have authority. Likewise, without evidence to establish one's claim to authority, there is no good reason to accept that authority.

God can't be known by human reason. The apostle Paul wrote, "the world by wisdom knew not God" (1 Cor. 1:21 KJV). This cannot mean that there is no evidence for God's existence, however, since Paul declared in Romans that the evidence for God's existence is so "plain" as to render "without excuse" one who has never heard the gospel (Rom. 1:19–20). Further, the context in 1 Corinthians is not God's existence but his plan of salvation through the cross. This cannot be known by mere human reason, but only by divine revelation. It is "foolish" to the depraved human mind. Finally, in this very book of 1 Corinthians Paul gives his greatest apologetic evidence for the Christian Faith—the eyewitnesses of the resurrection of Christ which his companion Luke called "many infallible proofs" (Acts 1:3 NKJV). So his reference to the world by wisdom not knowing God is not a reference to the inability of human beings to know God through the evidence he has revealed in creation (Rom. 1:19–20) and conscience (Rom. 2:12–15). Rather, it is a reference to human depravity and foolish rejection of the message of the

---

nkjv New King James Version

cross. Indeed, even though humankind knows clearly through human reason that God exists, nevertheless, he "suppresses" or "holds down" this truth in unrighteousness (Rom. 1:18).

Natural humanity can't understand. Paul insisted that "the man without the Spirit does not accept the things that come from the Spirit of God" (1 Cor. 2:14). What use, then, is apologetics? In response to this argument against apolo getics, it should be observed that Paul does not say that natural persons cannot *perceive* truth about God, but that they do not *receive* (Gk. δεκομαι, "welcome") it. Paul emphatically declares that the basic truths about God are "clearly seen" (Rom. 1:20). The problem is not that unbelievers are not aware of God's existence. They do not want to *accept* him because of the moral consequences this would have on their sinful lives. First Corinthians 2:14 (NKJV) says they do not "know" *(ginosko)* which can mean "to know by experience." They know God in their mind (Rom. 1:19–20), but they have not accepted him in their heart (Rom. 1:18). "The fool says *in his heart,* There is no God" (Ps. 14:1).

Without faith one cannot please God. Hebrews 11:6 insists that "without faith it is impossible to please God." This would seem to argue that asking for reasons, rather than simply believing, displeases God. But, as already noted, God does call upon us to use our reason (1 Peter 3:15). Indeed, he has given "clear" (Rom. 1:20) and "infallible proofs" (Acts 1:3 NKJV). Second, this text in Hebrews does not exclude "evidence" but actually implies it. Faith is said to be "the evidence" of things we do not see (Heb. 11:1 NKJV). Just as the evidence that a witness is reliable justifies my believing testimony of what he or she saw and I did not, even so, our faith in "things not seen" (Heb. 11:1 NKJV) is justified by the evidence that God does exist. The latter evidence is "clearly seen, being understood from what has been made" (Rom. 1:20).

Jesus refused to give signs for evil men. Jesus rebuked people who sought signs; hence, we should be content simply to believe. Indeed, Jesus did on occasion rebuke sign seekers. He said, "A wicked and adulterous generation asks for a miraculous sign!" However, this does not mean that Jesus did not desire people to look at the evidence before they believed. Even in this passage Jesus went on to offer the miracle of his resurrection as a sign of who he was, saying no signs would be given, "except the sign of the prophet Jonah" (Matt. 12:39–40 ; cf. Luke 16:31 ; *see* MIRACLES IN THE BIBLE).

Jesus offered his miracles as a proof of his messianic office (*see* MIRACLE ; MIRACLES, APOLOGETIC VALUE OF). When John the Baptist inquired whether he was the Christ, Jesus offered miracles as proof, saying: "Go back and report to John what you hear and see: The blind receive sight, the lame walk, those who have leprosy are cured, the deaf hear, the dead are raised, and the good news is preached to the poor" (Matt. 11:4–5). And when replying to the Scribes, he said: " 'But that you may know that the Son of Man has authority on earth to forgive sins.' He said to the paralytic, 'I tell you, get up, take your mat and go home' " (Mark 2:10–11).

Jesus was opposed to entertaining people by miracles. He refused to perform a miracle to satisfy King Herod's curiosity (Luke 23:8). On other occasions he did not do miracles because of their unbelief (Matt. 13:58), not wishing to "cast pearls before swine" (Matt. 7:6). The purpose of miracles was apologetic, viz., to confirm his message (cf. Exod. 4:1–9 ; John 3:2 ; Heb. 2:3–4). And this he did in great abundance for "Jesus of Nazareth was a man accredited by

God to you by miracles, wonders and signs, which God did among you through him” (Acts 2:22).

Do not answer a fool according to his folly. It is argued that atheism is folly (Ps. 14:1), and the Bible says we should not answer a fool. We agree with Proverbs 26:4 , but we also concur with Proverbs 26:5 which says, “Answer a fool according to his folly, or he will be wise in his own eyes.” Either the Book of Proverbs was put together by a mad man, or the lesson of the passage is that we have to be careful in how and when we choose to confront false ideas. Don’t just argue with someone who will not listen to reason, or you will be just as foolish as he is. But if you are able to show a person the error of his thinking in a way that he can understand, perhaps he will seek God’s wisdom rather than relying on his own.

Apologetics is not used in the Bible. If apologetics is biblical, then why don’t we see it done in the Bible? By and large the Bible was not written for unbelievers but for believers. Since they already believe in God, Christ, etc., there is no need to prove these truths to them. Apologetics is primarily for those who do not believe, so that they may have a reason to believe.

But apologetics *is used* in the Bible. Even those familiar with it don’t recognize it, since they don’t realize that what they are looking at is really apologetics. Moses did apologetics. The first chapter of Genesis clearly confronts the mythical accounts of creation known in his day. His miracles in Egypt were an apologetic that God was speaking through him (Exod. 4:1–9). Elijah did apologetics on Mount Carmel when he proved miraculously that Yahweh, not Baal, is the true God (1 Kings 18). Jesus constantly engaged in apologetics, proving by signs and wonders that he was the Son of God (John 3:2 ; Acts 2:22). The apostle Paul did apologetics at Lystra when he gave evidence from nature that the supreme God of the universe existed and that idolatry was wrong (Acts 14:6–20).

The classic case of apologetics in the New Testament is Acts 17 where Paul reasoned with the philosophers on Mars Hill. He not only presented evidence from nature that God existed but also from history that Christ was the Son of God. He cited pagan thinkers in support of his arguments. Apologetics was done in the Bible whenever the truth claims of Judaism or Christianity came in conflict with unbelief.

Objections to Apologetics from Outside the Bible. These objections against apologetics arise from assumptions of its irrationality, inadequacy, or fruitlessness. Many come from a rationalistic or skeptical point of view (*see* AGNOSTICISM). Others are fideistic (*see* FIDEISM).

Logic can’t tell us anything about God. This objection is self-defeating. It says that logic doesn’t apply to this issue. But the statement itself is a statement claiming logical thinking about God. It appeals to logic because it claims to be true while its opposite is false. That claim, called the law of noncontradiction (*see* FIRST PRINCIPLES ; LOGIC), is the basis for all logic. A statement that logic doesn’t apply to God applies logic to God. Logic is inescapable. You can’t deny it with your words unless you affirm it with the very same words. It is undeniable.

Logic in itself can tell us some things about God—at least hypothetically. For instance, if God exists, then it is false that he does not exist. And if God is a Necessary Being, then he

cannot not exist. Further, if God is infinite and we are finite, then we are not God. Also, if God is truth, he cannot lie (Heb. 6:18). For it is contradictory to his nature to lie. Likewise, logic informs us that if God is omnipotent, then he cannot make a stone so heavy that he cannot lift it. For whatever he can make, he can lift.

Logic cannot "prove" the existence of anything. True, mere logic shows only what is possible or impossible. We know by logic, for example, that square circles are impossible. We know also that something can exist, since no contradiction is involved in claiming something exists. But we cannot prove by mere logic that something actually exists. However, we know that something actually exists in another way. We know it intuitively and undeniably. For I cannot deny my existence unless I exist to deny it. The statement "I don't exist" is self-defeating, since I have to exist in order to be able to make the statement. So, while mere logic cannot prove the existence of anything, we have undeniable knowledge that something exists. And once we know that something exists (e.g., I do), then logic can help us determine whether it is finite or infinite. And if it is finite, logic can help us determine whether there is also an infinite being (*see* GOD, EVIDENCE FOR).

Reason is useless in religious matters. Fideism argues that reason is of no use in matters that deal with God. One must simply believe. Faith, not reason, is what God requires (Heb. 11:6).

But even in Scripture God calls on us to use reason (Isa. 1:18 ; Matt. 22:36–37 ; 1 Peter 3:15). God is a rational being, and he created us to be rational beings. God would not insult the reason he gave us by asking us to ignore it in such important matters as our beliefs about him.

Fideism is self-defeating. Either it has a reason that we should not reason about God or it does not. If it does, then it uses reason to say we should not use reason. If fideism has no reason for not using reason, then it is without reason for its position, in which case there is no reason why one should accept fideism.

To claim reason is just optional for a fideist will not suffice. For either the fideist offers some criteria for when to be reasonable and when not, or else this timing is simply arbitrary. If a fideist offers rational criteria for when we should be rational, then he does have a rational basis for his view, in which case he is not really a fideist after all.

Reason is not the kind of thing in which a rational creature can choose not to participate. By virtue of being rational by nature one must be part of rational discourse. And rational discourse demands that one follow the laws of reason. One such principle is that one should have a sufficient reason for his beliefs. But if one must have a sufficient reason, then fideism is wrong, since it claims that one need not have a sufficient reason for what he believes.

You can't prove God by reason. According to this objection, the existence of God cannot be proven by human reason. The answer depends on what is meant by "prove." If "prove" means to demonstrate with mathematical certainty, then most theists would agree that God's existence cannot be proven. This is because mathematical certainty deals only with the abstract, and the existence of God (or anything else) is a matter of the concrete. Further, mathematical certainty is based on axioms or postulates that must be assumed in order to get a necessary conclusion. But if

God’s existence must be assumed to be proven, then the conclusion that God exists is only based on the assumption that he exists, in which case it is not really a proof at all.

Another way to make the point is to note that mathematical certainty is deductive in nature. It argues from given premises. But one cannot validly conclude what is not already implied in the premise(s). In this case one would have to assume God exists in the premise in order to validly infer this in the conclusion. But this begs the question.

Likewise, if by “prove” one means to reach a logically necessary conclusion, then God’s existence cannot be proven either, unless the Ontological Argument is valid. But most thinkers hold that it is not. The reason one cannot prove God by logical necessity is that formal logic, like mathematics, deals with the abstract. Unless one begins with something that exists, he can never get out of the purely theoretical realm. *If* there is a triangle, we can know logically and with absolute certainty that it must have three sides and three corners. But there may not be any triangles in existence anywhere except in someone’s mind. Likewise, unless we know something exists, then logic cannot help us to know whether God exists. And logic by itself cannot tell us whether anything exists.

If by “prove,” however, we mean “give adequate evidence for” or “provide good reasons for,” then it would seem to follow that one can prove the existence of God (*see* GOD, EVIDENCE FOR ; COSMOLOGICAL ARGUMENT) and the truth of Christianity.

No one is converted through apologetics. The charge is made that no one ever comes to Christ through apologetics. If this implies that the Holy Spirit (*see* HOLY SPIRIT, ROLE IN APOLOGETICS) never uses apologetic evidence to bring people to Christ, this is clearly false. C. S. Lewis noted that “nearly everyone I know who has embraced Christianity in adult life has been influenced by what seemed to him to be at least a probable argument for Theism” (Lewis, 173). Lewis is an example of an atheist who came to Christ under the influence of apologetics. The skeptic Frank Morrison was converted while attempting to write a book refuting the evidence for the resurrection of Christ (see Morrison). Augustine tells in his confessions how he was led toward Christianity by hearing a Christian debate an unbeliever. Harvard Law School professor Simon Greenleaf was led to accept the authenticity of the Gospels by applying the rules of legal evidence to the New Testament. God has used evidence and reason in some way to reach virtually all adults who come to Christ.

Apologetics, Types of. There are differing kinds of apologetics systems, and no universally-acknowledged way to categorize them. Divergent approaches seem to be determined by the perspective of the one categorizing them. Nonetheless, there are some generally understood terms one can employ to view in a meaningful way the distinctives among more popular approaches.

Categorizing Systems. It is tempting to make logically exhaustive categories of apologetic systems. Two problems preclude this. First, the category may seem to work but the corresponding category that would logically oppose it is too broad. Second, divergent systems often are lumped into one category. For example, if one uses the categories of presuppositionalism and nonpresuppositionalism, not only are there differing kinds of presuppositionalism but significant differences among nonpresuppositional systems. If one uses evidential and nonevidential the same result occurs; classical and historical apologetics and even some forms of presuppositionalism (e.g., Systematic Consistency) must be mated in the same category. The same is true if one uses classical apologetics and nonclassical apologetics as two broad categories.

Types of Systems. Despite the fact that the categories are not logically exhaustive and overlap, it seems best simply to use commonly understood titles and state the differences and similarities. Evaluation of each can be found in other articles on individual systems and their key representatives.

Three points help to understand each type: proponents will be listed; some chief characteristics will be described, and comments on overlap and/or contrast with other approaches will be made.

Classical Apologetics. Characteristics. Classical apologetics stresses arguments for the existence of God (*see* GOD, EVIDENCE FOR) as well as the historical evidence supporting the truth of Christianity. Classical apologetics is characterized by two basic steps: theistic and evidential arguments.

Theistic arguments are used to establish the truth of theism apart from an appeal to special revelation (e.g., the Bible). Classical apologetics accepts the validity of traditional theistic proofs for God, though some stress one over another. And some reject certain traditional proofs as invalid, often the ontological argument. But most accept some form of the cosmological argument and the teleological argument. Many also believe the moral argument is valid.

This first step of classical apologetics also involves drawing the logical inference that if a theistic God exists, miracles are possible; indeed, the greatest miracle of all, creation, is possible. The credibility of miracles (*see* MIRACLE) is essential to the next step in classical apologetics—the historical one—but it flows logically from the first step.

Second, confirmed historical evidence substantiates the truth. The New Testament documents are shown to be historically reliable (*see* NEW TESTAMENT DOCUMENTS, MANUSCRIPTS ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT, NON-CHRISTIAN SOURCES). The apologist also shows that these documents reveal that Jesus claimed to be, and was miraculously proven to be, the Son of God (*see* CHRIST, DEITY OF). From this it is often argued that Jesus confirmed the Old Testament to be the Word of God and promised the same for the New Testament (*see* BIBLE, JESUS' VIEW OF).

Proponents. Classical apologetics was practiced by Augustine, Anselm, and Thomas Aquinas. Modern classical apologists include Winfried Corduan, William Lane Craig, Norman L. Geisler, John Gerstner, Stuart Hackett, Peter Kreeft, C. S. Lewis, J. P. Moreland, John Locke, William Paley, R. C. Sproul, and B. B. Warfield.

Comparison with other approaches. Sometimes classical apologists begin this second step by showing that the Bible has been proven to be the Word of God. In doing so they often use the same basic evidence used by evidential apologetics. This includes miracles (*see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE), fulfilled prophecy (*see* PROPHECY, AS PROOF OF BIBLE), the unity of the Bible, and other indications of its supernatural origin (*see* BIBLE, EVIDENCE FOR).

The difference between the classical apologists and the evidentialists on the use of historical evidence is that the classical see the need to first establish that this is a theistic universe in order to establish the possibility of and identity of miracles. Evidentialists do not see theism as a logically necessary precondition of historical apologetics. The basic argument of the classical apologists is that it makes no sense to speak about the resurrection as an act of God unless, as a logical prerequisite, it is first established that there is a God who can act. Likewise, the Bible

cannot be the Word of God unless there is a God who can speak. And Christ cannot be shown to be the Son of God except on the logically prior premise there is a God who can have a Son.

Evidential Apologetics. Evidential apologetics stresses the need for evidence in support of the Christian truth claims. The evidence can be rational, historical, archaeological, and even experiential. Since it is so broad, it understandably overlaps with other types of apologetics.

Some characteristics of evidential apologetics. Since evidentialists encompass a large and diverse category, their characteristics will be delineated according to type. Evidentialists often use *rational evidence* (e.g., proofs for God) in defense of Christianity. As such, they overlap with classical apologetics. However, for an evidentialist this is just one piece of evidence. Also in contrast to classical apologists, evidentialists do not hold that rational evidence is either necessary (since it is only one piece) or logically prior to the other evidence.

In the use of *historical evidence* there is again an overlap with evidential and historical apologetics. Evidentialists do not rest their whole case on historical evidence. They are more eclectic, interweaving evidence from various fields. Evidentialists operate as attorneys who combine evidences into an overall brief in defense of their position, trusting that the combined weight will present a persuasive case.

Many evidentialists focus on *archeological evidence* in support of the Bible. They stress that both the Old and the New Testaments (*see* ARCHAEOLOGY, OLD TESTAMENT ; ARCHAEOLOGY, NEW TESTAMENT) have been substantiated by thousands of discoveries. This, they believe, gives reason to accept the divine authority of the Scriptures. Other types of apologetics appeal to archaeological evidence, who use the evidence in a different way.

Some evidentialists appeal to *experiential evidence* in support of Christianity, most often from changed lives. The testimony of those converted to Christianity is offered as evidence of the truth of Christianity. How else, it is argued, can one explain the dramatic, transforming, enduring, and often radical changes? The conversion of Saul of Tarsus (Acts 9) is a classic case in point.

Prophetic evidence (*see* PROPHECY AS PROOF OF THE BIBLE) is often offered to substantiate Christianity. It is argued that only divine origin accounts for the numerous, precise biblical predictions that have been fulfilled. For the evidentialists prophetic and other evidences do not comprise a specific step in an overall logical order (as it is in classical apologetics). Rather, it is the sum total of all the interlocking evidences that offer high probability of the truth of Christianity.

Some proponents of evidential apologetics. While evidential apologetics enjoys wide popular support, it offers few clear proponents who do not fit into other categories as well. It seems best, then, to characterize evidentialism by the various kinds of evidence stressed in the particular apologetic approach. A noted evidentialist approach is offered by William Paley in his *Evidences for Christianity* , although since Paley offered proofs for God first, he can be listed as a classical apologist. Bernard Ramm's widely used *Protestant Christian Evidences* is another example of

evidential apologetics, though he seemed to move way from this in his later writings. The most widely distributed of evidentialist books is Josh McDowell's *Evidence That Demands a Verdict* .

Some comparisons with other approaches. While the use of evidence is not unique to evidential apologetics, the manner in which it is used is unique. Both classical apologists and some evidentialists use theistic arguments. However, for the evidentialists, establishing the existence of God is not a logically prior and necessary step. It is simply one strand in the overall web of evidence that supports Christianity.

Unlike historical apologetics, the pure evidentialist does not appeal to historical evidence as the sole basis for his case. For the evidentialists there are certain events, such as, the healings of Jesus, raisings from the dead, and fulfilled prophecy, which in themselves, apart from prior presupposition or proof that God exists, substantiate the truth of Christianity. Since the facts "speak for themselves" there is no need, according to evidentialists, to provide an independent reason for believing in God's existence. By contrast, both classical and presuppositional apologetics insist that historical events can only be interpreted in the light of the framework of the worldview of which they are a part.

Experiential Apologetics. Some Christians appeal primarily, if not exclusively, to experience as evidence for Christian faith. Some appeal to religious experience in general. Others to special religious experiences. Within this second category are some who focus on mystical experiences and others who identify what they believe are particularly supernatural conversion experiences. There are obviously some significant differences under the broad experiential umbrella.

Types of experience. The value of general, unspecific religious experience is of limited value for a distinctly Christian apologetic. At best, *general experience* establishes credibility for belief in a supreme being of some kind (not necessarily a theistic God). Nonetheless, proofs from religious experience (*see* GOD, EXPERIENTIAL APOLOGETICS FOR) have been offered by Christians and others. General religious experiences are available to all.

Special religious experiences are more limited. The mystic, for example, claims a special experience of God. *Mystical experiences* (*see* MYSTICISM) differ from general religious experiences in that they claim to be direct and unmediated contacts with God. Christian mystics claim such experiences are self-evidently true.

Although so-called *existential experience* encounters with God (*see* KIERKEGAARD, SOREN) are not the same as mystical experiences, proponents claim that they too are self-authenticating. One is grasped by God in a nonrational, direct encounter that is more basic and real than a sense experience. Although not all would call such experiences apologetic evidence, they do serve, nonetheless, to vindicate Christianity among those who have them. Those who appeal to such experiences reject apologetic approaches in the traditional sense. They spurn rational arguments or factual evidence in favor of what they believe to be a self-verifying experience.

Some proponents of experiential apologetics. Among Christian mystics the name Meister Eckart stands out. Existentialists include Soren Kierkegaard , Rudolph Bultmann , and Karl

Barth (*see also* FIDEISM). Others of a more general experiential nature include Friedrich Schleiermacher , and Paul Tillich.

Some comparisons with other approaches. Experiential arguments for God's existence are sometimes used by classical apologists and evidentialists. The difference is that, for the experiential apologist, the *only* kind of evidence is nonrational, mystical, and existential. In other apologetic approaches, the argument from religious experience is just one kind of evidence among many.

Presuppositional apologists, especially of the revelational variety, reject purely experiential arguments as unverifiable and of subjective interpretation.

Historical Apologetics . Historical apologetics stresses historical evidence as the basis for demonstrating the truth of Christianity. These apologists believe that the truth of Christianity, including the existence of God, can be proven from the historical evidence alone. In one sense historical apologetics belongs to the broad class of evidential apologetics, but it differs in that it stresses the importance, if not necessity, of beginning with the historical record for the truth of Christianity.

Some proponents of historical apologetics. Christianity is a historical religion, so it is understandable that it would have a historical emphasis from the very beginning. The earliest apologists, including Tertullian , Justin Martyr, Clement of Alexandria, and Origen , defended the historicity of Christianity.

Since these early apologists were often unsystematic in their writing, it is difficult to tell whether they fall into the category of historical apologetics. Some did offer theistic arguments, but they probably did not all see this as a logically necessary first step in an overall apologetic. Contemporary historical apologists include John Warwick Montgomery and Gary Habermas.

Some comparisons with other approaches. Historical apologetics is distinct from evidentialism in its narrow focus, using only one kind of evidence rather than many. It also offers a sequential argument. The historical apologist only begins with historical evidence as a basic premise. With historicity established, the apologist argues that certain claims are made in Scripture from which it can be inferred that God exists, the Bible is the Word of God, and Christ is the unique Son of God. The pure evidentialist has no such logical order that begins with historical evidence alone. Rather, the evidentialist employs a whole nest of evidence from which to conclude that Christianity is true.

Both historical and classical apologetics use historical evidence. But the classical apologist believes that historical evidence is only a second step, logically preceded by theistic arguments which establish the necessary worldview evidence by which alone one can properly interpret the historical evidence.

Presuppositional Apologetics. Presuppositional apologetics affirms that one must defend Christianity from the foundation of certain basic presuppositions. Usually, a presuppositionalist

presupposes the basic truth of Christianity and then proceeds to show (in any of several ways) that Christianity alone is true.

According to *revelational presuppositionalism* , one must posit that the Triune God has revealed himself in Holy Scriptures before it is possible to make any sense out of the universe, life, language, or history. This is sometimes viewed as a transcendental argument. Revelational presuppositionalists include Cornelius Van Til, Greg Bahnsen, and John Frame.

The *rational presuppositionalist* also begins with the Trinity revealed in the written Word of God. But the test for whether this is true or not is simply the law of noncontradiction (*see* FIRST PRINCIPLES). Christianity demonstrates its own truth in that, of all religions, it alone is internally consistent. Gordon Clark and Carl F. H. Henry are rational presuppositionalists.

Like the rational presuppositionalists, *systematic consistency* presuppositionalists believe a system must be rationally consistent. In addition, it must comprehensively take into account all facts. It must also be existentially relevant in that it meets life's basic needs. Only Christianity, they believe, offers such a consistent system. Edward John Carnell and Gordon Lewis hold this view.

Francis Schaeffer 's apologetic approach has occasionally been listed as a separate form of presuppositionalism, a kind of *practical presuppositionalism* . Schaeffer believes that false systems are unlivable, that only Christian truth is livable.

Some comparisons with other Approaches. Presuppositional apologists reject the validity of theistic proofs. They accept the critiques of theistic argumentation by David Hume and Kant (*see* GOD, OBJECTIONS TO PROOFS FOR). Or they believe there is no meaning to "facts" apart from the Christian worldview.

Conclusion. Proponents of one type of apologetic system provide critiques of opposing systems. So both evaluation and sources are listed under each type of apologetic discussed above. Only books that treat apologetic systems in general are listed below in the "Sources" section.

Apollonius of Tyana. Apollonius of Tyana (d. A.D . 98) is sometimes presented by critics of Christianity as an example of someone who rivaled Christ in his claim to be the Son of God and had the ability to do miracles to support his claim. Philostratus, in the *Life of Apollonius,* records

post-death miracle stories, including appearances and deification (apotheosis). Some critics use these stories to deny the uniqueness of the life, death, and resurrection of Christ.

Evaluating the Claims. The claims for Apollonius fall far short of those of Christ (*see* CHRIST, DEITY OF). Philostratus's biography of Apollonius ends with his death. Jesus' biographies do not (see Matthew 28 ; Mark 16 ; Luke 24 ; John 20–21). His ends in the resurrection (*see* RESURRECTION, EVIDENCE FOR). There is nothing supernatural in Apollonius's biography, either as to claims of deity or miracles done to prove such a claim. The postresurrection miracle stories are not even part of his biography. They are simply called "stories" by his biographer, Philostratus. In fact, they are later legends.

The book by Philostratus is the only extant source of his life. Hence, the authenticity of this account is unconfirmed. In Jesus' case we have many multiple contemporary accounts of his life, death, and resurrection (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF).

The alleged source for these stories, Damis, is most likely a nonexistent person used as a literary device. James Fergeson states: "Philostratus professed to have discovered an old document by one Damis as his source, but such discoveries are the stock-in-trade of historical romances, and we can place no credence upon Damis" (Fergeson, 182). Damis is alleged to have come from a city, Nineveh, that did not even exist during the time of his life. Throughout, there is no evidence for a factual basis of the stories.

By contrast, the Gospel accounts of Jesus offer various historically verifiable evidences of their accuracy. The record is filled, for example, with historical persons, among them the Herodian kings of the time, Pontius Pilate, Tiberius and Augustus, Philip Tetrarch of Iturea. Detailed information can be verified for Judea, Galilee, Samaria, Syria, Bethlehem, Nazareth, and Jerusalem (cf. Luke 1:26 ; 2:4 ; 3:1), as can times (Matt. 14:1–7 ; Luke 2:1–2 ; 3:1–2). The disciples of Jesus who wrote of him were real historical persons.

The style of writing used by Philostratus was a popular literary form of the day called "romance" or "romance fiction." It is not to be taken literally or historically. The plot unfolds through contrived situations; it involves exotic animals and formal descriptions of works of art; and it has lengthy speeches by the characters.

As a report, the account contains many geographical and historical inaccuracies. For example, Nineveh and Babylon were destroyed 300 years earlier. The Caucasus Mountains are described as a dividing point between India and Babylon, which is inaccurate. Philostratus's speeches are anachronistically put into Apollonius's mouth (from *Lives of the Sophists*).

Philostratus was not an eyewitness but was commissioned to compose his book by Julia Domna, wife of the Roman emperor Septimus, 120 years after Apollonius's death. The writers of the New Testament were contemporaries and/or eyewitnesses of the events (*see* NEW TESTAMENT, HISTORICITY OF).

A possible motive for the publication was a desire to counteract the growing influence of Jesus. One historian says, "It was she (Julia Domna) who encouraged Philostratus to put together a life of Apollonius of Tyana as a counterblast to Jesus" (ibid., 51). Another said that, since she was to become the high priestess of the Hellenistic polytheism, "Realizing the need of finding a historical figure fitted to counter the propaganda of the subversive gospels, she sought particularly to revive the memory of a hero of pagan hagiology, Apollonius of Tyana" (Cook, 613).

The miracle stories about Apollonius are contradictory. Some say he died in Ephesus, others in Lindus or Crete, and then appeared. Only one such appearance is recorded by Philostratus. This was to a man while he slept, a vision 200 years after Apollonius is to have lived (A.D . 273). Others say he did not die but was deified because he disappeared.

Finally, there is an important difference between the claims that Apollonius was deified and that Jesus was Deity (*see* CHRIST, DEITY OF). Apollonius's deification is known as apotheosis, the process by which a human becomes God. Christ's incarnation was a process by which God became human. Further, the concept of "God" differed. Christ was God in the theistic sense. The claim for Apollonius would make him God only in a polytheistic (*see* POLYTHEISM) sense.

Conclusion. There is no evidence for the historicity of Philostratus's work on Apollonius. It gives every evidence of being a work of fiction. Unlike the Gospels, it provides no eyewitnesses, no resurrection, and no confirmation. By contrast, the Gospels have abundant evidence for their authenticity and historicity. The testimony of the New Testament witnesses has been confirmed by numerous manuscripts (*see* NEW TESTAMENT MANUSCRIPTS) and other sources (*see* NEW TESTAMENT WITNESSES, RELIABILITY OF). In short, there is no real comparison between Apollonius and Christ. Jesus claimed to be the Son of the theistic God and proved it by historically verified miracles, including his own resurrection from the dead (*see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE). Apollonius made no such claims and had no such witnesses to support any alleged miracles. On the contrary, the single witness is late, unsubstantiated, and shows every sign of being myth, not history.

Apotheosis. Critics have used theories of apotheosis to argue that Christ's deity and resurrection are not unique beliefs to Christianity. Theories of apotheosis regarding persons who are taken to heaven and divinized have been told by other religions (*see* MITHRAISM). Among notable modern critics who have used these stories to cast doubt on the New Testament accounts are Otto

Pfleiderer in *The Early Christian Conception of Christ* (1905) and W. Bousset in *Kurios Christos* (1913).

Claims of divinization are not uncommon in ancient mythology and mystery religions (Pfleiderer). Among those supposedly divinized are various Roman emperors (notably Julius and Augustus caesars) and Apollonius of Tyana (Habermas, 168).

Claims of Apotheosis. Suetonius reported that after Julius Caesar's death "a comet appeared about an hour before sunset and shone for several days running. This was held to be Caesar's soul, elevated to heaven; hence the star, now placed above the forehead of his divine image" (Suetonius 1.88).

During the cremation of Augustus, Suetonius states that his spirit was reportedly seen "soaring up to Heaven through the flames" (ibid., 2.100). This too was taken to be a sign of apotheosis.

Antinous, the favorite slave of Emperor Hadrian, was also said to be divinized at death. Hadrian believed that a star was created from his soul, and so he built a city at the site and erected several statues in Antinous' honor. One such statue declares that Antinous was glorified in heaven and actually was the god Osiris (Cartlidge, 198).

Apollonius, a first-century neo-Pythagorean, was also reputed to have been transported to heaven after exhibiting miraculous powers. Later he was reported to have appeared to a young man in a dream.

Alexander the Great was said to have been born of a virgin, to have done wondrous deeds, and to have accepted accolades of being divine (Boyd, 49). He too is put in the category of divine-man legends.

Resurrection Claims. In addition to Apollonius of Tyana, there are claims that non-Christian leaders rose from the dead. Robert Price has made an extensive comparative religion study of post-death phenomena found in other religions that rival Christian claims about Christ. These stories have also been used to undercut claims of the uniqueness of Christianity (*see* CHRISTIANITY, UNIQUENESS OF ; PLURALISM, RELIGIOUS).

Evaluation. The divine-man hypothesis has been debunked by such diverse theologians as Oscar Cullmann (*The Christology of the New Testament*), Reginald Fuller (*The Foundation of New Testament Christology*), Gary Habermas ("Resurrection Claims in Non-Christian Religions" in *Religious Studies 25* [1989]), and Ronald Nash (*Christianity and the Hellenistic World*).

There are difficulties if these legends are used as competitive claims to those of Christ. Sources of these stories are all far later than the events described and are questionable. Suetonius lived 150 years after Julius and nearly 100 years after Augustus. The report of Dio Cassius about Hadrian was about 100 years later. Philostratus wrote over 100 years after Apollonius died. By

contrast, Christ's incarnation and divinity were attested by eyewitnesses in contemporary testimony (*see* CHRIST, DEITY OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF).

A political agenda accompanied most of these reports. Nearly one-half of Suetonius's twelve emperors were said to have been deified, and the story of Apollonius appeared at a time when some in the Empire were attempting to stimulate renewed mythological worship. They cannot be said to be historical accounts in any case, since there is no way to verify whether a spirit ascended to heaven or a soul turned into a star. Such are highly subjective testimonies. But the claim that Christ was raised physically from the dead, leaving an empty tomb and appearing in a physical body over a period of weeks to hundreds of people is historically verifiable (*see* RESURRECTION, EVIDENCE FOR).

The concept that a human being could be divinized is not the same as the Christian concept of the incarnation, wherein the second person of the Godhead became human. In Christ, the monotheistic God became human. In apotheosis a human becomes one among many gods.

The Case of Alexander. The claims about Alexander the Great illustrate the radical difference between these divine-men stories and that of Christ. Unlike the early Gospels, the earliest records of Alexander contain none of the features of the later legends about him. The stories of Alexander's miracles developed over a period of 1000 years. The miracles of Jesus were recorded within thirty years of their occurrence (*see* MIRACLES IN THE BIBLE ; MIRACLES, MYTH AND). The legends of Alexander actually date from later than the time of Christ. It is likely that the stories of Alexander's super-normal feats were influenced by the Gospel accounts.

The Gospels were written within the context of Jewish monotheism, which held that human beings cannot be God. The stories of Alexander, however, were composed within a pagan, polytheistic setting where the concept of divinized humans was accepted.

Conclusion. Attempts to reduce Jesus to a Greek divine-man legend are ill-fated. The differences are too radical, and if one influenced the other the Christian record of God incarnate in human flesh came first.

Archaeology, New Testament. The science of archaeology has brought strong confirmation to the historicity of both the Old Testament (*see* ALBRIGHT, WILLIAM F. ; ARCHAEOLOGY, OLD TESTAMENT) and the New Testament. Archaeological evidence for the reliability of the New Testament is overwhelming (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT, HISTORICITY OF). This evidence will be summarized in three parts: the historical accuracy of Luke, the testimony of secular historians, and the physical evidence relating to Christ’s crucifixion (*see* CHRIST, DEATH OF).

Historical Accuracy of Luke. It was once thought that Luke, writer of the most historically detailed Gospel and of Acts, had concocted his narrative from the rambling of his imagination, because he ascribed odd titles to authorities and mentioned governors that no one knew. The evidence now points in exactly the opposite direction (*see* ACTS, HISTORICITY OF).

The Census in Luke 2:1–5 . Several problems are involved in the statement that Augustus conducted a census of the whole empire during the reign of both Quirinius and Herod. For one, there is no record for such a census, but we now know that regular censuses were taken in Egypt, Gaul, and Cyrene. It is quite likely that Luke’s meaning is that censuses were taken throughout the empire at different times, and Augustus started this process. The present tense that Luke uses points strongly toward understanding this as a repeated event. Now Quirinius did take a census, but that was in A.D . 6, too late for Jesus’ birth, and Herod died before Quirinius became governor.

Was Luke confused? No; in fact he mentions Quirinius’ later census in Acts 5:37 . It is most likely that Luke is distinguishing this census in Herod’s time from the more well-known census of Quirinius: “This census took place before Quirinius was governor of Syria.” There are several New Testament parallels for this translation.

Gallio, Proconsul of Achaia. This designation in Acts 18:12–17 was thought to be impossible. But an inscription at Delphi notes this exact title for the man and dates him to the time at which Paul was in Corinth (A.D . 51).

Lysanias, Tetrarch of Abilene. Lysanias was unknown to modern historians until an inscription was found recording a temple dedication which mentions the name, the title, and is in the right place. The inscription is dated between A.D . 14 and 29, easily compatible with the beginnings of John's ministry, which Luke dates by Lysanias' reign (Luke 3:1).

Erastus. In Acts 19:22 , Erastus is named as a Corinthian who becomes a co-worker of Paul. If Luke were going to make up any names, this would seem to be the best place to do it. How would anyone know? In excavating Corinth, an inscription was found near the theater which reads, "Erastus in return for his aedileship laid the pavement at his own expense." If these are the same men, then it explains why Luke would have included the detail that a prominent and wealthy citizen of Corinth had been converted and had given his life to the ministry.

In addition to these, Luke gives correct titles for the following officials: Cyprus, *proconsul* (13:7–8); Thessalonica, *politarchs* (17:6); Ephesus, *temple wardens* (19:35); Malta, *the first man of the island* (28:7 ; Yamauchi, 115–19). Each of these has been confirmed by Roman usage. In all, Luke names thirty-two countries, fifty-four cities, and nine islands without an error. This led the prominent historian Sir William Ramsay to recant his critical views:

> I began with a mind unfavorable to it [Acts], for the ingenuity and apparent completeness of the Tubingen theory had at one time quite convinced me. It did not lie then in my line of life to investigate the subject minutely; but more recently I found myself often brought into contact with the book of Acts as an authority for the topography, antiquities, and society of Asia Minor. It was gradually borne in upon me that in various details the narrative showed marvelous truth. [Ramsay, 8]

In full agreement, Roman historian A. N. Sherwin-White says, "For Acts the confirmation of historicity is overwhelming. . . . Any attempt to reject its basic historicity must now appear absurd. Roman historians have long taken it for granted" (Sherwin-White, 189). The critical theories spawned in the early 1800s that persist today are left without substantiation. Archaeologist William F. Albright says, "All radical schools in New Testament criticism which have existed in the past or which exist today are pre-archaeological, and are therefore, since they were built *in der Luft* [in the air], quite antiquated today" (Albright, 29).

More recently another noted Roman historian has catalogued numerous archaeological and historical confirmations of Luke's accuracy (Hemer, 390f.). The following is a summary of his voluminous, detailed report (*see* ACTS, HISTORICITY OF ; NEW TESTAMENT, NON-CHRISTIAN SOURCES):

- Geographical or other detail that may be assumed to have been generally known in the first century. It is difficult to estimate how much knowledge should be expected of an ancient writer or reader.

- Specialized details, which would not have been widely known except to a contemporary researcher such as Luke who traveled widely. These details include exact titles of officials, identification of army units, and information about major routes.

- Details archaeologists know are accurate but can't verify as to precise time period. Some of these are unlikely to have been known except to a writer who had visited the districts.

- Correlation of dates of known kings and governors with the chronology of the narrative.

- Facts appropriate to the date of Paul or his immediate contemporary in the church but not to a date earlier or later.

- "Undesigned coincidents" between Acts and the Pauline Epistles.

- Internal correlations within Acts.

- Independently attested details that help scholars separate the original Acts text from what may have been added later in the Alexandrian or the Western text families. Alleged anachronisms can now be identified as insertions referring to a later period.

- Off-hand geographical references that bespeak familiarity with common knowledge.

- Differences in formulation within Acts that indicate the different categories of sources he used.

- Peculiarities in the selection of detail, as in theology, that are explainable in the context of what is now known of first-century church life.

- Materials whose "immediacy" suggests the author was recounting a recent experience, rather than shaping or editing a text long afterward.

- Cultural or idiomatic items now known to be peculiar to the first-century atmosphere.

- Interrelated complexes of detail in which two or more kinds of correlation are combined or where related details show separate correlations. Through careful analysis of these correlations, it is possible for the historian to reconstruct quite detailed pieces of history by fitting together the interlocking pieces of fact as in a jigsaw puzzle.

- Cases where the information provided by Luke and details from other sources mesh to simply provide new background color. These do not bear significantly on historicity.

- Precise details in Luke that remain unverified or unrefuted until more is known.

Confirmation by Non-Christian Historians. One popular misconceptions about Jesus is that there is no mention of him in any ancient sources outside of the Bible. On the contrary, there are numerous references to him as an historical figure who died at the hand of Pontius Pilate. Some

even noted that he was reported to have risen from the dead, and was worshiped as a god by all who followed him. Gary Habermas discusses these exhaustively. Quotations from historians and other sources are found in the article NEW TESTAMENT, NON-CHRISTIAN SOURCES .

Evidence Relating to Jesus' Death. Three fascinating discoveries illuminate the death of Christ and, to some degree, his resurrection. The first is an unusual decree; the second is the body of another crucifixion victim.

The Nazareth Decree. A slab of stone was found in Nazareth in 1878, inscribed with a decree from Emperor Claudius (A.D . 41–54) that no graves should be disturbed or bodies extracted or moved. This type of decree is not uncommon, but the startling fact is that here "the offender [shall] be sentenced to capital punishment on [the] charge of violation of [a] sepulchre" (ibid., 155). Other notices warned of a fine, but death for disturbing graves? A likely explanation is that Claudius, having heard of the Christian doctrine of resurrection and Jesus' empty tomb while investigating the riots of A.D . 49, decided not to let any such report surface again. This would make sense in light of the Jewish argument that the body had been stolen (Matt. 28:11–15). This is early testimony to the strong and persistent belief that Jesus rose from the dead.

Yohanan—A Crucifixion Victim. In 1968, an ancient burial site was uncovered in Jerusalem containing about thirty-five bodies. It was determined that most of these had suffered violent deaths in the Jewish uprising against Rome in A.D . 70. One of these was a man named Yohanan Ben Ha'galgol. He was about twenty-four to twenty-eight years old, had a cleft palate, and a seven-inch nail was still driven through both his feet. The feet had been turned outward so that the square nail could be hammered through at the heel, just inside the Achilles tendon. This would have bowed the legs outward as well so that they could not have been used for support on the cross. The nail had gone through a wedge of acacia wood, then through the heels, then into an olive wood beam. There was also evidence that similar spikes had been put between the two bones of each lower arm. These had caused the upper bones to be worn smooth as the victim repeatedly raised and lowered himself to breathe (breathing is restricted with the arms raised). Crucifixion victims had to lift themselves to free the chest muscles and, when they grew too weak to do so, died by suffocation.

Yohanan's legs were crushed by a blow, consistent with the common use of the Roman *crucifragium* (John 19:31–32). Each of these details confirms the New Testament description of crucifixion.

Much more textual and archaeological evidence supports the accuracy of the New Testament (*see* CHRIST, DEATH OF). But even these examples reveal the extent to which archaeology has confirmed the truth of the Scriptures. Archaeologist Nelson Glueck has boldly asserted that "it may be stated categorically that no archaeological discovery has ever controverted a biblical reference. Scores of archaeological findings have been made which confirm in clear outline or exact detail historical statements in the Bible" (Glueck, 31).

Archaeology, Old Testament. Several things must be kept in mind when reviewing archaeological data as it relates to Christianity (*see* ARCHAEOLOGY, NEW TESTAMENT). First, meaning can only be derived from context. Archaeological evidence is dependent on the context of date, place, materials, and style. How it is understood depends on the interpreter's presuppositions. Therefore, not all interpretations of the evidence will be friendly to Christianity.

Second, archaeology is a special kind of science. Physicists and chemists can do all kinds of experiments to recreate the processes they study and watch them over and over again. Archaeologists cannot. They have only the evidence left from the one and only time that civilization lived. They study past singularities, not present regularities. Because they can't recreate the societies that they study, their conclusions can't be tested as can other sciences. Archaeology tries to find plausible and probable explanations for the evidence it finds. It cannot make laws as can physics. For this reason, all conclusions must be subject to revision. The best interpretation is the one that best explains all the evidence.

Third, the archaeological evidence is fragmentary. It comprises only a tiny fraction of all that occurred. Hence, the discovery of more evidence can change the picture considerably. This is especially true when conclusions have been based on silence—a lack of existing evidence. Many critical views about the Bible have subsequently been overturned by archaeological discoveries (*see* BIBLE CRITICISM). For example, it was long believed that the Bible was in error when it spoke about Hittites (Gen. 23:10). But since the discovery of the Hittite library in Turkey (1906) this is no longer the case.

Archaeology Supports the Old Testament. *The Creation.* The opening chapters of Genesis (1–11) are typically thought to be mythological explanations derived from earlier versions of the story found in the ancient Near East. But this view chooses only to notice the similarities between Genesis and the creation stories in other ancient cultures. If we can propose derivation

of the human race from one family, plus general revelation, some lingering traces of the true historical account would be expected. The differences are more important. Babylonian and Sumerian accounts describe the creation as the product of a conflict among finite gods. When one god is defeated and split in half, the River Euphrates flows from one eye and the Tigris from the other. Humanity is made of the blood of an evil god mixed with clay. These tales display the kind of distortion and embellishment to be expected when an historical account becomes mythologized.

Less likely is that the literary progression would be from this mythology to the unadorned elegance of Genesis 1 . The common assumption that the Hebrew account is simply a purged and simplified version of the Babylonian legend is fallacious. In the Ancient Near East, the rule is that simple accounts or traditions give rise (by accretion and embellishment) to elaborate legends, but not the reverse. So the evidence supports the view that Genesis was not myth made into history. Rather, the extrabiblical accounts were history turned into myths (*see* CREATION AND ORIGINS ; CREATION, VIEWS OF ; GENESIS, DAYS OF).

The recent discoveries of creation accounts at Ebla (*see* EBLA TABLETS) add evidence of this. This library of sixteen thousand clay tablets predates the Babylonian account by about 600 years. The creation tablet is strikingly close to Genesis, speaking of one being who created the heavens, moon, stars, and earth. The people at Ebla believed in creation from nothing (*see* CREATION, VIEWS OF). The Bible contains the ancient, less embellished version of the story and transmits the facts without the corruption of the mythological renderings.

The Flood of Noah. As with the creation accounts, the flood (*see* FLOOD, NOAH'S) narrative in Genesis is more realistic and less mythological than other ancient versions, indicating its authenticity. The superficial similarities point toward an historical core of events that gave rise to all, not toward plagiarism by Moses. The names change. Noah is called Ziusudra by the Sumerians and Utnapishtim by the Babylonians. The basic story doesn't. A man is told to build a ship to specific dimensions because God(s) are going to flood the world. He does it, rides out the storm, and offers sacrifice upon exiting the boat. The Deity(-ies) respond with remorse over the destruction of life, and make a covenant with the man. These core events point to a historical basis.

Similar flood accounts are found all over the world. The flood is told of by the Greeks, the Hindus, the Chinese, the Mexicans, the Algonquins, and the Hawaiians. One list of Sumerian kings treats the flood as an historical reference point. After naming eight kings who lived extraordinarily long lives (tens of thousands of years), this sentence interrupts the list: "[Then] the Flood swept over [the earth] and when kingship was lowered [again] from heaven, kingship was [first] in Kish."

There are good reasons to believe that Genesis gives the original story. The other versions contain elaborations indicating corruption. Only in Genesis is the year of the flood given, as well as dates for the chronology relative to Noah's life. In fact, Genesis reads almost like a diary or ship's log of the events. The cubical Babylonian ship could not have saved anyone. The raging waters would have constantly turned it on every side. However, the biblical ark is rectangular—long, wide, and low—so that it would ride the rough seas well. The length of the rainfall in the

pagan accounts (seven days) is not enough time for the devastation they describe. The waters would have to rise at least above most mountains, to a height of above 17,000 feet, and it is more reasonable to assume a longer rainfall to do this. The Babylonian idea that all of the flood waters subsided in one day is equally absurd. Another striking dif ference between Genesis and the other versions is that in these accounts the hero is granted immortality and exalted. The Bible moves on to Noah's sin. Only a version that seeks to tell the truth would include this realistic admission.

Some have suggested that this was a severe but localized flood. However, there is geological evidence to support a worldwide flood. Partial skeletons of recent animals are found in deep fissures in several parts of the world and the flood seems to be the best explanation for these. This would explain how these fissures occur even in hills of considerable height, and they extend from 140 feet to 300 feet. Since no skeleton is complete, it is safe to conclude that none of these animals (mammoths, bears, wolves, oxen, hyenas, rhinoceros, aurochs, deer, and smaller mammals) fell into these fissures alive, nor were they rolled there by streams. Yet because of the calcite cementing of these diverse bones together, they must have been deposited under water. Such fissures have been discovered in various places around the world. This is exactly the kind of evidence that a brief but violent episode of this sort would be expected to show within the short span of one year.

The Tower of Babel. There is considerable evidence now that the world did indeed have a single language at one time. Sumerian literature alludes to this several times. Linguists also find this theory helpful in categorizing languages. But what of the tower and the confusion of tongues at the tower of Babel (Genesis 11)? Archaeology has revealed that Ur-Nammu, King of Ur from about 2044 to 2007 B.C ., supposedly received orders to build a great ziggurat (temple tower) as an act of worship to the moon god Nannat. A stele (monument) about five feet across and ten feet high reveals Ur-Nammu's activities. One panel has him setting out with a mortar basket to begin construction of the great tower, thus showing his allegiance to the gods by taking his place as a humble workman. Another clay tablet states that the erection of the tower offended the gods, so they threw down what the men had built, scattered them abroad, and made their speech strange. This is remarkably similar to the record in the Bible.

Conservative scholars believe Moses wrote these early chapters of Genesis (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF). But how could he, since these events occurred long before his birth? There are two possibilities. First, God could have revealed the accounts to Moses supernaturally. Just as God can reveal the future by prophetic revelation, he can reveal the past by retrospective revelation too. The second possibility is more likely, namely, that Moses compiled and edited earlier records of these events. This is not contrary to biblical practice. Luke did the same in his Gospel (Luke 1:1–4). P. J. Wiseman has argued convincingly that the history of Genesis was originally written on clay tablets and passed on from one generation to the next with each "clan leader" being responsible for keeping them edited and up to date. The main clue that Wiseman found to this in the Bible is the periodic repetition of words and phrases, especially the phrase "This is the generation of" (for example, Gen. 2:4 ; 6:9 ; 10:1 ; 11:10). Many ancient tablets were kept in order by making the first words of a new tablet a repetition of the last words of the previous stone. A literary evaluation of Genesis compared to other ancient

literature indicates that it was compiled no later than the time of Moses. It is quite possible that Genesis is a family history recorded by the patriarchs and edited into its final form by Moses.

The Patriarchs. While the narratives of the lives of Abraham, Isaac, and Jacob do not present the same kinds of difficulties as do the earlier chapters of Genesis, they were long considered legendary because they did not seem to fit with the known evidence of that period. As more has become known though, these stories are increasingly verified. Legal codes from the time of Abraham show why the patriarch would have been hesitant to throw Hagar out of his camp, for he was legally bound to support her. Only when a higher law came from God was Abraham willing to put her out.

The Mari letters reveal such names as Abam-ram (Abraham), Jacob-el, and Benjamites. Though these do not refer to the biblical people, they at least show that the names were in use. These letters also support the record of a war in Genesis 14 where five kings fought against four kings. The names of these kings seem to fit with the prominent nations of the day. For example, Genesis 14:1 mentions an Amorite king Arioch; the Mari documents render the king's name Ariwwuk. All of this evidence leads to the conclusion that the source material of Genesis was first-hand accounts of someone who lived during Abraham's time.

Sodom and Gomorrah. The destruction of Sodom and Gomorrah was thought to be spurious until evidence revealed that all five of the cities mentioned in the Bible were in fact centers of commerce in the area and were geographically situated as the Scriptures say. The biblical description of their demise seems to be no less accurate. Evidence points to earthquake activity, and that the various layers of the earth were disrupted and hurled high into the air. Bitumen is plentiful there, and an accurate description would be that brimstone (bituminous pitch) was hurled down on those cities that had rejected God. There is evidence that the layers of sedimentary rock have been molded together by intense heat. Evidence of such burning has been found on the top of Jebel Usdum (Mount Sodom). This is permanent evidence of the great conflagration that took place in the long-distant past, possibly when an oil basin beneath the Dead Sea ignited and erupted. Such an explanation in no way subtracts from the miraculous quality of the event, for God controls natural forces. The timing of the event, in the context of warnings and visitation by angels, reveals its overall miraculous nature.

The Dating of the Exodus. One of the several issues about Israel's relationship with Egypt is when the Exodus into Palestine occurred (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF ; PHARAOH OF THE EXODUS). There is even an official "Generally Accepted Date" (GAD) for the entrance into Canaan of about 1230–1220 B.C . The Scriptures, on the other hand, teach in three different texts (1 Kings 6:1 ; Judg. 11:26 ; Acts 13:19–20) that the Exodus occurred in the 1400s B.C ., with the entrance into Canaan forty years later. While the debate will rage on, there is no longer any reason to accept the 1200 date.

Assumptions have been made that the city "Rameses" in Exodus 1:11 was named after Rameses the Great, that there were no building projects in the Nile Delta before 1300, and that there was no great civilization in Canaan from the nineteenth to the thirteenth centuries. However, the name Rameses is common in Egyptian history. Rameses the Great is Ramses II. Nothing is known about Rameses I. Also, the name might not refer to a city but to an area. In

Genesis 47:11 , the name *Rameses* describes the Nile Delta area where Jacob and his sons settled.

Some scholars now suggest that reinterpretation of the data requires moving the date of the Middle Bronze (MB) age. If this is done, it would show that several uncovered cities of Canaan were destroyed by the Israelites. Evidence has come from recent digs that the last phase of the MB period needs more time than originally thought, so that its end is closer to 1400 B.C . than 1550 B.C . This realignment would bring together two events previously thought to be separated by centuries: the fall of Canaan's MB II cities and the conquest.

Another change may be warranted in the traditional view of Egyptian history. The chronology of the whole ancient world is based on the order and dates of the Egyptian kings, which was generally thought to have been fixed. However, Velikovsky and Courville assert that 600 extra years in that chronology throw off dates for events all around the Near East. Courville has shown that the lists of Egyptian kings should not be understood to be completely consecutive. He argues that some "kings" listed were not pharaohs, but high officials. Historians had assumed that each dynasty follows after the one before it. Instead, many dynasties list subrulers who lived at the same time as the preceding dynasty. Working out this new chronology places the Exodus about 1450 B.C . and would make the other periods of Israelite history fall in line with the Egyptian kings mentioned. The evidence is not definitive, but there is no longer any reason to demand a late-date Exodus. For more information, see the article PHARAOH OF THE EXODUS .

Saul, David, and Solomon. Saul became the first king of Israel, and his fortress at Gibeah has been excavated. One of the most noteworthy finds was that slingshots were one of the most important weapons of the day. This relates not only to David's victory over Goliath, but to the reference of Judges 20:16 that there were seven hundred expert slingers who "could sling a stone at a hair and not miss."

Upon Saul's death, Samuel tells us that his armor was put in the temple of Ashtaroth (a Canaanite fertility goddess) at Bethshan, while Chronicles says that his head was put in the temple of Dagon, the Philistine corn god. This was thought to be an error because it seemed unlikely that enemy peoples would have temples in the same place at the same time. However, excavations have found that there are two temples at this site that are separated by a hallway: one for Dagon, and the other for Ashtaroth. It appears that the Philistines had adopted the Canaanite goddess.

One of the key accomplishments of David's reign was the capture of Jerusalem. Problematic in the Scripture account was that the Israelites entered the city by way of a tunnel that led to the Pool of Siloam. However, that pool was thought to be *outside* the city walls at that time. But in the 1960s excavations it was finally determined that the wall did indeed extend well past the pool.

The psalms attributed to David are often said to have been written much later because their inscriptions suggest that there were musician's guilds (e.g., the sons of Korah). Such organization leads many to think that these hymns should be dated to about the time of the

Maccabeans in the second century B.C . Following excavations at Ras Shamra it is now known that there were such guilds in Syria and Palestine in David's time.

The time of Solomon has no less corroboration. The site of Solomon's temple has not been excavated, because it is near the Muslim holy place, The Dome of the Rock. However, what is known about Philistine temples built in Solomon's time fits well with the design, decoration, and materials described in the Bible. The only piece of evidence from the temple itself is a small ornament, a pomegranate, that sat on the end of a rod and bears the inscription, "Belonging to the Temple of Yahweh." It was first seen in a shop in Jerusalem in 1979, verified in 1984, and was acquired by the Israel Museum in 1988.

The excavation of Gezer in 1969 ran across a massive layer of ash that covered most of the mound. Sifting through the ash yielded pieces of Hebrew, Egyptian, and Philistine artifacts. Apparently all 3 cultures had been there at the same time. This puzzled researchers greatly until they realized that the Bible told them exactly what they had found. "Pharaoh king of Egypt had attacked and captured Gezer. He had set it on fire. He killed its Canaanite inhabitants and then gave it as a wedding gift to his daughter, Solomon's wife" (1 Kings 9:16).

The Assyrian Invasion. Much was learned about the Assyrians when 26,000 tablets were found in the palace of Ashurbanipal, son of the Esarhaddon who took the northern kingdoms into captivity in 722 B.C . These tablets tell of the many conquests of the Assyrian empire and record with honor the cruel and violent punishments that fell to those who opposed them.

Several of these records confirm the Bible's accuracy. Every reference in the Old Testament to an Assyrian king has proven correct. Even though Sargon was unknown for some time, when his palace was found and excavated, there was a wall painting of the battle mentioned in Isaiah 20 . The Black Obelisk of Shalmaneser adds to our knowledge of biblical figures by showing Jehu (or his emissary) bowing down to the king of Assyria.

Among the most interesting finds is Sennacherib's record of the siege of Jerusalem. Thousands of his men died and the rest scattered when he attempted to take the city and, as Isaiah had foretold, he was unable to conquer it. Since he could not boast about his great victory here, Sennacherib found a way to make himself sound good without admitting defeat:

> As to Hezekiah, the Jew, he did not submit to my yoke. I laid siege to 46 of his strong cities, walled forts, and to the countless small villages in their vicinity . . . I drove out of them 200,150 people, young and old, male and female, horses, mules, donkeys, camels, big and small cattle beyond counting and considered (them) booty. Himself I made a prisoner in Jerusalem, his royal residence, like a bird in a cage. [Pritchard, 288]

The Captivity. Various facets of the Old Testament history regarding the captivity have been confirmed. Records found in Babylon's famous hanging gardens have shown that Jehoiachin and his five sons were being given a monthly ration and place to live and were treated well (2 Kings 25:27–30). The name of Belshazzar caused problems, because there was not only no mention of him, but no room for him in the list of Babylonian kings; however, Nabodonius left a record that he appointed his son, Belshazzar (Daniel 5), to reign for a few years in his absence. Hence,

Nabodonius was still king, but Belshazzar ruled in the capital. Also, the edict of Cyrus as recorded by Ezra seemed to fit the picture of Isaiah's prophecies too well to be real, until a cylinder was found that confirmed the decree in all the important details.

In every period of Old Testament history, we find that there is good evidence from archaeology that the Scriptures speak the truth. In many instances, the Scriptures even reflect firsthand knowledge of the times and customs it describes. While many have doubted the accuracy of the Bible, time and continued research have consistently demonstrated that the Word of God is better informed than its critics.

In fact, while thousands of finds from the ancient world support in broad outline and often in detail the biblical picture, not one incontrovertible find has ever contradicted the Bible.

Aristotle. Aristotle (384–322 B.C .) holds immense importance for Christian apologetics. He laid down the basic principles of reason used by most apologists (*see* CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES ; LOGIC). Many of the greatest apologists, especially Thomas Aquinas, were dependent on Aristotelian principles.

Born in Stagira, Greece, as the son of a physician, Aristotle entered Plato's academy in about 367 and remained there until Plato's death (347). He began teaching Alexander the Great (356–323) in about 342. With Alexander's conquests, Aristotle's thought spread, along with Greek language and culture, throughout the world.

Major writings of Aristotle can be categorized under logic, physical studies, psychology, and philosophy:

BAR *Biblical Archaeology Review*

Logic: *Categories* , *On Interpretation* , *Prior and Posterior Analytics* , *On Sophistical Refutations* , *Topics*

Physical sciences: *Meteorologics* , *On Coming-to-be and Passing Away* , *On the Heavens* , *Physics*

Psychology: *On Dreams* , *On Memory and Reminiscence* , *On Prophesying by Dreams* (*Parva Naturalia*), *On the Soul*

Philosophy: *Art and Poetry* , *Metaphysics* , *Nicomachean Ethics* , *Politics* , *Rhetoric*

Few, if any, thinkers, before or after Aristotle, had a more analytic, encyclopedic, and productive mind.

Epistemology (Theory of Knowledge). Aristotle was an empiricist who believed all knowledge begins in the senses. Once an object is perceived by one or more of the five senses, the mind begins to act upon it with its powers of abstraction. Aristotle saw three acts of the intellect: *apprehension* (understanding), *predication* (declarations), and *syllogistic reasoning* (logic).

Apprehension. The first act of the mind is apprehension or the understanding of a thing or object. The *subject* of apprehension is a rational animal (human being). The *object* of apprehension is the essence (quiddity) or form of things. The *method* of apprehension is the intellectual process of abstraction, through which the mind obtains a universal from processing information about the particulars. In this Aristotle differed from the later nominalists, who denied universals and taught that only particulars exist.

Ten modes of apprehension are called the "predicaments" or *categories* . Categories include:

1. *Substance* — *what* is apprehended. This is also called the *subject* of apprehension. Primary substance is the ultimate subject of all predication. Secondary substance is the universal that is predicable for a class.

2. *Quantity* or *how much* of the subject is apprehended.

3. *Quality* is *what kind* of subject is apprehended.

4. *Relation* informs us *to what* the subject has reference.

5. *Action* speaks of *on what* the subject is acting.

6. *Passion* is *from what* the subject receives action.

7. *Place* answers *where* the subject is apprehended to be.

8. *Time* answers *when* the subject is apprehended.

9. *Position* refers to *under what circumstances* the subject is apprehended.

10. *Habit* or *state* tells *in what condition* the subject apprehended is found to be. A habit is natural but not essential to a thing, like clothes to humans.

Predication. Once an object is apprehended (understood), certain predications can be made about it. Similar to apprehension, predication can be broken down into the *subject* of predication (human being) and *object* of predication (quiddity or form of a thing). To these are added the *purpose* of predication (the definition or nature of a thing), *means* of predication, and the *mode* of predication.

The means of predication can be communicated as a proposition with a subject, predicate, and copula, a statement of what it "is" or "is not." The modes of predication are the predicables, the various kinds of reality a predicate can convey about a thing. Modes of predication include:

Genus . Humankind fits the genus "animal." This characteristic is common to many subjects.

Specific difference. Humans are "rational" animals. That is a difference specific to this subject.

Species. The subject denotes both the genus and the specific difference. Through our understanding of creation, we automatically know that *human* means "rational animal." In this particular example, the subject has been assigned a scientific species name, which says just that in Latin: *Homo sapiens* .

Property. A subject is predicated by what flows from its essence but isn't part of it. Human beings laugh. Risibility, the ability to laugh, is a property of human beings.

Accidents. The predicate describes what is in the essence of the subject but not part of it. In the sentence "He has black hair," the characteristic of black hair is not part of the human essence, but it is part of a category system that adheres to it.

Quantity/Extent. This predication can be universal, when all of the class is included, or particular, when a limitation is specified. "Human beings are rational animals, but few human beings do their thinking in Gaelic."

Quality. Predication that must be expressed by an affirmative ("is") or a negative ("is not") statement. "A human being is able to give glory to God."

Reasoning (Logic). Once something is apprehended, and propositions (declarations) are made about it, then conclusions can be drawn from combining two or more of these predications. Putting together predications and drawing conclusions from them results in a *syllogism* . There are three basic kinds of reasoning: *deductive* , *inductive* , and *fallacious* .

Deductive logic deals with the validity of deductions given to the premises in a syllogism. Aristotle developed this logic in *Prior Analytics* , and in *Posterior Analytics* he added *material*

logic , which deals with the truth of such deductions or demonstrations. *Inductive logic* (called "opinion") deals with probability reasoning. This is discussed in *Topics* . *Fallacious logic* deals with incorrect reasoning and is covered in detail in *Sophistical Refutations* .

Reality and God. Aristotle's view of God grows out of his view of reality, called "metaphysics." *Metaphysics* as Aristotle understood the term can be understood most clearly in contrast to other disciplines. For Aristotle, *Physics* studies the real that can be experienced through the five senses. Metaphysics studies reality outside sensory perception. *Mathematics* is the study of the real (being) insofar as it is quantifiable (though this is not true of all modern mathematics). Metaphysics is the study of being insofar as it is real.

Actuality (Act) and Potentiality (Potency). Aristotle's understanding of reality involved what actually is (*actuality*) and what it can be (*potentiality*). Everything in creation is composed of both form (actuality) and matter (potentiality), a view called "hylomorphism." Its immutable implication is that the reality we perceive through our senses is changing.

Change is the passing from potentiality to actuality. Aristotle posited two kinds of change, *substantial* and *accidental* . Substantial changes alter substance—what something essentially is. This change happens when substance comes to be (generation) or ceases to be (corruption). Accidental change is a change in what something *has* , in its *accidents* . An accident is what inheres in a substance but is not of the essence of that substance. Dying is a substantial change. Learning is an accidental change.

The Four Causes of Things. In studying the nature of being, Aristotle posited four causes. Two intrinsic causes are inside the thing. As applied to a wooden chair, they are:

1. The formal cause—that *of which* it is made, its form or essence: chairness.

2. The material cause—that *out of which* it is made, its material: wood.

The two extrinsic causes are outside the thing. In the example of the chair they are:

3. The efficient cause—that *by which* it is made, the agent: carpenter.

4. The final cause—that *for which* it was made, the purpose: to sit in.

Aristotle's Answer to Monism. Aristotle's metaphysics can be understood as a response to the argument by Parmenides (b. 515 B.C .) for monism (*see* MONISM ; ONE AND MANY, PROBLEM OF). Parmenides argued that: (1) Either everything is one or it is many. (2) If there are many beings, they must differ. (3) If they differ, they must differ by being or by nonbeing. (4) They cannot differ by nonbeing, since nonbeing is nothing (and that would mean they do not differ). (5) Neither can they differ by being, since being is what they all have in common. They cannot differ by the sense in which they are the same. (6) Hence, there can only be one being (monism).

There were four basic answers to Parmenides. (1) Atomism said that things (atoms) differ by absolute nonbeing (the void). (2) Platonism argued (*see* PLATO) that things (forms) differ by

relative nonbeing (otherness), determination by negation. (3) Aquinas later affirmed that since being is a complex of act and potency, things differ by the kind of being they are. (4) Aristotle believed only material things were composed of form (act) and matter (potency). Pure forms, such as gods are, are simple. So the forty-seven or fifty-five forms (gods) differ in that they are simply different beings.

The Existence and Nature of God. From this answer to Parmenides, one can see that Aristotle's concept of god(s) was by no means the Creator as understood by Judaism. Like many later Christians, however, Aristotle believed that the existence of God could be proven. His proof went like this:

1. Things do change. This is established by observing movement, the most obvious form of change.

2. All change is a passing from potentiality to actuality. That is, when a potential is actualized, change has occurred.

3. No potential can actualize itself. Wood cannot make itself into a chair, although it has the capacity to become a chair.

4. There must be an actuality that actualizes everything that passes from potentiality to actuality. Otherwise, nothing would be actualized.

5. An infinite regress of actualizers is impossible, for the whole series would not be actualized unless there is a first actualizer.

6. This first actuality actualizes things by final causality, by drawing things to it the way a lover is drawn by his loved one.

7. There are forty-seven (according to the astronomer Eudoxus) or fifty-five (according to Callipus) of these pure actualities ("unmoved movers").

8. Ultimately, there is only one heaven and one God. Only material things can be numerically different, since matter is the principle of individuation.

9. This last point was either a later addition by Aristotle or by one of his editors after his death. It gives the appearance of being the latter. For Aristotle's context in the history of the cosmological argument, see COSMOLOGICAL ARGUMENT .

Several things are noteworthy about Aristotle's argument: It introduces the question of an infinite regress of causes (*see* INFINITE SERIES). It posited a plurality of first causes with a note attached (that may be by a later editor) that posits one God. Unlike Plato's demiurges, Aristotle's First Cause is a final purposing cause, not an efficient cause. Neither was the Unmoved Mover a personal God who had love or concern for creation. In fact, Aristotle's God had no religious significance or need for worship. This God was simply a logical necessity to be used to explain the cosmos and then discarded. This First Cause was not infinite as is the God of Christian

theism. Aristotle followed the Greek belief that only what was formless and indefinite could be considered infinite. Aristotle's God did not create everything freely and *ex nihilo* (*see* CREATION, VIEWS OF). The universe is eternal, and God has been forming it by drawing it to himself. So God is not the producing (efficient) cause but a pulling (final) cause.

Other views of Aristotle are of interest to Christian apologists. He believed in a literal (vs. an allegorical) hermeneutic. In contrast to Plato, Aristotle denied the immortality of the soul or the afterlife. According to Aristotle, the soul, which is the form of the body, dies with the body (*see* IMMORTALITY). Aristotle espoused a "golden mean" ethic that others have developed into a situational ethic (*see* MORALITY, ABSOLUTE NATURE OF).

Athanasius. Athanasius of Alexandria (296–373) was one of the great early defenders of the Christian faith. He was educated in the catechetical school of Alexandria. As secretary to Bishop Alexander, he attended the Council of Nicea (325). He succeeded Alexander three years later. Probably before 318, while still in his twenties, he wrote *De Incarnatione* (*On the Incarnation*) and *Contra Gentes* , explaining how the Logos (Christ) became human and redeemed humanity. Later, in *Letters Concerning the Holy Spirit* , he defended the personality and deity of the third person of the Trinity.

Orthodoxy of Athanasius. Athanasius not only defended orthodox Christianity, he helped set the standard for it, particularly on the deity of Christ. From 339 to 359 he wrote a series of defenses of the faith (*Orations Against Arians*) aimed at those who denied the full deity of Christ. Grammatically, the issue centered around whether Christ was *homoiousion* (of "like substance"), or *homoousion* (of the "same substance") with the Father. Athanasius stood firm, against great odds and at great personal cost, to preserve a biblical stand when most church leaders wandered into Arianism. For this he earned the title of *contra mundum* ("against the world").

The Nicene Creed. It is uncertain what exact role Athanasius played in framing the Nicene Creed. He certainly defended it with his life. This creed reads, in part, in its original form:

> We believe in ONE GOD THE FATHER Almighty, Maker of heaven and earth, and of all things visible and invisible.

And in one LORD JESUS CHRIST, the only-begotten son of God, Begotten of the Father before all worlds, Light of Light, very God of very God, begotten, not made, Being of one substance with the Father; by whom all things were made. . . .

And in the HOLY GHOST, the Lord and Giver of Life; who proceeds from the Father; who with the Father and the Son together is worshiped and glorified; who spake by the Prophets.

Atheism. While polytheism dominated much of ancient Greek thought and theism dominated medieval Christian view, atheism has had its day in the modern world. Of course not all who lack faith in a divine being wish to be called "atheist." Some prefer the positive ascription of "Humanist" (*see* HUMANISM, SECULAR). Others are perhaps best described as "materialists." But all are nontheists, and most are antitheistic. Some prefer the more neutral term a-theists.

In distinction from a theist, (*see* THEISM) who believes God exists beyond and in the world, and a pantheist, who believes God is the world, an atheist believes there is no God either beyond or in the world. There is only a universe or cosmos and nothing more.

Since atheists share much in common with agnostics (*see* AGNOSTICISM) and skeptics, they are often confused with them (see Russell, "What Is an Agnostic?"). Technically, a skeptic says "I *doubt* that God exists" and an agnostic declares "I *don't know* (or can't know) whether God exists." But an atheist claims to *know* (or at least believe) that God does not exist. However, since atheists are all nontheists and since most atheists share with skeptics an antitheistic stand, many of their arguments are the same. It is in this sense that modern atheism rests heavily upon the skepticism of David Hume and the agnosticism of Immanuel Kant .

Varieties of Atheism. Broadly speaking, there are differing kinds of atheism. *Traditional* (metaphysical) atheism holds that there never was, is, or will be a God. The many with this view include Ludwig Feuerbach , Karl Marx , Jean-Paul Sartre , and Antony Flew . *Mythological* atheists, such as Friedrich Nietzsche , believe the God-myth was never a Being, but was once a live *model* by which people lived. This myth has been killed by the advancement of man's understanding and culture. There was a short-lived form of *dialecti cal* atheism held by Thomas Altizer which proposed that the once-alive, transcendent God actually died in the incarnation and crucifixion of Christ, and this death was subsequently realized in modern times. S *emantical* atheists (*see* VERIFICATION, EMPIRICAL) claim that God-talk is dead. This view was held by Paul Van Buren and others influenced by the logical positivists who had seriously challenged the meaningfulness of language about God. Of course, those who hold this latter view need not be actual atheists at all. They can admit to the existence of God and yet believe that it is not possible to talk about him in meaningful terms. This view has been called "acognosticism," since it denies that we can speak of God in cognitive or meaningful terms. *Conceptual* atheism believes that there is a God, but he is hidden from view, obscured by our conceptual constructions (*see* BUBER, MARTIN). Finally, *practical* atheists confess that God exists but believes that we should live *as if* he did not. The point is that we should not use God as a crutch for our failure to act in a spiritual and responsible way (some of Dietrich Bonhoffer's writings can be interpreted in this category).

There are other ways to designate the various kinds of atheists. One way would be by the philosophy by which they express their atheism. In this way one could speak of *existential* atheists (Sartre), *Marxist* atheists (Marx), *psychological* atheists (Sigmund Freud), *capitalistic* atheists (Ayn Rand), and *behavioristic* atheists (B. F. Skinner).

For apologetics purposes the most applicable way to consider atheism is in a metaphysical sense. Atheists are those who give reasons for believing that no God exists in or beyond the world. Thus we are speaking about philosophical atheism as opposed to practical atheists who simply live as though there were no God.

Arguments for Atheism. The arguments for atheism are largely negative, although some can be cast in positive terms. Negative arguments fall into two categories: (1) arguments against proofs for God's existence (*see* GOD, OBJECTIONS TO PROOFS FOR), and (2) arguments against God's existence (*see* GOD, ALLEGED DISPROOFS OF). On the first set of arguments most atheists draw heavily on the skepticism of Hume and the agnosticism of Kant.

Atheists offer what they consider to be good and sufficient reasons for believing no God exists. Four such arguments are often used by atheists: (1) the fact of evil (*see* EVIL, MORAL PROBLEM OF); (2) the apparent purposelessness of life; (3) random occurrence in the universe; and (4) the First Law of Thermodynamics —that "energy can neither be created or destroyed" as evidence that the universe is eternal and, hence, needs no Creator.

Responses to the Arguments. *The Existence of Evil.* A detailed response to the problem of evil is given elsewhere (*see* EVIL, PROBLEM OF), so it will be treated here only in general terms. The atheist's reasoning is circular. Former atheist C. S. Lewis argued that, in order to know there is injustice in the world one has to have a standard of justice. So, to effectively eliminate God via

evil one is to posit an ultimate moral standard by which to pronounce God evil (*Mere Christianity*). But for theists God is the ultimate moral standard, since there cannot be an ultimate moral law without an Ultimate Moral Law Giver.

Atheists argue that an absolutely good God must have a good purpose for everything, but there is no good purpose for much of the evil in the world. Hence, there cannot be an absolutely perfect God.

Theists point out that just because we do not know the purpose for evil occurrences does not mean that there is no good purpose. This argument does not necessarily disprove God; it only proves our ignorance of God's plan. Along the same reasoning, just because we do not see a purpose for all evil now, does not follow that we never will. The atheist is premature in his judgment. According to theism, a day of justice is coming. If there is a God, he must have a good purpose for evil, even if we do not know it. For a theistic God is omniscient and knows everything. He is omnibenevolent and has a good reason for everything. So, by his very nature he must have a good reason for evil.

Purposelessness. In assuming that life is without purpose, the atheist is again both a presumptuous and premature judge. How does one know there is no ultimate purpose in the universe? Simply because the atheist knows no real purpose for life does not mean God does not have one. Most people have known times that made no sense for the moment but eventually seemed to have great purpose.

The Random Universe. Apparent randomness in the universe does not disprove God. Some randomness is only apparent, not real. When DNA was first discovered it was believed that it split randomly. Now the entire scientific world knows the incredible design involved in the splitting of the double helix molecule known as DNA. Even actual randomness has an intelligent purpose (*see* TELEOLOGICAL ARGUMENT). Molecules of carbon dioxide are exhaled randomly with the oxygen (and nythogine in the air), but for a good purpose. If they did not, we would inhale the same poisonous gases we have exhaled. And some of what seems to be waste may be the product of a purposeful process. Horse manure makes good fertilizer. According to the atheist's time scale the universe has been absorbing and neutralizing very well all its "waste." So far as we know, little so-called waste is really wasted. Even if there is some, it may be a necessary byproduct of a good process in a finite world like ours, just like sawdust results from logging.

The Eternality of Matter (Energy). Atheists often misstate the scientific first law of thermodynamics. It should not be rendered: "Energy *can* neither be created *nor* destroyed." Science as science should not be engaged in "can" or "cannot" statements. Operation science deals with what *is* or *is not* , based on observation. And observation simply tells us, according to the first law, that "The amount of actual energy in the universe remains constant." That is, while the amount of *usable* energy is decreasing, the amount of *actual* energy is remaining constant in the universe. The first law says absolutely nothing about the *origin* or *destruction* of energy. It is merely an observation about the continuing presence of energy in the cosmos.

Unlike the second law of thermodynamics, which tells us the universe is running out of usable energy and, hence, must have had a beginning, the first law makes no statement about whether energy is eternal. Therefore, it cannot be used to eliminate a Creator of the cosmos.

Tenets of Atheism. Atheists do not have identical beliefs, any more than do all theists. However, there is a core of beliefs common to most atheists. So while not all atheists believe all of the following, all of the following are believed by some atheists. And most atheists believe most of the following:

About God. True atheists believe that only the cosmos exists. God did not create man; people created God.

About the World. The universe is eternal. If it is not eternal, then it came into existence "out of nothing and by nothing." It is self-sustaining and self-perpetuating. As astronomer Carl Sagan put it, "The Cosmos is all there is, all there was, and all there ever will be" (Sagan, *Cosmos,* 4). If asked "what caused the world?" most atheists would reply with Bertrand Russell that it was not caused; it is just there. Only the parts of the universe need a cause. They all depend on the whole, but the whole needs no cause. If we ask for a cause for the universe, then we must ask for a cause for God. And if we do not need a cause for God, then neither do we need one for the universe.

If one insists that *everything* needs a cause, the atheist simply suggests an infinite regress of causes that never arrives at a first cause (i.e., God). For if everything must have a cause, then so does this "first cause." In that case it really isn't first at all, nor is anything else (see Sagan, *Broca's Brain,* 287).

About Evil. Unlike pantheists (*see* PANTHEISM) who deny the reality of evil, atheists strongly affirm it. In fact, while pantheists affirm the reality of God and deny the reality of evil, atheists, on the other hand, affirm the reality of evil and deny the reality of God. They believe theists are inconsistent in trying to hold to both realities.

About Human Beings. A human being is matter in motion with no immortal soul. There is no mind apart from brain. Nor is there a soul independent of body. While not all atheists are strict materialists who identify soul and body, most do believe that the soul is dependent on the body. The soul in fact dies when the body dies. The soul (and mind) may be more than the body, the way a thought is more than words or symbols. But as the shadow of a tree ceases to exist when the tree does, so the soul does not survive the body's death.

About Ethics. No moral absolutes exist, certainly no divinely authorized absolutes. There may be some widely accepted and long enduring values. But absolutely binding laws would seem to imply an absolute Law Giver, which is not an option (*see* MORALITY, ABSOLUTE NATURE OF).

Since values are not *discovered* from some revelation of God, they must be *created* . Many atheists believe values emerge by trial and error the way traffic laws developed. Often the right action is described in terms of what will bring the greatest good in the long run (*see* UTILITARIANISM). Some frankly acknowledge that relative and changing situations determine

what is right or wrong. Others speak about the expedient behavior (what "works"), and some work out their whole ethic in terms of self-interest. But virtually all atheists recognize that each person must determine personal values, since there is no God to reveal what is right and wrong. As the *Humanist Manifesto* put it, "Humanism asserts that the nature of the universe depicted by modern science makes unacceptable any supernatural or cosmic guarantees of human values" (Kurtz, 8).

About Human Destiny. Most atheists see no eternal destiny for individual persons, though some speak of a kind of collective immortality of the race. But the denial of individual immortality notwithstanding, many atheists are utopians. They believe in an earthly paradise to come. Skinner proposed a behaviorally controlled utopia in *Walden Two* . Marx believed an economic dialectic of history would inevitably produce a communist paradise. Others, such as Rand, believe that pure capitalism can produce a more perfect society. Still others believe human reason and science can produce a social utopia. Virtually all, however, recognize the ultimate mortality of the human race but console themselves in the belief that its destruction is millions of years away.

Evaluation. *Positive Contributions of Atheism.* Even from a theistic point of view, not all views expressed by atheists lack truth. Atheists have provided many insights into the nature of reality.

The reality of evil. Unlike pantheists, atheists do not close their eyes to the reality of evil. In fact, most atheists have a keen sensitivity to evil and injustice. They rightly point to the imperfection of this world and to the need for adjudication of injustice. In this regard they are surely right that an all-loving, all-powerful God would certainly do something about the situation.

Contradictory concepts of God. In contending that God is not caused by another, some have spoken of God as though he were a self-caused being *(causa sui)* . Atheists rightly point out this contradiction, for no being can cause its own existence. To do this it would have to exist and not exist at the same time. For to cause existence is to move from nonexistence to existence. But nonexistence cannot cause existence. Nothing cannot cause something (*see* CAUSALITY, PRINCIPLE OF). On this point atheists are surely right.

Positive human values. Many atheists are humanists. With others they affirm the value of humanity and human culture. They earnestly pursue both the arts and the sciences and express deep concern in ethical issues. Most atheists believe that racism, hatred, and bigotry are wrong. Most atheists commend freedom and tolerance and have other positive moral values.

The Loyal Opposition . Atheists are the loyal opposition to theists. It is difficult to see the fallacies in one's own thinking. Atheists serve as a corrective to invalid theistic reasoning. Their arguments against theism should give pause to dogmatism and temper the zeal with which many believers glibly dismiss unbelief. In fact, atheists serve a significant corrective role for theistic thinking. Monologues seldom produce refined thought. Without atheists, theists would lack significant opposition with which to dialogue and clarify their concepts of God.

A Critique of Atheism. Still, the position that God does not exist lacks adequate rational support. The atheist's arguments against God are insufficient (*see* ATHEISM). Further, there are good arguments for the existence of God (*see* GOD, EVIDENCE FOR). For many things, atheism provides no satisfactory answer.

Why is there something rather than nothing? Atheism does not provide an adequate answer as to why anything exists when it is not necessary for anything at all to exist. Nonexistence of everything in the world is possible, yet the world does exist. Why? If there is no cause for its existence, there is no reason why the world exists (*see* COSMOLOGICAL ARGUMENT).

What is the basis for morality? Atheists can believe in morality, but they cannot *justify* this belief. Why should anyone be good unless there is a Definer of goodness who holds people accountable? It is one thing to say that hate, racism, genocide, and rape are wrong. But if there is no ultimate standard of morality (i.e., God), then how can these things be wrong? A moral prescription implies a Moral Prescriber (*see* MORAL ARGUMENT FOR GOD).

What is the basis for meaning? Most atheists believe life is meaningful and worth living. But how can it be if there is no purpose for life, nor destiny after this life? Purpose implies a Purposer. But if there is no God, there is no objective or ultimate meaning. Yet most atheists live as if there were.

What is the basis for truth? Most atheists believe that atheism is true and theism is false. But to state that atheism is true implies that there is such a thing as objective truth. Most atheists do not believe that atheism is true only for them. But if atheism is true, there must be a basis for objective truth (*see* TRUTH, NATURE OF). Truth is a characteristic of a mind, and objective truth implies an objective Mind beyond our finite minds.

What is the basis for reason? Most atheists pride themselves on being rational. But why be rational if the universe is the result of irrational chance? There is no reason to be reasonable in a random universe. Hence, the very thing in which atheists most pride themselves is not possible apart from God.

What is the basis for beauty? Atheists also marvel at a beautiful sunset and are awestruck by the starry heavens. They enjoy the beauty of nature as though it were meaningful. Yet if atheism is true, it is all accidental, not purposeful. Atheists enjoy natural beauty as though it were meant for them, and yet they believe no Designer exists to mean it for them.

Athenagoras. Athenagoras was a second-century Christian apologist who was called the “Christian philosopher from Athens.” His famous *Apology* (ca. 177), which he called

“Embassy,” petitioned Marcus Aurelius on behalf of Christians. He later wrote a strong defense of the physical resurrection (*see* RESURRECTION, PHYSICAL NATURE OF), *On the Resurrection of the Dead.*

Two later writers mention Athenagoras. Methodius of Olympus (d. 311) was influenced by him in his *On the Resurrection of the Body* . Philip Sidetes (early sixth century) stated that Athenagoras had been won to Christianity while reading the Scriptures “in order to controvert them” (Pratten, 127). His English translator noted, “Both his *Apology* and his treatise on the Resurrection display a practiced pen and a richly cultured mind. He is by far the most elegant, and certainly at the same time one of the ablest, of the early Christian Apologists” (ibid.). The silence about Athenagoras by the fourth-century Church historian Eusebius, is strange in view of his work.

Apologetics. The basic elements of later apologetics were present in Athenagoras’s treatises. He defended Christianity against charges of atheism , cannibalism (eating Christ’s body), and practicing incest. He focused attention on the peaceful, blameless lives of Christians and claimed that they deserved equal rights with other citizens.

Scripture. As other church Fathers, Athenagoras believed the Bible was the inspired Word of God (*see* BIBLE, EVIDENCE FOR). He claimed that “it would be irrational for us to cease to believe in the Spirit from God, who moved the mouths of the prophets like musical instruments” (ibid., vii). He spoke of “The Holy Spirit Himself also, which operates in the prophets” (ibid., ix), and “the writings either of Moses or of Isaiah and Jeremiah and the other prophets, who lifted up with ecstasy above the natural operations of their minds by the impulses of the Divine Spirit, uttered the things with which they were inspired the Spirit making use of them as a flute player breathes into a flute” (ibid.).

God. Athenagoras affirmed the existence, unity, triunity, and essential attributes of God. This he did against the challenge of polytheism . Athenagoras first defended the existence of God against the Roman view that Christians were atheists since they did not accept the Roman pantheon nor did they worship the emperor. Christians are not atheists, Athenagoras wrote, in that they acknowledge one God. Unlike some Greeks who denied God, Christians “distinguish God from matter, and teach that matter is one thing and God another, and that they are separated by a wide interval (for that the Deity is uncreated and eternal . . . while matter is created and perishable), is it not absurd to apply the name of atheism?” (*Apology* , 4).

Against the pagan polytheistic context, Athenagoras affirmed the unity of God (ibid., 5). He chided the “absurdities of polytheism,” asking, “If there were from the beginning two or more gods, they were either in one and the same place, or each of them separately in his own. In one and the same place they could not be. . . . But if, on the contrary, each of them exists separately, since He that made the world is above the things created . . . where can the other or the rest be?” (ibid., 8).

God is both unity and triunity. He is a plurality of persons within the unity of one God. Athenagoras made clear that “we acknowledge also a Son of God. . . . The Holy Spirit Himself also . . . we assert to be an effluence of God.” Thus, we “speak of God the Father, and of God the

Son, and of the Holy Spirit" (ibid., 10). Athenagoras stresses that, the Father and Son being one, the Son was the one through whom the universe was created. The Father had the "logos in Himself" from eternity. Hence the Logos was begotten of the Father, but "not as having been brought into existence" (ibid.).

Athenagoras affirmed the essential elements of classical theism, insisting "we acknowledge one God, uncreated, eternal, invisible, impassible, incomprehensible, illimitable . . . Who is encompassed by light, and beauty and spirit, and power ineffable, by whom the universe has been created through His Logos, and set in order, and is kept in being" (ibid., 10).

Creation. For Athenagoras, "the Deity is uncreated and eternal . . . while matter is created and perishable" (ibid., 4). And repeatedly he affirmed that the universe had been created through the Logos. He uses this radical distinction between Creator and creation to show the absurdity of polytheism. He criticized those who cannot see the distance between themselves and their Creator, and so prayed to idols made of matter (ibid., 15). Distinguishing between the Artist (God) and his art (the world), he concluded: "I admire its beauty, and adore the Artificer" (ibid., 16). He pointed out that polytheistic gods were themselves created. "Every one of them has come into existence just like ourselves" (ibid.).

The Resurrection. Athenagoras wrote a treatise *On the Resurrection of the Dead* . With all other early Fathers (except Origen who was condemned for heresy on the point), Athenagoras affirmed the physical resurrection of the same material body of flesh and bones that died (*see* GEISLER). He insisted that God's power is sufficient to raise dead bodies, since he created those bodies (*On the Resurrection* , chap. 3). As for the charge that God cannot bring together the scattered parts of a dead body, he said, "It is not possible for God to be ignorant, either of the nature of the bodies that are to be raised, as regards both the members entire and the particles of which they consist, . . . although to me it may appear quite impossible" (ibid., 2). God was quite capable, he assured the reader, of bringing together these bodies "with equal ease" (ibid., 3).

His strong teaching on the resurrection is used to refute the charge of cannibalism. He asks "Who, then, that believes in a resurrection, would make himself into a tomb for bodies that will rise again? For it is not the part of the same persons to believe that our bodies will rise again, and to eat them as if they would not" (*Apology* , 36).

One reason for the resurrection is that "Man, therefore, who consists of the two parts [body and soul], must continue forever. But it is impossible for him to continue unless he rise again. For if no resurrection were to take place, the nature of men as men would not continue." Thus, along with the interminable duration of the soul, there will be a perpetual continuance of the body according to its proper nature" (*On the Resurrection* , 15). He added that each person must have both body and soul at the judgment if it is to be just. If the body is not restored alongside the soul, there "is no longer any remembrance of past action, nor sense of what it experienced in connection with the soul" (ibid., 20). In biblical terms, a person will be judged for the things done "in the body" (2 Cor. 5:10). This is not fully possible unless the body is resurrected.

Atomism. Ancient atomists were materialists (*see* MATERIALISM) who believed that the universe was made up of pellets of reality. They believed that absolute space (the Void) was filled with these tiny, unsplittable particles. All variety in the universe was explained in terms of different combinations of atoms.

The Atomists were pluralists, as opposed to monists, believing reality is ultimately many, not one (*see* MONISM ; ONE AND MANY, PROBLEM OF ; PLURALISM). Ancient atomists included Greek thinkers like Democritus and Leucipus.

Since the Greek word *atom* means unsplittable, many of the atomists’ hard-core materialistic views fell with the splitting of the atom. Contemporary materialists, however, still believe that all reality is comprised of physical energy which, according to the first law of thermodynamics (*see* THERMODYNAMICS, LAWS OF), is neither being created nor destroyed.

Other modern pluralists, however, have opted for a more immaterial view of atom-like entities called “monads” (*see* LEIBNIZ, GOTTFRIED) or eternal objects (*see* WHITEHEAD, ALFRED NORTH). Thus, atomism lives on in various forms, the materialistic varieties of which are still a challenge to Christianity (*see* ATHEISM).

There are several serious problems with materialistic atomism in both its ancient and modern forms. First, Atomists do not solve the problem of the one and the many. They have no adequate explanation for how simple things can differ nor how this can be a *uni* -verse when all that really exists is multiplicity, rather than unity.

Second, the ancient form of atomism has been destroyed by the splitting of the atom. These allegedly irreducibly hard pellets of reality have given way to a softer view of energy.

Third, even in its modern form, the belief in the eternality of matter (physical energy) has yielded to the second law of thermodynamics (*see* THERMODYNAMICS, LAWS OF), which reveals that the physical universe is not eternal, but is running down (*see* EVOLUTION, COSMIC).

Fourth, pure materialism is self-defeating. It is an immaterial theory about all matter that claims there is nothing immaterial. The materialist who peers into the microscope, examining all things material fails to reckon with the immaterial self conscious “I” and its mental process that are making the deductions.

Atonement, Substitutionary. ***See*** **CHRIST, DEATH OF ; CHRIST'S DEATH, MORAL OBJECTIONS TO ; CHRIST'S DEATH, SUBSTITUTION LEGEND ; RESURRECTION, EVIDENCE FOR ; RESURRECTION, PHYSICAL NATURE OF .**

Augustine. Augustine, bishop of Hippo (354–430), made his spiritual pilgrimage from Greek paganism through Manichaean dualism to neoplatonism (*see* PLOTINUS) and finally to Christian theism. His great mind and immense literary output have made him one of Christianity's most influential theologians.

Faith and Reason. Like all great Christian thinkers, Augustine struggled to understand the relationship between faith and reason. Many apologists tend to stress Augustine's emphasis on faith and underplay his affirmation of reason in the proclamation and defense of the gospel (*see* FIDEISM ; PRESUPPOSITIONAL APOLOGETICS). They stress passages where the Bishop of Hippo placed faith before reason, such as "I believe in order that I may understand." Indeed, Augustine said, "First believe, then understand" (*On the Creed* , 4). For "if we wished to know and then believe, we should not be able to either know or believe" (*On the Gospel of John* , 27.9).

However, these passages taken alone leave the wrong impression of Augustine's teaching on the role of reason in the Christian Faith. Augustine also held that there is a sense in which reason comes before faith. He declared that "no one indeed believes anything unless he has first thought that it is to be believed." Hence, "it is necessary that everything which is believed should be believed after thought has led the way" (*On Free Will* , 5).

He proclaimed the superiority of reason when he wrote, "God forbid that He should hate in us that faculty by which He made us superior to all other beings. Therefore, we must refuse so to believe as not to receive or seek reason for our belief, since we could not believe at all if we did not have rational souls" (*Letters* , 120.1).

Augustine even used reason to elaborate a "proof for the existence of God." In *On Free Will,* he argued that "there exists something above human reason" (2.6). Not only can reason prove God exists, but it is helpful in understanding the content of the Christian message. For "how can anyone believe him who preaches the faith if he (to say nothing of the other points) does not understand the very tongue which he speaks. . . . Our understanding therefore contributes to the belief of that which it comprehends" (cited in Przywara, 59).

Augustine also used reason to remove objections to Christian Faith. Speaking of someone who had questions prior to becoming a believer, he wrote: “It is reasonable that he inquire as to the resurrection of the dead before he is admitted to the Christian sacraments.” What is more, “perhaps he ought also to be allowed to insist on preliminary discussion on the question proposed concerning Christ—why he came so late in the world’s history, and of a few great questions besides, to which all others are subordinate” (*Letters 120.1,* 102.38). In short, Augustine believed that human reason was used before, during and after one exercises faith in the Gospel.

God. For Augustine, God is the self-existing I AM WHO I AM. He is uncreated substance, immutable, eternal, indivisible, and absolutely perfect (*see* GOD, NATURE OF). God is not an impersonal Force (*see* PANTHEISM) but a personal Father. In fact, he is the tripersonal Father, Son, and Holy Spirit (*see* TRINITY). In this one eternal substance there is neither confusion of persons nor division in essence.

God is omnipotent, omnipresent, and omniscient. He is eternal, existing before time and beyond time. He is absolutely transcendent over the universe and yet immanently present in every part of it as its sustaining cause. Although the world had a beginning (*see* KALAM COSMOLOGICAL ARGUMENT), there was never a time when God was not. He is a Necessary Being who depends on nothing, but on whom everything else depends for its existence. “Since God is supreme being, that is, since he supremely is and, therefore, is immutable, it follows that he gave being to all that he created out of nothing” (*City of God,* 12.2).

Origin and Nature of the Universe. According to Augustine the world was created *ex nihilo* (*see* CREATION, VIEWS OF), out of nothing. Creation comes *from* God but is not *out of* God. “Out of nothing didst Thou create heaven and earth—a great thing and a small—because Thou are Almighty and Good, to make all things good, even the great heaven and the small earth. Thou wast, and there was nought else from which Thou didst create heaven and earth” (*Confessions,* 12:7). Hence, the world is not eternal. It had a beginning, yet not in time but with time. For time began with the world. There was no time before time. When asked what God did before he created the world out of nothing, Augustine retorted that since God was the author of all time, there was no time before he created the world. It was not creation *in* time but the creation *of* time that God executed in his initial acts (ibid., 11.13). So God was not *doing* (acting, creating) anything before he created the world. He was simply *being* God.

The world is temporal and changing, and from it we can see that there must be an eternal and unchanging being. “Behold the heavens and the earth are; they proclaim that they were created; for they change and vary.” However, “whatsoever hath not been made, and yet is, hath nothing in it, which before it had not, and this it is, to change and vary. They proclaim also, that they made not themselves” (ibid., 11.4).

Miracles. Since God made the world, he can intervene in it (*see* MIRACLE). In fact what we call Nature is simply the way God regularly works in his creation. For, “when such things happen in a continuous kind of river of ever-flowing succession, passing from the hidden to the visible, and from the visible to the hidden, by a regular and beaten track, then they are called natural.” But “when, for the admonition of men, they are thrust in by an unusual changeableness,

then they are called miracles" (*On the Trinity,* in *Nicene and Post-Nicene Fathers,* 3.6). But even nature's regular activities are the works of God. For,

> Who draws up the sap through the root of the vine to the bunch of grapes, and makes the wine, except God; who, while man plants and waters, himself giveth the increase? But when, at the command of the Lord, the water was turned into wine with an extraordinary quickness, the divine power was made manifest, by the confession even of the foolish. Who ordinarily clothes the trees with leaves and flowers except God? Yet, when the rod of Aaron the priest blossomed, the Godhead in some way conversed with doubting humanity. [ibid., 3.5]

Human Beings. Humankind, like the rest of the world, is not eternal. Humans were created by God and are like God. They are composed of a mortal body and an immortal soul (*see* IMMORTALITY). After death the soul awaits reunion with the body in either a state of conscious bliss (heaven) or of continual torment (hell). These souls will be reunited to their bodies at the resurrection. And "after the resurrection, the body, having become wholly subject to the spirit, will live in perfect peace to all eternity" (*On Christian Doctrine,* 1.24).

For Augustine, the human soul, or spiritual dimension, is of higher value than the body. Indeed, it is in this spiritual dimension that humankind is made in God's image and likeness. Hence, sins of the soul are worse than sins of the body.

Evil. Evil is real, but it is not a substance (*see* EVIL, PROBLEM OF). The origin of evil is the rebellion of free creatures against God (*see* EVIL, PROBLEM OF). "In fact, sin is so much a voluntary evil that it is not sin at all unless it is voluntary" (*Of True Religion,* 14). Of course, God created all things good and gave to his moral creatures the good power of free choice. However, sin arose when "the will which turns from the unchangeable and common good and turns to its own private good or to anything exterior or inferior, sins" (*On Free Will,* 2.53).

By choosing the lesser good, moral creatures brought about the corruption of good substances. Evil, then, by nature is a lack or privation of the good. Evil does not exist in itself. Like a parasite, evil exists only as a corruption of good things. "For who can doubt that the whole of that which is called evil is nothing else than corruption? Different evils may, indeed, be called by different names; but that which is the evil of all things in which any evil is perceptible is corruption" (*Against the Epistle of Manachaeus,* 38).

Evil is a lack in good things. It is like rot to a tree or rust to iron. It corrupts good things while having no nature of its own. In this way Augustine answered the dualism of the Manichaean religion which pronounced evil to be a co-eternal, but opposed, reality to the good.

Ethics. Augustine believed that God is love by his very nature. Since the human obligation to the creator is to be God-like, people have an absolute moral duty (*see* MORALITY, ABSOLUTE NATURE OF) to love God and neighbor, who is made in God's image. "For this is the law of love that has been laid down by Divine authority. 'Thou shalt love thy neighbor as thyself,' but, 'Thou shalt love God with all thy heart, and with all thy soul, and with all thy mind' " (*On Christian Doctrine,* 1.22). Hence, we are to concentrate all our thoughts, our whole life, and our

whole intelligence upon him from whom we derive all that we have. All the virtues are defined in terms of this love.

Augustine said, "As to virtue leading us to a happy life, I hold virtue to be nothing else than perfect love of God. For the fourfold division of virtue I regard as taken from four forms of love": "Temperance is love giving itself entirely to that which is loved; fortitude is love readily bearing all things for the sake of the loved object; justice is love serving only the loved object, and therefore ruling rightly; prudence is love distinguishing with sagacity between what hinders it and what helps it." So "temperance is love keeping itself entire and incorrupt for God; justice is love serving God only, and therefore ruling well all else, as subject to man; prudence is love making a right distinction between what helps it towards God and what might hinder it" (*On the Morals of the Catholic Church,* 15).

The object of this love is God, the chief Good. He is absolute love, and a human being's absolute obligation is to express love in every area of activity, first toward God and then toward neighbor.

History and Destiny. In his classic, *The City of God,* Augustine wrote the first great Christian philosophy of history. He said there are two "cities" (kingdoms), the city of God and the city of man. These two cities have two different origins (God and Satan), two different natures (love for God and love of oneself, pride), and two different destinies (heaven and hell).

History is headed toward a completion. At this end of time, there will be an ultimate victory of God over Satan and of good over evil. Evil will be separated from the good, and the righteous will be resurrected into a perfect body and a perfect state. The paradise lost at the beginning will be regained by God in the end.

History is *His* -story. God is working out his sovereign plan, and in the end he will defeat evil and perfect man. "Hence we have an answer to the problem why God should have created men whom he foresaw would sin. It was because both in them and by means of them he could reveal how much was deserved by their guilt and condoned by his grace, and, also, because the harmony of the whole of reality which God has created and controls cannot be marred by the perverse discordancy of those who sin" (*City of God,* 14).

Evaluation. St. Augustine has been criticized for many things, but perhaps more than anything else he is guilty of an uncritical acceptance of platonic and neoplantic (*see* PLOTINUS) thought. Even he rejected some of his own earlier platonic views in his *Retractions,* written near the end of his life. For example, he once accepted Plato's doctrine of the preexistence of the soul and the recollection of ideas from a previous existence.

Unfortunately, there were other platonic ideas that Augustine never repudiated. These include a platonic dualism of body and soul wherein human beings *are* a soul and only *have* a body. Along with this, Augustine held a very ascetic view of physical desires and sex, even within the context of marriage.

Further, Augustine's epistemology of innate ideas has been contested by modern empiricists (*see* HUME, DAVID), as has been his view of illuminationism. And even some theists question whether or not his proof for God from truth really works, asking why one needs an absolute Mind as the source of an absolute truth.

Even some who accept Augustine's classical theism point out his inconsistency in not demonstrating a unicity (oneness) of the divine ideas. This resulted from an acceptance of ideas as irreducibly simple platonic forms of which many are not possible in one simple substance (*see* ONE AND MANY, PROBLEM OF). This problem was later resolved by Thomas Aquinas with the aid of his distinction between actuality and potentiality in the order of being (*see* MONISM), which was expressed in his doctrine of analogy.

N. L. Geisler, *What Augustine Says*

E. Przywara, *An Augustine Synthesis*

Averroes. Averroes (1126–1198) was a Spanish Muslim jurist and physician born in Cordoba. His name is a Latinization of the Arabic form of Ibn-Rushd. Averroes wrote treatises on law, astronomy, grammar, medicine, and philosophy, his most significant being a commentary on Aristotle. He was known by scholastics as "the commentator" (of Aristotle).

Philosophy and Religion. Averroes had an unappreciated influence on the Christian Middle Ages. Because he was the most widely-read commentator on Aristotle, his platonic interpretation was thought to be correct and was adopted by Christians. Actually, like many in his time, Averroes mistakenly believed Aristotle was author of a book called *Theology* , which was really a compendium of Plotinus's writings (Edwards, 221). As a result, Plotinian ideas were read into Aristotle.

The commentaries of Averroes on Aristotle were integral to the education curriculum at early Western European Universities (ibid., 223).

Emanational Pantheism. While it seems strange for an adherent of monotheistic Islam to be a pantheist (*see* PANTHEISM), this is not uncommon among Sufi Muslims. Averroes' God was entirely separated from the world, exercising no providence. Similar to the theology of Avicenna, the universe was created by emanations from God. There was a series of celestial spheres (intelligences) that descended from God until they reached humanity at the bottom. Matter and intellect are both eternal. God was a remote, impersonal Prime Mover. God's was the only actual Mind in the universe.

The individual under this schema has only a passive intellect. God does the thinking through the human mind. Averroes denied human free will and the soul's immortality.

Double-truths. Averroes has been charged with teaching a "double-truth" theory. In a double-truth, one simultaneously believes two mutually exclusive propositions to be true if one is in philosophy and the other in religion. This is a false charge. It is ironic that it has been leveled against Averroes, who composed the treatise *On the Harmony Between Religion and Philosophy* to refute this very view. Averroes did believe in alternative modes of access to truth, but he apparently did not hold that there could be incompatible truths in different domains (see Edwards, 223).

Nonetheless, later Averronians were charged with holding the double-truth view. Siger of Brabant allegedly introduced such neoplatonic teachings at the University of Paris. Bonaventure and Thomas Aquinas reacted strongly. Aquinas is credited with destroying the popularity of Averroism in the West, particularly through his *The Unity of the Intellect Against the Averroeists* (1269).

By 1270 Stephen Tempier, bishop of Paris, condemned several of Averroes's teachings, including the eternality of the world, the denial of the universal providence of God, the unity of the human intellect, and the denial of free will. In 1277 he issued more condemnations of similar errors. In the preamble to the latter denunciation, he accused Siger and his followers of saying that "things are true according to philosophy but not according to the Catholic faith, as though there were two contradictory truths"(Cross, 116).

While there is no certainty that Siger actually held the double-truth view, this view did give rise to the Enlightenment assumption that domains of faith and reason could be separated. Forms of this view still prevail widely. Thomas Hobbes, Benedict Spinoza , and Immanuel Kant promoted this idea, as have New Testament critics (see BIBLE CRITICISM) who separate the Jesus

of history from the Christ of faith (*see* BULTMANN, RUDOLPH ; CHRIST OF FAITH VS. JESUS OF HISTORY ; JESUS SEMINAR ; MYTHOLOGY AND THE NEW TESTAMENT).

Allegorical Interpretation. Following Plotinus, Averroes believed the highest form of knowledge leads to a mystical experience of God (*see* MYSTICISM). This experience involves passing from a normal, rational, discursive kind of knowing to a trans-rational, intuitive, and direct experience of God. Such an approach necessitated an allegorical approach to Scripture.

Averroes interpreted the *Qur'an* allegorically and for this was accused of heresy and exiled, though he was recalled shortly before his death. Many Christians from Origen (ca. 185–ca. 254) on took this allegorical approach to Scripture.

Evaluation. Whether he actually taught it, the double-truth theory carried forward by some of his disciples is contrary to basic laws of thought (LOGIC ; FIRST PRINCIPLES). Faith and reason cannot be bifurcated (*see* FAITH AND REASON).

Averroes' pantheism is contrary to the tenets of theism in general and Christian theism in particular. His views about the eternality of matter (*see* CREATION, VIEWS OF) are contrary to biblical teaching about creation (*see* KALAM COSMOLOGICAL ARGUMENT).

His denial of free will has serious problems and is a form of strong determinism, which most Christians reject. The same can be said for his denial of individual immortality (*see* HELL ; IMMORTALITY). The form of mysticism Averroes held, in which mind and laws of reason are irrelevant, is unacceptable to thoughtful theists (*see* FAITH AND REASON ; LOGIC ; MYSTERY).

Avicenna. Avicenna (980–1037) was a physician and philosopher from near Bokhara in the West Asian region of Uzbekistan. His name is a Latinized pronunciation of the Arabic form of Ibn Sina. Avicenna wrote about 100 books on logic, mathematics, metaphysics, and theology, and his greatest work, *The Canon,* a system of medicine. He combined Aristotelianism (*see* ARISTOTLE) and neoplatonism (*see* PLOTINUS) in his philosophy of pantheism.

Avicenna's Cosmological Argument. Following the Muslim philosopher Alfarabi, Avicenna formulated a similar cosmological argument that was emulated by later scholastics, including Thomas Aquinas. To find Avicenna's context in the history of the cosmological argument, see COSMOLOGICAL ARGUMENT .

Avicenna's proof goes like this:

1. There are possible beings (i.e., things which come into existence because they are caused to exist but would not otherwise exist on their own).

2. Whatever possible beings there are have a cause for being (since they do not explain their own existence).

3. But there cannot be an infinite series of causes of being. (a) There can be an infinite series of causes of *becoming* (father begets son, who begets son). (b) There cannot be an infinite series of causes of *being,* since the cause of being must be simultaneous with its effect. Unless there was a causal basis for the series, there would be no beings there to be caused.

4. Therefore, there must be a First Cause for all possible beings (i.e., for all beings that come into existence).

5. This First Cause must be a Necessary Being, for the cause of all possible beings cannot itself be a possible being.

Neoplatonic Influence on Avicenna. By borrowing some neoplatonic premises and a ten-sphere cosmology, Avicenna furthers his argument to prove that this necessary First Cause created a series of "Intelligences" (demiurges or angels) and ten cosmic spheres they controlled:

6. Whatever is essentially One can create immediately only one effect (called an intelligence).

7. Thinking is creating, and God necessarily thinks, since he is a Necessary Being.

8. Therefore, there is a necessary emanation from God of ten intelligences which control the various spheres of the universe. The last of these (agent intellect) forms the four elements of the cosmos. By agent intellect, the human mind (possible intellect) is formed of all truth.

Evaluation. Many criticisms of the cosmological argument have been offered by atheists, agnostics, and skepticism, most emanating from David Hume and Immanuel Kant (*see* GOD, OBJECTIONS TO PROOFS FOR).

In addition to the traditional arguments, Avicenna's form of the argument is subject to many of the criticisms of pantheism and neoplotinian thought. Emanational cosmology has been outdated by modern astronomy.

Conclusion. In common with theism, Avicenna's God was a Necessary Being. But in contrast to theism a serial creative force of ten gods emanated from God with absolute necessity. Also, unlike the Christian theistic God who freely created *ex nihilo* and who is directly responsible for the existence of everything else, in Avicenna's cosmology the universe emanates from a chain of gods (*see* CREATION, VIEWS OF).

Ayer, A. J. Alfred Jules Ayer (1910–1989) was a British humanist, a graduate of Oxford (1932), and a member of the Vienna Circle of logical positivism. This group, formed in 1932, was influenced by Ernst Mach (d. 1901). Their work was strongly antimetaphysical (*see* METAPHYSICS) and anti-Christian.

In *Language, Truth and Logic* (1936) Ayer tried to eliminate metaphysics via the verifiability principle. *Foundations of Empirical Knowledge* (1940) dealt with problems of private language and other minds. *Philosophical Essays* (1954) contained articles treating problems raised by his first two books. By 1956 Ayer wrote *The Problem of Knowledge* (1956), which reflects moderate antiskeptical realism. He accepts that some statements may be true even if they cannot be justified in principle. A near-death experience in the 1980s convinced Ayer of the possibility of immortality, though he continued to reject the existence of God (*see* ACOGNOSTICISM).

Ayer's Philosophy. According to Ayer and the logical positivists, meaningful statements must measure up to the criterion of verifiability. All genuine propositions must be empirically testable or else they are purely formal or definitional.

Meaningful Propositions. Following David Hume , Ayer taught that there are three types of propositions: (1) Analytic propositions are truisms, tautologies, or true by definition. These are explicative, meaning the predicate merely states what the subject says. (2) Synthetic propositions are true by experience and/or in relation to experience. These are ampliative, since the predicate

amplifies or affirms more than the subject. All other propositions are (3) nonsensical. They are meaningless, have no literal significance, and are emotive at best.

Metaphysics Is Meaningless. Ayer followed Immanuel Kant in rejecting metaphysical or theological statements, but for different reasons. Kant used the argument that the mind cannot go beyond phenomena of the physical world. But Ayer recognized that the mind must go beyond the physical. How else would it know it cannot go beyond? Further, whereas Kant had a metaphysics, Ayer did not, reasoning that we cannot speak meaningfully of what may be beyond the empirical. As Ludwig Wittgenstein said, "That whereof you cannot speak, speak not thereof." The impossibility of metaphysics rests not in the psychology of man but in the meaning of language.

Distinctions. Ayer laid down two distinctions in the verifiability principle (*see* VERIFICATION, PRINCIPLE OF). First, there is a difference between *practical* and *principle* verification. Both are meaningful. In practical verification the means for verification are available. Principle verification, on the other hand, involves propositions that we do not have the means to verify now but we know how we could do so. For example, "There is no life on Mars" is verifiable in principle, though not yet in practice.

Second, there is a difference between *strong* and *weak verification* . Only weak verification is valid. Strong verification involves certitude, beyond doubt, or conclusive proof. Early positivists claimed to have this, but later modified their view. If there is strong verification, then there would be a general metaphysics too. And for Ayer to say that there are important types of nonsense would be hedging. Weak verification is subject to change or correction, since it is based on experience. Ayer concluded that no proposition other than tautology can be more than probable, for example, "All human beings are mortal" is either purely definitional, or else it is an empirical generalization.

Further Qualification of the Verifiability Principle. Ayer refined the verification principle in three ways. First, no proposition can be conclusively confuted by experience, any more than it can be conclusively verified by experience. Second, analytic propositions can be neither verified nor falsified by experience. Third, propositions don't have to be directly verifiable to be meaningful. They must, however, have some sense-experience relative to truth or falsity.

In the 1946 revised edition of *Language, Truth, and Logic* (1946) Ayer found it necessary to make further revisions to the verifiability principle. He reluctantly acknowledged that some definitional propositions, for example the verification principle itself, are meaningful without being either factual or purely arbitrary. Also, some empirical statements can be conclusively verified, for example a single sense experience. These qualifications, especially the first one, were to be the downfall of logical positivism.

Applying the Verification Principle. *Metaphysics and Theology.* Ayer's conclusions were severe: All metaphysical propositions are nonsensical because they are neither analytic nor empirical. All genuine philosophy is analytical, not metaphysical. Also, metaphysics arose by accident of language, a belief that nouns have real referents.

Metaphysics is not merely misplaced poetry. Poetry does not talk nonsense; there is a literal meaning behind most of what poets say. Not so for metaphysics. What is more, no meaningful propositions can be formulated about the terms *God* or *transcendent* . According to Ayer, this is neither atheism nor agnosticism, both of which hold it meaningful to speak of God. This is noncognitivism or acognosticism, which holds the very question of God to be meaningless.

Ethics. Ayer believed that ethical statements are neither formal nor factual but emotive. Such statements merely express the speaker's feeling and attempt to persuade others to feel the same way. For example, "You ought not to steal" means I dislike stealing and I want you to feel this way also. It is not a factually declarative but merely expresses the speaker's attitude. Ethical statements are not statements *about* one's feeling but statements *of* one's feelings. Ayer claims that this view is subjective but not radically subjectivistic. Ethical statements are merely ejaculative and, hence unverifiable, whereas statements about feeling are verifiable: "I am bored" is verifiable; a sigh is unverifiable.

Evaluation. Logical positivism is diametrically opposed to evangelical Christianity. If true, Ayer's logical positivism would hold disastrous consequences for orthodox Christianity. No statement about the existence or the nature of God could even be meaningful, to say nothing of whether it could be true. The Bible could not contain propositional revelation about God, nor could it be the inspired Word of God. There could be no meaningful ethical prescriptions, let alone absolute moral principles.

The Self-Defeating Nature of Empirical Verifiability. The death blow to Ayer's principle of verifiability is the self-destructive fact that it is not empirically verifiable. For according to the criterion of verifiability, all meaningful statements must be either true by definition or empirically testable. But the principle of verifiability is neither. By its own standard the principle of verifiability is meaningless.

Nor does one escape the dilemma by devising a third category intended to include the meaningfulness of the verifiability principle but to exclude all metaphysical and theological statements. For every attempt to define such a principle failed. In the end, most of the original Vienna Circle discarded their strict logical positivism, including Ayer himself.

The revised verification principles died the death-of-a-thousand-qualifications. Every attempt to push metaphysics out the front door and let verification by qualification in the back door found that metaphysics followed them in the back door. It was given new life by the broadened qualifications allowing for metaphysical statements. The narrow statements of verification inevitably eliminated their own principle of verification. The broader statements of the principle that were not self-defeating did not systematically eliminate all metaphysical and theological statements.

Legislating Meaning Without Listening. The problem with logical positivism is that it attempted to legislate what someone meant by their statements rather than to listen to what they meant. Ethical statements are a classic case in point. "Thou shalt not" statements do not mean "I do not like that action." They mean "You should not/ought not do it." It is a fallacy to reduce

ought to *is* , the *prescriptive* to the *descriptive* . It also is a fallacy to reduce "You ought" to "I feel it is wrong."

Likewise, statements about God need not be reduced to either tautologies or empirical statements to be meaningful. Why should statements about a transempirical Being (God) be subjected to empirical criteria? Metaphysical statements are meaningful within a metaphysical context using metaphysical criteria (*see* FIRST PRINCIPLES).

Barnabas, Gospel of. Muslims often cite *The Gospel of Barnabas* in defense of Islamic teaching (*see* MUHAMMAD, ALLEGED DIVINE CALL OF ; QUR'AN, ALLEGED DIVINE ORIGIN OF). In fact, it is a best-seller in many Muslim countries. Suzanne Haneef, in her annotated bibliography on Islam, highly recommends it, saying, "Within it one finds the living Jesus portrayed far more vividly and in character with the mission with which he was entrusted than any other of the four New Testament Gospels has been able to portray him." It is called "essential reading for any seeker of the truth" (Haneef, 186).

Typical of Muslim claims is that of Muhammad Ata ur-Rahim: "The Gospel of Barnabas is the only known surviving Gospel written by a disciple of Jesus. . . . [It] was accepted as a Canonical Gospel in the churches of Alexandria up until 325 A.D ." (Ata ur-Rahim, 41). Another Muslim author, M. A. Yusseff, argues confidently that "in antiquity and authenticity, no other gospel can come close to *The Gospel of Barnabas* " (Yusseff, 5).

The Contents of the Gospel. It is not surprising that Muslim apologists appeal to the *Gospel of Barnabas* in that it supports a central Islamic teaching in contrast to the New Testament (*see* CHRIST, DEATH OF). It claims that Jesus did not die on the cross (cf. sura 4:157; *see* CHRIST'S DEATH, SUBSTITUTION LEGEND). Rather, it argues that Judas Iscariot died in Jesus' stead (sect. 217), having been substituted for him at the last minute. This view has been adopted by many Muslims, since the vast majority of them believe that someone else was substituted on the cross for Jesus.

Authenticity of the Gospel. Reputable scholars who have carefully examined it find absolutely no basis for this writing's authenticity. After reviewing the evidence in a scholarly article in *Islamochristiana,* J. Slomp concluded: "in my opinion scholarly research has proved absolutely that this 'gospel' is a fake. This opinion is also held by a number of Muslim scholars" (Slomp, 68). In their introduction to the Oxford edition of *The Gospel of Barnabas,* Longsdale and Ragg conclude that "the true date lies . . . nearer to the sixteenth century than to the first" (Longsdale, 37).

The evidence that this was not a first-century gospel, written by a disciple of Christ, is overwhelming:

The earliest reference to it comes from a fifth-century work, *Decretum Gelasianum* (Gelasian Decree, by Pope Gelasius, A.D . 492–495). But even this reference is in doubt (Slomp, 74). Moreover, there is no original language manuscript evidence for its existence. Slomp says flatly, “There is no text tradition whatsoever of the G.B.V. [Gospel of Barnabas Vienna manuscript]” (ibid.). By contrast, the New Testament books are verified by more than 5300 Greek manuscripts that begin over the first three centuries (*see* BIBLE, EVIDENCE FOR).

Second, L. Bevan Jones notes that “the earliest form of it known to us is in an Italian manuscript. This has been closely analyzed by scholars and is judged to belong to the fifteenth or sixteenth century, that is, 1400 years after the time of Barnabas” (Jones, 79). Even Muslim defenders of it, like Muhammad ur-Rahim, admit that they have no manuscripts from before the 1500s.

This gospel is widely used by Muslim apologists today, yet there is no reference to it by any Muslim writer before the fifteenth or sixteenth century. Surely they would have used it had it been in existence. There were many Muslim writers who wrote books who would no doubt have referred to such a work, had it been in existence. But not one of them, or anyone else, ever refers to it between the seventh and fifteenth centuries, when Muslims and Christians were in heated debate.

No father or teacher of the Christian church ever quoted it from the first to the fifteenth centuries, despite the fact that they quoted every verse of every book of the New Testament except 11 (Geisler, *General Introduction to the Bible*). If *The Gospel of Barnabas* had been considered authentic, it more surely would have been cited many times, as were all the other canonical books of Scripture. Had this gospel even been in existence, authentic or not, certainly it would have been cited by someone. But no father cited it, either pro or con, for over 1500 years.

Sometimes it is confused with the first-century *Epistle of [Pseudo] Barnabas* (ca. A.D . 70–90), which is an entirely different book (Slomp, 37–38). Because of references to this volume, Muslim scholars falsely allege support for an early date. Muhammad Ata ur-Rahim confuses the two books and so wrongly claims that the gospel was in circulation in the second and third centuries A.D . This is a strange error since he admits that they are listed as different books in the “Sixty Books” as Serial No. 18 Epistle of Barnabas and Serial No. 24 Gospel of Barnabas. Rahim even cites by name the “Epistle of Barnabas” as evidence of the existence of the *Gospel of Barnabas* (Ata ur-Rahim, 42–43).

Some have mistakenly assumed that the reference to a gospel used by Barnabas referred to in the *Apocrypha* l *Acts of Barnabas* (pre–478) was *The Gospel of Barnabas* . However, this is clearly false, as the quotation reveals: “Barnabas, having unrolled the Gospel, *which we have received from Matthew his fellow-labourer,* began to teach the Jews” (Slomp, 110). By deliberately omitting this emphasized phrase, the impression is given that there is a *Gospel of Barnabas* .

The message of the *Gospel of Barnabas* is completely refuted by eyewitness first-century documents of the New Testament (*see* NEW TESTAMENT, HISTORICITY OF). For example, its

teaching that Jesus did not claim to be the Messiah and that he did not die on the cross are thoroughly refuted by eyewitness first-century documents (*see* BIBLE MANUSCRIPTS). In fact, no Muslim should accept the authenticity of *The Gospel of Barnabas* since it clearly contradicts the *Qur'an's* claim that Jesus was the Messiah. It claims, "Jesus confessed, and said the truth; 'I am not the Messiah. . . . I am indeed sent to the house of Israel as a prophet of salvation; but after me shall come the Messiah' " (sects. 42, 48). The *Qur'an* repeatedly calls Jesus the "Messiah" [the "Christ"] (cf. suras 5:19, 75).

Even the book's Muslim promoters, such as Haneef, have to admit that "the authenticity of this book has not been unquestionably established. . . . It is believed to be an *Apocrypha* l account of the life of Jesus." Haneef claims it was "lost to the world for centuries due to its suppression as a heretical document," but there is not a shred of documented evidence for this. As noted, it was not even mentioned by anyone before it in the sixth century. Other Muslim scholars doubt its authenticity too (see Slomp, 68). For the book contains anachronisms and descriptions of medieval life in western Europe that reveal that it was not written before the fourteenth century. For example, it refers to the year of Jubilee coming every 100 years, instead of fifty (*The Gospel of Barnabas* , 82). The papal declaration to change it to every 100 years was made by the church in 1343. John Gilchrist in his work titled, *Origins and Sources of the Gospel of Barnabas,* concludes that "only one solution can account for this remarkable coincidence. The author of the Gospel of Barnabas only quoted Jesus as speaking of the jubilee year as coming 'every hundred years' because he knew of the decree of Pope Boniface." He added, "but how could he know of this decree unless he lived at the same time as the Pope or sometime afterwards? This is a clear anachronism which compels us to conclude than the Gospel of Barnabas could not have been written earlier that the fourteenth century after Christ" (Gilchrist, 16–17). One significant anachronism is that *The Gospel of Barnabas* uses the text from the fourth-century Roman Catholic Latin Vulgate translation of the Bible. Other examples of anachronisms include a vassal who owes a share of his crop to his lord (*The Gospel of Barnabas,* 122), an illustration of medieval feudalism, a reference to wooden wine casks (152), rather than wine skins as were used in Palestine, and a medieval court procedure (121).

J. Jomier provides a list of mistakes and exaggerations:

The writing says that Jesus was born when Pilate was governor, though he did not become governor until A . D 26 or 27. Jesus sailed to Nazareth, though it was not on the sea shore. Likewise, *the Gospel of Barnabas* contains exaggerations, such as mention of 144,000 prophets and 10,000 prophets being slain "by Jizebel" (see Slomp).

Jomier's study shows fourteen Islamic elements throughout the text that prove that a Muslim author, probably a convert, worked on the book. The pinnacle of the temple, where Jesus is said to have preached—hardly a good place—was translated into Arabic by *dikka,* a platform used in mosques (7). Also, Jesus is represented as coming only for Israel but Muhammad "for the salvation of the whole world" (chap. 11). Finally, the denial of Jesus to be the Son of God is Qur'anic, as is the fact that Jesus' sermon is modeled after a Muslim *hutba* which begins with praising God and his holy Prophet (chap. 12).

Conclusion. Muslim use of *The Gospel of Barnabas* to support their teaching is devoid of evidence. Its teachings even contradict the *Qur'an* . This work, far from being an authentic first-century account of the facts about Jesus, is patently a late medieval fabrication. The best first-century records we have of the life of Christ are found in the New Testament, which categorically contradicts the teaching of the *Gospel of Barnabas* . Even early non-Christian references contradict the Gospel of Barnabas in key points (*see* NEW TESTAMENT, NON-CHRISTIAN SOURCES). For a further critique the reader should consult David Sox's excellent book, *The Gospel of Barnabas* .

Barth, Karl. Karl Barth (1886–1968) was a German theologian who studied at Berne, Berlin, Tubingen, and Marburg. He ministered at Geneva from 1901 to 1911. After a ten-year pastorate at Safenwil, Switzerland, Barth was appointed to the chair of Reformed theology at the University of Gottingen (1921). In 1925 he went to Munster and later to Bonn (1929) where his opposition to the German National Socialist movement led to his exile. He then taught theology at the University of Basel until his retirement in 1962.

Barth's most influential works include *Commentary on Romans* (1919; rev. 1922), *The Word of God and Theology* (1924; tr. 1928), *Theology and the Church* (1928), *Christian Dogmatics in Outline* (1927), *Anselm* (1931), and *Church Dogmatics* (1932–68). He also wrote a small but significant work of apologetics, *Nein* (*No*).

Influences. Barth drew on the epistemology of Immanuel Kant by way of Albrecht Ritschl and Wilhelm Herrmann. The existentialism of Soren Kierkegaard also had significant impact on his thinking, though he disavowed that influence later. Fyodor Dostoevsky's *The Brothers Karamazov* , a novel that portrayed the bankruptcy of human-centered philosophy, helped mold his thinking.

Barth was also influenced by the liberal theological method of Herrmann, the atheism of Franz Overbeck, and the pietism of Jean Blumhardt, an early-nineteenth-century pastor. Barth himself would point to his reading of the Bible, especially Romans, and the Reformers as transforming influences on his life and thought (see Barth, *Romans* ; unless otherwise noted, citations in this article are from Barth's writings).

Barth was also strongly influenced negatively by the human-centered atheism of Ludwig Feuerbach . He even wrote a foreword for an edition of Feuerbach's *The Essence of Christianity* . He seemed to affirm that an anthropomorphic religion is the best human beings can do apart from divine revelation.

Elements of Barth's Thought. Barth was a student of liberalism who reacted strongly against liberal teachings. He stressed the transcendence of God and the domination of sin in the world in opposition to the modernist tendency to put humanity in the place of God. He developed a dialectical theological method that poses truth as a series of paradoxes. For example, the infinite became finite, the absolutely transcendent disclosed himself in Jesus. He also developed a theme of "crisis," describing the struggle with these paradoxes

Fideism . As a pastor at Safenwil, Barth became disillusioned with liberalism in the face of the practical concerns of Christian preaching. For Barth, truth in religion is based on faith rather than on reason or evidence (*Church Dogmatics* , 1.2.17). This is fideism. Barth held that transcendental truth cannot be expressed in rational categories. It needs to be made known in the clash of opposites. Theological knowledge is an internal rationality, an inner consistency within the presuppositions of faith. This knowledge is independent of the rules of thought that govern other knowledge.

The apex of Barth's fideism was reached in *Anselm* and continued in *Church Dogmatics* . Only God can make God known. Faith needs no proofs. The Word of God becomes knowable by making itself knowable (Anselm, 282). So strong was this fideism that Barth wrote *Nein* (No) to respond to another neoorthodox theologian, Emil Brunner. Barth denied that human beings even have an active capacity to receive special revelation from God (*see* REVELATION, SPECIAL). Rather, God has to miraculously create the "contact point" within the person before they can communicate (*Nein* , 29). Of course, he denied the efficacy of general revelation (*see* REVELATION, GENERAL) to convey truth of God (ibid., 79–85). Humanity is so totally vitiated by sin that revelation cannot be understood (*see* FAITH AND REASON ; NOETIC EFFECTS OF SIN).

Natural theology , which seeks to establish God's existence by rational arguments (*see* GOD, EVIDENCE FOR), is simply ruled out (*Romans* , 2.1.168). Miracles do not confirm revelation to unbelievers. They are meaningful only to those who already believe (ibid., 3.3.2; 714f.; *see* MIRACLES, APOLOGETIC VALUE OF). In his *Shorter Commentary on Romans* (1959) Barth acknowledged that there is a witness of God in nature to which all people have access, but he hastens to add that they have not profited by it (*Shorter Commentary* , 28).

Barth's View of Scripture. *Three Levels of the Word of God.* The Word of God is revealed in three forms: (1) The incarnate Word, Jesus Christ, is the ultimate level, which is identical with the second person of the Trinity. (2) The inscripturated Word is the whole canon of Scripture as a

witness to revelation. (3) The proclaimed (preached) Word depends on the written Word, because it is based upon this witness to revelation.

The Bible as Record of Revelation. The Bible is not a written revelation (*Church Dogmatics* , 6.1.5–7). It merely records the revelation of God in Jesus Christ. The proclaimed Word looks forward to the fulfillment of God's Word in the future. Only that revealed Word, the incarnate Christ, has the absolute character of the Word of God. The other two are relative to the first and can only be properly labeled "Word of God" to the extent that God freely chooses to use these to confront us.

Barth was convinced that the Holy Scripture is not itself revelation, but is rather a *witness* of revelation. There is a difference between an event and its record and description. Hence, the revelation of God and the human description of it are never identical.

The Bible is fallible. The Bible is not the infallible words of God, but a thoroughly human book. The writers of the Bible were time-bound children who possessed their own perspective, which is unlike ours. They witnessed the redemptive events according to the concepts of their time. The writers erred in every word, but their work was justified and sanctified by God so that they spoke God's Word with their fallible and erring words. God's Word never coincides with the book (Bible) itself. The Word is always a free, sovereign act of God. This removes the words of the Bible from the Word of God, so that the Word of God is not subject to attacks leveled against the words of the Bible.

The Bible is a gateway. God uses this Bible for his service by taking the human text and encountering the individual through and in it. The authority of the Bible and its divine character are not subject to human demonstration. It is only when God, by the Holy Spirit, speaks through the Bible that a person hears the Word of God. The Bible consists of sixty-six canonical books recognized in the church, not because the church confers on them a special authority, but because they embody the record of those who witnessed (personal) revelation in its original form (Christ).

God's Word is always the Word of God, but it is not at our disposal. The dictum, "The Bible is the Word of God," does not refer to the book as such, but to God's being at work within the book. Inspiration does not vouchsafe the grammatical, historical, and theological character of the words on the page; it uses them as a gateway.

All likeness between God's Word and the Bible is lacking, and everything stands in opposition and in contradiction with the real Word of God. It is not an infallible revelation but a fallible record of God's revelation in Christ. It may be said that the Bible *becomes* the Word of God, if and when God is pleased to speak through it.

Religious Language. Barth strongly opposed analogous religious language. There is no analogy of being, as in Thomas Aquinas. There is only an analogy of faith. This means that the language of the Bible does not describe the way God really is. God so transcends our language about himself that it is equivocal as applied to him. It is evocative, but not descriptive.

The Resurrection . His deviation from an orthodox view of Scripture notwithstanding, Barth held some conservative views. Inconsistently to his view of Scripture, he accepted the virgin birth, miracles, and bodily resurrection. He confessed an orthodox Trinity and a Christ who is God.

On the resurrection, Barth affirmed, "The Easter story actually speaks of . . . Christ truly, corporeally risen, and as such appearing to his disciples" (*Commentary* , 1.2.114f.). In *Credo* , his commentary on the Apostles' Creed, he added: "The miracle [of the resurrection] consists in the two facts that belong together . . .—the one, that the grave of that Jesus who died on the Cross on Good Friday was found empty on the third day, the other that Jesus Himself 'appears' . . . to His disciples as visibly, audibly, tangibly alive." Barth emphasized the "corporeally risen" and adds that "there cannot be any talk of striking out the empty grave" (*Credo* , 100).

In his work on *The Resurrection of the Dead* (tr. 1977), Barth adds, "the tomb is doubtless empty, under every conceivable circumstance empty! 'He is not here.' " Further, "It is an event which involves a definite seeing with the eyes and hearing with the ears and handling with the hands. . . . It involves real eating and drinking, speaking and answering, reasoning and doubting and then believing." The event "is fixed and characterized as something which actually happened among men like other events, and was experienced and later attested by them" (*Commentary* , 2.64.143).

Barth goes so far as to refute those who stress a "glorified corporeality" by making certain speculative inferences from the fact that Jesus was not always immediately recognized after his resurrection and that he appeared through closed doors. Barth replies, "What the Evangelists really know and say is simply that the disciples saw and heard Jesus again after His death, and that as they saw and heard Him they recognized Him, and they recognized Him on the basis of His identity with the One whom they had known before." Indeed, "in the ensuing appearances to the eleven, recognition comes when He allows them to see and touch His hands and His feet" (ibid.).

Evaluation. *Positive Features.* From the viewpoint of orthodox Christians, Barth is a mixed blessing. Among helpful dimensions of his thought are:

1. his attempt to reject modernism and liberalism;

2. his identification of the modernist's effort to put humanity in God's place;

3. his rejection of efforts to make God totally immanent;

4. his stress on a bodily resurrection;

5. his emphasis on calling the church back to the Bible, with the understanding that faith is not ultimately directed to the book, but to God alone, and

6. his support for central orthodox doctrines.

Criticisms. God is out of reach. Barth is a classic example of a fideist. In overemphasizing God's transcendence, Barth effectively makes God unknowable. He never overcame the "wholly other" form of his paradox, which will not stand alongside the revealed Son of God of the Christ (*Commentary*). Barth's God is the God of Kierkegaard. If language about God is not even analogical, all that is left is agnosticism about God's nature.

The central thesis is self-defeating. The idea that transcendental truth cannot be expressed in rational categories does the very thing it denies—it expresses transcendental truth in rational categories. To propose that "truth is a series of paradoxes" raises the question of whether this statement is true, and, if so, whether it is paradoxical.

Fideism is unfounded. To argue that there are no rational supports for the Christian faith is self-destructive. It is an argument in support of a religious position claiming that arguments cannot be given in support of religious positions. Further, fideism may be internally consistent, but there is no indication of where it touches reality, so it is impossible to distinguish from falsehood.

The denial of general revelation is unbiblical. When Barth denied the validity of general revelation he went contrary to both historical Christianity and Scripture. Romans 1:19–20 (cf. 2:12–15) declares that general revelation in nature is so clear that even fallen human beings are "without excuse." Other passages demonstrate that God can be known by general revelation, among them Psalm 119 and Acts 14 and 17 .

This view of Scripture is faulty. There are serious problems with Barth's view of Scripture. In attempting to preserve God's freedom about whether to speak through Scripture, he has undermined the essential nature of Scripture and the authoritative Word of God. His view is contrary to what the Bible affirms of itself (*see* BIBLE, EVIDENCE FOR), namely, that it is not merely a witness to revelation but a revelation itself (*see* BIBLE, INSPIRATION OF).

The focus of divine revelation according to Scripture is not a self-authenticating word, but an open, public, verifiable historical event. Evidence is made known to all (Acts 17:31). Luke composed his work to show the historical foundations on which the proclamation of the gospel rests (Luke 1:1–4). Jesus offered infallible proofs (Acts 1:3).

This defective view of Scripture allows virtually no limits to picking and choosing what to believe. Barth may have accepted a literal physical resurrection, but many of those who followed him did not. He accepted such unorthodox beliefs of universalism. Following Origen , Barth denied the existence of hell and affirmed that all will be saved.

Bayle, Pierre. Pierre Bayle (1647–1706) was born in Carla, France, where his father was a Calvinist clergyman. He attended the Jesuit University of Toulouse in 1669 where he converted to Catholicism. After reconsidering, he returned to Protestantism and became subject to severe penalties under French law. He thus left France for Geneva to finish his studies. He was appointed to the chair of philosophy at Sedan (1675) and later in Rotterdam (1682) where he published his *Pensees diverses sur la comete de 1680* (Diverse Thoughts on the Comet of 1680) and his *Critique generale de l'Historie du Calvinisme de M. Maimbourg* (A Critique of Maimbourg's History of Calvinism). Both his father and his brothers died in France as a result of religious persecutions. From 1684 to 1687 he published his famous journal, *Nouvelles de la republique des lettres* , an attempt to popularize literature. After being deposed from his chair in 1693, he devoted his attention to his famous *Dictionaire historique et critique* (2 vols., 1697) which was eventually expanded to sixteen volumes by the eleventh edition (1829–24). The English translation was five volumes (1734–38).

Beliefs. Since Bayle lived in a day of religious intolerance, his views were more covert than they otherwise may have been. Nevertheless, some things emerge clearly.

Skepticism. After the publication of his *Dictionary* , Bayle was charged with skepticism, Manichaeism, and disregard for Holy Scripture. Bayle was called before a Presbyterian commission and consented to change some offensive articles, which appeared in revised form in the second edition. Nonetheless, it is evident that Bayle was far from being an orthodox Protestant.

In fact, Bayle was a skeptic who strongly objected to Benedict Spinoza 's monism and leaned toward Manichaean dualism —the system out of which Augustine was converted. Bayle held

that the realms of faith and reason are mutually exclusive. At first Protestant liberals believed Bayle was on their side, but they soon learned that he considered Christian beliefs incompatible with reason and science.

Attack on Religion. Bayle's attack on religion was relentless, though often subtle. Many of his articles in the *Dictionary* dealt with the problem of evil, immorality in the Old Testament, and the alleged irrationality of Christianity. He reveled in salacious tales about famous religious figures. Indeed, his articles were "a massive onslaught against almost any religious, philosophical, moral, scientific, or historical view that anyone held" (Edwards, 258). He considered himself "a Protestant in the true sense of the term, that he opposed everything that was said and everything that was done" (ibid.).

Religious Toleration. Bayle believed that "matters of belief should be outside the sphere of the State"—a belief that earned his work a place on the Catholic Index. In 1686 he published a *Commentaire philosphique sur ces paroles de Jesus-Christ 'Constrains-les de' enter"* (*Philosophical Commentary on the Words of Jesus "Constrain Them to Come In"*) in which he defended toleration for Jews, Muslims, Unitarians, Catholics, and even atheists.

Influence. Although he was not himself a revolutionary, his writings did pave the way for the French Revolution. Three years before John Locke (1632–1704) wrote his famous *Letters on Toleration,* Bayle penned his *Commentaire philosphique sur le Compelle Entrare* in which he argued that freedom is a natural right and that even an atheist was not necessarily a bad citizen.

Bayle had a great influence on French philosophers of the eighteenth century, especially Francois-Marie Voltaire (1694–1778). Bayle's *Dictionary* was the source from which they drew many of their arguments. Denis Diderot's skeptic *Encyclopedie* was based on Bayle's work. Diderot (1713–1784) wrote: "Articles dealing with respectable prejudices must expound them differentially; the edifice of clay must be shattered by referring the reader to the other articles in which the opposite truths are established on sound principles" ("Diderot, Denis," in *Encyclopedia Britannica*).

The influence of Bayle extended to figures like David Hume and Edward Gibbon. Thomas Jefferson recommended the *Dictionary* as one of the hundred basic books with which to start the Congressional Library. The famous German atheist Ludwig Feuerbach viewed Bayle as a major figure in modern thought and devoted a whole volume to him (*see* FEUERBACH).

The central theses of Bayle's skepticism are treated elsewhere, particularly in articles on Agnosticism; Apologetics; Biblical Criticism; Hume, David; Miracles; and New Testament, Reliability of.

Berkeley, George. Bishop George Berkeley (1685–1753) was born in Kilekenny, Ireland. He studied John Locke and Rene Descartes at Trinity College, Dublin. He attempted but failed to start a college in Rhode Island. Having been ordained as an Anglican priest in 1707, he was eventually appointed bishop in 1734.

The primary philosophical writings of Berkeley include *A Treatise Concerning the Principles of Human Knowledge* (1710), *Three Dialogues Between Hylas and Philonous* (1713), and *The Analyst; or, A Discourse Addressed to an Infidel Mathematician* (1734).

The Philosophy of Berkeley. Berkeley is known for two seemingly incongruous positions. He was an epistemological empiricist in the tradition of John Locke . He was also a metaphysical idealist who denied the existence of matter.

The Epistemology of Empiricism. According to Berkeley, the cause and cure of philosophical difficulties lies not in our senses or reason but in the philosophical principle of *abstraction* . We can imagine, compound, divide, and symbolize (generalize) and no more. General ideas are only particular ones made to stand for a group (e.g., a triangle).

The error of abstraction arises from language; we wrongly believe words have precise meanings, that every word stands for an idea or that language is primarily for communication. It also arouses passions and influences attitudes. The cure is to confine thoughts to naked ideas that are free from their traditional names, so as to avoid purely verbal controversies, to avoid the snare of abstractions, and to be clear. The result of this is that we won't look for abstract when particular is known, nor will we assume that all names represent an idea.

Berkeley believed that the *source* of all ideas is internal—sensation, perception, memory, and imagination. The *subject* of all knowledge is a perceiver (the mind or "me"). The *nature* of ideas is that they are passive objects of perception. The *results* of all this is metaphysics idealism.

The Metaphysics of Idealism. Berkeley accepted the existence of only minds and ideas. To be is either to perceive (*esse is percipere*) or to be perceived (*esse* is *percipi*). No "matter" or extramental beings exist: (1) There is no way to separate *being* from *being perceived* . (2) The arguments against existence of secondary qualities also apply to primary ones. For example, extension cannot be known apart from color and bulk. Number is based on unity, which cannot be perceived. Figure changes with perspective. Motion is relative. (3) "Things" cannot be known apart from thought; they exist only in thought. (4) Belief in "matter" charges God with a useless creation (*see* WILLIAM OF OCKHAM). It is impossible to conceive of anything existing outside of a mind. To do so is a power of mind to form an idea in the mind (not outside of it). Nothing can be conceived as existing unconceived.

Proof for God. Besides being an epistemological empiricist and a metaphysical idealist, Berkeley was a Christian theist (*see* THEISM). He even offered a proof for God's existence (*see* GOD, EVIDENCES FOR).

1. All ideas are passive objects or perception. (a) Minds perceive, but (b) Ideas are only perceived.

2. I am receiving a strong, steady succession of ideas coming from outside me, forced upon me, and over which I have no control. What I call "world" so does everyone else.

3. Therefore, there must be a Mind (God), an active Spirit causing the "world" of ideas I and others receive from outside our minds.

4. We do not directly perceive this Mind, but only its effects, the ideas it causes.

Answers to Objections. Berkeley anticipated and offered responses to many objections, though not all are plausible.

For the argument that his view does away with nature, Berkeley responds that nature is a set of rules by which God regularly excites ideas in our minds. To the assertion that substance has no meaning, he answers that it is only an idea gained from a group of sensations. Though some might insist that it sounds harsh to eat and wear ideas, this is true, but only because it goes against our customary use of words.

As for those who contend that distant objects are not in the mind, he replied that they are in our dreams if nowhere else. Further, the *sight* of a distant object is the prognostication that I may soon *feel* it hit me. Though it be objected that fire differs from the idea of fire, Berkeley reminded us that Plato did not see that difference. Even so, other universal beliefs have been false. All may *act* as if there is matter, even though it is philosophically untrue. The general objection that ideas and things differ was met with the response that this is true only because the former is a passive idea and the latter is an active idea (activated by God). Does this view destroy the concept of motion? Not so. Motion is reducible to sense phenomena (ideas). Berkeley responded to the argument that things not thought about would cease to exist. God is always thinking them. This latter response occasioned the famous response by John Knox: "A Poem on Berkeley."

There was a young man who said, "God

Must think it exceedingly odd

If He finds that this tree

Continues to be

When there's no one about in the Quad."

Dear Sir: Your astonishment's odd:

I am always about in the Quad.

And that is why the tree

Will continue to be

Since observed by Yours faithfully, God.

It could be argued against Berkeley that this would make everything a direct result of God or else artificial. He believed this was not true. There are secondary causes—ideas combined into regular patterns (nature) for the practical purposes of life. Fire warns of potential pain, but it doesn't cause it.

Since the Bible speaks of physical bodies, Berkeley was charged with denying the teaching of the Bible. His answer was that what we call "body" is merely a collection of sense impressions, but not really a material thing. To the insistence that his view was a denial of miracles, Berkeley responded that things are not real, but they are real perceptions. Thus the disciples really perceived they were touching the resurrected body of Christ, though it was not made of matter in the way we usually think (*see* RESURRECTION, EVIDENCE FOR).

The Values of Idealism. Bishop Berkeley enumerated positive values of his philosophical idealism. For one, the source of skepticism (*see* AGNOSTICISM) is gone. How can we know ideas correspond to reality? This is no problem; since ideas *are* real they do not have to correspond to anything else. The cornerstone of atheism is gone as well—matter. It is matter in motion eternally that atheists use to eliminate the idea of God.

The basis for idolatry is eliminated. Who could worship the mere idea of an object in their mind? The Socinians lose their objection to the resurrection, since there are no particulars to be resurrected (*see* RESURRECTION, OBJECTIONS TO).

Evaluation. Although Berkeley was a Christian theist in the classical tradition, his metaphysical ideas have caused great discomfort to other theists. Rather than solve problems, it seems to create them. Several criticisms should be noted:

His Basic Assumption Begs the Question. The fundamental assumption of Berkeley's idealism is that only minds and ideas exist. Once this is granted, everything else follows. But there is no compelling reason to grant it. Indeed, it begs the question by assuming that *only* minds and ideas exist. No surprise that he concludes that nothing exists beyond minds and ideas. The existence of extramental and nonmental reality is not eliminated by any of Berkeley's arguments.

His Basic Arguments Fail. Berkeley's arguments for idealism are at root based on the mistaken notion that knowing involves a sensing *of* ideas rather than sensing things *through* ideas. But this begs the question. If ideas are not the *formal* object of knowledge, but really the *instrument of* knowledge, then Berkeley's view collapses.

His Ingenious Solutions Are Contrary to Experience. To speak of bodies, matter, and nature we all experience as mere ideas that God regularly excites in us is clever but counter-intuitive. It

is possible, but not credible. Indeed, it *is harsh* to speak of eating ideas. It *does undermine the resurrection* to affirm that God merely raised up a cluster of ideas.

His View Charges God with Deception. Indeed, Berkeley appears to charge God with deception (*see* GOD, NATURE OF ; MORAL ARGUMENT). If it is simply a matter of God's power, there is no question but that God can excite the idea of matter in our minds without matter actually existing. But it is not simply a matter of power. God is more than all powerful. He is all perfect. He cannot deceive. But exciting in us regularly the idea of an extramental world when there is no word out there is deception.

Bible, Alleged Errors in. Critics claim the Bible is filled with errors. Some even speak of thousands of mistakes. However, orthodox Christians through the ages have claimed that the Bible is without error in the original text ("autographs"; see Geisler, *Decide for Yourself*). "If we are perplexed by any apparent contradiction in Scripture," Augustine wisely noted, "it is not allowable to say, 'The author of this book is mistaken'; but either the manuscript is faulty, or the translation is wrong, or you have not understood" (Augustine, 11.5). Not one error that extends to the original text of the Bible has ever been demonstrated.

Why the Bible Cannot Err. The argument for an errorless (inerrant) Bible can be put in this logical form:

God cannot err.

The Bible is the Word of God.

Therefore, the Bible cannot err.

God Cannot Err. Logically, the argument is valid. So, if the premises are true, the conclusion is also true. If the theistic God exists (*see* GOD, EVIDENCE FOR ; THEISM), then the first premise is true. For an infinitely perfect, all-knowing God cannot make a mistake. The Scriptures testify to this, declaring emphatically that "it is impossible for God to lie" (Heb. 6:18). Paul speaks of the "God who does not lie" (Titus 1:2). He is a God who, even if we are faithless, "remains faithful; he cannot deny himself" (2 Tim. 2:13). God is truth (John 14:6), and so is his word. Jesus said to the Father, "Your word is truth" (John 17:17). The psalmist exclaimed, "The entirety of Your word is truth" (Ps. 119:160).

The Bible Is the Word of God. Jesus, who is the Son of God (*see* CHRIST, DEITY OF) referred to the Old Testament as the "Word of God" which "cannot be broken" (John 10:35). He said, "until heaven and earth disappear, not the smallest letter, not the least stroke of a pen, will by any means disappear from the Law until everything is accomplished" (Matt. 5:18). Paul added, "All Scripture is God-breathed" (2 Tim. 3:16). It came "out of the mouth of God" (Matt. 4:4). Although human authors recorded the messages, "prophecy never had its origin in the will of man, but men spoke from God as they were carried along by the Holy Spirit" (2 Peter 1:20).

Jesus said to the religious leaders of his day, "You nullify the word of God by your tradition" (Mark 7:13). Jesus turned their attention to the written Word of God by affirming over and over again, "It is written" (for example, Matt. 4:4 , 7 , 10). This phrase occurs more than ninety times in the New Testament, a strong indication of divine authority. Stressing the unfailing nature of God's truth, the apostle Paul referred to the Scriptures as "the word of God" (Rom. 9:6). The writer of Hebrews declared that "the word of God is living and active. Sharper than any double-edged sword, it penetrates even to dividing soul and spirit, joints and marrow; it judges the thoughts and attitudes of the heart" (Heb. 4:12).

Therefore, the Bible Cannot Err. If God cannot err and if the Bible is the Word of God, then the Bible cannot err (*see* BIBLE, EVIDENCE FOR). God has spoken, and he has not stuttered. The God of truth has given us the Word of truth, and it does not contain any untruth. The Bible is the unerring Word of God. This is not to say that there are not *difficulties* in our Bibles. There are, or such books as this would be unneeded. But God's people can approach difficult texts with confidence, knowing that they are not actual *errors* ; God did not err.

Errors in Science and History? Some have suggested that Scripture can always be trusted on matters of faith and life, or moral matters, but it is not always correct on historical matters. They rely on it in the spiritual domain, but not in the sphere of science (*see* SCIENCE AND THE BIBLE). If true, this would render the Bible ineffective as a divine authority, since the historical and scientific is inextricably interwoven with the spiritual.

A close examination of Scripture reveals that the scientific (factual) and spiritual truths of Scripture are often inseparable. One cannot separate the spiritual truth of Christ's resurrection from the fact that his body permanently and physically vacated the tomb and walked among people (Matt. 28:6 ; 1 Cor. 15:13–19). If Jesus was not born of a biological virgin, then he is no different from the rest of the human race, on whom the stigma of Adam's sin rests (Rom. 5:12). Likewise, the death of Christ for our sins cannot be detached from the literal shedding of his blood on the cross, for "without the shedding of blood there is no remission" (Heb. 9:22). Adam's existence and fall cannot be a myth. If there were no literal Adam and no actual fall, then the spiritual teaching about inherited sin and physical and spiritual death are wrong (Rom. 5:12). Historical reality and the theological doctrine stand or fall together.

Also, the doctrine of the incarnation (*see* CHRIST, DEITY OF) is inseparable from the historical truth about Jesus of Nazareth (John 1:1 , 14). Jesus' moral teaching about marriage was based on his teaching about a literal Adam and Eve who were joined by God in marriage (Matt. 19:4–5). The moral or theological teaching is devoid of meaning apart from the historical or factual event. If one denies that the literal space-time event occurred, then there is no basis for

believing the scriptural doctrine built upon it, or anything else, for all is then untrustworthy (*see* MIRACLES, MYTH AND).

Jesus often directly compared Old Testament events with important spiritual truths. He related his death and resurrection to Jonah and the great fish (Matt. 12:40), his second coming to Noah and the flood (Matt. 24:37–39). Both the occasion and the manner of comparison make it clear that Jesus was affirming the historicity of those Old Testament events. Jesus asserted to Nicodemus, "If I told you earthly things and you do not believe, how shall you believe if I tell you heavenly things?" (John 3:12). The corollary to that statement is that, if the Bible does not speak truthfully about the physical world, it cannot be trusted when it speaks about the spiritual world. The two are intimately related.

Inspiration includes not only all that the Bible explicitly *teaches* , but everything the Bible *touches* . This is true of history, science, or mathematics—whatever the Bible declares is true, whether a major or a minor point. The Bible is God's Word, and God does not deviate from the truth. All the parts are as true as the whole they comprise.

If Inspired, Then Inerrant. Inerrancy is a logical result of inspiration (*see* BIBLE, EVIDENCE FOR). *Inerrancy* means "wholly true and without error." And what God breathes out (inspires) must be wholly true (inerrant). However, it is helpful to specify more clearly what is meant by "truth" and what would constitute an "error" (see Geisler, "The Concept of Truth in the Inerrancy Debate").

Truth is that which corresponds to reality (*see* TRUTH, DEFINITION OF). *Error* is what does not correspond to reality. Nothing mistaken can be true, even if the author intended the true. Otherwise, every sincere utterance ever made is true, even the grossly mistaken.

Some biblical scholars argue that the Bible cannot be inerrant through some faulty reasoning:

1. The Bible is a human book.

2. Humans err.

3. Therefore, the Bible errs.

The error of this reason can be seen from equally erroneous reasoning:

1. Jesus was a human being.

2. Human beings sin.

3. Therefore, Jesus sinned.

One can readily see that this conclusion is wrong. Jesus was "without sin" (Heb. 4:15 ; see also 2 Cor. 5:21 ; 2 Peter 1:19 ; 2 John 2:1 ; 3:3). But, if Jesus never sinned, what is wrong with the

above argument that Jesus is human and humans sin, therefore, Jesus sinned? Where does the logic go astray?

The mistake is to assume that Jesus is *simply* human. Mere human beings sin. But, Jesus was not a *mere* human being. He was also God. Likewise, the Bible is not *merely* a human book; it is also the Word of God. Like Jesus, it has divine elements that negate the statement that anything human errs. They are divine and cannot err. There can no more be an error in God's written Word than there was a sin in God's living Word.

Approaching Bible Difficulties. As Augustine said above, mistakes come not in the revelation of God, but in the misinterpretations of man. Except where scribal errors and extraneous changes crept into textual families over the centuries, all the critics' allegations of error in the Bible are based on errors of their own. Most problems fall into one of the following categories.

Assuming the Unexplained Is Unexplainable. No informed person would claim to be able to fully explain all Bible difficulties. However, it is a mistake for the critic to assume that the explained cannot and will not be explained. When a scientist comes upon an anomaly in nature, he does not give up further scientific exploration. Rather, the unexplained motivates further study. Scientists once could not explain meteors, eclipses, tornadoes, hurricanes, and earthquakes. Until recently, scientists did not know how the bumblebee could fly. All of these mysteries have yielded their secrets to relentless patience. Scientists do not now know how life can grow on thermo-vents in the depths of the sea. But, no scientist throws in the towel and cries "contradiction!"

The true biblical scholar approaches the Bible with the same presumption that there are answers to the thus-far unexplained. When something is encountered for which no explanation is known, the student goes on with research, looking out for the means to discover an answer. There is rational reason for faith that an answer will be found, because most once-unsolvable problems have now been answered by science, textual study, archaeology, linguistics, or another discipline. Critics once proposed that Moses could not have written the first five books of the Bible, because Moses' culture was preliterate. Now we know that writing had existed thousands of years before Moses (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF).

Critics once believed that Bible references to the Hittite people were totally fictional. Such a people by that name had never existed. Now that the Hittites' national library has been found in Turkey, the skeptics' once-confident assertions seem humorous. Indications from archaeological studies are that similar scoffings about the route and date of the Exodus will soon be silenced. These and many more examples inspire confidence that the biblical difficulties that have not been explained are not mistakes in the Bible.

Assuming the Bible is Guilty of Error unless Proven Innocent. Many critics assume the Bible is wrong until something proves it right. However, like an American citizen charged with an offense, the Bible should be read with at least the same presumption of accuracy given to other literature that claims to be nonfiction. This is the way we approach all human communications. If we did not, life would not be possible. If we assumed that road signs and traffic signals were not

telling the truth, we would probably be dead before we could prove otherwise. If we assumed food packages mislabeled, we would have to open up all cans and packages before buying.

The Bible, like any other book, should be presumed to be telling us what the authors said, experienced, and heard. Negative critics begin with just the opposite presumption. Little wonder they conclude the Bible is riddled with error.

Confusing Interpretations with Revelation. Jesus affirmed that the "Scripture cannot be broken" (John 10:35). As an infallible book, the Bible is also irrevocable. Jesus declared, "Truly I say to you, until heaven and earth pass away, not the smallest letter or stroke shall pass away from the Law, until all is accomplished" (Matt. 5:18 ; cf. Luke 16:17). The Scriptures also have final authority, being the last word on all it discusses (*see* BIBLE, JESUS' VIEW OF). Jesus employed the Bible to resist the tempter (Matt. 4:4 , 7 , 10), to settle doctrinal disputes (Matt. 21:42), and to vindicate his authority (Mark 11:17). Sometimes a biblical teaching rests on a small historical detail (Heb. 7:4–10), a word or phrase (Acts 15:13–17), or the difference between the singular and the plural (Gal. 3:16).

But, while the Bible is infallible, human interpretations are not. Even though God's word is perfect (Ps. 19:7), as long as imperfect human beings exist, there will be misinterpretations of God's Word and false views about his world. In view of this, one should not be hasty in assuming that a currently dominant assumption in science is the final word. Some of yesterday's irrefutable laws are considered errors by today's scientists. So, contradictions between popular opinions in science and widely accepted interpretations of the Bible can be expected. But this falls short of proving there is a real contradiction.

Failure to Understand the Context. The most common mistake of all Bible interpreters, including some critical scholars, is to read a text outside its proper context. As the adage goes, "A text out of context is a pretext." One can prove anything from the Bible by this mistaken procedure. The Bible says, "there is no God" (Ps. 14:1). Of course, the context is: "The fool has said in his heart 'There is no God.' " One may claim that Jesus admonished us "not to resist evil" (Matt. 5:39), but the antiretaliatory context in which he cast this statement must not be ignored. Many read Jesus' statement to "Give to him who asks you," as though one had an obligation to give a gun to a small child. Failure to note that meaning is determined by context is a chief sin of those who find fault with the Bible.

Interpreting the Difficult by the Clear. Some passages are hard to understand or appear to contradict some other part of Scripture. James appears to be saying that salvation is by works (James 2:14–26), whereas Paul teaches that it is by grace. Paul says Christians are "saved by grace through faith, and that not of ourselves; it is a gift of God, not of works, lest anyone should boast" (Eph. 2:8–9). And, "to him who does not work but believes on him who justifies the ungodly, his faith is counted for righteousness" (Rom. 4:5). Also, it "is not by works of righteousness which we have done, but according to his mercy he saved us" (Titus 3:5–6).

A careful reading of all that James says and all that Paul says shows that Paul is speaking about justification *before God* (by faith alone), whereas James is referring to justification *before*

others (who only see what we do). And James and Paul both speak of the fruitfulness that always comes in the life of one who loves God.

A similar example, this time involving Paul, is found in Philippians 2:12 . Paul says, “Work out your own salvation with fear and trembling.” This appears to say salvation is by works. But this is flatly contradicted by the above texts, and a host of other Scriptures. When this difficult statement about “working out our salvation” is understood in the light of clear passages, we can see that it *does not* mean we are saved by works. In fact, what it means is found in the very next verse. We are to work salvation *out* because God’s grace has worked it *in* our hearts. In Paul’s words, “for it is God who works in you both to will and to do for his good pleasure” (Phil. 2:13).

Teaching on an Obscure Passage. Some passages in the Bible are difficult because their meaning is obscure. This is usually because a key word in the text is used only once (or rarely), so it is difficult to know what the author is saying unless it can be inferred from the context. One of the best known passages in the Bible contains a word that appears nowhere else in all existing Greek literature up to the time the New Testament was written. This word appears in what is popularly known as the Lord’s P rayer (Matt. 6:11). It is usually translated, “Give us this day our daily bread.” The word in question is the one translated “daily”— *(epiousion)* . Experts in Greek still have not come to any agreement as to its origin, or its precise meaning. Different commentators try to establish links with Greek words that are known, and many suggested meanings have been proposed:

Give us this day our *continuous* bread.

Give us this day our *supersubstantial* (a supernatural gift from heaven) bread.

Give us this day bread *for our sustenance* .

Give us this day our *daily* (or, what we need for today) bread.

Each one of these proposals has its defenders, each makes sense in the context, and each is a possibility based on the limited linguistic information. There does not seem to be a compelling reason to depart from what has become the generally accepted translation, but it does add difficulty, because the meaning of some key word is obscure.

At other times, the words are clear but the meaning is not evident because we are missing some background information that the first readers had. This is surely true in 1 Corinthians 15:20 where Paul speaks of those who were “baptized for the dead.” Is he referring to dead believers who were not baptized and others were being baptized for them so they could be saved (as Mormons claim)? Or, is he referring to others being baptized into the church to fill the ranks of those who have passed on? Or is he referring to a believer being baptized “for” (i.e., “with a view to”) his own death and burial with Christ? Or to something else?

When we are not sure, then several things should be kept in mind. First, we should not build a doctrine on an obscure passage. The rule of thumb in the Bible is “The main things are the plain things, and the plain things are the main things.” This is called the “perspicuity” (clarity) of

Scripture. If something is important, it is clearly taught and probably in more than one place. Second, when a given passage is not clear, we should never conclude that it means something that is opposed to another plain teaching of Scripture.

Forgetting the Bible's Human Characteristics. With the exception of small sections such as the Ten Commandments, which were "written with the finger of God" (Exod. 31:18), the Bible was not verbally dictated (see Rice). The writers were not secretaries of the Holy Spirit. They were human composers employing their own literary styles and idiosyncrasies. These human authors sometimes used *human sources* for their material (Josh. 10:13 ; Acts 17:28 ; 1 Cor. 15:33 ; Titus 1:12). In fact, every book of the Bible is the composition of a *human writer* — about forty of them in all. The Bible also manifests different *human literary* styles. Writers speak from an observer's standpoint when they write of the sun rising or setting (Josh. 1:15). They also reveal *human thought patterns* , including memory lapses (1 Cor. 1:14–16), as well as *human emotions* (Gal. 4:14). The Bible discloses specific *human interests* . Hosea has a rural interest, Luke a medical concern, and James a love of nature. Biblical authors include a lawgiver (Moses), a general (Joshua), prophets (Samuel, Isaiah, et al.), kings (David and Solomon), a musician (Asaph), a herdsman (Amos), a prince and statesman (Daniel), a priest (Ezra), a tax collector (Matthew), a physician (Luke), a scholar (Paul), and fishermen (Peter and John). With such a variety of occupations represented by biblical writers, it is only natural that their personal interests and differences should be reflected in their writings.

Like Christ, the Bible is completely human, yet without error. Forgetting the humanity of Scripture can lead to falsely impugning its integrity by expecting a level of expression higher than that which is customary to a human document. This will become more obvious as we discuss the next mistakes of the critics (*see* BIBLE CRITICISM).

Assuming a Partial Report Is a False Report. Critics often jump to the conclusion that a partial report is false. However, this is not so. If it were, most of what has ever been said would be false, since seldom does time or space permit an absolutely complete report. Occasionally biblical writers express the same thing in different ways, or at least from different viewpoints, at different times, stressing different things. Hence, inspiration does not exclude a diversity of expression. The four Gospels relate the same story—often the same incidents—in different ways to different groups of people and sometimes even quotes the same saying with different words. Compare, for example, Peter's famous confession in the Gospels:

Matthew: "You are the Christ, the Son of the living God" (16:16).

Mark: "You are the Christ" (8:29).

Luke: "The Christ of God" (9:20).

Even the Ten Commandments, which were "written by the finger of God" (Deut. 9:10), are stated with variations the second time they are recorded (cf. Exod. 20:8–11 with Deut. 5:12–15). There are many differences between the books of Kings and Chronicles in their description of identical events, yet they harbor no contradiction in the events they narrate. If such important utterances can be stated in different ways, then there is no reason the rest of Scripture cannot speak truth without employing a wooden literalness of expression.

New Testament Citations of the Old Testaments. Critics often point to variations in the New Testament use of Old Testament Scriptures as a proof of error. They forget that every *citation* need not be an exact *quotation* . Sometimes we use indirect and sometimes direct quotations. It was then (and is today) perfectly acceptable literary style to give the *essence* of a statement without using precisely the *same words* . The same *meaning* can be conveyed without using the same *verbal expressions* .

Variations in the New Testament citations of the Old Testament fall into different categories. Sometimes they are because there is a change of speaker. For example, Zechariah records the Lord as saying, "they will look on *me* whom they have pierced" (12:10). When this is cited in the New Testament, John, not God, is speaking. So it is changed to "They shall look on *him* whom they have pierced" (John 19:37).

At other times, writers cite only part of the Old Testament text. Jesus did this at his home synagogue in Nazareth (Luke 4:18–19 citing Isa. 61:1–2). In fact, he stopped in the middle of a sentence. Had he gone any farther, he could not have made his central point from the text, "Today this Scripture is fulfilled in your hearing" (vs. 21). The very next phrase, "And the day of vengeance of our God," refers to his second coming.

Sometimes the New Testament paraphrases or summarizes the Old Testament text (e.g., Matt. 2:6). Others blend two texts into one (Matt. 27:9–10). Occasionally a general truth is mentioned, without citing a specific text. For example, Matthew said Jesus moved to Nazareth "that it might be fulfilled which was spoken by the prophets, 'he shall be called a Nazarene' " (Matt. 2:23). Notice, Matthew quotes no given prophet, but rather "prophet *s* " in general. Several texts speak of the Messiah's lowliness. To be from Nazareth, a Nazarene, was a byword for low status in the Israel of Jesus' day.

There are instances where the New Testament applies a text in a different way than the Old Testament did. For example, Hosea applies "Out of Egypt have I called My Son" to the Messianic nation, and Matthew applies it to the product of that nation, the Messiah (Matt. 2:15 from Hosea 11:1). In no case does the New Testament misinterpret or misapply the Old Testament, nor draw some invalid implication from it. The New Testament makes no mistakes in citing the Old Testament, as critics do in citing the New Testament.

Assuming Divergent Accounts Are False. Because two or more accounts of the same event differ, does not mean they are mutually exclusive. Matthew 28:5 says there was one angel at the tomb after the resurrection, whereas John informs us there were two (20:12). But these are not contradictory reports. An infallible mathematical rule easily explains this problem: Where there are two, there is always one. Matthew did not say there was *only* one angel. There may also have been one angel at the tomb at one point on this confusing morning and two at another. One has to add the word "only" to Matthew's account to make it contradict John's. But if the critic comes to the texts to show they err, then the error is not in the Bible, but in the critic.

Likewise, Matthew (27:5) informs us that Judas hanged himself. But Luke says that "he burst open in the middle and all his entrails gushed out" (Acts 1:18). Once more, these accounts are not mutually exclusive. If Judas hanged himself from a tree over the edge of a cliff or gully in

this rocky area, and his body fell on sharp rocks below, then his entrails would gush out just as Luke vividly describes.

Presuming That the Bible Approves of All It Records. It is a mistake to assume that everything contained in the Bible is commended by the Bible. The whole Bible is *true* (John 17:17), but it records some *lies* , for example, Satan's (Gen. 3:4 ; cf. John 8:44) and Rahab's (Josh. 2:4). Inspiration encompasses the Bible fully in the sense that it records accurately and truthfully even the lies and errors of sinful beings. The truth of Scripture is found in what the Bible *reveals* , not in everything it *records* . Unless this distinction is held, it may be incorrectly concluded that the Bible teaches immorality because it narrates David's sin (2 Sam. 11:4), that it promotes polygamy because it records Solomon's (1 Kings 11:3), or that it affirms atheism because it quotes the fool as saying "there is no God" (Ps. 14:1).

Forgetting That the Bible is Nontechnical. To be true, something does not have to use scholarly, technical, or so-called "scientific" language. The Bible is written for the common person of every generation, and it therefore uses common, everyday language. The use of observational, nonscientific language is not *un* scientific, it is merely *pre* scientific. The Scriptures were written in *ancient* times by ancient standards, and it would be anachronistic to superimpose modern scientific standards upon them. However, it is no more un scientific to speak of the sun "standing still" (Josh. 10:12) than to refer to the sun "rising" (Josh. 1:16). Meteorologists still refer to the times of "sunrise" and "sunset."

Assuming Round Numbers Are False. Like ordinary speech, the Bible uses round numbers (see Josh. 3:4 ; cf. 4:13). It refers to the diameter as being about one-third of the circumference of something (1 Chron. 19:18 ; 21:5). While this technically is only an approximation (see Lindsell, 165–66); it may be imprecise from the standpoint of a technological society to speak of 3.14159265 as "3, " but it is not incorrect (*see* SCIENCE AND THE BIBLE). It is sufficient for a "cast metal sea" (2 Chron. 4:2) in an ancient Hebrew temple, even though it would not suffice for a computer in a modern rocket. One should not expect to see actors referring to a wrist watch in a Shakespearean play, nor people in a prescientific age to use precise numbers.

Neglecting to Note Literary Devices. Human language is not limited to one mode of expression. So there is no reason to suppose that only one literary genre was used in a divinely inspired Book. The Bible reveals a number of literary devices: Whole books are written as *poetry* (e.g., Job, Psalms, Proverbs). The Synoptic Gospels feature *parables* . In Galatians 4 , Paul utilizes an *allegory* . The New Testament abounds with *metaphors* (2 Cor. 3:2–3 ; James 3:6), *similes* (Matt. 20:1 ; James 1:6), *hyperbole* (John 21:25 ; 2 Cor. 3:2 ; Col. 1:23), and even *poetic figures* (Job 41:1). Jesus employed *satire* (Matt. 19:24 ; 23:24). *Figures of speech* are common throughout the Bible.

It is not a mistake for a biblical writer to use a figure of speech, but it is a mistake for a reader to take a figure of speech literally. Obviously when the Bible speaks of the believer resting under the shadow of God's "wings" (Ps. 36:7) it does not mean that God is a feathered bird. When the Bible says God "awakes" (Ps. 44:23), as though he were sleeping, it means God is roused to action.

Forgetting That Only the Original Text Is Inerrant. Genuine mistakes have been found—in copies of Bible text made hundreds of years after the autographs. God only uttered the original text of Scripture, not the copies. Therefore, only the original text is without error. Inspiration does not guarantee that every copy is without error, especially in copies made from copies made from copies made from copies (*see* NEW TESTAMENT MANUSCRIPTS ; OLD TESTAMENT MANUSCRIPTS). Therefore, we are to expect that minor errors are to be found in manuscript copies.

For example, 2 Kings 8:26 gives the age of King Ahaziah as twenty-two, whereas 2 Chronicles 22:2 says forty-two. The later number cannot be correct, or he would have been older than his father. This is obviously a copyist error, but it does not alter the inerrancy of the original.

First, these are errors in the copies, not the originals. Second, they are minor errors (often in names or numbers) which do not affect any teaching. Third, these copyist errors are relatively few in number. Fourth, usually by the context, or by another Scripture, we know which is in error. For example, Ahaziah must have been twenty-two. Finally, though there is a copyist error, the entire message comes through. For example, if you received a letter with the following statement, would you assume you could collect some money?

"#OU HAVE WON $10 MILLION."

Even though there is a mistake in the first word, the entire message comes through—you are ten million dollars richer! And if you received another letter the next day that read like this, you would be even more sure:

"Y#U HAVE WON $10 MILLION."

The more mistakes of this kind there are (each in a different place), the more sure you are of the original message. This is why scribal mistakes in the biblical manuscripts do not affect the basic message of the Bible—and why studies of the ancient manuscripts are so important. A Christian can read a modern translation with confidence that it conveys the complete truth of the original Word of God.

Confusing General with Universal Statements. Critics often jump to the conclusion that unqualified statements admit no exceptions. They seize upon verses that offer general truths and then point with glee to obvious exceptions. Such statements are only intended to be generalizations.

The Book of Proverbs has many of these. Proverbial sayings, by their very nature, offer general guidance, not universal assurance. They are rules for life, but rules that admit of exceptions. Proverbs 16:7 affirms that "when a man's ways please the Lord, he makes even his enemies to be at peace with him." This obviously was not intended to be a universal truth. Paul was pleasing to the Lord and his enemies stoned him (Acts 14:19). Jesus was pleasing the Lord, and his enemies crucified him. Nonetheless, it is a general truth that one who acts in a way pleasing to God can minimize his enemies' antagonism.

Proverbs 22:6 says, "Train up a child in the way he should go, and when he is old he will not depart from it." However, other Scripture passages and experience show that this is not always true. Indeed, some godly persons in the Bible (including Job, Eli, and David) had wayward children. This proverb does not contradict experience because it is a general principle that applies in a general way, but allows for individual exceptions. Proverbs are not designed to be absolute guaran tees. Rather, they express truths that provide helpful advice and guidance by which the individual should conduct his daily life.

Proverbs are *wisdom* (general guides), not *law* (universally binding imperatives). When the Bible declares "You shall therefore be holy, for I am holy" (Lev. 11:45), then there are no exceptions. Holiness, goodness, love, truth, and justice are rooted in the very nature of an unchanging God. But wisdom literature applies God's universal truths to life's changing circumstances. The results will not always be the same. Nonetheless, they are helpful guides.

Forgetting That Later Revelation Supersedes Earlier. Sometimes critics do not recognize progressive revelation. God does not reveal everything at once, nor does he lay down the same conditions for every period of history. Some of his later revelations will supersede his earlier statements. Bible critics sometimes confuse a *change* in revelation with a *mistake* . That a parent allows a very small child to eat with his fingers but demands that an older child use a fork and spoon, is not a contradiction. This is progressive revelation, with each command suited to the circumstance.

There was a time when God tested the human race by forbidding them to eat of a specific tree in the Garden of Eden (Gen. 2:16–17). This command is no longer in effect, but the later revelation does not contradict this former revelation. Also, there was a period (under the Mosaic law) when God commanded that animals be sacrificed for people's sin. However, since Christ offered the perfect sacrifice for sin (Heb. 10:11–14), this Old Testament command is no longer in effect. There is no contradiction between the later and the former commands.

Likewise, when God created the human race, he commanded that they eat only fruit and vegetables (Gen. 1:29). But later, when conditions changed after the flood, God commanded that they also eat meat (Gen. 9:3). This change from herbivorous to omnivorous status is progressive revelation, but it is not a contradiction. In fact, all these subsequent revelations were simply different commands for different people at different times in God's overall plan of redemption.

Of course, God cannot change commands that have to do with his unchangeable nature (cf. Mal. 3:6 ; Heb. 6:18). For example, since God is love (1 John 4:16), he cannot command that we hate him. Nor can he command what is logically impossible, for example, to both offer and not offer a sacrifice for sin at the same time and in the same sense. But these moral and logical limits notwithstanding, God can and has given noncontradictory, progressive revelations which, if taken out of its proper context and juxtaposed, can look contradictory. This is as much a mistake as to assume a parent is self-contradictory for allowing a sixteen-year-old to stay up later at night than a six-year-old.

After forty years of continual and careful study of the Bible, I can only conclude that those who have "discovered a mistake" in the Bible do not know too much about the Bible—they know too little about it. This does not mean, of course, that we understand how to resolve all the difficulties in the Scriptures. But we have seen enough problems resolved to know these also admit answers. Meanwhile, Mark Twain had a point when he concluded that it was not the parts of the Bible he did not understand that bothered him—but the parts he did understand!

Bible, Canonicity of. *Canonicity* (Fr. *canon,* rule or norm) refers to the normative or authoritative books inspired by God for inclusion in Holy Scripture. Canonicity is determined by God (*see* BIBLE, EVIDENCE FOR). It is not the antiquity, authenticity, or religious community that makes a book canonical or authoritative. A book is valuable because it is canonical, and not canonical because it is or was considered valuable. Its authority is *established* by God and merely *discovered* by God's people.

Bib. Sac. *Bibliotheca Sacra*

Definition of Canonicity. The distinction between God's determination and human discovery is essential to the correct view of canonicity, and should be drawn carefully:

The Authority Relationship Between Church and Canon

Incorrect View	**Biblical View**
The church is determiner of the canon.	The church is discoverer of the canon.
The church is mother of the canon.	The church is child of the canon.
The church is magistrate of the canon.	The church is minister of the canon.
The church is regulator of the canon.	The church is recognizer of the canon.
The church is judge of the canon.	The church is witness of the canon.
The church is master of the canon.	The church is servant of the canon.

In the "Incorrect View" the authority of the Scriptures is based upon the authority of the church; the correct view is that the authority of the church is to be found *in* the authority of the Scriptures. The incorrect view places the church *over* the canon, whereas the proper position views the church *under* the canon. In fact, if in the column titled "Incorrect View," the word *church* be replaced by God, then the proper view of the canon emerges clearly. It is God who *regulated* the canon; man merely *recognized* the divine authority God gave to it. God *determined* the canon, and man *discovered* it. Louis Gaussen gives an excellent summary of this position:

> In this affair, then, the Church is a servant and not a mistress; a depository and not a judge. She exercises the office of a minister, not of a magistrate. . . . She delivers a testimony, not a judicial sentence. She discerns the canon of the Scriptures, she does not make it; she has recognized their authenticity, she has not given it. . . . The authority of the Scriptures is not founded, then, on the authority of the Church: It is the church that is founded on the authority of the Scriptures. [Gaussen, 137]

Discovering Canonicity. Appropriate methods must be employed to discover which books God determined to be canonical. Otherwise, the list of canonical books might be varied and incorrectly identified. Many procedures used in the study of the Old Testament canon have been marred by the use of fallacious methods (*see* APOCRYPHA, OLD AND NEW TESTAMENTS).

Inadequate Criteria for Canonicity. Five mistaken methods have particularly troubled the church (see Beckwith, 7–8):

1. failure to distinguish a book that was "known" from a book that carried God's authority;

2. failure to distinguish disagreement about the canon between different parties from uncertainty about the canon within those parties;

3. failure to distinguish between the adding of books to the canon and the removal of books from it;

4. failure to distinguish between the canon that the community recognized and eccentric views of individuals;

5. failure to properly use Jewish evidence about the canon transmitted through Christian hands, either by denying the Jewish origins or by ignoring the Christian medium through which it has come (Beckwith, 7–8).

Principles of Canonicity. Granted that God gave authority and hence canonicity to the Bible, another question arises: How did believers become aware of what God had done? The accepted canonical books of the Bible themselves refer to other books that are no longer available, for example, the “Book of Jasher” (Josh. 10:13) and “the Book of the Wars of the Lord” (Num. 21:14). Then there are *Apocryphal* books and the so-called “lost books.” How did the Fathers know those were not inspired? Did not John (21:25) and Luke (1:1) speak of a profusion of religious literature? Were there not false epistles (2 Thess. 2:2)? What marks of inspiration guided the Fathers as they identified and collected the inspired books? Perhaps the very fact that some canonical books were doubted at times, on the basis of one principle or another, argues both for the value of the principle and the caution of the Fathers in their recognition of canonicity. It provides assurance that the people of God really included the books God wanted.

Five foundational questions lie at the very heart of the discovery process:

Was the book written by a prophet of God? The basic question was whether a book was prophetic. Propheticity determined canonicity. A prophet was one who declared what God had disclosed. Thus, only the prophetic writings were canonic. Anything not written by a prophet of God was not part of the Word of God. The characteristic words “And the word of the Lord came to the prophet,” or “The Lord said unto,” or “God spoke” so fill the Old Testament that they have become proverbial. If substantiated these claims of inspiration are so clear that it was hardly necessary to discuss whether some books were divine in origin. In most cases it was simply a matter of establishing the authorship of the book. If it was written by a recognized apostle or prophet, its place in the canon was secured.

Historical or stylistic (external or internal) evidence that supports the genuineness of a prophetic book also argues for its canonicity. This was exactly the argument Paul used to defend his harsh words to the Galatians (Gal. 1:1–24). He argued that his message was authoritative because he was an authorized messenger of God, “an apostle not sent from men nor through the agency of man, but through Jesus Christ, and God the Father” (Gal. 1:1). He also turned the tables on his opponents who preached “a different gospel; which is really not another; only . . . to distort the gospel of Christ” (Gal. 1:6–7). His opponents’ gospel could not be true because they were “false brethren” (Gal. 2:4).

It should be noted in this connection that occasionally the Bible contains true prophecies from individuals whose status as people of God is questionable, such as Balaam (Num. 24:17) and Caiaphas (John 11:49). However, granted that their prophecies were consciously given, these prophets were not writers of Bible books, but were merely quoted by the actual writer. Therefore, their utterances are in the same category as the Greek poets quoted by the apostle Paul (cf. Acts 17:28 ; 1 Cor. 15:33 ; Titus 1:12).

The arguments Paul used against the false teachers at Galatia were also used as grounds for rejecting a letter that was forged or written under false pretenses. One such letter is mentioned in 2 Thessalonians 2:2 . A book cannot be canonical if it is not genuine. A book might use the device of literary impersonation without deception. One writer assumes the role of another for effect. Some scholars feel such is the case in Ecclesiastes, if *Koheleth* wrote autobiographically as though he were Solomon (see Leupold, 8f.). Such a view is not incompatible with the principle, provided it can be shown to be a literary device and not a moral deception. However, when an author pretends to be an apostle in order to gain acceptance of his ideas, as the writers of many New Testament *Apocryphal* books did, then it is moral deception.

Because of this "prophetic" principle, 2 Peter was disputed in the early church. Even Eusebius in the fourth century said, "But the so-called second Epistle we have not received as canonical, but nevertheless it has appeared useful to many, and has been studied with other Scriptures" (Eusebius 1:193). On the basis of differences in the style of writing, it was felt by some that the author of 2 Peter could not be the same as the author of 1 Peter. But 2 Peter claimed to have been written by "Simon Peter, a servant and apostle of Jesus Christ" (2 Peter 1:1). Thus, the epistle was either a forgery or there was great difficulty in explaining its different style. Those who were disturbed by such evidence doubted the genuineness of 2 Peter and it was placed among the antilegomena books for a time. It was finally admitted on the grounds that it was Peter's genuine writing. The differences in style can be accounted for by the time lapse, different occasions, and the fact that Peter verbally dictated 1 Peter to an amanuensis (or secretary; see 1 Peter 5:13).

Inspiration was so certain in many prophetic writings that their inclusion was obvious. Some were rejected because they lacked authority, particularly the pseudepigrapha. These books provided no support for their claim. In many cases the writing is fanciful and magical. This same principle of authority was the reason the book of Esther was doubted, particularly since the name of God is conspicuously absent. Upon closer examination, Esther retained its place in the canon after the Fathers were convinced that authority was present, although less observable.

Was the writer confirmed by acts of God? A miracle is an act of God to confirm the word of God given through a prophet of God to the people of God. It is the sign to substantiate his sermon; the miracle to confirm his message. Not every prophetic revelation was confirmed by a specific miracle. There were other ways to determine the authenticity of an alleged prophet. If there were questions about one's prophetic credentials it could be settled by divine confirmation, as indeed it was on numerous occasions throughout Scripture (Exodus 4 ; Numbers 16–17 ; 1 Kings 18 ; Mark 2 ; Acts 5 ; *see* MIRACLES IN THE BIBLE).

There were true and false prophets (Matt. 7:15), so it was necessary to have divine confirmation of the true ones. Moses was given miraculous powers to prove his call (Exod. 4:1–9). Elijah triumphed over the false prophets of Baal by a supernatural act (1 Kings 18). Jesus was attested to by miracles and signs God performed through him (Acts 2:22). As to the apostles' message, "God was also bearing witness with them, both by signs and wonders and by various miracles and by gifts of the Holy Spirit according to his own will" (Heb. 2:4). Paul gave testimony of his apostleship to the Corinthians, declaring, "the signs of a true apostle were performed among you with all perseverance, by signs and wonders and miracles" (2 Cor. 12:12 ; *see* MIRACLES, APOLOGETIC VALUE OF).

Does the message tell the truth about God? Only immediate contemporaries had access to the supernatural confirmation of the prophet's message. Other believers in distant places and subsequent times had to depend on other tests. One such test was the *authenticity* of a book. That is, does the book tell the truth about God and his world as known from previous revelations? God cannot contradict himself (2 Cor. 1:17–18), nor can he utter what is false (Heb. 6:18). No book with false claims can be the Word of God. Moses stated the principle about prophets generally that

> If a prophet or a dreamer of dreams arises among you and gives you a sign or a wonder, and the sign or wonder comes true, concerning which he spoke to you, saying, "Let us go after other gods (whom you have not known) and let us serve them," you shall not listen to the words of that prophet or that dreamer of dreams. [Deut. 13:1–3]

So any teaching about God contrary to what his people already knew to be true was to be rejected. Furthermore, any predictions made about the world which failed to come true indicated that a prophet's words should be rejected. As Moses said to Israel,

> And you may say in your heart, "How shall we know the word which the Lord has not spoken?" When a prophet speaks in the name of the Lord, if the thing does not come about or come true, that is the thing which the Lord has not spoken. The prophet has spoken it presumptuously; you shall not be afraid of him. [Deut. 18:21–22]

A prophet who made such false claims might be stoned. The Lord said, "The prophet who shall speak a word presumptuously in my name which I have not commanded him to speak, or which he shall speak in the name of other gods, that prophet shall die" (Deut. 18:20). That kind of punishment assured no repeat performance by that prophet, and it gave other prophets pause before they said, "Thus says the Lord."

Truth in itself does not make a book canonical. This is more a test of *inauthenticity* of a book, rather than canonicity. It is a negative test that could eliminate books from the canon. The Bereans used this principle when they searched the Scriptures to see whether Paul's teaching was true (Acts 17:11). If the preaching of the apostle did not accord with the teaching of the Old Testament canon, it could not be of God.

Much of the *Apocrypha* was rejected because it was not authentic. The Jewish Fathers and early Christian Fathers rejected, or considered second-rate, these books because they had

historical inaccuracies and even moral incongruities. The Reformers rejected some because of what they considered to be heretical teaching, such as praying for the dead, which 2 Maccabees 12:45 supports. The apostle John strongly urged that all purported "truth" be tested by the known standard before it be received (1 John 4:1–6).

The test of authenticity was the reason James and Jude have been doubted. Some have thought Jude inauthentic because it may quote inauthentic pseudepigraphical books (Jude 9 , 14 ; see Jerome, 4). Martin Luther questioned the canonicity of James because it lacks an obvious focus on the cross. Martin Luther thought the book appeared to teach salvation by works. Careful study has cleared James of these charges, and even Luther came to feel better about them. Historically and uniformly, Jude and James have been vindicated and their canonicity recognized after they have been harmonized with the rest of Scripture.

Did it come with the power of God? Another test for canonicity is a book's power to edify and equip believers. This requires the power of God. The Fathers believed the Word of God to be "living and active" (Heb. 4:12) and consequently ought to have a transforming force (2 Tim. 3:17 ; 1 Peter 1:23). If the message of a book did not effect its stated goal, if it did not have the power to change a life, then God was apparently not behind its message. A *message* of God would certainly be backed by the *might* of *God* . The Fathers believed that the Word of God accomplishes its purpose (Isa. 55:11).

Paul applied this principle to the Old Testament when he wrote to Timothy, "And that from a child thou hast known the holy scriptures, which are able to make thee wise unto salvation" (2 Tim. 3:15 KJV). If it is of God, it will work—it will come to pass. This simple test was given by Moses to try the truth of a prophet's prediction (Deut. 18:20ff .). If what was foretold did not materialize, it was not from God.

On this basis, heretical literature and good noncanonical apostolic literature was rejected from the canon. Even those books whose teaching was spiritual, but whose message was at best only devotional, were deemed noncanonical. Such is the case for most literature written in the apostolic and subapostolic periods. There is a tremendous difference between the canonical books of the New Testament and other religious writings of the apostolic period. "There is not the same freshness and originality, depth and clearness. And this is no wonder, for it means the transition from truth given by infallible inspiration to truth produced by fallible pioneers" (Berkhof, 42). The noncanonical books lacked power; they were devoid of the dynamic aspects found in inspired Scripture. They did not come with the power of God.

Books whose edifying power was questioned included Song of Solomon (or Song of Songs) and Ecclesiastes. Could a book that is erotically sensual or skeptical be from God? Obviously not; as long as these books were thought of in that manner, they could not be considered canonical. Eventually, the messages of these books were seen as spiritual, so the books themselves were accepted. The principle, nevertheless, was applied impartially. Some books passed the test; others failed. No book that lacked essential edificational or practical characteristics was considered canonical.

---

kjv King James Version

Was it accepted by the people of God? A prophet of God was confirmed by an act of God (miracle) and was recognized as a spokesman by the people who received the message. Thus, the seal of canonicity depended on whether the book was accepted by the people. This does not mean that everybody in the community to which the prophetic message was addressed accepted it as divinely authoritative. Prophets (1 Kings 17–19 ; 2 Chron. 36:11–16) and apostles (Galatians 1) were rejected by some. However, believers in the prophet's community acknowledged the prophetic nature of the message, as did other contemporary believers familiar with the prophet. This acceptance had two stages: initial acceptance and subsequent recognition.

Initial acceptance of a book by the people to whom it was addressed was crucial. Paul said of the Thessalonians, "We also constantly thank God that when you received from us the word of God's message, you accepted it not as the word of men, but for what it really is, the word of God" (1 Thess. 2:13). Whatever subsequent debate there may have been about a book's place, the people in the best position to know its prophetic credentials were those who knew the writer. The definitive evidence is that which attests acceptance by contemporary believers.

There is ample evidence that books were immediately accepted into the canon. Moses' books were immediately placed with the ark of the covenant (Deut. 31:26). Joshua's writing was added (Josh. 24:26). Following were books by Samuel and others (1 Sam. 10:25). Daniel had a copy of Moses and the Prophets, which included the book of his contemporary Jeremiah (Dan. 9:2 , 10–11). Paul quoted the Gospel of Luke as "Scripture" (1 Tim. 5:18). Peter had a collection of Paul's "letter" (2 Peter 3:16). Indeed, the apostles exhorted that their letters be read and circulated among the churches (Col. 4:16 ; 1 Thess. 5:27 ; Rev. 1:3).

Some have argued that Proverbs 25:1 shows an exception. It suggests that some of Solomon's proverbs may not have been collected into the canon during his lifetime. Rather, "the men of Hezekiah . . . transcribed" more of Solomon's proverbs. It is possible that these additional proverbs (chaps. 25–29) were not officially presented to the believing community during Solomon's life, perhaps because of his later moral decline. However, since they were *authentic* Solomonic proverbs there was no reason not to later present and at that time immediately accept them as authoritative. In this case Proverbs 25–29 would not be an exception to the canonic rule of immediate acceptance.

It is also possible that these later chapters of Proverbs were presented and accepted as authoritative during Solomon's lifetime. Support for this view can be derived from the fact that the Solomonic part of the book may have been compiled in three sections, which begin at 1:1 , 10:1 , and 25:1 . Perhaps these were preserved on separate scrolls. The word *also* in Proverbs 25:1 can refer to the fact that Hezekiah's men also copied this last section (scroll) along with the first two sections (scrolls). All three scrolls would have been immediately accepted as divinely authoritative and were only copied afresh by the scholars.

Since Scripture of every time period is referred to in later biblical writings, and each book is quoted by some early church Father or listed in some canon, there is ample evidence that there was continuing agreement within the covenant community concerning the canon. That certain books were written by prophets in biblical times and are in the canon now argues for their canonicity. Along with evidence for a continuity of belief, this argues strongly that the idea of

canonicity existed from the beginning. The presence of a book in the canon down through the centuries is evidence that it was known by the contemporaries of the prophet who wrote it to be genuine and authoritative, despite the fact that succeeding generations lacked definitive knowledge of the author's prophetic credentials.

Later debate about certain books should not cloud their initial acceptance by immediate contemporaries of the prophets. True canonicity was *determined* by God when he directed the prophet to write it, and it was immediately *discovered* by the people addressed.

Technically speaking, the discussion about certain books in later centuries was not a question of *canonicity* but of *authenticity* or *genuineness* . Because later readers had neither access to the writer nor direct evidence of supernatural confirmation, they had to rely on historical testimony. Once they were convinced by the evidence that books were written by accredited spokespeople for God, the books were accepted by the church universal. But the decisions of church councils in the fourth and fifth centuries did not determine the canon, nor did they first discover or recognize it. In no sense was the authority of the canonical books contingent upon the late church councils. All the councils did was to give *later, broader,* and *final* recognition to the facts that God had inspired the books, and the people of God had accepted them.

Several centuries went by before all the books in the canon were recognized. Communication and transportation were slow, so it took longer for the believers in the West to become fully aware of the evidence for books that had circulated first in the East, and vice versa. Prior to 313 the church faced frequent persecution that did not allow leisure for research, reflection, and recognition. As soon as that was possible, it was only a short time before there was general recognition of all canonical books by the regional councils of Hippo (393) and Carthage (397). There was no great need for precision until a dispute arose. Marcion published his gnostic canon, with only Luke and ten of Paul's Epistles, in the middle of the second century. Spurious gospels and epistles appeared throughout the second and third centuries. Since those books claimed divine authority, the universal church had to define the limits of God's authentic, inspired canon that already was known.

Applying Principles of Canonicity. Lest the impression be given that these principles were explicitly and mechanically applied by some commission, some explanation is needed. Just how did the principles operate in the consciousness of the early Christian church? Although the issue of the discovery of the canon center about the Old and New Testaments alike, J. N. D. Kelly discusses these principles as they apply to the New Testament canon. He writes,

> The main point to be observed is that the fixation of the finally agreed list of books, and of the order in which they were to be arranged, was the result of a very gradual process. . . . Three features of this process should be noted. First, the criterion which ultimately came to prevail was apostolicity. Unless a book could be shown to come from the pen of an apostle, or at least to have the authority of an apostle behind it, it was peremptorily rejected, however edifying or popular with the faithful it might be. Secondly, there were certain books which hovered for a long time on the fringe of the canon, but in the end failed to secure admission to it, usually because they lacked this indisputable stamp. . . . Thirdly, some of the books which were later included had to wait

> a considerable time before achieving universal recognition. . . . By gradual stages, however, the Church both in East and West arrived at a common mind as to its sacred books. The first official document which prescribes the twenty-seven books of our new Testament as alone canonical is Athanasius's Easter letter for the year 367, but the process was not everywhere complete until at least a century and a half later. [Kelly, 59–60]

Some Principles Are Implicit While Others Are Explicit. All criteria of inspiration are necessary to demonstrate the canonicity of each book. The five characteristics must at least be implicitly present, though some of them are more dominant than others. For example, the dynamic equipping power of God is more obvious in the New Testament Epistles than in the Old Testament historical narratives. "Thus-says-the-Lord" authority is more apparent in the Prophets than in the poetry. That is not to say that authority isn't in the poetic sections, nor a dynamic in the redemptive history. It does mean the Fathers did not always find all of the principles explicitly operating.

Some Principles Are More Important Than Others. Some criteria of inspiration are more important than are others, in that the presence of one implies another, or is a key to others. For example, if a book is authoritatively from God, it will be dynamic—accompanied by God's transforming power. In fact, when authority was unmistakably present, the other characteristics of inspiration were automatically assumed. Among New Testament books the proof of apostolicity, its prophetic nature, was often considered a guarantee of inspiration (Warfield, 415). If propheticity could be verified, this alone established the book. Generally speaking, the church Fathers were only explicitly concerned with apostolicity and authenticity. The edifying characteristics and universal acceptance of a book were assumed unless some doubt from the latter two questions forced a reexamination of the tests. This happened with 2 Peter and 2 John. Positive evidence for the first three principles emerged victorious.

The witness of the Holy Spirit. The recognition of canonicity was not a mere mechanical matter settled by a synod or ecclesiastical council. It was a providential process directed by the Spirit of God as he witnessed to the church about the reality of the Word of God (*see* HOLY SPIRIT, ROLE IN APOLOGETICS). People could not identify the Word until the Holy Spirit opened their understanding. Jesus said, "My sheep hear my voice" (John 10:27). This is not to say that the Holy Spirit mystically spoke in visions to settle questions of canonicity. The witness of the Spirit convinced them of the reality that a God-breathed canon existed, not its extent (Sproul, 337–54). Faith joined science; objective principles were used, but the Fathers knew what writings had been used in their churches to change lives and teach hearts by the Holy Spirit. This subjective testimony joined the objective evidence in confirming what was God's Word.

Tests for canonicity were not mechanical means to measure the amount of inspired literature, nor did the Holy Spirit say, "This book or passage is inspired; that one is not." That would be disclosure, not discovery. The Holy Spirit providentially guided the examination process and gave witness to the people as they read or heard.

Conclusion. It is important to distinguish between the *determination* and the *discovery* of canonicity. God is solely responsible for determining; God's people are responsible for

discovery. That a book is canonical is due to divine *inspiration* . How it is known to be canonical is due to a process of human recognition. Was a book (1) written by a spokesperson for God, (2) who was confirmed by an act of God, (3) told the truth (4) in the power of God and (5) was accepted by the people of God? If a book clearly had the first mark, canonicity was often assumed. Contemporaries of a prophet or apostle made the initial confirmation. Later church Fathers sorted out the profusion of religious literature to officially recognize what books were divinely inspired in the manner of which Paul speaks in 2 Timothy 3:16 .

Bible Criticism. *Criticism* as applied to the Bible simply means the exercise of judgment. Both conservative and nonconservative scholars engage in two forms of biblical criticism: *lower criticism* deals with the text; *higher criticism* treats the source of the text. Lower criticism attempts to determine what the original text said, and the latter asks who said it and when, where, and why it was written.

Most controversies surrounding Bible criticism involve higher criticism. Higher criticism can be divided into negative (destructive) and positive (constructive) types. Negative criticism denies the authenticity of much of the biblical record. Usually an antisupernatural presupposition (*see* MIRACLES, ARGUMENTS AGAINST ; MIRACLES, MYTH AND) is employed in this critical approach. Further, negative criticism often approaches the Bible with distrust equivalent to a "guilty-until-proven-innocent" bias.

Negative New Testament Criticism. *Historical* , *Source* , *Form* , *Tradition* , and *Redaction* methods (and combinations thereof) are the approaches with the worst record for bias. Any of these, used to advance an agenda of skepticism, with little or no regard for truth, undermine the Christian apologetic.

Historical Criticism. Historical criticism is a broad term that covers techniques to date documents and traditions, to verify events reported in those documents, and to use the results in historiography to reconstruct and interpret. The French Oratorian priest Richard Simon published a series of books, beginning in 1678, in which he applied a rationalistic, critical approach to studying the Bible. This was the birth of historical-critical study of the Bible, although not until Johann Gottfried Eichhorn (1752–1827) and Johann David Michaelis (1717–1791) was the modern historical-critical pattern set. They were influenced by the secular historical research of Barthold Georg Niebuhr (1776–1831; *Romische Geschichte,* 1811–12), Leopold von Ranke (1795–1886; *Geshichte der romanischen und germanischen Volker von 1494–1535*), and others, who developed and refined the techniques. Among those influenced was Johann Christian Konrad von Hofmann (1810–1877). He combined elements of Friedrich Schelling (1775–1854), Friedrich Schleiermacher (1768–1834), and orthodox Lutheranism with historical categories and the critical methods to make a biblical-theological synthesis. This model stressed “superhistorical history,” “holy history,” or “salvation history” *(Heilsgeschichte)*— the sorts of history that need not be literally true. His ideas and terms influenced Karl Barth (1886–1968), Rudolf Bultmann (1884–1976), and others in the twentieth century. Toward the close of the nineteenth century, capable orthodox scholars challenged “destructive criticism” and its rationalistic theology.

Among more conservative scholars were George Salmon (1819–1904), Theodor von Zahn (1838–1933), and R. H. Lightfoot (1883–1953), who used criticism methods as the bases for a constructive criticism. This constructive criticism manifests itself most openly when it considers such matters as miracles, virgin birth of Jesus, and bodily resurrection of Christ (*see* RESURRECTION, EVIDENCE FOR). Historical criticism is today taken for granted in biblical studies. Much recent work in historical criticism manifests rationalistic theology that at the same time claims to uphold traditional Christian doctrine. As a result, it has given rise to such developments as source criticism.

Source Criticism. Source criticism, also known as literary criticism, attempts to discover and define literary sources used by the biblical writers. It seeks to uncover underlying literary sources, classify types of literature, and answer questions relating to authorship, unity, and date of Old and New Testament materials (Geisler, 436). Some literary critics tend to decimate the biblical text, pronounce certain books inauthentic, and reject the very notion of verbal inspiration. Some scholars have carried their rejection of authority to the point that they have modified the idea of the canon (e.g., with regard to pseudonymity) to accommodate their own conclusions (ibid., 436). Nevertheless, this difficult but important undertaking can be a valuable aid to biblical interpretation, since it has bearing on the historical value of biblical writings. In addition, careful literary criticism can prevent historical misinterpretations of the biblical text.

Source criticism in the New Testament over the past century has focused on the so-called “Synoptic problem,” since it relates to difficulties surrounding attempts to devise a scheme of literary dependence that accounts for similarities and dissimilarities among the Synoptic Gospels

of Matthew, Mark, and Luke. Theories tend to work with the idea of a now-absent *Q* or *Quelle* ("Source") used by the three evangelists, who wrote in various sequences, with the second depending on the first and the third on the other two. These theories were typical forerunners of the Two-Source theory advanced by B. H. Streeter (1874–1937), which asserted the priority of Mark and eventually gained wide acceptance among New Testament scholars. Streeter's arguments have been questioned, and his thesis has been challenged by others. Eta Linnemann, once a student of Bultmann and a critic, has written a strong critique of her former position in which she uses source analysis to conclude that no synoptic problem in fact exists. She insists that each Gospel writer wrote an independent account based on personal experience and individual information. She wrote: "As time passes, I become more and more convinced that to a considerable degree New Testament criticism as practiced by those committed to historical-critical theology does not deserve to be called science" (Linnemann, 9). Elsewhere she writes, "The Gospels are not works of literature that creatively reshape already finished material after the manner in which Goethe reshaped the popular book about Dr. Faust" (ibid., 104). Rather, "Every Gospel presents a complete, unique testimony. It owes its existence to direct or indirect eyewitnesses" (ibid., 194).

Form Criticism. Form criticism studies literary forms, such as essays, poems, and myths, since different writings have different forms. Often the form of a piece of literature can tell a great deal about the nature of a literary piece, its writer, and its social context. Technically this is termed its "life setting" (*Sitz im Leben*). The classic liberal position is the documentary or J-E-P-D Pentateuchal source analysis theory established by Julius Wellhausen (1844–1918) and his followers (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF). They actually attempted to mediate between traditionalism and skepticism, dating Old Testament books in a less supernaturalistic manner by applying the "documentary theory." These documents are identified as the "Jahwist" or Jehovistic (J), dated in the ninth century B.C ., the Elohistic (E), eighth century, the Deuteronomic (D), from about the time of Josiah (640–609), and the Priestly (P), from perhaps the fifth century B.C . So attractive was the evolutionary concept in literary criticism that the source theory of Pentateuchal origins began to prevail over all opposition. A mediating position of some aspects of the theory was expressed by C. F. A. Dillman (1823–1894), Rudolph Kittle (1853–1929), and others. Opposition to the documentary theory was expressed by Franz Delitzsch (1813–1890), who rejected the hypothesis outright in his commentary on Genesis, William Henry Green (1825–1900), James Orr (1844–1913), A. H. Sayce (1845–1933), Wilhelm Moller, Eduard Naville, Robert Dick Wilson (1856–1930), and others (see Harrison, 239–41; Archer; Pfeiffer). Sometimes form-critical studies are marred by doctrinaire assumptions, including that early forms must be short and later forms longer, but, in general, form criticism has been of benefit to biblical interpretation. Form criticism has been most profitably used in the study of the Psalms (Wenham, "History and the Old Testament," 40).

These techniques were introduced into New Testament study of the Gospels as *Formgeschichte* ("form history") or *form criticism* . Following in the tradition of Heinrich Paulus and Wilhelm De Wette (1780–1849), among others, scholars at Tubingen built on the foundation of source criticism theory. They advocated the priority of Mark as the earliest Gospel and multiple written sources. William Wrede (1859–1906) and other form critics sought to eliminate the chronological-geographical framework of the Synoptic Gospels and to investigate the twenty-year period of oral traditions between the close of New Testament events and the earliest

written accounts of those events. They attempted to classify this material into "forms" of oral tradition and to discover the historical situation (*Sitz im Leben*) within the early church that gave rise to these forms. These units of tradition are usually assumed to reflect more of the life and teaching of the early church than the life and teaching of the historical Jesus. Forms in which the units are cast are clues to their relative historical value.

The fundamental assumption of form criticism is typified by Martin Dibelius (1883–1947) and Bultmann. By creating new words and deeds of Jesus as the situation demanded, the evangelists arranged the units or oral tradition and created artificial contexts to serve their own purposes. In challenging the authorship, date, structure, and style of other New Testament books, destructive critics arrived at similar conclusions. To derive a fragmented New Testament theology, they rejected Pauline authorship for all Epistles traditionally ascribed to him except Romans, 1 Corinthians, 2 Corinthians, and Galatians (Hodges, 339–48).

Thoroughgoing form critics hold two basic assumptions: (1) The early Christian community had little or no genuine biographical interest or integrity, so it created and transformed oral tradition to meet its own needs. (2) The evangelists were compiler-editors of individual, isolated units of tradition that they arranged and rearranged without regard for historical reality (see Thomas and Gundry, *A Harmony of the Gospels* [281–82], who identify Dibelius, Bultmann, Burton S. Easton, R. H. Lightfoot, Vincent Taylor, and D. E. Nineham as preeminent New Testament form critics).

Tradition Criticism. Tradition criticism is primarily concerned with the history of traditions before they were recorded in writing. The stories of the patriarchs, for example, were probably passed down through generations by word of mouth until they were written as a continuous narrative. These oral traditions may have been changed over the long process of transmission. It is of great interest to the biblical scholar to know what changes were made and how the later tradition, now enshrined in a literary source, differs from the earliest oral version.

Tradition criticism is less certain or secure than literary criticism because it begins where literary criticism leaves off, with conclusions that are in themselves uncertain. It is difficult to check the hypotheses about development of an oral tradition (Wenham, ibid., 40–41). Even more tenuous is the "liturgical tradition" enunciated by S. Mowinckel and his Scandinavian associates, who argue that literary origins were related to preexilic sanctuary rituals and sociological phenomena. An offshoot of the liturgical approach is the "myth and ritual" school of S. H. Hooke, which argues that a distinctive set of rituals and myths were common to all Near Eastern peoples, including the Hebrews. Both of these approaches use Babylonian festival analogies to support their variations on the classical literary-critical and tradition-critical themes (Harrison, 241).

Form criticism is closely aligned with tradition criticism in New Testament studies. A review of many of the basic assumptions in view of the New Testament text have been made by Oscar Cullmann, *The Christology of the New Testament* , and I. Howard Marshall, *The Origins of New Testament Christology* and *I Believe in the Historical Jesus* . Also see the discussions in Brevard S. Childs, *Introduction to the Old Testament as Scripture* and *Introduction to the New Testament*

as Canon , and Gerhard Hasel, *Old Testament Theology: Basic Issues in the Current Debate* and *New Testament Theology: Basic Issues in the Current Debate* .

Redaction Criticism. Redaction criticism is more closely associated with the text than is traditional criticism. As a result, it is less open to the charge of subjective speculation. Redaction (editorial) critics can achieve absolute certainty only when all the sources are used that were at the disposal of the redactor (editor), since the task is to determine how a redactor compiled sources, what was omitted, what was added, and what particular bias was involved in the process. At best, the critic has only some of the sources available, such as the books of Kings used by the writers of Chronicles. Elsewhere, in both the Old and the New Testaments, the sources must be reconstructed out of the edited work itself. Then redaction criticism becomes much less certain as a literary device (Wenham, "Gospel Origins," 439).

Redaction critics tend to favor a view that biblical books were written much later and by different authors than the text relates. Late theological editors attached names out of history to their works for the sake of prestige and credibility. In Old and New Testament studies this view arose from historical criticism, source criticism, and form criticism. As a result, it adopts many of the same presuppositions, including the documentary hypothesis in the Old Testament, and the priority of Mark in the New Testament.

Evaluation. As already noted, higher criticism can be helpful as long as critics are content with analysis based on what can be objectively known or reasonably theorized. Real criticism doesn't begin its work with the intent to subvert the authority and teaching of Scripture.

Kinds of Criticism Contrasted. However, much of modern biblical criticism springs from unbiblical philosophical presuppositions exposed by Gerhard Maier in *The End of the Historical Critical Method* . These presuppositions incompatible with Christian faith include deism, materialism, skepticism, agnosticism, Hegelian idealism, and existentialism. Most basic is a prevailing naturalism (antisupernaturalism) that is intuitively hostile to any document containing miracle stories (*see* MIRACLES IN THE BIBLE ; MIRACLES, MYTH AND). This naturalistic bias divides negative (destructive) from positive (constructive) higher criticism:

	Positive Criticism (Constructive)	**Negative Criticism (Destructive)**
Basis	Supernaturalistic	Naturalistic
Rule	Text is "innocent until proven guilty"	Text is "guilty until proven innocent"
Result	Bible is wholly true	Bible is partly true
Final Authority	Word of God	Mind of man
Role of Reason	To discover truth (rationality)	To determine truth (rationalism)

Some of the negative presuppositions call for scrutiny, especially as they relate to the Gospel record. This analysis is especially relevant to source criticism, form criticism, and redaction

criticism, as these methods challenge the genuineness, authenticity, and consequently the divine authority of the Bible. This kind of biblical criticism is unfounded.

Unscholarly bias. It imposes its own antisupernatural bias on the documents. The originator of modern negative criticism, Benedict Spinoza , for example, declared that Moses did not write the Pentateuch, nor Daniel the whole book of Daniel, nor did any miracle recorded actually occur. Miracles, he claimed, are scientifically and rationally impossible.

In the wake of Spinoza, negative critics concluded that Isaiah did not write the whole book of Isaiah. That would have involved supernatural predictions (including knowing the name of King Cyrus) over 100 years in advance (*see* PROPHECY AS PROOF OF THE BIBLE). Likewise, negative critics concluded Daniel could not have been written until 165 B.C . That late authorship placed it after the fulfillment of its detailed description of world governments and rulers down to Antiochus IV Epiphanes (d. 163 B.C .). Supernatural predictions of coming events was not considered an option. The same naturalistic bias was applied to the New Testament by David Strauss (1808–1874), Albert Schweitzer (1875–1965), and Bultmann, with the same devastating results.

The foundations of this antisupernaturalism crumbled with evidence that the universe began with a big bang (*see* EVOLUTION, COSMIC). Even agnostics such as Robert Jastrow (Jastrow, 18), speak of "supernatural" forces at work (Kenny, 66; *see* AGNOSTICISM ; MIRACLE ; MIRACLES, ARGUMENTS AGAINST), so it is sufficient to note here that, with the demise of modern antisupernaturalism, there is no philosophical basis for destructive criticism.

Inaccurate view of authorship. Negative criticism either neglects or minimizes the role of apostles and eyewitnesses who recorded the events. Of the four Gospel writers, Matthew, Mark, and John were definitely eyewitnesses of the events they report. Luke was a contemporary and careful historian (Luke 1:1–4 ; see Acts). Indeed, every book of the New Testament was written by a contemporary or eyewitness of Christ. Even such critics as the "Death-of-God" theologian John A. T. Robinson admit that the Gospels were written between 40 and 65 (Robinson, 352), during the life of eyewitnesses.

But if the basic New Testament documents were composed by eyewitnesses, then much of destructive criticism fails. It assumes the passage of much time while "myths" developed. Studies have revealed that it takes two generations for a myth to develop (Sherwin-White, 190).

What Jesus really said. It wrongly assumes that the New Testament writers did not distinguish between their own words and those of Jesus. That a clear distinction was made between Jesus' words and those of the Gospel writers is evident from the ease by which a "red letter" edition of the New Testament can be made. Indeed, the apostle Paul is clear to distinguish his own words from those of Jesus (see Acts 20:35 ; 1 Cor. 7:10 , 12 , 25). So is John the apostle in the Apocalypse (see Rev. 1:8 , 11 , 17b–20 ; 2:1f .; 22:7 , 12–16 , 20b). In view of this care, the New Testament critic is unjustified in assuming without substantive evidence that the Gospel record does not actually report what Jesus said and did.

Myths? It incorrectly assumes that the New Testament stories are like folklore and myth. There is a vast difference between the simple New Testament accounts of miracles and the embellished myths that did arise during the second and third centuries A.D ., as can be seen by comparing the accounts. New Testament writers explicitly disavow myths. Peter declared: "For we did not follow cleverly devised tales (mythos) when we made known to you the power and coming of our Lord Jesus Christ, but we were eyewitnesses of his majesty" (2 Peter 1:16). Paul also warned against belief in myths (1 Tim. 1:4 ; 4:7 ; 2 Tim. 4:4 ; Titus 1:14).

One of the most telling arguments against the myth view was given by C. S. Lewis:

> First then, whatever these men may be as Biblical critics, I distrust them as critics. They seem to lack literary judgment, to be imperceptive about the very quality of the texts they are reading . . . If he tells me that something in a Gospel is legend or romance, I want to know how many legends and romances he had read, how well his palate is trained in detecting them by the flavour; not how many years he has spent on that Gospel . . . I have been reading poems, romances, vision-literature, legends, myths all my life. I know what they are like. I know that not one of them is like this. [Lewis, 154–55]

Creators or recorders? Unfounded higher criticism undermines the integrity of the New Testament writers by claiming that Jesus never said (or did) what the Gospels claim. Even some who call themselves evangelical have gone so far as to claim that what " 'Jesus said' or 'Jesus did' need not always mean that in history Jesus said or did what follows, but sometimes may mean that in the account at least partly constructed by Matthew himself Jesus said or did what follows" (Gundry, 630). This clearly undermines confidence in the truthfulness of the Gospels and the accuracy of the events they report. On this critical view the Gospel writers become creators of the events, not recorders.

Of course, every careful biblical scholar knows that one Gospel writer does not always use the same words in reporting what Jesus said as does another. However, they always convey the same meaning. They do select, summarize, and paraphrase, but they do not distort. A comparison of the parallel reports in the Gospels is ample evidence of this.

There is no substantiation for the claim of one New Testament scholar that Matthew created the Magi story (Matt. 2) out of the turtledove story (of Luke 2). For according to Robert Gundry, Matthew "changes the sacrificial slaying of 'a pair of turtledoves or two young pigeons,' at the presentation of the baby Jesus in the Temple (Luke 2:24 ; cf. Lev. 12:6–8), into Herod's slaughtering of the babies in Bethlehem" (ibid., 34–35). Such a view not only degrades the integrity of the Gospel writers but the authenticity and authority of the Gospel record. It is also silly.

Neither is there support for Paul K. Jewett, who went so far as to assert (Jewett, 134–35) that what the apostle Paul affirmed in 1 Corinthians 11:3 is wrong. If Paul is in error, then the time-honored truth that "what the Bible says, God says" is not so. Indeed, if Jewett is right, then even when one discovers what the author of Scripture is affirming, he is little closer to knowing the truth of God (cf. Gen. 3:1). If "what the Bible says, God says" (*see* BIBLE, EVIDENCE FOR) is not so, then the divine authority of all Scripture is worthless.

The early church's stake in truth. That the early church had no real biographical interest is highly improbable. The New Testament writers, impressed as they were with the belief that Jesus was the long-promised Messiah, the Son of the living God (Matt. 16:16–18), had great motivation to accurately record what he actually said and did.

To say otherwise is contrary to their own clear statements. John claimed that "Jesus did" the things recorded in his Gospel (John 21:25). Elsewhere John said "What . . . we have heard, we have seen with our eyes, we beheld and our hands handled . . . we proclaim to you also" (1 John 1:1–2).

Luke clearly manifests an intense biographical interest by the earliest Christian communities when he wrote: "Inasmuch as many have undertaken to compile an account of the things accomplished among us, just as those who from the beginning were eyewitnesses and servants of the Word have handed them down to us, it seemed fitting for me as well, having investigated everything carefully from the beginning, to write it out for you in consecutive order, most excellent Theophilus; so that you might know the exact truth about the things you have been taught" (Luke 1:1–4). To claim, as the critics do, that the New Testament writers lacked interest in recording real history is implausible.

The work of the Holy Spirit. Such assumptions also neglect or deny the role of the Holy Spirit in activating the memories of the eyewitnesses. Much of the rejection of the Gospel record is based on the assumption that the writers could not be expected to remember sayings, details, and events twenty or forty years after the events. For Jesus died in 33, and the first Gospel records probably came (at latest) between 50 and 60 (Wenham, "Gospel Origins," 112–34).

Again the critic is rejecting or neglecting the clear statement of Scripture. Jesus promised his disciples, "The Helper, the Holy Spirit, whom the Father will send in My name, he will teach you all things, and bring to your remembrance all that I said to you" (John 14:26).

So even on the unlikely assumption that no one recorded anything Jesus said during his lifetime or immediately after, the critics would have us believe that eyewitnesses whose memories were later supernaturally activated by the Holy Spirit did not accurately record what Jesus did and said. It seems far more likely that the first-century eyewitnesses were right and the twentieth-century critics are wrong, than the reverse.

Guidelines for Biblical Criticism. Of course biblical scholarship need not be destructive. But the biblical message must be understood in its theistic (supernatural) context and its actual historical and grammatical setting. Positive guidelines for evangelical scholarship are set forth in Chicago Statement on Biblical Hermeneutics" (see Geisler, *Summit II: Hermeneutics,* 10–13. Also Radmacher and Preus, *Hermeneutics, Inerrancy, and the Bible,* esp. 881–914). It reads in part as follows:

> Article XIII. WE AFFIRM that awareness of the literary categories, formal and stylistic, of the various parts of Scripture is essential for proper exegesis, and hence we value genre criticism as one of the many disciplines of biblical study. WE DENY that

generic categories which negate the historicity may rightly be imposed on biblical narratives which present themselves as factual.

Article XIV. WE AFFIRM that the biblical record of events, discourses and sayings, though presented in a variety of appropriate literary forms, corresponds to historical fact. WE DENY that any such event, discourse or saying reported in Scripture was invented by the biblical writers or by the traditions they incorporated.

Article XV. WE AFFIRM the necessity of interpreting the Bible according to its literal, or normal sense. The literal sense is the grammatical-historical sense, that is, the meaning which the writer expressed. Interpretation according to the literal sense will account for all figures of speech and literary forms found in the text. WE DENY the legitimacy of any approach to Scripture that attributes to it meaning which the literal sense does not support.

Article XVI. WE AFFIRM that legitimate critical techniques should be used in determining the canonical text and its meaning. WE DENY the legitimacy of allowing any method of biblical criticism to question the truth or integrity of the writer's expressed meaning, or of any other scriptural teaching.

Redaction versus Editing. There are important differences between destructive redaction and constructive editing. No knowledgeable scholars deny that a certain amount of editing occurred over the biblical text's thousands of years of history. This legitimate editing, however, must be distinguished from illegitimate redaction which the negative critics allege. The negative critics have failed to present any convincing evidence that the kind of redaction they believe in has ever happened to the biblical text.

The following chart contrasts the two views.

Legitimate Editing	**Illegitimate Redacting**
Changes in form	Changes in content
Scribal changes	Substantive changes
Changes in the text	Changes in the truth

The redaction model of the canon confuses legitimate scribal activity, involving grammatical form, updating of names, and arrangement of prophetic material, with illegitimate redactive changes in actual content of a prophet's message. It confuses acceptable scribal transmission with unacceptable tampering. It confuses proper discussion of which text is earlier with improper discussion of how later writers changed the truth of texts. There is no evidence that any significant illegitimate redactive changes have occurred since the Bible was first put in writing. On the contrary, all evidence supports a careful transmission in all substantial matters and in most details. No diminution of basic truth has occurred from the original writings to the Bibles in our hands today (*see* OLD TESTAMENT MANUSCRIPTS ; NEW TESTAMENT MANUSCRIPTS).

Bible, Evidence for. The Bible claims to be and proves to be the Word of God. It was written by prophets of God, under the inspiration of God.

Written by Prophets of God. The biblical authors were prophets and apostles of God (*see* MIRACLES, APOLOGETIC VALUE OF ; PROPHECY AS PROOF OF BIBLE). There are many designations for prophet, and these are informative about their role in producing Scripture. They are called:

1. A *man of God* (1 Kings 12:22), meaning chosenness.

2. A *servant of the Lord* (1 Kings 14:18), indicating faithfulness.

3. A *messenger of the Lord* (Isa. 42:19), showing mission.

4. A *seer* (*ro'eh*), or *beholder* (*hozeh*) (Isa. 30:9–10), revealing insight from God.

5. A *man of the Spirit* (Hosea 9:7 KJV ; cf. Micah 3:8), noting spiritual indwelling.

6. A *watchman* (Ezek. 3:17), relating alertness for God.

7. A *prophet* (most frequently), marking a spokesman for God.

The work of a biblical prophet is described in vivid terms: "The Lord has spoken; who can but prophesy" (Amos 3:8). He is one who speaks "all the words which the Lord has spoken" (Exod. 4:30). God said to Moses of a prophet, "I will put my words in his mouth, and he shall speak to them all that I command him" (Deut. 18:18). He added, "You shall not add to the word which I command you, nor take away from it" (Deut. 4:2). Jeremiah was commanded: "This is what the LORD says: Stand in the courtyard of the LORD 's house and speak to all the people. . . . Tell them everything I command you; do not omit a word" (Jer. 26:2).

A prophet was someone who said what God told him to say, no more and no less.

Moved by the Spirit of God. Throughout Scripture, the authors claimed to be under the direction of the Holy Spirit. David said, "The Spirit of the Lord spoke through me; his word was on my tongue" (2 Sam. 23:2). Peter, speaking of the whole Old Testament, added, "Prophecy never had its origin in the will of man, but men spoke from God as they were carried along by the Holy Spirit" (2 Peter 1:21).

Not all prophets were known by that term. David and Solomon were kings. But they were mouthpieces of God, and David is called a "prophet" in Acts 2:29–39 . Moses was a lawgiver. He too was a prophet or spokesman for God (Deut. 18:18). Amos disclaimed the term "prophet," in that he was not a professional prophet, like Samuel and his "school of the prophets" (1 Sam. 19:20). Even if Amos was not a prophet by office, he was one by gift (cf. Amos 7:14). God used him to speak. Nor did all prophets speak in an explicit "Thus says the Lord" first-person style. Those who wrote historical narrative spoke in an implied "Thus *did* the Lord"

approach. Their message was about the acts of God in relation to the people and their sins. In each case God made the prophet a channel through which to convey his message to us.

Breathed Out by God. Writing about the entire Old Testament canon, the apostle Paul declared:

"All Scripture is God-breathed and is useful for teaching, rebuking, correcting and training in righteousness, so that the man of God may be thoroughly equipped for every good work" (2 Tim. 3:16–17). Jesus described the Scriptures as the very "word that comes out of the mouth of God" (Matt. 4:4 , 7 , 10). They were written *by* men who spoke *from* God. Paul said his writings were "words . . . which the Holy Spirit teaches" (1 Cor. 2:13). As Jesus said to the Pharisees, "How is it then that David, *speaking by the Spirit* , calls him 'Lord'?" (Matt. 22:43 , emphasis added).

What the Bible Says. The basic logic of the inerrancy of Scripture is offered in the article, Bible, Alleged errors in. That the Bible is God's inerrant Word is expressed in several ways in Scripture. One is the formula, "What the Bible says, God says." An Old Testament passage claims God said something, yet when this text is cited in the New Testament, the text tells us that the Scriptures said it. Sometimes the reverse is true. In the Old Testament it is said that the Bible records something. The New Testament declares that God said it. Consider this comparison:

What God Says . . .	**the Bible Says**
Genesis 12:3	Galatians 3:8
Exodus 9:16	Romans 9:17
What the Bible Says . . .	**God Says**
Genesis 2:24	Matthew 19:4 , 5
Psalm 2:1	Acts 4:24 , 25
Psalm 2:7	Hebrews 3:7
Psalm 16:10	Acts 13:35
Psalm 95:7	Hebrews 3:7
Psalm 97:7	Hebrews 3:7
Psalm 104:4	Hebrews 3:7
Isaiah 55:3	Acts 13:34

Scripture's Claims. *"Thus Says the Lord."* Phrases such as "thus says the Lord" (for example, Isa. 1:11 , 18 ; Jer. 2:3 , 5), "God said" (Gen. 1:3), and "the Word of the Lord came" (Jer. 34:1 ; Ezek. 30:1) are used hundreds of times in Scripture to stress God's direct, verbal inspiration of what was written.

"The Word of God." At some points the Bible claims, forthrightly and unequivocally, to be "the Word of God." Referring to Old Testament commands, Jesus told the Jews of his day, "Thus you nullify the word of God for the sake of your tradition" (Matt. 15:6). Paul speaks of

the Scriptures as "the oracles of God" (Rom. 3:2). Peter declares, "For you have been born again, not of perishable seed, but of imperishable, through the living and enduring word of God" (1 Peter 1:23). The writer of Hebrews affirms, "For the word of God is living and active. Sharper than any double-edged sword" (Heb. 4:12).

The Claim of Divine Authority. Other words or phrases used in Scripture entail the claim of God's authority. Jesus said the Bible will never pass away and is sufficient for faith and life (Luke 16:31 ; cf. 2 Tim. 3:16–17). He proclaimed that the Bible possesses divine inspiration (Matt. 22:43) and authority (Matt. 4:4 , 7 , 10). It has unity (Luke 24:27 ; John 5:39) and spiritual clarity (Luke 24:25).

The Extent of Its Biblical Authority. The extent of divine authority in Scripture includes:

1. all that is written— 2 Timothy 3:16 ;

2. even the very words— Matthew 22:43 ; 1 Corinthians 2:13 ;

3. and tenses of verbs— Matthew 22:32 ; Galatians 3:16 ;

4. including even the smallest parts of words— Matthew 5:17 , 18 .

Even though the Bible was not verbally dictated by God, the result is as perfectly God's thoughts as if it had been. The Bible's authors claimed that God is the source of the very words, since he supernaturally superintended the process by which each human wrote, using their vocabulary and style to record his message (2 Peter 1:20–21).

Presented in Human Terms. Although the Bible claims to be the Word of God, it is also the words of human beings. It claims to be God's communication to people, in their own language and expressions.

First, every book in the Bible was the composition of *human writers* .

Second, the Bible manifests different *human literary styles,* from the mournful meter of lamentations to the exalted poetry of Isaiah, from the simple grammar of John to the complex Greek of Hebrews. Their choices of metaphors show that different writers used their own background and interests. James is interested in nature. Jesus uses urban metaphors, and Hosea those of rural life.

Third, the Bible manifests *human perspectives and emotions;* David spoke in Psalm 23 from a shepherd's perspective; Kings is written from a prophetic vantage point, and Chronicles from a priestly point of view; Acts manifests a historical interest and 2 Timothy a pastor's heart. Paul expressed grief over the Israelites who had rejected God (Rom. 9:2).

Fourth, the Bible reveals human thought patterns and processes, including reasoning (Romans) and memory (1 Cor. 1:14–16).

Fifth, writers of the Bible used human sources for information, including historical research (Luke 1:1–4) and noncanonical writings (Josh. 10:13 ; Acts 17:28 ; 1 Cor. 15:33 ; Titus 1:12 ; Jude 9 , 14).

Original Text Is Without Errors, Not the Copies. As noted in the article Bible, Alleged Er rors in, this does not mean that every copy and translation of the Bible is perfect. God breathed out the originals, not the copies, so inerrancy applies to the original text, not to every copy. God in his providence preserved the copies from substantial error. In fact, the degree of accuracy is greater than that of any other book from the ancient world, exceeding 99 percent (*see* NEW TESTAMENT MANUSCRIPTS ; OLD TESTAMENT MANUSCRIPTS).

The Overall Evidence. Considered as a totality, evidences for the Bible's claim to be the Word of God are overwhelming.

The Testimony of Christ. Perhaps the strongest argument that the Bible is the Word of God is the testimony of Jesus (*see* BIBLE, JESUS' VIEW OF). Even non-Christians believe he was a good teacher. Muslims believe him to be a true prophet of God (*see* MUHAMMAD, ALLEGED DIVINE CALL OF). Christians, of course, insist that he is the Son of God as he claimed to be (Matt. 16:16–18 ; Mark 2:5–11 ; John 5:22–30 ; 8:58 ; 10:30 ; 20:28–29) and proved to be by numerous miracles (John 3:2 ; Acts 2:22 ; *see* MIRACLES IN THE BIBLE). Even the *Qur'an* admits that Jesus did miracles (*see* MUHAMMAD, ALLEGED MIRACLES OF), and that the Bible Christians used in Muhammad's day (A.D . seventh century) was accurate, since they were challenged to consult it to verify Muhammad's claims.

Jesus affirmed the Old Testament to be the Word of God and promised to guide his disciples to know all truth. Jesus claimed for the Bible:

1. Divine authority— Matthew 4:4 , 7 , 10
2. Indestructibility— Matthew 5:17–18
3. Infallibility or unbreakability— John 10:35
4. Ultimate supremacy— Matthew 15:3 , 6
5. Factual inerrancy— Matthew 22:29 ; John 17:17
6. Historical reliability— Matthew 12:40 , 24:37–38
7. Scientific accuracy— Matthew 19:4–5 ; John 3:12

The authority of Jesus confirms the authority of the Bible. If he is the Son of God (*see* CHRIST, DEITY OF), then the Bible is the Word of God. Indeed, if Jesus were merely a prophet, then the Bible still is confirmed to be the Word of God through his prophetic office. Only if one rejects the divine authority of Christ can he consistently reject the divine authority of the Scriptures. If Jesus is telling the truth, then it is true that the Bible is God's Word.

Manuscript Evidence. New Testament manuscripts are now available from the third and fourth centuries, and fragments that may date back as far as the late first century. From these through the medieval centuries, the text remained substantially the same. There are earlier and more manuscripts for the New Testament than for any other book from the ancient world. While most books exist in ten or twenty manuscripts dating from a thousand years or more after they were composed, one nearly entire manuscript, the *Chester Beatty Papyri,* was copied in about 250. Another manuscript with the majority of the New Testament, called *Vaticanus* , is dated to about 325.

The Biblical Authors. Whatever weaknesses they may have had, the biblical authors are universally presented in Scripture as scrupulously honest, and this lends credibility to their claim, for the Bible is not shy to admit the failures of his people.

They taught the highest standard of ethics, including the obligation to always tell the truth. Moses' law commanded: "You shall not give false testimony against your neighbor" (Exod. 20:16). Indeed, only one "whose walk is blameless and who does what is righteous, who speaks the truth from his heart" (Ps. 15:2), who "has no slander on his tongue, who does his neighbor no wrong and casts no slur on his fellow-man, [and] who despises a vile man but honors those who fear the L ORD , who keeps his oath even when it hurts" were considered righteous.

The New Testament also exalts integrity, commanding: "Therefore each of you must put off falsehood and speak truthfully to his neighbor" (Eph. 4:25). The person who "loves and practices falsehood" will be excluded from heaven, according to Revelation 22:15 . Absolute truthfulness was extolled as a cardinal Christian virtue.

The biblical writers not only taught the highest moral standards, including truthfulness, but they exemplified them in their lives. A true prophet could not be bought off. As one prophet who was tempted confessed, "I could not go beyond the command of the Lord" (Num. 22:18). What God spoke, the prophet had to declare, regardless of the consequences. Many prophets were threatened and even martyred but never recanted the truth. Jeremiah was put into prison for his unwelcome prophecies (Jer. 32:2 ; 37:15) and even threatened with death (Jer. 26:8 , 24). Others were killed (Matt. 23:34–36 ; Heb. 11:32–38). Peter and the eleven apostles (Acts 5), as well as Paul (Acts 28), were all imprisoned and most were eventually martyred for their testimony (2 Tim. 4:6–8 ; 2 Peter 1:14). Indeed, being "faithful unto death" was an earmark of early Christian conviction (Rev. 2:10).

People sometimes die for false causes they believe to be true, but few die for what they know to be false. Yet the biblical witnesses, who were in a position to know what was true, died for proclaiming that their message came from God. This is at least prima facie evidence that the Bible is what they claimed it to be—the Word of God.

The Miraculous Confirmation. It is always possible that someone believes he or she speaks for God and does not. There are false prophets (Matt. 7:15). This is why the Bible exhorts: "Dear friends, do not believe every spirit, but test the spirits to see whether they are from God, because many false prophets have gone out into the world" (1 John 4:1). One sure way a true prophet can be distinguished from a false one is miracles (Acts 2:22 ; Heb. 2:3–4). A miracle is

an act of God, and God would not supernaturally confirm a false prophet to be a true one (*see* MIRACLES IN THE BIBLE ; PROPHECIES AS PROOF OF THE BIBLE).

When Moses was called of God, he was given miracles to prove he spoke for God (Exodus 4). Elijah on Mount Carmel was confirmed by fire from heaven to be a true prophet of the true God (1 Kings 18). Even Nicodemus acknowledged to Jesus, “Rabbi, we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him” (John 3:2).

Even the *Qur’an* recognized that God confirmed his prophets (sura 7:106–8, 116–119), including Jesus, by miracles. God is said to have told Muhammad, “If they reject thee, so were rejected apostles before thee, who came with clear signs” (sura 17:103). Allah says, “Then We sent Moses and his brother Aaron, with Our signs and authority manifest” (sura 23:45). Interestingly, when Muhammad was challenged by unbelievers to perform like miracles, he refused (see sura 2:118; 3:183; 4:153; 6:8, 9, 37). In Muhammad’s own words (from the *Qur’an*), “They [will] say: ‘Why is not a sign sent down to him from his Lord?’ ” since even Muhammad admitted that “God hath certainly power to send down a sign” (sura 6:37; *see* MUHAMMAD, ALLEGED MIRACLES OF ; QUR’AN, ALLEGED DIVINE ORIGIN OF). But miracles were a mark of Jesus’ ministry, as of other prophets and apostles (Heb. 2:3–4 ; 2 Cor. 12:12 ; *see* MIRACLES, APOLOGETIC VALUE OF). When asked by John the Baptist if he was the Messiah, Jesus responded, “Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached” (Luke 7:20–22).

Miracles, then, are a divine confirmation of a prophet’s claim to be speaking for God (*see* MIRACLE). But of all the world’s religious leaders, only the Judeo-Christian prophets and apostles were supernaturally confirmed by genuine miracles of nature that could not possibly have been self-delusion or trickery. Confirming miracles included the turning of water into wine (John 2), healing of those with organic sicknesses (John 5), multiplying food (John 6), walking on water (John 6), and raising the dead (John 11).

Muslims allege that Muhammad did miracles, but there is no support for this claim, even in the *Qur’an* (for his refusal to do miracles, see sura 3:181–84; *see* MUHAMMAD, CHARACTER OF). Only the Bible is supernaturally confirmed.

Predictions by Biblical Prophets. Unlike any other book, the Bible offers specific predictions that were written hundreds of years in advance of their literal fulfillment. Many of these center around the coming of Christ and others around world events. For a discussion of a number of these, *see* PROPHECY AS PROOF OF THE BIBLE . While Bible critics play with the dating of Old Testament books to claim that predictions were written after their fulfillment, these claims abuse credibility. In some cases of more recent fulfillment no such claims are even possible. These fulfillments stand as a mark of the Bible’s unique, supernatural origin.

The Unity of the Bible. One supporting line of evidence for the Bible’s divine origin is its unity in great diversity. Even though composed by many people of diverse backgrounds over many years, Scripture speaks from one mind.

Not taking into account unknowns in the dating for Job and sources Moses could have used, the first book was written no later than 1400 B.C . and the last shortly before A.D . 100. In all there are sixty-six different books, written by perhaps forty different authors of different backgrounds, educational levels, and occupations. Most was written originally in Hebrew or Greek, with some small portion in Aramaic.

The Bible covers hundreds of topics in literature of widely varying styles. These include history, poetry, didactic literature, parable, allegory, apocalyptic, and epic.

Yet note the amazing unity. These sixty-six books unfold one continuous drama of redemption, paradise lost to paradise regained, creation to the consummation of all things (see Sauer). There is one central theme, the person of Jesus Christ, even by implication in the Old Testament (Luke 24:27). In the Old Testament Christ is anticipated; in the New Testament he is realized (Matt. 5:17–18). There is one message: Humankind's problem is sin, and the solution is salvation through Christ (Mark 10:45 ; Luke 19:10).

Such incredible unity is best accounted for by the existence of a divine Mind that the writers of Scripture claimed inspired them. This Mind wove each of their pieces into one mosaic of truth.

Critics claim this is not so amazing, considering that succeeding authors were aware of preceding ones. Hence, they could build upon these texts without contradicting them. Or, later generations only accepted their book into the growing canon because it seemed to fit.

But not all writers were aware that their book would come to be in the canon (for example, Song of Solomon and the multiauthor Proverbs). They could not have slanted their writing to the way that would best fit. There was no one point when books were accepted into the canon. Even though some later generations raised questions as to how a book came to be in the canon, there is evidence that books were accepted immediately by the contemporaries of the writers. When Moses wrote, his books were placed by the ark (Deut. 31:22–26). Later, Joshua was added, and Daniel had copies of these works, plus even the scroll of his contemporary Jeremiah (Dan. 9:2). In the New Testament, Paul cites Luke (1 Tim. 5:18 , cf. Luke 10:7), and Peter possessed at least some of Paul's Epistles (2 Peter 3:15–16). While not every Christian everywhere possessed every book immediately, it does seem that some writings were accepted and distributed immediately. Perhaps others were disseminated more slowly, after they were determined to be authentic.

Even if every author possessed every earlier book, there is still a unity that transcends human ability. The reader might assume that each author was an incredible literary genius who saw both the broader unity and "plan" of Scripture and just how his piece would fit in it. Could even such geniuses write so that the unforeseen end would come out, even though they could not know precisely what that end would be? It is easier to posit a superintending Mind behind the whole who devised the plot and from the beginning planned how it would unfold.

Suppose a book of family medical advice was composed by forty doctors over 1500 years in different languages on hundreds of medical topics. What kind of unity would it have, even

assuming that authors knew what preceding ones had written? Due to superstitious medical practice in the past, one chapter would say that disease is caused by demons who must be exorcised. Another would claim that disease is in the blood and must be drained by blood-letting. Another would claim disease to be a function of mind over matter. At best, such a book would lack unity, continuity, and usefulness. It would hardly be a definitive source covering the causes and cures of disease. Yet the Bible, with greater diversity, is still sought by millions for its solutions to spiritual maladies. It alone, of all books known to humankind, needs a God to account for its unity in diversity.

Archaeological Confirmation. Archaeology cannot directly prove the Bible's inspiration; it can confirm its reliability as an historical document. This is an indirect confirmation of inspiration. (*See* ARCHAEOLOGY, NEW TESTAMENT , and ARCHAEOLOGY, OLD TESTAMENT , for some of this evidence.) The conclusion of that evidence was summed up by Nelson Glueck that "no archaeological discovery has ever controverted a biblical reference. Scores of archaeological findings have been made which confirm in clear outline or exact detail historical statements in the Bible" (Glueck, 31). Millar Burroughs notes that "more than one archaeologist has found his respect for the Bible increased by the experience of excavation in Palestine" (Burroughs, 1).

Testimonies of Transforming Power. The writer of Hebrews declares that "the word of God is living and active. Sharper than any double-edged sword" (4:12). The apostle Peter added, "For you have been born again, not of perishable seed, but of imperishable, through the living and enduring word of God" (1 Peter 1:23). While not in the area of primary evidence, a subjective, supporting line of evidence is the change in life that God's Word brings. While early Islam spread by the power of the sword, early Christianity spread by the sword of the Spirit, even as Christians were being killed by the power of the Roman sword.

The great Christian apologist William Paley summarized the differences between the growth of Christianity and Islam vividly:

> For what are we comparing? A Galilean peasant accompanied by a few fishermen with a conqueror at the head of his army. We compare Jesus, without force, without power, without support, without one external circumstance of attraction or influence, prevailing against the prejudices, the learning, the hierarchy, of his country, against the ancient religious opinions, the pompous religious rites, the philosophy, the wisdom, the authority of the Roman empire, in the most polished and enlightened period of its existence,—with Mahomet making his way amongst Arabs; collecting followers in the midst of conquests and triumphs, in the darkest ages and countries of the world, and when success in arms not only operated by that command of men's wills and persons which attend prosperous undertakings, but was considered as a sure testimony of Divine approbation. That multitudes, persuaded by this argument, should join the train of a victorious chief; that still greater multitudes should, without any argument, bow down before irresistible power—is a conduct in which we cannot see much to surprise us; in which we can see nothing that resembles the causes by which the establishment of Christianity was effected. [Paley, 257]

Despite the later misuse of military power in the Crusades and at isolated times earlier, the fact is that *early* Christianity grew by its spiritual power, not by political force. From the very beginning, as it is today around the world, it was the preaching of the Word of God which transformed lives that gave Christianity its vitality (Acts 2:41). For “Faith comes by hearing, and hearing by the word of God” (Rom. 10:17).

Conclusion. The Bible is the only book that both claims and proves to be the Word of God. It claims to be written by prophets of God who recorded in their own style and language exactly the message God wanted them to give to humankind. The writings of the prophets and apostles claim to be the unbreakable, imperishable, and inerrant words of God. The evidence that their writings are what they claimed to be is found not only in their own moral character but in the supernatural confirmation of their message, its prophetic accuracy, its amazing unity, its transforming power, and the testimony of Jesus who was confirmed to be the Son of God.

Bible, Islamic View of. Muslims believe that the *Qur'an* is the Word of God, superseding all previous revelations. To maintain this belief, they must sustain an attack upon the competing claims of their chief rival, the Bible.

The Attack on the Bible. Muslim accusations against the Bible fall into two basic categories: first, the text of Scripture has been changed or forged; second, doctrinal mistakes have crept into Christian teaching, such as the belief in the incarnation of Christ, the triunity of the Godhead, and the doctrine of original sin (Waardenburg, 261–63).

Praise for the Original Bible. Strangely, sometimes the *Qur'an* gives the Judeo-Christian Scriptures such noble titles as: "the Book of God," "the Word of God," "a light and guidance to man," "a decision for all matters," "a guidance and mercy," "the lucid Book," "the illumination *(al-furqan),* " "the gospel with its guidance and light, confirming the preceding Law," and "a guidance and warning to those who fear God" (Takle, 217). Christians are told to look into their own Scriptures to find God's revelation for them (5:50). And even Muhammad himself at one point is exhorted to test the truthfulness of his own message by the contents of the previous divine revelations to Jews and Christians (10:94).

The Bible Set Aside. This praise for the Bible is misleading, since Muslims hasten to claim that the *Qur'an* supersedes previous revelations, based on their concept of progressive revelation. By this they hope to show that the *Qur'an* fulfills and sets aside the less complete revelations, such as the Bible. One Islamic theologian echoes this conviction by stating that while a Muslim needs to believe in the Torah (Law of Moses), the *Zabur* (the Psalms of David), and the *Injil* (Gospels), nevertheless "according to the most eminent theologians" the books in their present state "have been tampered with." He goes on to say, "It is to be believed that the *Qur'an* is the noblest of the books. . . . It is the last of the God-given scriptures to come down, it abrogates all the books which preceded it. . . . It is impossible for it to suffer any change or alteration" (Jeffery, 126–28). Even though this is the most common view among Islamic scholars, still many Muslims claim to believe in the sacredness and truthfulness of the present-day Bible. This, however, is largely lip-service due to their firm belief in the all-sufficiency of the *Qur'an* . Very few ever study the Bible.

Against the Old Testament. Muslims often show a less favorable view of the Old Testament, which they believe has been distorted by the teachers of the law. The charges include: concealing God's Word (sura 2:42; 3:71), verbally distorting the message in their books (sura 3:78; 4:46), not believing in all the parts of their Scriptures (sura 2:85), and not knowing what their own Scriptures really teach (sura 2:78). Muslims have included Christians in these criticisms.

Due to the ambiguities in the qur'anic accounts, Muslims hold various views (that are sometimes in conflict) regarding the Bible. For instance, the well-known Muslim reformer, Muhammad Abduh writes, "The Bible, the New Testament and the *Qur'an* are three concordant books; religious men study all three and respect them equally. Thus the divine teaching is completed, and the true religion shines across the centuries" (Dermenghem, 138). Another Muslim author tries to harmonize the three great world religions in this way: "Judaism lays stress on Justice and Right; Christianity, on Love and Charity; Islam, on Brotherhood and Peace"

(Waddy, 116). However, the most typical Islamic approach to this subject is characterized by comments of the Muslim apologist, Ajijola:

> The first five books of the Old Testament do not constitute the original Torah, but parts of the Torah have been mingled up with other narratives written by human beings and the original guidance of the Lord is lost in that quagmire. Similarly, the four Gospels of Christ are not the original Gospels as they came from Prophet Jesus . . . the original and the fictitious, the Divine and the human are so intermingled that the grain cannot be separated from the chaff. The fact is that the original Word of God is preserved neither with the Jews nor with the Christians. The Qur'an, on the other hand, is fully preserved and not a jot or tittle has been changed or left out in it. [Ajijola, 79]

These charges bring us once again to the Islamic doctrine of tahrif, or corruption of the Judeo-Christian Scriptures. Based on some of the above qur'anic verses and, more important, exposure to the actual contents of other scriptures, Muslim theologians have generally formulated two responses. According to Nazir-Ali "the early Muslim commentators (e.g., Al-Tabari and Ar-Razi) believed that the alteration is tahrif bi'al ma'ni, a corruption of the meaning of the text without tampering with the text itself. Gradually, the dominant view changed to tahrif bi'al-lafz, corruption of the text itself" (Nazir-Ali, 46). The Spanish theologians Ibn-Hazm, and Al-Biruni, along with most Muslims, hold this view.

Another qur'anic scholar claims that "the biblical Torah was apparently not identical with the pure *tawrat* [law] given as a revelation to Moses, but there was considerable variation in opinion on the question to what extent the former scriptures were corrupted." On the one hand, "Ibn-Hazm, who was the first thinker to consider the problem of *tabdil* [change] systematically, contended . . . that the text itself had been changed or forged (*taghyr*), and he drew attention to immoral stories which had found a place within the corpus." On the other hand, "Ibn-Khaldun held that the text itself had not been forged but that Jews and Christians had misinterpreted their scripture, especially those texts which predicted or announced the mission of Muhammad and the coming of Islam" (Waardenburg, 257).

Whether a Muslim scholar shows more or less respect for the Bible, and whether or how he will quote from it depends on his particular interpretation of *tabdil* . Ibn-Hazm, for instance, rejects nearly the whole Old Testament as a forgery, but cheerfully quotes the *tawrat* 's bad reports of the faith and behavior of the *Banu Isra'il* as proofs against the Jews and their religion.

Against the New Testament. Noted Muslim commentator Yusuf Ali contends that "the *Injil* spoken of by the *Qur'an* is not the New Testament. It is not the four Gospels now received as canonical. It is the single Gospel which, Islam teaches, was revealed to Jesus, and which he taught. Fragments of it survive in the received canonical Gospels and in some others of which traces survive" (Ali, 287). Direct allegations against New Testament and Christian teaching are made. These include the charges that there have been a change and forgery of textual divine revelation, and that there have been doctrinal mistakes, such as the belief in the incarnation of Christ, the Trinity, the godhead, and the doctrine of original sin (Waardenburg, 261–63).

Debated among Muslim theologians is the question of the eternal destiny of the people of the Book. Although the average Muslim might consider anyone who has been a "good person" worthy of salvation, accounting for all the qur'anic evidences on this subject has created much uncertainty.

Among classical Muslim theologians, Jews and Christians were generally regarded as unbelievers (*kafar*) because of their rejection of Muhammad as a true prophet of God. For example, in the qur'anic commentary of Tabari, one of the most respected Muslim commentators of all time, we notice that, even though the author distinguishes between the people of the book and the polytheists (*mushrikun*) and expresses a higher opinion of the former, he clearly declares that the majority of Jews and Christians are in unbelief and transgression because of their refusal to acknowledge Muhammad's truthfulness (Antes, 104–5).

Added to this is the charge against Christian belief in the divinity of Christ as the Son of God (*see* CHRIST, DEITY OF), a belief that amounts to committing the unpardonable sin of *shirk* , and is emphatically condemned throughout the *Qur'an* . The condemnation of Christians is captured in 5:75: "They do blaspheme who say: 'God is Christ the son of Mary.' . . . Whoever joins other gods with God, God will forbid him the Garden, and the Fire will be his abode."

On the other hand the contemporary Muslim theologian, Falzur Rahman, goes against what he admits is "the vast majority of Muslim commentators." He champions the opinion that salvation is not acquired by formally joining the Muslim faith, but as the *Qur'an* points out, by believing in God and the last day and doing good deeds (Rahman, 166–67). The debate continues and each individual Muslim can take a different side of this issue based on his own understanding.

A Response to Islamic Charges. One evidence that these Islamic views are critically flawed is the internal inconsistency within the Muslim view of Scripture itself. Another is that it is contrary to the facts.

Tension within the Islamic View of the Bible. There is serious tension in the Islamic rejection of the authenticity of the current New Testament. This tension can be focused by the following teachings from the *Qur'an* :

The original New Testament ("Gospel") is a revelation of God (sura 5:46, 67, 69, 71).

Jesus was a prophet and his words should be believed by Muslims (sura 4:171; 5:78). As the Muslim scholar Mufassir notes, "Muslims believe all prophets to be truthful because they are commissioned in the service of humanity by Almighty God (Allah)" (Mufassir, i).

Christians were obligated to accept the New Testament of Muhammad's day (A.D . seventh century; sura 10:94).

In sura 10, Muhammad is told: "If thou wert in doubt as to what We have revealed unto thee, then ask those who have been reading the Book [the Bible] from before thee; the truth hath indeed come to thee from thy Lord; so be in no wise of those in doubt." Abdul-Haqq notes that "the learned doctors of Islam are sadly embarrassed by this verse, referring the prophet as it does

to the people of the Book who would solve his doubts" (Abdul-Haqq, 23). One of the strangest interpretations is that the sura is actually addressed to those who question his claim. Others claim that "it was Muhammad himself who is addressed, but, however much they change and turn the compass, it ever points to the same celestial pole—the purity and preservation of the Scriptures." However, Abdul-Haqq adds, "If again, we take the party addressed to be those who doubted the truth of Islam, this throws open the whole foundation of the prophet's mission; regarding which they are referred to the Jews [or Christians] for an answer to their doubts; which would only strengthen the argument for the authority of the Scripture—a result the Muslim critics would hardly be prepared for" (ibid., 100).

Christians respond that Muhammad would not have asked them to accept a corrupted version of the New Testament. Also, the New Testament of Muhammad's day is substantially identical to the New Testament today, since today's New Testament is based on manuscripts that go back several centuries before Muhammad (*see* NEW TESTAMENT MANUSCRIPTS). Hence, by the logic of this verse, Muslims should accept the authenticity of today's Bible. But if they do, then they should accept the doctrines of the deity of Christ (*see* CHRIST, DEITY OF) and the Trinity , since that is what the New Testament teaches. However, Muslims categorically reject these teachings, creating a dilemma within the Islamic view.

Another inconsistency within the qur'anic view of the Bible is that Muslims claim the Bible to be "the Word of God" (2:75). Muslims also insist that God's words cannot be altered or changed. But, as Pfander points out, "if both these statements are correct . . . then it follows that the Bible has not been changed and corrupted either before or since Muhammad's time" (Pfander, 101). However, Islamic teaching insists that the Bible has been corrupted, thus the contradiction.

As Islamic scholar Richard Bell pointed out, it is unreasonable to suppose that Jews and Christians would conspire to change the Old Testament. For "their [the Jews'] feeling towards the Christians had always been hostile" (Bell, 164–65). Why would two hostile parties (Jews and Christians), who shared a common Old Testament, conspire to change it to support the views of a common enemy, the Muslims? It does not make any sense. What is more, at the supposed time of the textual changes, Jews and Christians were spread all over the world, making the supposed collaboration to corrupt the text impossible. And the number of copies of the Old Testament in circulation were too numerous for the changes to be uniform. Also, there is no mention of any such changes by former Jews or Christians of the time who became Muslims, something that they surely would have done if it were true (see McDowell, 52–53).

Contrary to the Factual Evidence. Furthermore, Muslim's rejection of the New Testament is contrary to the overwhelming manuscript evidence. All the Gospels are preserved in the Chester Beatty Papyri, copied in about 250. And the entire New Testament exists in Vaticanus Ms. (B) which dates from about 325–50. There are more than 5300 other manuscripts of the New Testament (*see* NEW TESTAMENT MANUSCRIPTS), dating from the second century to the fifteenth century (hundreds of which are from before Muhammad) which confirm that we have substantially the same text of the whole New Testament as existed in Muhammad's day. These manuscripts also confirm that the text is the same basic New Testament text as was written in the first century. These manuscripts provide an unbroken chain of testimony. For example, the

earliest fragment of the New Testament, the John Ryland Fragment, is dated about 117–38. It preserves verses from John 18 just as they are found in today's New Testament. Likewise, the Bodmer Papyri from ca. 200 preserves whole books of Peter and Jude as we have them today. Most of the New Testament, including the Gospels, is in the Beatty Papyri, and the entire New Testament is in Vaticanus from about 325. There is absolutely no evidence that the New Testament message was destroyed or distorted, as Muslims claim it was (see Geisler and Nix, chap. 22).

Finally, Muslims use liberal critics of the New Testament to show that the New Testament was corrupted, misplaced, and outdated. However, the late liberal New Testament scholar John A. T. Robinson concluded that the Gospel record was written well within the lives of the apostles, between A.D . 40 and 60 (*see* NEW TESTAMENT, HISTORICITY OF ; BIBLE CRITICISM). Former Bultmannian New Testament critic Eta Linnemann has more recently concluded that the position that the New Testament as preserved in the manuscripts does not accurately preserve the words and deeds of Jesus, is no longer defensible. She writes: "As time passes, I become more and more convinced that to a considerable degree New Testament criticism as practiced by those committed to historical-critical theology does not deserve to be called science" (Linnemann, 9). She adds, "The Gospels are not works of literature that creatively reshape already finished material after the manner in which Goethe reshaped the popular book about Dr. Faust" (ibid., 104). Rather, "Every Gospel presents a complete, unique testimony. It owes its existence to direct or indirect eyewitnesses" (ibid., 194).

Further, the use of these liberal critics by Muslim apologists undermines their own view of the *Qur'an* . Muslim writers are fond of quoting the conclusions of liberal critics of the Bible without serious consideration as to their presuppositions. The antisupernaturalism that led liberal critics of the Bible to deny that Moses wrote the Pentateuch, noting the different words for God used in different passages, would likewise argue that the *Qur'an* did not come from Muhammad. For the *Qur'an* also uses different names for God in different places. *Allah* is used for God in suras 4, 9, 24, 33, but *Rab* is used in suras 18, 23 and 25 (Harrison, 517). Muslims seem blissfully unaware that the views of these critics are based on an antisupernatural bias that, if applied to the *Qur'an* and the *hadith* , would destroy basic Muslim beliefs as well. In short, Muslims cannot consistently appeal to criticism of the New Testament based on the belief that miracles do not occur, unless they wish to undermine their own faith.

Conclusion. If Christians in Muhammad's day were obligated to accept the New Testament, and if abundant manuscript evidence confirms that the New Testament of today is essentially the same, then, according to the teachings of the *Qur'an* itself, Christians are obligated to accept the teachings of the New Testament. But the New Testament today affirms that Jesus is the Son of God, who died on the cross for our sins and rose again three days later. But this is contrary to the *Qur'an* . Thus, Muslim rejection of the authenticity of the New Testament is inconsistent with their own belief in the inspiration of the *Qur'an* .

Bible, Jesus' View of. Jesus' view of the Bible is a crucial link in the chain of argument that the Bible is the Word of God (*see* BIBLE, EVIDENCE FOR). The progression (*see* APOLOGETICS, ARGUMENT OF) runs:

1. Truth about reality is knowable (*see* TRUTH, NATURE OF ; AGNOSTICISM).

2. Opposites cannot both be true (*see* FIRST PRINCIPLES ; LOGIC).

3. The theistic God exists (*see* GOD, EVIDENCE FOR).

4. Miracles are possible (*see* MIRACLES, ARGUMENTS AGAINST).

5. Miracles confirm truth claims of a prophet of God (*see* MIRACLES, APOLOGETIC VALUE OF).

6. New Testament documents are historically reliable (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF and NEW TESTAMENT, HISTORICITY OF).

7. As witnessed by the New Testament, Jesus claimed to be God (*see* CHRIST, DEITY OF).

8. Jesus' claim to be God was confirmed by miracles (*see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE ; RESURRECTION, EVIDENCE FOR).

9. Therefore, Jesus is God.

10. Whatever Jesus (who is God) affirmed is true, is true (*see* GOD, NATURE OF).

11. Jesus, who is God, affirmed the Bible is the Word of God.

12. Therefore, it is true that the Bible is the Word of God and whatever is opposed to any biblical teaching is false (*see* WORLD RELIGIONS AND CHRISTIANITY ; PLURALISM, RELIGIOUS).

What Jesus Affirmed about the Bible. Step 9 is crucial to the overall argument. If Jesus is the Son of God, then what he affirmed about the Bible is true. And Jesus affirmed that the Bible is the infallible, indestructible, inerrant Word of God (*see* BIBLE, ALLEGED ERRORS IN).

What Jesus Affirmed about the Old Testament. The New Testament was not written until after Jesus ascended into heaven. Hence, his statements about the Bible refer to the Old Testament. But what Jesus confirmed for the Old Testament, he also promised for the New Testament.

Jesus affirmed the divine authority of the Old Testament. Jesus and his disciples used the phrase "it is written" more than ninety times. It is usually in the perfect tense, meaning, "it was written in the past and it still stands as the written Word of God." Often Jesus used in the sense of "this is the last word on the topic. The discus sion is over." Such is the case when Jesus resisted the temptation of the Devil.

> But he answered and said, *It is written* , Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God. . . . Jesus said unto him, *It is written* again, Thou shalt not tempt the Lord thy God. Jesus said to him, It is again written, Thou shalt not tempt [the] Lord thy God. . . . Then saith Jesus unto him, Get thee hence, Satan: for *it is written* , Thou shalt worship the Lord thy God, and him only shalt thou serve. [Matt. 4:4 , 7 , 10 , emphasis added]

This use demonstrates that Jesus believed the Bible to have final and divine authority.

Jesus affirmed the Old Testament to be imperishable. "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, to fulfill. Think not that I am come to make void the law or the prophets. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled" (Matt. 5:17–18). Jesus believed the Old Testament to be the imperishable Word of the eternal God.

Jesus affirmed the Old Testament to be inspired. Although Jesus never used the word *inspiration* , he did use its equivalent. To the Pharisees' question, he retorted: "How is it then that David, *speaking by the Spirit* , calls him 'Lord'?" (Matt. 22:43 , emphasis added). Indeed, David himself said of his own words, "The Spirit of the LORD spoke through me; his word was on my tongue" (2 Sam. 23:2). This is precisely what is meant by inspiration.

Jesus affirmed that the Bible is unbreakable. The word *infallible* is not used in the New Testament, but a close cousin is— *unbreakable* . Jesus said, "If he called them gods, unto whom the word of God came, and *the scripture cannot be broken* " (John 10:35). Indeed, three powerful words describe the Old Testament in this short passage: "law" (vs. 34), "word of God," and "unbreakable." Thus, Jesus believed that the Old Testament was the unbreakable law of God.

Jesus affirmed the Old Testament is the Word of God. Jesus regarded the Bible as the "Word of God." He insisted elsewhere that it contained the "commandment of God" (Matt 15:3 , 6). The same truth is implied in his reference to its indestructibility in Matthew 5:17–18 . Elsewhere, Jesus' disciples call it "the oracles of God" (Rom. 3:2 ; Heb. 5:12).

Jesus ascribed ultimate supremacy to the Old Testament. Jesus often asserted the ultimate authority and supremacy of the Old Testament over all human teaching or "tradition." He said to the Jews: "Why do you break the command of God for the sake of your tradition? . . . Thus you nullify the word of God for the sake of your tradition" (Matt. 15:3 , 6). Jesus believed that the Bible alone has supreme authority when even the most revered of all human teachings conflict with it. Scripture alone is God's supreme written authority.

Jesus affirmed the inerrancy of the Old Testament. Inerrancy means without error. That concept is found in Jesus' answer to the Sadducees, a sect who denied the divine inspiration of the Old Testament, "Ye do err, not knowing the scriptures [which do not err], nor the power of God" (Matt. 22:29 KJV). In his high priestly prayer, Jesus affirmed the total truthfulness of Scripture, saying to the Father, "Sanctify them through thy truth: *thy word is truth"* (John 17:17 KJV).

Jesus affirmed the historical reliability of the Old Testament. Jesus affirmed as historically true some of the most disputed passages of the Old Testament, including the creation of Adam and Eve (Matt. 19:4–5), the miracle about Jonah in the great fish, and destruction of the world by a flood in the days of Noah. Of the latter, Jesus declared: "As it was in the days of Noah, so it will be at the coming of the Son of Man. For in the days before the flood, people were eating and drinking, marrying and giving in marriage, up to the day Noah entered the ark" (Matt. 24:37–38). Jesus affirmed that Jonah was really swallowed by a great fish for three days and three nights: "For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will

be three days and three nights in the heart of the earth" (Matt. 12:40). Jesus also spoke of the slaying of Abel (1 John 3:12), Abraham, Isaac, and Jacob (Matt. 8:11), the miracles of Elijah (James 5:17), and many other Old Testament persons and events as historically true, including Moses, Isaiah, David, and Solomon (Matt. 12:42), and Daniel the prophet (Matt. 24:15). He affirmed the historical reliability of major disputed passages of the Old Testament. Both the manner in which these events are cited, the authority they are given, and the basis they form for major teachings Jesus gave about his life, death, and resurrection reveals that he understood these events as historical.

Jesus affirmed the scientific accuracy of the Old Testament. The most scientifically disputed chapters of the Bible are the first eleven (*see* SCIENCE AND BIBLE). Yet Jesus affirmed the account throughout this section of Genesis. He unflinchingly bases his moral teaching about marriage on the literal truth of the creation of Adam and Eve. He said to the Pharisees, "Haven't you read," he replied, "that at the beginning the Creator 'made them male and female,' and said, 'For this reason a man will leave his father and mother and be united to his wife, and the two will become one flesh'?" (Matt. 19:4–5). After speaking to Nicodemus, the ruler of the Jews, about physical earthly things like birth and wind, Jesus declared: "I have spoken to you of earthly things and you do not believe; how then will you believe if I speak of heavenly things?" (John 3:12). In short, Jesus said that, unless one could believe him when he spoke of empirical scientific matters, then they should not believe him when he speaks of heavenly matters—revealing that he considered them inseparable.

What Jesus promised about the New Testament. Jesus not only affirmed the divine authority and infallibility of the Old Testament, he also promised the same for the New Testament. And his apostles and New Testament prophets claimed for their writings what Jesus had promised them (*see* BIBLE, EVIDENCE FOR).

Jesus said the Holy Spirit would teach "all truth." Jesus promised that "the Comforter, [which is] the Holy Ghost, whom the Father will send in my name, he shall teach you *all things* , and bring *all things* to your remembrance, *whatsoever I have* said unto you." He added, "Howbeit when he, the Spirit of truth, is come, he will guide you into *all truth:* for he shall not speak of himself; but whatsoever he shall hear, [that] shall he speak" (John 14:26 ; 16:13 , emphasis added). This promise was fulfilled when they spoke and later recorded (in the New Testament) everything Jesus had taught them.

The apostles claimed this divine authority Jesus gave them. Not only did Jesus promise his disciples divine authority in what they wrote, but the apostles claimed this authority for their writings. John said, "these are written, that ye might believe that Jesus is the Christ, the Son of God; and that believing ye might have life through his name" (John 20:31). He added, "That which was from the beginning, which we have heard, which we have seen with our eyes, which we have looked upon, and our hands have handled, of the Word of life" (1 John 1:1). Again, he said, "Beloved, believe not every spirit, but try the spirits whether they are of God: because many false prophets are gone out into the world. . . . They are of the world: therefore speak they of the world, and the world heareth them. We are of God: he that knoweth God heareth us; he that is not of God heareth not us. Hereby know we the spirit of truth, and the spirit of error" (1 John 4:1 , 5–6).

Likewise, the apostle Peter acknowledged all Paul's writing as "Scripture" (2 Peter 3:15–16 ; cf. 2 Tim. 3:15–16), saying, "And account [that] the longsuffering of our Lord [is] salvation; even as our beloved brother Paul also according to the wisdom given unto him hath written unto you. As also in all [his] epistles, speaking in them of these things; in which are some things hard to be understood, which they that are unlearned and unstable wrest, as [they do] also the other scriptures, unto their own destruction."

The New Testament is the record of apostolic teaching. But the New Testament is the only authentic record of apostolic teachings which we have. Each book was written by an apostle or New Testament prophet (Eph. 2:20 ; 3:3–5).

Therefore, the New Testament is the "all truth" Jesus promised. From the fact that Jesus promised to lead his disciples into "all truth" and they both claimed this promise and recorded this truth in the New Testament, we may conclude that Jesus' promise was finally fulfilled in the inspired New Testament. In this way, Jesus directly confirmed the inspiration and divine authority of the Old Testament and promised the same, indirectly, for the New Testament. Therefore, if Christ is the Son of God, then both the Old Testament and the New Testament are the Word of God.

Jesus and the Critics. Jesus confessed the very things many modern critics deny about the Old Testament (*see* BIBLE CRITICISM). If Jesus was right, then the critics are wrong, despite the pretense of having scholarship on their side. For if Jesus is the Son of God, then it is a matter of Lordship, not a matter of scholarship.

Negative critics of the Bible claim that Daniel was not a predictive prophet, but only a historian recording the events after they happened (ca. 165 B.C .). Jesus, however, agreed with the conservative view, declaring Daniel to be a prophet (*see* DANIEL, DATING OF). Indeed, Jesus cited a prediction that Daniel made that had not yet occurred in Jesus' day. In his Mount Olivet Discourse he said, "So when you see standing in the holy place 'the abomination that causes desolation,' spoken of through *the prophet Daniel* . . ." (Matt. 24:15 , emphasis added). "See, I have told you ahead of time" (Matt. 24:25).

Many critics assert that the first human beings evolved by natural processes. But, as already noted, Jesus insisted that Adam and Eve were created by God (Matt. 19:4–5 ; *see* ADAM, HISTORICITY OF). If Jesus is the Son of God, then the choice is between Charles Darwin and the divine; between a nineteenth-century creature and the eternal Creator.

Most negative critics of the Bible believe that the Jonah story is mythology (*see* MYTHOLOGY AND THE NEW TESTAMENT). Indeed, with strong emphasis Jesus asserted that "just as" Jonah was in the great fish three days and nights, "even so" he would be in the grave for three days and nights. Surely, Jesus would not have based the historicity of his death and resurrection on mythology about Jonah.

Bible critics often deny there was a world-wide flood in the days of Noah (*see* SCIENCE AND THE BIBLE). But, as was seen above, Jesus affirmed there was a flood in the days of Noah in which all but Noah's family perished (Matt. 24:38–39 ; cf. 1 Peter 3:20 ; 2 Peter 3:5–6).

It is common for biblical critics to teach that there were at least two Isaiahs, one of whom lived after the events described in the latter chapters (40–66) and the other of which lived earlier and wrote chapters 1 to 39 . But Jesus quoted from both sections of the book as the writing of "the prophet Isaiah" (*see* ISAIAH, DEUTERO). In Luke 4:17 Jesus cited the last part of Isaiah (61:1), reading: "The Spirit of the Lord is on me, because he has anointed me to preach good news to the poor" (Luke 4:17–18). In Mark 7:6 Jesus cited from the first section of Isaiah (29:13), saying, "Isaiah was right when he prophesied about you hypocrites; as it is written: 'These people honor me with their lips, but their hearts are far from me' " (Mark 7:6). Jesus' disciple John made it unmistakably clear that there was only one Isaiah by citing from both sections of Isaiah (chapters 53 and 6) in the same passage, claiming of the second that the same "Isaiah said again" (John 12:37–41).

The negative critic of the Bible does well to ask: Who knew more about the Bible, Christ or the critics? The dilemma is this: If Jesus is the Son of God, then the Bible is the Word of God. Conversely, if the Bible is not the Word of God, then Jesus is not the Son of God (since he taught false doctrine).

In spite of the forthright proclamations of Christ about the Scriptures many critics believe that he was not really affirming but only accommodating himself to the false beliefs of the Jews of his day about the Old Testament. But this hypothesis is clearly contrary to the facts (*see* ACCOMMODATION THEORY). Others believe that since Jesus was only a human being that he made mistakes, some of which were about the origin and nature of Scripture. But this speculation too is not rooted in the facts of the matter (see ibid.). Jesus neither accommodated false beliefs (cf. Matt. 5:21–22 , 27–28 ; 22:29 ; 23:1f .) nor was he limited in his authority to teach the truth of God (cf. Matt. 28:18–20 ; 7:29 ; John 12:48).

Big Bang Theory. Big bang cosmology is a widely accepted theory regarding the origin of the universe (*see* EVOLUTION, COSMIC), according to which the material universe or cosmos exploded into being some 15 billion years ago. Since then the universe has been expanding and developing according to conditions set at the moment of its origin. Had these conditions been different in the slightest degree, the world and life as we know it, including human life, would never have developed. The fact that conditions necessary for and favorable to the emergence of human life were determined from the very instant of the original cosmic explosion is called the *anthropic principle* .

Evidence for the Big Bang. British astronomer Stephen Hawking stated the issue well: "So long as the universe had a beginning, we could suppose it had a creator. But if the universe is really completely self-contained, having no boundary or edge, it would have neither beginning nor end: it would simply be" (*Brief History of Time*). Robert Jastrow was one of the first to address this issue in his book, *God and the Astronomers* . This agnostic astronomer noted that "three lines of evidence—the motions of the galaxies, the laws of thermodynamics, and the life story of the stars—pointed to one conclusion: all indicated that the Universe had a beginning" (111).

The Second Law of Thermodynamics. The second law of thermodynamics is the law of entropy. It asserts that the amount of *usable* energy in any closed system is decreasing. This must be held in tension with the first law of thermodynamics (*see* THERMODYNAMICS, LAWS OF), the law of the conservation of energy, which states that the amount of *actual* energy existing within the universe changes form, yet remains constant. As energy changes to less usable forms of energy, the closed system of the universe is running down; everything tends toward disorder. Jastrow noted that "Once hydrogen has been burned within that star and converted to heavier elements, it can never be restored to its original state." Thus, "minute by minute and year by year, as hydrogen is used up in stars, the supply of this element in the universe grows smaller" ("Scientist Caught,"15–16).

Now if the overall amount of energy stays the same, but the universe is running out of usable energy, then the universe began with a finite supply of energy. This would mean that the universe could not have existed forever in the past. If the universe is getting more and more disordered, it cannot be eternal. Otherwise, it would be totally disordered by now, which it is not. So it must have had a highly ordered beginning.

The Expansion of the Galaxies. The second line of evidence is the expansion of the galaxies. Evidence reveals that the universe is not simply in a holding pattern, maintaining its movement from everlasting to everlasting. It is expanding. It now appears that all of the galaxies are moving outward as if from a central point of origin, and that all things were expanding faster in the past than they are now. As we look out into space, we are also looking back in time, for we are seeing things, not as they are now, but as they were when the light was given off many years ago. The light from a star 7 million light years away tells us what that star was like and its location 7 million years ago. The most complete study made thus far has been carried out on the 200-inch telescope by Allan Sandage. "He compiled information on 42 galaxies, ranging out in space as far as 6 billion light years from us. His measurements indicate that the Universe was expanding more rapidly in the past than it is today. This result lends further support to the belief that the Universe exploded into being" (Jastrow, *God and the Astronomers* , 95).

Another astronomer, Victor J. Stenger, used a similar phrase when he stated that "the universe exploded out of nothingness" (Stenger, 13). This explosion, called the *big bang* , was a beginning point from which the entire universe has come. Putting an expanding universe in reverse leads us back to the point where the universe gets smaller and smaller until it vanishes into nothing. By this reckoning the universe, at some point in the distant past, came into being.

The Background Radiation Echo. A third line of evidence that the universe began is the background microwave radiation "echo" that seems to come from the whole universe. It was first thought to be a malfunction or static of the instruments, or even the effect of pigeon droppings. But research has discovered that the static was coming from everywhere—the universe itself has a low-level radiation signature emanating from some past catastrophe like a giant fireball. Jastrow concludes, "No explanation other than the big bang has been found for the fireball radiation. The clincher, which has convinced almost the last doubting Thomas, is that the radiation discovered by Penzias and Wilson has exactly the pattern of wavelengths expected for the light and heat produced in a great explosion. Supporters of the Steady State theory have tried desperately to find an alternative explanation, but they have failed" (Jastrow, "A Scientist Caught," 15). Again, this evidence leads to the conclusion that there was a beginning of the universe.

The Discovery of a Large Mass of Matter. Since Jastrow wrote of three lines of evidence for the beginning of the universe a fourth has been discovered. According to the predictions of the big bang theory, there should have been a great mass of matter associated with the original explosion of the universe into being, but none was found. Then, by use of the Hubble Space Telescope (1992), astronomers were able to report that "by peering back into the beginning of time, a satellite finds the largest and oldest structure ever observed—evidence of how the universe took shape 15 billion years ago." In fact, they found the very mass of matter predicted by big bang cosmology. One scientist exclaimed, "It's like looking at God" (Lemonick, 62).

Objections to the Big Bang. Of course, not all scientists who accept an expanding universe reason that the universe was brought into existence out of nothing by God. Some have sought earnestly to find other alternatives to the theistic implications.

Cosmic Rebound Theory. Some cosmologists argue for some kind of rebound theory whereby the universe collapses and rebounds forever. They propose that there is enough matter to cause a gravitational pull that will draw together the expanding universe. They see it as part of the pulsating nature of reality in a similar way to the Hindu view that the universe moves in eternal cycles.

However, big bang proponents note that there is no evidence to support this view. It is unlikely that there is enough matter in the universe to make the expanding universe collapse even once. Even if there were enough matter to cause a rebound, there is good reason to hold that it would not rebound forever. For according to the well established second law of thermodynamics, each succeeding rebound would have less explosive energy than the previous until eventually the universe would not rebound again. Like a bouncing ball, it would finally peter out, showing that it is not eternal. The rebound hypothesis is based on the fallacious premise that the universe is 100 percent efficient, which it is not. Usable energy is lost in every process.

Logically and mathematically the evidence for the big bang suggests that originally there was no space, no time, and no matter. Hence, even if the universe were somehow going through expansion and contraction from this point on, at the beginning it came into existence from nothing. This would still call for an initial Creator.

Plasma Cosmology. Hannes Alfven proposed a plasma cosmology, according to which the universe is composed of electrically conducting gases which indirectly produce a repelling effect of galaxy superclusters, causing the observed expansion. However, the expansion does not start from a single point; it has a sort of partial big bang and then contracts to about one-third the size of the present universe. Then some unknown principle kicks in and blows it apart again, thus maintaining an eternal equilibrium. This speculation lacks scientific support. Like other expansion-contraction views, it is contrary to the second law of thermodynamics. It speculates without evidence that the universe never wears out but continually recycles old forms of energy. Nothing is ever used up.

Plasma theorists admit that they do not know any force that could be responsible for the expansion. It is simply speculation built on the presupposition of an eternal universe. Neither can the plasma theory account for the helium and light isotopes in the universe which would not have been synthesized in these quantities in stars alone. These can be explained by the big bang. It provides no good explanation for the microwave background radiation that is readily explained by the big bang view. Heavier matter should be plentiful according to the plasma theory. None has been found.

Finally, the plasma theory provides no explanation for ultimate origins. Plasma popularizer Eric Lerner proposed a "starting place" for the cosmos when it was "filled with a more or less uniform hydrogen plasma, free of electrons and protons" (Heeren, 81). When asked what brought this plasma into being, he admits that "we have no real knowledge of what such processes were" (ibid., 81).

Hawking's Infinite Time. Another speculative alternative to the big bang is Stephen Hawking's hypothesis of infinite time, according to which the universe had no beginning. However, this revisiting of Albert Einstein's view is subject to the same criticisms that led Einstein himself to discard the view (*see* KALAM COSMOLOGICAL ARGUMENT). It is an ingenious theory destroyed by the same brutal gang of facts that demand that the universe had a beginning. Even Hawking distinguishes between his abstract mathematical time, which has no beginning, and real time in which we live and which has a beginning. And even Hawking admitted that if there was a beginning then it is reasonable to assume there was a Creator.

Hawking further admitted that, even if his proposal turned out to describe the real universe, no conclusion could be drawn about the existence of God. He wrote: "I do not believe the no-boundary proposal proves the nonexistence of God, but it may affect our ideas of the nature of God." In Hawking's words, it would simply show that "we do not need someone to light the blue torch paper of the universe" (Heeren, 83). This, however, does not mean that there would be nothing for God to do, for there is more to do in running a universe than simply igniting the initial big bang.

Scientists have no theory to show how a universe without boundaries could exist. How, for example, can the ideas of an expanding universe be combined with one or no boundaries? Alan Guth, father of the inflationary model, concluded that Hawking's proposal "suffers from the problem that it doesn't yet have a completely well-defined theory in which to embed it. That is, it

really is a notion of quantum gravity, and so far we do not have a complete theory of gravity in which to embed this idea" (Heeren, 83).

Even Einstein failed to find an explanation of his general relativity equation that would not require a beginning or a Beginner for the universe. He later wrote of his desire "to know how God created the universe" (ibid., 84). Indeed, even Hawking raises the question of who put "fire into the equations" and ignited the universe (*Black Holes,* 99).

Spontaneous Eruption: No Need for a Cause. Some atheists argue that there is no need for a cause of the beginning of the universe. They insist that there is nothing incoherent about something spontaneously erupting into existence from nothing. Several points are relevant in response to this objection.

First, this contention is contrary to the established principle of causality (*see* CAUSALITY, PRINCIPLE OF) which affirms that everything that comes to be had a cause. Indeed, even the skeptic David Hume confessed his belief in this time-honored principle, saying, "I never asserted so absurd a proposition as that anything might arise without a cause" (Hume, 1:187).

Second, it is contrary to the scientific enterprise which seeks a causal explanation of things. Francis Bacon, the father of modern science, affirmed that true knowledge is "knowledge by causes" (Bacon, 2.2.121).

Third, it is counterintuitive to believe that things just pop into existence out of nothing, willy-nilly. Reality does not work that way in our experience.

Fourth, the idea that nothing can cause something is logically incoherent, since "nothing" has no power to do anything—it does not even exist. As the Latin axiom put it: *Ex nihilo nihil fit:* From nothing, nothing comes.

Fifth, when one examines the "nothing" from which the universe allegedly came without a supernatural cause, it is discovered that it is not really nothing. Isaac Asimov speaks of it as a state of "existence" in which there is "energy" (Asimov, 148). This is a long way from absolutely nothing. Even in physical terms it is not really nothing. Ed Tryon who originated the idea (in a 1973 *Nature* article) recognized the problem of explaining creation from pure nothingness, since the quantum effects require something more than nothing—they require *space* , something physicists now carefully distinguish from "nothing" (see Heeren, 93). As Fred Hoyle noted, "The physical properties of the vacuum [or "nothing"] would still be needed, and this would be something" (Hoyle, 144). Moreover, general relativity reveals that space in our universe is not mere nothingness. As Einstein wrote: "There is no such thing as an empty space, that is, a space without field. Space-time does not claim existence on its own, but only as a structural quality of the field" (Heeren, 93). Cosmologist Paul Davies points out that when a physicist asks how matter arose from nothing "that means not only, how did matter arise out of nothing, but 'why did space and time exist in the first place, that matter may emerge from them?' " As space scientist John Mather notes, "we have no equations whatever for creating space and time. And the concept doesn't even make any sense, in English. . . . And I certainly don't know of any work that seriously would explain it when it can't even state the concept" (ibid., 93–94). George

Smoot, principal investigator with the COBE satellite, said, "It is possible to envision the creation of the universe from almost nothing—not nothing, but practically nothing" (ibid., 94). So, the "nothing" of which some scientists suggest that the universe could spring without a supernatural cause is not really nothing—it is something. It involves at least space and time. But before the big bang there was no space, no time, and no matter. Out of this "nothing," only a supernatural cause could bring something.

The First Law of Thermodynamics. Many astronomers who propose that the universe may be eternal, including Carl Sagan, use the first law of thermodynamics to support their view. Often this law of the conservation of energy is stated: "Energy can neither be created nor destroyed." If this were so, then it would follow that the universe (i.e., the sum total of all actual energy) is eternal.

But this misunderstands the law, which should be stated: "The actual amount of energy in the universe remains constant." This formulation is based on scientific observation about what does occur and is not a dogmatic philosophical assertion about what *can* or *cannot* happen. There is really no scientific evidence that the universe is eternal.

The second law confirms that the first law cannot be stated in terms that do not allow the creation of energy. For the second law demonstrates that no energy would exist if it did not come from outside a system. Therefore, there can be no such thing as a truly closed system.

To say energy *cannot* be created begs the question. That is what is to be proven. It is victory by stipulative definition—a classic example of the logical fallacy of *petitio principii* .

Eternal Eventless Universe. Some suggest that the big bang only signals the first eruption in a previously eternal universe. That is, the universe was eternally quiet before this first event. The big bang singularity only marks the transition from primal physical stuff. Hence, there is no need for a Creator to make something out of nothing.

Theists observe that no known natural laws could account for this violent eruption out of eternal quietude. Some argue that an eternally quiet universe is physically impossible, since it would have to exist at absolute zero, which is impossible. Matter at the beginning was anything but cold, being collapsed into a fireball with temperatures in excess of billions of degrees Kelvin. In a lump of matter frozen at absolute zero, no first event could occur.

Positing eternal primordial stuff does nothing to account the incredible order that follows the moment of the big bang. Only an intelligent Creator can account for this.

The Steady-State Theory. Hoyle proposed his steady-state theory to avoid the conclusion of a Creator. It affirms that hydrogen atoms are coming into existence to keep the universe from running down. This hypothesis has fatal flaws, not the least of which is that no scientific evidence even hints at such an event. No one has ever observed energy coming into existence anywhere.

The steady-state theory contradicts the principle of causality that there must be an adequate cause for every event. Only a Creator would be an adequate cause for the creation of new hydrogen atoms out of nothing. Denying the principle of causality is a high cost for the scientist to pay.

Although Hoyle has not given up his steady-state theory, he has concluded that the incredible complexity of even the simplest forms of life necessitate a Creator. Having calculated that the chances for first life emerging without intelligent intervention at 1 in 1040,000, Hoyle acknowledges a Creator of life (Hoyle, 24, 147, 150).

Reaction to the Evidence. The combined evidence for a big bang origin of the cosmos provides a strong case for a beginning to the universe. No viable scientific alternatives have been found. But, if the universe has a beginning, then, as Hawking admitted, the evidence would point to existence of a Creator. It follows logically that whatever had a beginning had a Beginner. In the face of this powerful evidence for the beginning of the universe, it is interesting to note how some brilliant scientists reacted to this news.

Astrophysicist Arthur Eddington summed up the attitude of many naturalistic scientists when he wrote: “Philosophically, the notion of a beginning of the present order of Nature is repugnant to me. . . . I should like to find a genuine loophole” (Heeren, 81).

At first Einstein refused to admit that his own general theory of relativity leads to the conclusion that the universe had a beginning. To avoid this conclusion, Einstein added a “fudge factor” in his equations, only to be embarrassed when it became known. To his credit, he eventually admitted his error and concluded that the universe was created. Thus, he wrote of his desire “to know how God created this world.” He said, “I am not interested in this or that phenomenon, in the spectrum of this of that element. I want to know his thought; the rest are details” (cited by Herbert, 177).

One has to ask just why rational beings react in irrational ways to the news the universe had a beginning. Jastrow offers an illuminating clue.

> There is a kind of religion in science. It is the religion of a person who believes there is order and harmony in the universe. . . . Every effect must have its cause: There is no first cause. . . . This religious faith of the scientists is violated by the discovery that the world had a beginning under conditions in which the known laws of physics are not valid, and as a product of forces or circumstances we cannot discover. When that happens, *the scientist has lost control* . [Jastrow, *God and the Astronomers* , 113–14, emphasis added]

Theistic Implications. After reviewing the evidence that the cosmos had a beginning, physicist Edmund Whittaker concluded: “It is simpler to postulate creation ex nihilo—divine will constituting nature from nothingness” (cited in Jastrow, “A Scientist Caught,” 111). Even Jastrow, a confirmed agnostic, said “That there are what I or anyone would call supernatural forces at work is now, I think, a scientifically proven fact” (*God and the Astronomers,* 15, 18). Jastrow adds some embarrassing words both for skeptical astronomers and liberal theologians: “Now we see how the astronomical evidence leads to a biblical view of the origin of the world.

The details differ, but the essential elements in the astronomical and biblical accounts of genesis are the same: the chain of events leading to man commence suddenly and sharply at a definite moment in time, in a flash of light and energy" ("A Scientist Caught," 14). He further observed that "Astronomers now find that they have painted themselves into a corner because they have proven, by their own methods, that the world began abruptly in an act of creation. . . . And they have found that all this happened as a product of forces they cannot hope to discover" (*God and the Astronomers,* 15). Thus, he notes that "the scientists' pursuit of the past ends in the moment of creation." And "This is an exceedingly strange development, unexpected by all but theologians. They have always accepted the word of the Bible: 'In the beginning God created the heaven and the earth' " ("A Scientist Caught," 115).

Jastrow ends his book with noteworthy words: "For the scientist who has lived by faith in the power of reason, the story ends like a bad dream. He has scaled the mountain of ignorance: He is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries" (*God and the Astronomers,* 116).

Other atheists offer similar clues that the problem with drawing a theistic conclusion from the evidence is not rational but spiritual. Julian Huxley said, "For my own part, the sense of spiritual relief which comes from rejecting the idea of God as a supernatural being is enormous" (Huxley, 32). But if one is purely objective in viewing the evidence, then why experience "spiritually relief" at the news that God does not exist?

Perhaps the famous atheist, Friedrich Nietzsche, said it most clearly: "If one were to prove this God of the Christians to us, we should be even less able to believe in him" (Nietzsche, 627). Obviously, Nietzche's problem was not rational but *moral* .

Conclusion. In view of the incredible order in the universe, it is difficult to draw any conclusion other than existence of a supernatural, superintelligent Being behind it all. As one scientist quipped, you can lead a skeptical astronomer to order but you cannot make him think. After writing what he believed were definitive critiques of any attempt to demonstrate God's existence, even the great philosophical agnostic, Immanuel Kant, wrote: "Two things fill the mind with ever new and increasing admiration and awe, the oftener and more steadily we reflect on them: the starry heavens above and the moral law within me" (Kant, 166). Modern astronomers are again faced with the evidence of God for a Creator of the cosmos. It is interesting that this is the very thing to which the apostle Paul points as the reason that all are "without excuse" (Rom. 1:19–20).

Bonaventure. ***See*** **COSMOLOGICAL ARGUMENT ; KALAM COSMOLOGICAL ARGUMENT .**

Bruce, F. F. Frederick Fyvie Bruce (1910–1990) was born in Elgin, Scotland and trained in the classics at Elgin Academy, the University of Aberdeen, and Cambridge University. Though he is best known for his work in biblical studies, he never took formal courses in either Bible or theology. He was awarded an honorary doctor of divinity degree from Aberdeen. He taught Greek at Edinburgh (1934–35) and Leeds (1938–47). From 1959 to 1978 he was John Rylands

Professor of Biblical Criticism and exegesis at Manchester University. Concurrently (1956–78) he was a contributing editor for *Christianity Today* Magazine.

Bruce wrote nearly fifty books and about two thousand articles, essays, and reviews. He is best known for *The New Testament Documents: Are They Reliable?* (*see* NEW TESTAMENT MANUSCRIPTS, RELIABILITY OF). His *Commentary on the Epistles to the Ephesians and Colossians* is a standard. His most explicitly apologetic work is *The Defense of the Gospel* (1959). *The Books and the Parchments* (1963) supports the authenticity and reliability of the Bible, as does *Jesus and Christian Origins Outside the New Testament* (1974). He was also known for his work on Qumran, *Second Thoughts on the Dead Sea Scrolls* (1956).

Views and Teaching. *Scripture and Apologetics.* Bruce's conclusions on the Bible did not make him a strong defender of Scripture, though he generally fell within a conservative viewpoint. He did not consider himself a conservative, nor did he believe in the "inerrancy" of the Bible, though he looked on Scripture as "truth" (Gasque, 24). "If any of my critical conclusions, for example, are conservative, they are so not because they are conservative, nor because I am conservative, but because I believe them to be the conclusions to which the evidence points" (Gasque, 24). Bruce's chief importance for apologetics was as a defender of the reliability of the biblical manuscripts.

Bruce was not a Christian apologist as such, but his works support historical apologetics (*see* APOLOGETICS, HISTORICAL). *In Defense of the Gospel* is an exposition of the apologetics practiced by the apostles in the New Testament against Judaism, paganism, and early gnosticism . Bruce insists that "Christian apologetics is a needed part of Christian witness" (*In Defense* , 10; *see also* APOLOGETICS, NEED FOR).

Resurrection. Bruce believed in the historicity of the resurrection accounts and in the bodily resurrection itself. He distinguished the Christian view of bodily resurrection from the Greek view of the immortality of the soul ("Paul on Immortality," 464–65). He critiques the gnostic view of a spiritual resurrection, insisting that for Paul, "This future resurrection could only be a bodily resurrection" (ibid., 466). However, his view that believers receive their spiritual resurrection body at death has helped undermine the historic evangelical view of a physical resurrection body (*see* RESURRECTION, PHYSICAL NATURE OF). Of 2 Corinthians 5:1–10 he said, "Here Paul seems to imply that for those who do not survive until the *parousia* [coming], the new body will be immediately available at death" (ibid., 470–71). This led many of his students, including Murray Harris, to affirm the unorthodox view that the believer's resurrection body will come from heaven, not the grave. Harris later retracted this view under criticism (see Geisler, *The Battle for the Resurrection* , chaps. 6, 11).

Buber, Martin. Jewish existentialist Martin Buber (1878–1965) was born in Vienna, Austria and studied philosophy and art at the universities of Vienna, Zurich, and Berlin. An active Zionist as a young man, he was instrumental in the revival of Hasidism, a form of Jewish mysticism . His famous “I-Thou” philosophy was developed in 1923, though William James had used the phrase in 1897. Buber taught at the University of Frankfurt from 1923 to 1933 and fled Germany in 1938. He taught at Hebrew University from 1938 to 1951. His form of existentialism was a significant influence on neoorthodox theologian Emil *Brunner.

Buber’s major works include *Good and Evil* (tr. 1953), *I And Thou* (1923; tr. 1957), *The Eclipse of God* (tr. 1952), *The Prophetic Faith* (1949; tr. 1960), and *Two Types of Faith* (that is, Jewish and Christian; 1951; Eng. 1961).

The Philosophy of Buber. *I-Thou vs. I-It.* An I-Thou relation is where others are treated as an end, rather than as a means. People should be loved and things used, not the reverse. People are the subject, not the object. But many things can hinder I-Thou relations—seeming rather than being; speechifying rather than real dialogue; imposing oneself on, rather than unfolding oneself to another.

Since Buber believed in God, and Jean-Paul Sartre did not, their existential views form an instructive contrast:

Jean-Paul Sartre	Martin Buber
Common Project	I-Thou
Others are hell.	Others are heaven.
Others are the means of objectifying myself.	Others help me discover my true subjectivity in interpersonal relations.
There is no ultimate meaning, since humanity cannot become God.	There is ultimate meaning, since there is an ultimate personal ground of personal relationships.

God. According to Buber, God is "wholly other," but also "wholly the same," nearer to me than I am to myself (*see* GOD, NATURE OF). God is so close he cannot be sought, since there is nowhere he is not to be found. In fact, God is not sought by the human being; the human meets God through grace as God moves to the person. All who hallow this life meet the living God as the unfathomable condition of being. To see everything in God is not to renounce the world but to establish it on its true basis. We can sense God's presence, but can never solve his mysteriousness. God is experienced in and through the world and others, but must be met alone. In union with God, we are not absorbed, but remain an individual "I." By this ontological difference, Buber avoids absolute pantheism.

Religious Language. Like Plotinus , Buber held that God is not the Good but the Supergood; he must be loved in his concealment. God does not name himself (in the "I Am That I Am"), but reveals himself. This is a disclosure, not a definition. The idea of God is a masterpiece of human construction, an image of the Imageless. Nonetheless, the word *God* should not be given up, simply because it is the most heavily laden of all human words, and thereby the most imperishable and indispensable of words. The word *religion* , however, is vexatious and has undergone the epidemic sickening of our time. It should be replaced by the phrase *all real human dealings with God* .

The Eclipse of God. Philosophy hinders the human relation to God. The person makes selfhood supreme and thus shuts off light from heaven. The passion peculiar to philosophers is pride in which their system replaces God. Further, objective "It" language is verbal idolatry that obscures God. God does not come under the law of contradiction; we speak of him only dialectically.

Evaluation. Among positive features to Buber's thought are its stress on the need for personal relationships and for a basis in God. Buber makes a valuable critique of the way philosophy has often eclipsed God and helpful suggestions about overcoming artificial relationships.

The view, however, is subject to many of the criticisms of other forms of religious existentialism (*see* BARTH, KARL ; KIERKEGAARD, SOREN). From an evangelical Christian perspective a few are particularly worthy of note.

Denial of Propositional Revelation. Buber's denial of propositional revelation (*see* REVELATION, SPECIAL) had a marked influence on Brunner and neoorthodoxy (*see* BIBLE, EVIDENCE FOR). He denies that God has revealed himself in any propositional statements. This is a strange thing to say about a theistic God. This god can act but not talk; he is not dead, but he is dumb. Therefore the creatures can do what the Creator cannot. The effect is greater than the Cause.

Equivocal God-Talk. Not only is God tongue-tied, but when he does reveal himself the language conveys to us nothing about God himself. It is equivocal, totally different from the way God is. The effect is not similar to the Cause. God gives what he does not have. There is no analogy between Creator and creatures (*see* ANALOGY, PRINCIPLE OF).

A Mystical Epistemology. Buber is subject to the same criticisms as other mystics. How does one know it is God who is being encountered in this mystical experience, rather than Satan. A totally subjective experience has no objective criteria by which it can be evaluated. The Christian mystical experience is indistinguishable from the Buddhist mystical experience (*see* BUDDHISM). There are no meaningful criteria by which to know truth.

Butler, Joseph. Joseph Butler (1692–1753) was an important eighteenth-century English apologist (*see* APOLOGETICS, NEED FOR). Though he came from a Presbyterian family, Butler was ordained in the Church of England in 1718, after attending Oxford University. He eventually became bishop of Durham.

Although Butler made a significant contribution to the discussion of morality in "Three Sermons on Human Nature," he is best known for *Analogy of Religion* (1736), in which he defends Christianity against Deism , particularly that of Anthony Ashley Cooper, Earl of Shaftesbury, and Matthew Tindal. Lord Shaftesbury wrote *Characteristics of Men, Manners, Opinions, Times* (1711) and Tindal, *Christianity as Old as the Creation* (1730).

Butler's Apologetic. Butler was influenced by his older contemporary, Samuel Clarke , a disciple of Sir Isaac Newton and defender of the Christian Faith. *Analogy of Religion* was a defense of the plausibility of Christianity in terms of the analogy between revealed and natural religion (*see* REVELATION, GENERAL).

The Use of Probability. In accord with the empirical basis of knowledge and the limitations of science, Butler argued, our knowledge of nature is only probable (*see* CERTAINTY/CERTITUDE ; INDUCTIVISM). Since this is the case, "one is always in the position of a potential learner, and so never can posit what one knows of nature as *the standard* to judge what is natural" (Rurak,

367). Probability, which is the guide to life, supports the belief in a supernatural revelation from God in the Bible (*see* BIBLE, EVIDENCE FOR) and the miracles of Christ.

Butler began *Analogy* by noting that “It is come, I knew not how, to be taken for granted by many persons, that Christianity is not much a subject of inquiry, but that it is, now at length, discovered to be fictitious.” His response is to the point that “any reasonable man who would thoroughly consider the matter, may be as much assured, as he is of his own being, that it is not however, so clear a case that there is nothing in it. There is, I think, strong evidence of its truth” (*Analogy in Religion,* 2).

Objection to Deism. Butler directed his attack against the deist Tindal who argued that “There’s a religion of nature and reason written in the hearts of everyone of us from the first creation by which mankind must judge the truth of any instituted religion whatever” (Tindal, 50).

To deists who reject Scripture as a supernatural revelation because of its difficulties, Butler responds: “He who believes the Scriptures to have proceeded from him who is the Author of nature, may well expect to find the same sort of difficulties in it, as are found in the constitution of nature” (*see* REVELATION, GENERAL). Hence, “he who denies Scripture to have been from God, upon account of these difficulties, may for the very same reason, deny the world to have been formed by him” (*Analogy in Religion,* 9–10). Since the deists admitted the latter they should not deny the former. As James Rurak notes, “both natural and revealed religion will be assessed by the same standard, the constitution and course of nature. Natural religion cannot be used as a standard to judge revelation” (Rurak, 367). There is an analogy between them.

Judging Christianity as a Whole. Another result of Butler’s analogous argument is that a system of religion must be judged as a whole, not simply from attacks leveled against specific parts, as the Deists were prone to do. When this standard was applied to Christianity, Butler believed that revealed that there is an “Intelligent Author and Governor of nature.” He extended this analogy to belief that:

> Mankind is appointed to live in a future state; that everyone shall be rewarded or punished; . . . that this world being in the state of apostasy and wickedness . . . gave an occasion for an additional dispensation of Providence; of the utmost importance; proved by miracles; . . . carried on by a divine person, the Messiah, in order to the recovery of the world; yet not revealed to all men, nor proved with the strongest possible evidence to all those to whom it is revealed; but only to such a part of mankind, and with such particular evidence as the wisdom of God thought fit. [*Analogy in Religion,* 16–17]

Natural and Supernatural Revelation. With the deists Butler agrees that God is the Author of nature and that Christianity contains a republication of this original revelation in creation. However, Christianity is more than a supernatural revelation. Butler explains: “the essence of natural religion may be said to consist in the religious regards to ‘God the Father Almighty’: and the essence of revealed religion, as distinguished from natural, to consist in religious regard to ‘the Son,’ and to ‘the Holy Ghost.’ ” And “How these revelations are made known, whether by reason or revelation, makes no alteration of the case; because the duties arise out of the relations

themselves, not out of the manner in which we are informed of them" (*Analogy in Religion,* 198).

The Defense of Miracles. Butler devoted a chapter to the subject "Of the supposed Presumption against a Revelation, considered as miraculous." In his own summary of the argument (in the margin) he insists that there is

> I. No presumption, from analogy, against the general Christian Scheme; for (1) although undiscoverable by reason or experience, we only know a small part of a vast whole; (2) even if it be unlike the known course of nature, (a) the unknown may not *everywhere* resemble the known; (b) we observe unlikeness sometimes in nature; (c) the alleged unlikeness is not complete. Thus no presumption lies against the general Christian scheme, whether we call it miraculous or not.
>
> II. No presumption against a primitive revelation, for (i) *miracle* is relative to a *course* of nature. (ii) Revelation may well have followed Creation, which is an admitted fact. (iii) The further miracle [is] no additional difficulty." For "(iv) Tradition declares that Religion was revealed at the first."
>
> III. No presumption from analogy against miracles in historic times, for (a) we have no parallel case of a second fallen world; (b) in particular, (i) there is a presumption against all alleged facts before testimony, not after testimony. (ii) Reasons for miraculous intervention may have arisen in 5000 years. (iii) Man's need of supernatural guidance is such a reason. (iv) Miracles [are] comparable to *extraordinary* events, against which some presumption always lies. Thus (a) Miracles [are] not incredible. In fact, (b) In some cases, [they are] *a priori* probable. (c) In no case is there a peculiar presumption against them. [*Analogy in Religion,* 155–61]
>
> Upon all this I conclude; that there certainly is no such presumption against miracles, as to render them in any way incredible; that on the contrary, our being able to discern reasons for them, gives a positive credibility to the history of them, in cases where those reasons hold; and that is by no means certain, that there is any peculiar presumption at all, from analogy, even in the lowest degree, against miracles, as distinguished from other extraordinary [natural] phenomena.

Therefore, by analogy with nature, miracles are both credible and even *a priori* probable (*see* MIRACLE).

Evaluation. *On the Positive Side.* Given his deist context, Butler made a significant defense of Christianity. Arguing from their premise of natural revelation, he showed that there was no probable presumption against Christianity. Further, by reducing the epistemological basis to probability he commendably avoided rational necessity for his conclusions. Regardless of how one evaluates his results, he should be commended for his rational attempt to defend Christianity against the attacks of its naturalistic critics.

On the Negative Side. From the standpoint of a classical apologists (*see* CLASSICAL, APOLOGETICS), Butler unnecessarily weakened the cosmological argument by arguing from analogy.

Some naturalists argue that Butler's argument for miracles is based on a false analogy: "The presumption against miracles is not merely a presumption against a specific event, but against that *kind* of event taking place." Further, the comparison with extraordinary events in nature is not valid. "For in the case of these forces, given the same physical antecedents, the same consequents will always follow; and the truth of this can be verified by experiment" (Bernard, 161–62).

While this critique appears valid for some of the illustrations that Butler provides (e.g., electricity and magnetism), it does not appear to work with all singularities in nature. In particular, it would not apply to the big bang theory held by many naturalistic scientists, since the antecedent conditions were nothing or nonbeing. From these, no prediction can be made nor verified by further experiment. Further, Butler appears to be correct in the negative side of his argument that there is no *a priori* probability against miracles. Indeed, he builds a strong case for *a priori* probability (*see* MIRACLES, ARGUMENTS AGAINST).

Calvin, John. John Calvin (1509–1564) was born in Noyon, Picardy, France, but became the Reformer of Geneva, Switzerland. A humanist scholar in Paris when he was drawn to Reformation principles, he based much of his theological thought on the writings of Augustine. In addition to his systemization of theology, *Institutes of the Christian Religion,* Reformer John Calvin was a pioneer Protestant exegete of the Bible. *Calvin's Commentaries on Holy Scripture* are still widely used commentaries. Through Geneva Academy, Calvin and his colleagues also pioneered in evangelism training, Protestant scholarship, and a full-orbed Christian living ethic.

Apologetics of John Calvin. The followers of John Calvin are not united in their interpretation of his apologetic approach. Their number includes classical apologists and presuppositionalists (*see* Classical Apologetics ; Presuppositional Apologetics).

The presuppositionalists, with roots in Herman Dooyeweerd are headed by Cornelius Van Til and such of his followers as Greg Bahnsen and John Frame. The classical apologists follow B. B. Warfield's understanding of Calvin and are represented by Kenneth Kantzer, John Gerstner, and R. C. Sproul (see Kantzer). Calvin would have identified with classical apologists.

Calvin's Roots in Classical Apologetics. Contrary to the presuppositional view, Calvin's view of the use of human reason in the proclamation of the Gospel did not differ significantly from great thinkers before him. As Augustine and Thomas Aquinas, Calvin believed that the general revelation of God is manifest in nature and ingrained in the hearts of all men (*see* Revelation, General).

The Innate Sense of Deity. "That there exists in the human mind, and indeed by natural instinct, some sense of Deity, we hold to be beyond dispute," Calvin said in *Institutes of the Christian Religion,* 1.3.1. He contended that "there is no nation so barbarous, no race so brutish, as not to be imbued with the conviction that there is a God" (ibid.). This "sense of Deity is so naturally engraven on the human heart, in the fact, that the very reprobate are forced to acknowledge it" (ibid., 1.4.4).

God's Existence and the Soul's Immortality. In Part One of *Institutes* , Calvin views "the invisible and incomprehensible essence of God, to a certain extent, made visible in his works" and "proofs of the soul's immortality " (ibid., 1.5.1–2). For "on each of his [God's] works his glory is engraven in characters so bright, so distinct, and so illustrious, that none, however dull

and illiterate, can plead ignorance as their excuse" (ibid.). Calvin did not formally elaborate these, as did Aquinas, but he would likely have accepted the teleological argument, the cosmological argument, and even the moral argument. The first two can be seen in his emphasis on design and causality and the last from his belief in a natural moral law. Commenting on Romans 1:20–21 , Calvin concludes that Paul "plainly testifies here, that God has presented to the minds of all the means of knowing him, having so manifested himself by his works, that they must necessarily see what of themselves they seek not to know—that there is some God" (Calvin, 2).

Natural Law . For Calvin this innate knowledge of God includes knowledge of his righteous law. He held that, since "the Gentiles have the righteousness of the law naturally engraved on their minds, we certainly cannot say that they are altogether blind as to the rule of life" (*Institutes,* 1.2.22). He calls this moral awareness "natural law" that is "sufficient for their righteous condemnation" but not for salvation (ibid.). By this natural law "the judgment of conscience" is able to distinguish between the just from the unjust (*New Testament Commentaries,* 48). God's righteous nature "is engraved in characters so bright, so distinct, and so illustrious, that none, however dull and illiterate, can plead ignorance as their excuse" (*Institutes,* 1.5.1).

Not only is natural law clear, but it is also specific. There "is imprinted on their hearts a discrimination and judgment, by which they distinguish between justice and injustice, honesty and dishonesty." According to Calvin, even peoples with no knowledge of God's Word "prove their knowledge . . . that adultery, theft, and murder are evils, and honesty is to be esteemed" (*New Testament Commentaries,* 48). God has left proof of himself for all people in both creation and conscience.

Since a natural moral law implies a Moral Law Giver, Calvin would have agreed with what later became known as the moral argument for God's existence. Indeed, his acceptance of natural law places him squarely in the tradition of the classical apologetics of Augustine, Anselm, and Aquinas.

The Evidence for Inspiration of Scripture. Calvin repeatedly spoke of "proofs" of the Bible's inspiration. These included the unity of Scripture, its majesty, its prophecies, and its miraculous confirmation. Calvin wrote: "We shall see . . . that the volume of sacred Scripture very far surpasses all other writings. Nay, if we look at it with clear eyes and unbiased judgment, it will forthwith present itself with a divine majesty which will subdue our presumptuous opposition, and force us to do it homage" (*Institutes,* 1.7.4). In the light of the evidence, even unbelievers "will be compelled to confess that the Scripture exhibits clear evidence of its being spoken by God and, consequently, of its containing his heavenly doctrine (ibid.).

The Vitiating Effects of Depravity. Calvin was quick to point out that depravity obscures this natural revelation of God. Calvin wrote: "Your idea of His [God's] nature is not clear unless you acknowledge Him to be the origin and foundation of all goodness. Hence, would arise both confidence in Him and a desire of cleaving to Him, did not the depravity of the human mind lead it away from the proper course of investigation" (ibid., 1.11.2).

The Role of the Holy Spirit. Calvin believed that complete certainty of God and the truth of Scripture comes only by the Holy Spirit. He wrote: “Our faith in doctrine is not established until we have a perfect conviction that God is its author. Hence, the highest proof of Scripture is uniformly taken from the character of him whose word it is. . . . Our conviction of the truth of Scripture must be derived from a higher source than human conjecture, judgments, or reasons; namely, the secret testimony of the Spirit” (ibid., 1.7.1; cf. 1.8.1) (*see* HOLY SPIRIT, ROLE IN APOLOGETICS).

But it is important to remember, as R. C. Sproul points out, that “the *testimonium* is not placed over reason as a form of mystical subjectivism. Rather, it goes beyond and transcends reason” (Sproul, 341). In Calvin’s own words, “But I answer that the testimony of the Spirit is superior to reason. For God alone can properly bear witness to his own words, so these words will not obtain full credit on the hearts of men, until they are sealed by the inward testimony of the Spirit” (ibid.)

God working through the objective evidence, provides subjective certainty that the Bible is the Word of God (*see* BIBLE, EVIDENCE FOR).

Conclusion. Although John Calvin was, by virtue of his place in history, preoccupied primarily with the disputes over authority, soteriology and ecclesiology, nevertheless, the outline of his approach to apologetics seems clear. He falls into the general category of classical apologetics. This is evident both from his belief that “proofs” for God are available to the unregenerate mind and from his stress on general revelation and natural law (*see* LAW, NATURE AND KINDS OF).

Camus, Albert. Albert Camus (1913–1960) was a French novelist and essayist whose primary contributions were made during and after World War II. *The Stranger* , his first novel, and *The Myth of Sisyphus* (both 1942) were followed after the war by *The Plague* (1947) and *The Rebel* (1951). His last major work, *The Fall* , appeared in 1956, and in 1957 he was awarded the Nobel Prize in literature. He died in an automobile accident.

Views of God and Life. Camus was part of a small movement of French atheists (*see* ATHEISM) associated with existentialism and particularly with Jean-Paul Sartre. He began as a nihilist (*see* NIHILISM), believing that in view of life’s absurdities, the only serious

philosophical question was suicide. He gradually moved to a more humanistic position (*see* HUMANISM, SECULAR).

In view of the denial of God, Camus, like other atheists, was left with no anchor for moral absolutes. Nonetheless, he espoused a moralistic humanism, speaking out strongly about what he regarded as moral evils, including war and capital punishment. Even his moral protest against theism belies basic moral values. The freedom of the individual was paramount; the value he placed on human life left him opposed to suicide.

Camus argued forcefully that theism is antihumanitarian, in view of the intolerable suffering inflicted on humankind (*see* EVIL, PROBLEM OF). In *The Plague* the dilemma he sets before theism is described through a story of a plague caused by rats. His reasoning can be stated:

One must either join the doctor and fight the plague or join the priest and not fight the plague.

Not to join the doctor and fight the plague is antihumanitarian.

To fight the plague is to fight against God, who sent it.

Therefore, if humanitarianism is right, theism is wrong.

Evaluation. *Positives in Camus's Thought.* From the beginning in *The Myth of Sisyphus* Camus incisively penetrated the absurdity of a life lived apart from God. In his earlier nihilistic moods he saw the futility of suicide. His humanitarian philosophy demonstrated a deeply moral concern about the plight of humanity. On his journey into existentialism , he came to see the failure of his earlier nihilism. He also moved toward an understanding of what Christians call human depravity. Throughout his life, Camus reflected a deep need for God.

Negative Dimensions. The argument from evil against theism wrongly assumes that God is the author of all evil in the world. No responsibility is assigned to human beings for their sinful actions in inflicting suffering on themselves (*see* FREE WILL). The Bible makes it clear that the rebellion of Adam and Eve and their descendants causes evil and death (Rom. 5:12). All of nature is infected by the fall (Romans 8).

Also, Camus assumes that it is inconsistent with Christian belief in the sovereignty of God for Christians to have compassion for those who suffer. Both in principle and in practice, Christianity has offered more respite to the sufferer at every level than has non-Christian philosophy. Even agnostic Bertrand Russell acknowledged that what the world needed was Christian love and compassion (Russell, 579). Only in Christianity has something been done through the death and resurrection of Christ to stop the plague of sin (Rom. 4:25 ; 1 Cor. 15:1–4).

Like many other atheists, Camus revealed a longing for God (*see* GOD, EVIDENCE FOR). He wrote, "for anyone who is alone, with God and without a master, the weight of days is dreadful" (*The Fall* , 33). He added elsewhere, "Nothing can discourage the appetite for divinity in the heart of man" (*The Rebel* , 147).

The novelist's sense of moral right and wrong should have led him to posit a Moral Law Giver whose presence alone accounts for the eradicable moral conviction that some injustices are absolutely wrong (*see* MORAL ARGUMENT FOR GOD). As the former Oxford atheist, C. S. Lewis, asked himself, "Just how had I got this idea of just and unjust? A man does not call a line crooked unless he has some idea of a straight line." He adds, "What was I comparing this universe with when I called it unjust. . . . Of course I could have given up my idea of justice by saying it was nothing but a private idea of my own," he concludes. "But if I did that, then my argument against God collapsed too—for the argument depended on saying that the world was really unjust, not simply that it did not happen to please my private fancies." Thus, "in the very act of trying to prove that God did not exist—in other words, that the whole of reality was senseless—I found I was forced to assume that one part of reality—namely my idea of justice—was full of sense" (Lewis, 45, 46).

Canaanites, Slaughter of the. When the Israelites reached the Canaanite city of Jericho at the beginning of their invasion of the land of promise, Joshua and his soldiers "utterly destroyed all that was in the city, both man and woman, young and old, ox and sheep and donkey, with the edge of the sword" (Josh. 6:21). Bible critics charge that such ruthless destruction of innocent life and property cannot be morally justified. It seems contrary to God's command not to kill innocent human beings (see Exod. 20:13).

Reasons for Destruction. Defenses of the actions of ancient Israel fall into three categories: (1) a challenge of the presumption of moral innocence; (2) delineation of implications from the unique theocratic nature of the command, and (3) examination of the conditions under which it was executed.

Scripture makes it very clear that Canaanites were far from "innocent." The description of their sins in Leviticus 18 is vivid: "The land is defiled; therefore I visit the punishment of its

iniquity upon it, and the land vomits out its inhabitants" (vs. 25). They were cancerously immoral, "defiled" with every kind of "abomination," including child sacrifice (vss. 21 , 24 , 26).

God had given the people of Palestine over 400 years to repent of their wickedness. The people of that land had every opportunity to turn from their wickedness. According to Genesis 15:16 , God told Abraham that his descendants would return to inherit this land, but not yet, for the iniquity of the people was not yet full. This prophetic statement indicated that God would not destroy the people of the land until their guilt merited complete destruction in judgment.

In this, Joshua and the people of Israel were not acting according to their own initiative. The destruction of Jericho was carried out by the army of Israel as the instrument of judgment upon the sins of these people by the righteous Judge of all the earth. No other nation before or since has possessed this special relation to God or this mandate (cf. Exod. 19:5 ; Deut. 4:8 ; Ps. 147:20 ; Rom. 3:1–2). Consequently, anyone who would question the justification of this act is questioning God's justice.

God is sovereign over all life and has the right to take what he gives. Job declared "The LORD gave and the LORD has taken away; may the name of the LORD be praised" (Job 1:21). Moses recorded God's words: "See now that I myself am he! There is no god besides me. I put to death and I bring to life, I have wounded and I will heal, and no one can deliver out of my hand" (Deut. 32:39). Human beings do not create life, and they do not have the right to take it (Exod. 20:13), except under guidelines laid by the one who owns all human life.

God permits life taking in self-defense (Exod. 22:2), in capital punishment (Gen. 9:6), and in just war (cf. Gen. 14:14–20). And when there is a theocratic command to do so, as in the case of Israel and the Canaanites, its moral justification is vouchsafed by God's sovereignty.

As for the killing of the children as part of this command, it should be noted that, given the cancerous state of the society into which they were born, they could not avoid its fatal pollution. If children who die before the age of accountability go to heaven (*see* INFANTS, SALVATION OF), this was an act of God's mercy to take them into his holy presence from this unholy environment. Ultimately, however, the primary argument throughout Scripture is that God is sovereign over life (Deut. 32:39 ; Job 1:21). He can order its end according to his will, and his people can have utter confidence that God's actions are for good.

Conclusion. In the case of the Canaanites, it was necessary in establishing a holy nation and priesthood to exterminate the godlessness of the city and its people. If anything had remained, except that which was taken into the treasure house of the Lord, there would have always been the threat of heathen influence to pull the people away from the pure worship of the Lord. As the subsequent history of Israel shows, that is what happened.

Canonicity. ***See*** **BIBLE, CANONICITY OF .**

Carnell, Edward John. Edward John Carnell (1919–1967) was a pioneer apologist of the evangelical renaissance after World War II. A founding faculty member at Fuller Theological Seminary in 1948, he served as president from 1955–1959. He suffered from depression and life-long insomnia which occasioned his confessed addiction to barbiturates. He tragically died of an overdose of sleeping pills, whether accidental or intentional, at the early age of forty-eight.

Carnell wrote eight books, most of which deal with apologetics: *An Introduction to Christian Apologetics* (1948); *The Theology of Reinhold Niebuhr* (1951); *A Philosophy of the Christian Religion* (1952); *Christian Commitment: An Apologetic* (1957); *The Case for Orthodox Theology* (1959); *The Kingdom of Love and the Pride of Life* (1960); and *The Burden of Soren Kierkegaard* (1965). Articles and reviews also touch on apologetics. Of special note is the three-part article, "How Every Christian Can Defend His Faith" in *Moody Monthly* (January, February, March 1950).

The influences that molded Carnell's thought are summarized by one of his foremost disciples, Gordon Lewis: "At Wheaton College in the classes of Gordon H. Clark , Carnell found the test of noncontradiction (*see* FIRST PRINCIPLES). The test of fitness to empirical fact was championed by Edgar S. Brightman at Boston University where Carnell earned his Ph.D." Finally, the requirement of relevance to personal experience became prominent during Carnell's Th.D. research at Harvard University in the study of Soren Kierkegaard and Reinhold Niebuhr" (Lewis, *Testing Christianity's Truth Claims,* 176).

Carnell's Apologetic. Carnell was hypothetical or presuppositional (*see* PRESUPPOSITIONAL APOLOGETICS) in his approach, in contrast to a classical apologetic method.

Carnell defined apologetics as "that branch of Christian theology which has the task of defending the faith." He added, "There is no 'official' or 'normative' approach to apologetics." Instead, "The approach is governed by the climate of the times. This means, as it were, that an apologist must play it by ear" (*Kingdom of Love,* 6).

Looking back over his own apologetic efforts, he wrote, "In my own books on apologetics I have consistently tried to build on some useful point of contact between the gospel and culture." For example, "In *An Introduction to Christian Apologetics* , the appeal was to the law of noncontradiction; in *A Philosophy of the Christian Religion* it was to values, and in *Christian Commitment* it was to the judicial sentiment. In this book [*The Kingdom of Love and the Pride of Life*] I am appealing to the law of love" (ibid., 6).

Rejecting Classical Arguments. Like other presuppositionalists, Carnell rejected the validity of traditional theistic arguments (*see* GOD, EVIDENCE FOR). In this he follows many of the arguments of skeptics, such as David Hume , and agnostics (*see* AGNOSTICISM), such as Immanuel Kant .

The basic problems with theistic arguments. The fundamental reason Carnell rejects theistic rea soning is its starting point. It begins in experience and ends in skepticism (*An Introduction to Christian Apologetics,* 126f.). In fact, Carnell lists seven objections:

1. Empiricism ends in skepticism. "If all the mind has to work with are sense-perceptions as reports to the mind of what is going on in the external world, knowledge can never rise to the universal and the necessary, for from flux only flux can come" (ibid., 129).

2. The principle of economy eliminates the Christian God. Hume set the pace for empiricists by insisting that the cause be proportionate to the effect, but not necessarily greater. An infinite effect dictates an infinite cause, but a finite effect need not.

3. The fallacy of impartation. Even "granted that a cause *may* have more perfections than are seen in the effect, . . . the finite universe does not *require* for its explanation the existence of an infinite cause."

4. Fallacy of one God. How can we be assured that the God proved in the first argument is the same Deity as the moral Governor? Since none need be infinite, for the effect is finite, there is room for thousands of gods.

5. Fallacy of anticipation. Thomas Aquinas used the same arguments as did Aristotle, but came out with the differing conclusion of a personal God. Was this not because Thomas *already* had heart-experience of the true God?

6. Predicament of commitment. Once we are committed to an empirical position, how can we show that what we have demonstrated is the Father of Jesus Christ? The data of nature are satisfied by Aristotle's Unmoved Mover, so why move on to the Trinity?

7. Nonempirical presuppositions. "To prove God's existence from the flux found in nature requires concepts that cannot be found in nature. . . . To know the cause one must first know the uncaused. . . . Thus empirical arguments are successful only if one begins with concepts that are significant when God is already known, for he alone is unmoved, uncaused, noncontingent, perfect, and absolute" (ibid., 133–34). Even "a chip on the statue or a flaw on the canvas makes the artist inferior. . . . In short, the universe evinces too much evil in it to bear the weight of the teleological argument" (ibid., 139).

At best, empirical theistic arguments have only "nuisance value," showing that empiricism is insufficient and pointing to something else beyond the empirical (ibid., 152).

Rejection of Other "Tests for Truth." Carnell reviews and discards other tests for truth.

1. *Instincts* "cannot be a test for truth, since they cannot distinguish between what is legitimately natural to the species and what is acquired. Only the mind can do that."

2. *Custom* is an inadequate test because "customs can be good or bad, true or false. Something beyond and outside of custom, therefore, must test the validity of customs themselves."

3. *Tradition* , a more normative body of customs handed down by a group from early times, is insufficient. "There are in existence so many traditions, so conflicting in essentials, that only in a madhouse could all be justified."

4. *Consensus gentium* , or the "consent of the nations," fails as a test for truth. All once believed that the world was the center of the universe. "A proposition must be true to be worthy of the belief of all, but it does not follow that what is believed by all is true."

5. *Feeling* is insufficient, for "without reason to guide it, feeling is irresponsible."

6. *Sense perception* is at best "a source for truth, not its definition or test. Our senses often deceive us."

7. *Intuition* cannot test truth, since we cannot detect false intuitions, of which there are many."

8. *Correspondence* of an idea to reality cannot be a test. "If reality is extra-ideational, then how can we compare our idea of the mind with it?"

9. *Pragmatism* is inadequate, for on a purely pragmatic ground there is no way to distinguish between materialism's and theism's opposing views of the highest ultimate (whether material or spiritual reality). Further, a pragmatist has no right, according to his theory, to expect his theory to be verified by future experience, since he has no basis on which to believe in the regularity of the world.

Carnell argues all deductive proofs to be inadequate, because "reality cannot be connected by formal logic alone. . . . Logical truth cannot pass into material truth until the facts of life are introduced into the picture." And inductive proofs are invalid tests for truth, for they cannot rise above probability. "A premise is demonstrated only when it is the necessary implication of a self-evident premise or when its contradiction is shown to be false" (*Introduction to Christian Apologetics,* 48–53, 105).

The Necessity of Innate Ideas. One alternative to empiricism, then, is a kind of "Christian rationalism." Augustine taught that "the mind by natural endowment from the Creator enjoys immediate apprehension of those standards which make our search for the true, the good, and the beautiful meaningful." For "to speak meaningfully of the true, the good, and the beautiful, . . . we must have criteria; but criteria that are universal and necessary must be found other than in the flux of sense perception." Otherwise, "how do we know that a thing must be coherent to be true, if the soul, by nature, is not in possession of the conviction?" And "how is it that we are able

confidently to say that what is good today will be good tomorrow, unless we lodge our theory of the good in something outside the process of history?" In brief, "how can we know what the character of all reality is, so as to act wisely unless God tells us?" (ibid., 152–57).

Carnell believes the laws of logic to be innate evidence for God (*see* LOGIC). People have an inborn sense of the rules for right thinking. Therefore, the rules must be innate. Apart from the God revealed in Scripture, it would be meaningless to say that murder is wrong today, so it will be wrong tomorrow. That we can make such a statement is a verification that an Author of our moral nature exists.

There also is a knowledge of God through nature. The world is regular; it shows proof of a God who makes things that are coherent. We can make sense of our existence, and we should not be able to, except by this presupposition or hypothesis.

A Presuppositional Basis for All Knowledge. A second alternative to empiricism confirms the first. The second entails an existential analysis of what makes human life meaningful (see Lewis, "Three Sides to Every Story").

All thought involves assumptions (ibid., 91, 95). Carnell recognizes that "It may be asked why we make assumptions at all. Why not stay with the facts? The answer to this is *very easy* indeed! We make assumptions because we must make assumptions to think at all. The best assumptions are those which can account for the totality of reality" (ibid., 94). Thus, like the scientific method we must begin with a "hypothesis" and then proceed to test it (ibid., 89f.).

The Christian hypothesis is the best presupposition. "The Christian assumes both God and the Scriptures" (ibid., 101). Actually, "God is the Christian's only major premise, but this God is known through the Scriptures" (ibid.).

As to the charge of circular reasoning, Carnell answers frankly, "The Christian begs the question by assuming the truth of God's existence to establish that very existence. Indeed! This is true for establishing the validity of any ultimate. The truth of the law of [non]contradiction" must be assumed to prove the validity of that axiom (*see* FIRST PRINCIPLES). Nature must be assumed to prove nature" (ibid.). Actually, "strict demonstration of a first postulate is impossible, as Aristotle pointed out, for it leads either to infinite regress or to circular reasoning" (ibid., 102).

This is not to say that some hypotheses are not better informed than others.

The Inadequacy of Tests for Truth. "The truth is a quality of that judgment or proposition which, when followed out into the total witness of facts in our experience, does not disappoint our expectations" (*Introduction to Christian Apologetics,* 45). Truth is what corresponds to God's mind. It is thinking God's thoughts after him (ibid., 47).

The inadequacy of deductive tests for truth. Carnell rejects both strictly deductive and inductive arguments as ways to establish the truth of Christianity. In their place he favors a presuppositional approach. Deductive proofs are rejected because "When one demonstrates a

proposition, he shows that it is the necessary conclusion of a premise which is already known to be true. . . . One can easily detect that pure demonstration is operative only within a system of formal symbols, as in logic and mathematics" (ibid., 104).

The inadequacy of inductive tests for truth. Inductive reasoning (*see* INDUCTIVE METHOD) is rejected as an adequate test for the truth of Christianity for "here one cannot rise above probability " (ibid., 105). No real proof is possible with a probability argument, since the opposite is always possible.

The inadequacy of general revelation. While some appeal is made to general revelation (*see* REVELATION, GENERAL) as a point of contact, Carnell argues that it is an inadequate basis for knowing the truth about God. Carnell agreed with Calvin that general revelation "ought not only excite us to the worship of God, but likewise to awaken and arouse us to the hope of future life. But, notwithstanding the clear representations given by God in the mirror of his works . . . such is our stupidity, that, always inattentive to these obvious testimonies we derive no advantage from them." We must then make recourse to special revelation (*Introduction to Christian Apologetics,* 159–72).

The need for special revelation. Since general revelation is inadequate, there is a need to presuppose the truth of special revelation. Therefore, the appeal to special revelation in Scripture is—like any other hypothesis—verifiable if its resulting system is horizontally self-consistent and vertically conforms to reality.

Carnell stresses that trading natural for special revelation does not divide Christian epistemology. There is a single major premise, that God who has revealed himself in Scripture exists. This premise strengthens the faith of one who believes, "for faith is a resting of the soul in the sufficiency of the evidence." The Bible is needed to give us more evidence. For "truth" is systematically constructed meaning, and if the Bible fulfills this standard, it is just as true as Lambert's law of transmission. Any hypothesis is verified when it smoothly interprets life (ibid., 175).

Carnell defends both the fact and necessity of special revelation. No philosophical argument proves revelation cannot take place, for "one can know whether God has revealed Himself or not only after examining all the facts of reality, for any one fact overlooked may be the very revelation itself. . . . To track God down, therefore, one must at least be everywhere at the same time, which is to say, he must be God Himself." In essence, "if a man says there is no God, he simply makes himself God, and thus revelation is made actual. If he says there is a God, the only way he can know this is by God's having revealed Himself." For "the fundamental reason why we need a special revelation is to answer the question, What must I do to be saved? Happiness is our first interest, but this happiness cannot be ours until we know just how God is going to dispose of us at the end of history" (ibid., 175–78).

The Systematic-Consistency Test. Two tests help us evaluate the truth of a worldview: First, it must be logically consistent; second, it must explain all the relevant facts. These join as one criteria called "systematic consistency." "Accept that revelation which, when examined, yields a system of thought which is horizontally self-consistent and which vertically fits the facts of

history.” The Bible is not arbitrarily accepted as the Word of God. To elect any other position would ignore the facts (ibid., 190).

The Negative Test: Noncontradiction. The basic rational test for truth is the law of noncontradiction. It is an innate necessity for human thought and life. Without the law of noncontradiction, neither sensation nor truth nor speech are possible (ibid., 161–63). This law of thought is epistemologically prior to all knowing (ibid., 164f.). Carnell’s defense of the law of noncontradiction is what Cornelius Van Til called a “transcendental argument.”

The Positive Test: Factual Fit. In addition to “horizontal self-consistency,” Carnell’s second test for truth was that the system *vertical fits the facts* (ibid., 108–9). Self-consistency is only a starting point. Without it, truth is absent, without something more, truth is truncated (ibid., 109). As Lewis put it: “A mere formal consistency without factual adequacy is empty and irrelevant. On the other hand, an experiential relevance without consistency ends in chaos and meaninglessness” (*Testing Christianity’s Truth Claims,* 206).

The “facts” included external experience, such as historical facts, and internal experience, such as personal, subjective peace of heart (Introduction, 109–13). Carnell’s “facts” include ethical, existential, psychological, and value matters.

Values are part of the factual fit. Carnell was convinced that no other worldview can satisfy the human quest for personal fellowship. No other provides meaningful standards of love and forgiveness (Lewis, *Testing Christianity’s Truth Claims,* 218). Carnell devotes *A Philosophy of the Christian Religion* to this thesis. Lewis noted, “Edward Carnell sought to show that Christianity is not only *true,* but most *desirable* for each individual person” (*Testing Christianity’s Truth Claims,* 210, emphasis added).

Carnell wrote *Christian Commitment* and *The Kingdom of Love and the Pride of Life* to make the case that Christianity alone provides a value-satisfaction system. As stated in Francis Schaeffer ’s existential authenticity, one can live by Christian principles without hypocrisy.

In *Kingdom of Love and the Pride of Life* , Carnell argued the unconventional thesis that Freudian psychotherapy provides the model for doing an apologetic of love, since it relates trust and love to happiness. He declared: “I believe that if Christian apologists would rally their wits and make better use of love as a point of contact, great things might be accomplished for the defense of the faith” (*Kingdom of Love,* 10). He added that he had not appreciated the apologetic significance of love until he read Sigmund Freud. “The more I reflected on the relationship between patient and analyst, the more convinced I became that psychotherapy has unwittingly created a new base for Christian apologetics. Christianity has always defended love as the law of life” (ibid., 6). Love is unconditional acceptance. It is always kind and truthful, and it seeks nothing but kindness and truth in return. “If man is made in the image of God (as Scripture says he is), then conservatives ought to welcome any evidence which helps establish a vital connection between the healing power of the gospel and man as a creature who is plagued by anxiety and estrangement. A divorce between common and special grace is an offense to both culture and the gospel” (ibid., 9).

Defenders of Carnell recognize that this values approach has limits. Gordon Lewis asks: "Is the psychological apologetic sufficient by itself, however, to support Christianity's truth-claims?" He answers his own question in the negative: Experientially, the truth of love answers problems, but from a theoretical viewpoint, "a religion might alleviate people's anxieties with counterfeit promises. In fact, that is what some of Christianity's cultic deviations do" (*Testing Christianity's Truth Claims,* 252).

Ethics is part of factual fit. Christianity alone can resolve the individual's moral predicament. No other religion can give a consistent answer to the question: How can a sinner be just before God? Lewis sums up Carnell's test(s) for truth: "In sum, Carnell's apologetic finds the Christian hypothesis true because, without contradiction, it accounts for more empirical evi dence . . . , axiological evidence . . . , psychological evidence . . . , ethical evidence . . . , with fewer difficulties than any other hypothesis" (ibid., 282).

Probability and Moral Certainty. Carnell is aware that his method does not yield absolute rational certainty. He willingly settles for high-probability rational confidence if it accompanies a moral certainty that goes beyond reasonable doubt (*Introduction to Christian Apologetics,* 113f.).

The Point of Contact: The Image of God. Unlike Van Til, Carnell believed that the natural human was capable of understanding some truths about God. He disliked "vague homilies on the 'noetic effects of sin' " (*Christian Commitment,* 198). Among other things, the image of God provides both innate moral principles and the very idea of God. Citing John Calvin with approval, Carnell wrote, "One certainly ought not to find it strange that God, in creating me, placed this idea (God) with me to be like the mark of the workman imprinted on his work" (*Introduction to Christian Apologetics,* 160).

Evaluation. *Contributions of Carnell's Apologetics. The stress on the law of noncontradiction.* Carnell correctly emphasized the importance of the law of noncontradiction as a negative test for rationality (*see* LOGIC). He understood its transcendental importance and never wavered from using it, in spite of the fact that he added other dimensions to his overall criteria for the truth of a worldview.

The demand for factual fit. Unlike the rational presuppositionalism of Clark, Carnell's apologetic took into account the need to be comprehensive in any adequate test for truth. Logical consistency offers only a negative test for falsity. Positively, it shows only that a system *could be* true, not that it *is true* . To demonstrate truth, a worldview must touch base with reality.

The rejection of factual sufficiency. Carnell recognized that ultimate, metaphysical truth does not reside in facts as such. Facts alone are insufficient. Only fact understood in the consistent context of an entire worldview can be the basis for ultimate truth. Unless the "stuff" of experience is structured by a meaning-model, it is not possible to speak of the meaningfulness of that system. One must presuppose or hypothesize a metaphysical model of the universe before it is even possible to make ultimate truth claims. One can, of course, understand facts in an everyday sense. Believer and unbeliever may share common ground in understanding of what a

dozen roses are. But that the ultimate meaning of those roses is to glorify the theistic God is known only by those who hold a theistic presupposition.

The need for a worldview framework. Carnell correctly saw the need for a world and life view, that is, with what in German is called a *Weltanschauung* . Merely one dimension of the truth question is not enough. Worldview truths must cover all that is in the world. To single out the rational element, the empirical element, or the existential element alone is inadequate. Carnell saw clearly the need to test the truth of the entire Christian system. He integrated the three basic elements in this test: the rational, the empirical, and the existential.

The contextual validity of systematic coherence. Granted a theistic framework, systematic consistency is a sufficient method for determining the truth. That is, within a theistic worldview, the position that most consistently explains all the relevant facts is true. This is why Christianity meets the test and Judaism does not, since the former accounts for all the predictive prophecy (*see* PROPHECY AS PROOF OF THE BIBLE) about the Messiah, and the latter does not. Likewise, Islam does not account for the theistic evidence that Christ died on the cross and rose from the dead three days later. Christianity does. Hence, both Judaism and Islam fail on the test of comprehensiveness.

The need for existential relevance. Carnell saw what few apologists are willing to admit, that a true *Weltanschauung* must be relevant to life. It was not fully stressed in *An Introduction to Christian Apologetics* . But by the time he wrote *Christian Commitment: An Apologetic* , existential relevance was important to Carnell's comprehensive test for the truth of his system.

Difficulties in Carnell's Apologetics. Carnell's apologetic is not without its faults, some of them crucial defects.

Innate epistemology. Carnell evidently draws on Augustine for his belief in innate ideas. While this is not a fatal criticism of his system, it is worth noting that belief in innate ideas is unfounded (*see* HUME, DAVID) and unnecessary. The same data can be accounted for by simply positing an innate *capacity* without innate *ideas* . Both Kant and Aquinas demonstrated how this could be done—Aquinas without ending in agnosticism.

Rejection of theistic arguments. While Carnell rejects the validity of traditional theistic arguments, he uses a theistic argument of his own. Following Augustine and Rene Descartes , Carnell argues that total skepticism is self-refuting. If the skeptic is doubting, then he is thinking. And if he thinks then he must exist (*cogito ergo sum*). But Carnell argues that this gives not only a knowledge of self, but "the *cogito* provides us with a knowledge of God. Knowing what truth is, we know what God is, *for God is truth.* " He adds, "Proof for God is parallel to proof for logic; logic must be used to prove logic" (ibid., 158–59). So while Carnell rejects traditional theistic arguments he offers a "proof" of his own—one that is the same as his proof for the validity of the laws of logic. Indeed, this can be put in the same form as what Van Til called a transcendental argu ment. So the question is not whether one can prove God, but rather which kind of proof works. Carnell, then, is not really a presuppositionalist but a rational theist—offering a proof for God's existence.

Carnell, of course, believes that this kind of argument avoids the flux of sense experience because it has an interior starting point in the self, not an external one in nature. Yet, when commenting on Romans 1:20 he admits that "the heavens [external nature] declare the glory of God, for they constantly remind us that God exists. The limited perfection of nature is a reminder of absolute perfection; the mutability of nature is a reminder that there is absolute immutability." He even admits that his factual test for truth is the external world, for by " *fitting the facts* we mean being *true to nature* " (*Introduction to Christian Apologetics,* 109). He hastens to say, "this is not a formal demonstration of God's existence; it is simply a proof by coherence" (ibid., 169–70). But regardless of what it is called, it is still a rational "proof" for God's existence that can be made from external nature, which is what the traditional theistic arguments rejected by Carnell purport to accomplish.

Inconsistent use of probability. Carnell is also inconsistent in his use of probability . Carnell chastises apologetic approaches that begin with empirical and historical probabilities. Empirical argumentation is rejected as an adequate test for the truth of Christianity for "here one cannot rise above probability" (ibid., 105). He insists that no real proof is possible with a probability argument, since the opposite is always possible. However, when defending against the charge that his view only yields probability on even crucial matters like the resurrection of Christ, he responds by claiming that probability is sufficient. For "No historical event, however recent, can be demonstrated beyond a degree of probability. So it would be inappropriate to expect verification of Christ's resurrection, for example, to rise to the point of logical necessity" (ibid., 198). But one cannot have it both ways. If probability is never a proof, then no matter how high the probability Carnell would have no proof of the resurrection (cf. Acts 1:3).

A methodological category mistake. Carnell explicitly treats the testing of the truth claims of Christianity like the testing of a scientific "hypothesis" (*An Introduction to Christian Apologetics,* 101). But, as Etienne Gilson has brilliantly demonstrated, this is a methodological category mistake. Borrowing a method from geometry, or mathematics, or science is not the way to do metaphysics. Each discipline has its own appropriate method. And what works in science, for example, does not necessarily work in metaphysics.

Arguing in a vicious circle. The use of facts to test the truth of the worldview, which in turn gives meaning to these facts, is a vicious circle. When testing worldviews, one cannot presuppose the truth of a given context or framework, for that is precisely what is being tested. But Carnell's apologetic method of systematic consistency cannot be a test for the context (or model) by which the very facts, to which he appeals, are given meaning.

Factual fit is inadequate to test a worldview because "fit" is determined for the facts by the overall pattern of the worldview. A fact's meaning is not found in its bare facticity but by the way it is modeled or incorporated by a worldview. Carnell says, "a fact is any unit of being which is capable of bearing meaning, but it is the meaning, not the fact, which is the knowledge" (*Introduction to Christian Apologetics,* 92). If so, then it seems clear that the same data (say, the resurrection of Christ) can be interpreted alternately as an anomaly (from a naturalistic perspective), a supernormal magical event (from a pantheistic view), or a supernatural act of God (from a theistic worldview). Incompatible worldviews inevitably color the same data to mean different things. By not using theistic arguments to establish an overall world view context for

the facts of experience, Carnell is not able to avoid this criticism (*see* MIRACLES, ARGUMENTS AGAINST). For example, some ancient languages that did not divide letters into words left the reader to decide from the context. No appeal to the bare facts alone can solve the problem; only a context, model, or framework from outside can do it. And when one framework fits as well as another, then there is no way to adjudicate the problem by appealing to differing models that each in its own way accounts for all the facts. Or, differing systems may account equally well for an equal number of facts, while having difficulty with others.

Systematic coherence offers no way to know whether the model fits the facts best because the facts are prefitted to the model to give meaning to the whole from the very beginning. The fact of the resurrection of Christ is already a theistic "interprafact" and as such it will naturally fit better into a theistic scheme of things than into a naturalistic worldview. However, if one speaks merely about the anomalous or unusual event of a resuscitated corpse in the framework of a naturalistic worldview, the bare fact also fits the framework.

Conflict of multiple criteria for testing truth. A system that has many criteria for testing truth, as did Carnell's, has a problem with what to do when the criteria yield conflicting results. No criteria is offered by Carnell to adjudicate such conflicts. What happens, for example, if the love criterion conflicts with the law of noncontradiction? What happens when the facts seem to support a position that conflicts with another central tenet of one's system?

The "leaky bucket" fallacy. Systematic coherence is a form of the "leaky bucket" argument. It says, in effect, that empiricism is not an adequate test for truth, existentialism is not an adequate test for truth, and rationalism is not an adequate test for truth. However, if one leaky bucket does not hold the water, then two or three leaky buckets will not do the job either. Just adding together inadequate solutions does not make an adequate solution, unless there is some way to correct the inadequacy of one test.

But the problem with logical coherence as a test for truth is not corrected by appeal to facts. This logical argument does not fail simply because it provides no factual referents for thought, but because in its strong form it provides no rationally inescapable arguments, and in the weak form it is only a test for the possibility of a system's truth. The law of noncontradiction can show only that a system is wrong if it has contradictions in its central tenets. But several systems may be internally noncontradictory. Likewise, there may be many worldviews that account for all the data of experience as they interpret it. Pantheism, for example, has no necessary internal logical contradictions, and it can account for all the facts as interpreted through its worldview lenses. Only if one superimposes nonpantheistic lenses on it does it fail to do so. One who steps inside another worldview may find that its major tenets are consistent, that it accounts for all the facts of experience as interpreted through its framework, and that it is existentially relevant to those within that lifestyle.

Only a negative test for truth. Systematic consistency only tests for the falsity, not the truth, of a worldview. More than one view may be both consistent and adequate. However, those that are not both consistent and adequate will be determined to be false. Carnell's view would at best eliminate only false worldviews (or, aspects of worldviews). It cannot establish one worldview as uniquely true.

It is noteworthy that Frederick Ferre, who uses a similar method, recognized that even nontheistic worldviews may carry equal or even greater weight than the Christian model when tested by his criteria. If Western theists admit this, then surely the sophisticated Hindu or Buddhist could design a combinational test for truth to vindicate his worldview.

Causality, Principle of. The principle of causality is a *first principle* . All first principles are self-evident or reducible to the self-evident. But not everything self-evident in itself appears to

be self-evident to everyone. The principle of causality (*see* FIRST PRINCIPLES) fits that category and so must be unpacked.

Statement of the Principle of Causality. The principle of causality may be stated in various ways, some more easily accepted than others. For example, it may be stated:

1. Every effect has a cause.

This form is clearly self-evident, and it is analytic, in that the predicate is reducible to its subject. Other ways to state the principle are not analytic, nor so self-evident:

2. Every contingent being is caused by another.

3. Every limited being is caused by another.

4. Every thing that comes to be is caused by another.

5. Nonbeing cannot cause being.

Sometimes the principle is stated in other ways than these, but each form is reducible to one or more of these statements. For example, "Every thing that begins has a cause" is the same as "Everything that comes to be is caused by another." Also, "Every dependent being is caused by another" is the same as "Every contingent being is caused by another."

Defense of the Principle. *An Undeniable Truth.* If the principle of causality is stated, "Every effect has a cause," then it is undeniable.

In this form the principle of causality is analytically self-evident, since by an "effect" is meant what is caused and by a "cause" is meant what produces the effect. Hence, the predicate is reducible to the subject. It is like saying, "Every triangle has three sides." However, there is a difficulty with stating the principle in this way for a theist who wishes to use it to prove the existence of God (*see* GOD, EVIDENCE FOR). It simply shifts the burden of the proof back on the theist, who must show that contingent, finite, and/or temporal beings are effects. While this can be done, it is not so useful as to use the form, "Nonbeing cannot produce being." But the question remains as to whether this form is self-evident or undeniable.

All of the ways to defend the nonanalytic forms of the principle of causality (forms 2–4) require explanation of what is meant by the terms of the statement. The following are examples:

The nature of being and nonbeing. Statement 5 can be defended by defining terms. "Nonbeing cannot cause being" because only being can cause something to exist. Nonbeing is nothing; it does not exist. And what does not exist has no power to produce anything. Only what exists can cause existence, since the very concept of "cause" implies that some existing thing has the power to effect another. From absolutely nothing comes absolutely nothing. Or it can be more popularly phrased, "Nothing comes from nothing; nothing ever could."

The nature of contingency. All contingent beings need a cause, for a contingent being is something that exists but that might, under other circumstances, not exist. Since it has the possibility not to exist, it does not account for its own existence. In itself, there is no reason why it exists. Once it was nonbeing, but nonbeing cannot cause anything. Being can only be caused by being. Only something can produce something.

Observe that both of the above defenses (being/nonbeing and contingency) depend on the principle that "Nonbeing cannot cause being" or "Nothing cannot cause something." Many philosophers hold that this principle is known to be true intuitively and is self-evident. But if someone does not accept this as self-evident, the statement can be defended in two ways:

First, inherent in the concept *produce* or *cause* is the implication that something that existed brought into being whatever is produced or caused. The alternative is to define nothing as something or a nonbeing as a being, which is nonsense. This argument should be distinguished from David Hume 's point that it is not absurd to say that *nothing can be followed by something* . Hume himself denies that *something can be caused by nothing* : "I never asserted so absurd a proposition as that something could arise without a cause" (Hume, *The Letters of David Hume,* 1:187).

Theists readily accept Hume's statement. For example, a state in which there was no world was followed by a state in which a world existed (after God created it). That is, nothing (no world) followed by something (a world). There is no inherent contradiction in saying that nothing can be followed by something. The problem arises in saying that nothing can *produce or cause* something.

The importance of its truth begins to surface when it is stated another way: *If there were ever absolutely nothing (including God), then there would always be absolutely nothing (including God).*

Second, everything that comes to be must have a cause. If it came to be, it is not a *Necessary Being* , which by its nature *must always exist* . What comes to be is a *contingent being* , which by nature is capable of either existing or not existing. Something separate from the contingent being has to determine that it comes into existence. So, everything that came to be must be caused, since there must be some efficient action which causes it to pass from a state of potentiality (potency) to a state of actuality (act). For, Aquinas noted, no potency for being can actualize itself. To actualize itself means it would have previously been in a state of actuality, and to be actualized means it would have been in a state of potentiality. It cannot be both at the same time. That would violate the principle of noncontradiction. Hence, one cannot deny the principle of causality without violating the principle of noncontradiction.

First Principles and God's Existence. Given that something exists (which is undeniable) by causality (and the principle of analogy) the existence of God can be demonstrated (*see* COSMOLOGICAL ARGUMENT). In each case, of course, the burden of proof falls on the minor premise, not the premise which is the principle of causality.

Everything That Comes to Be Has a Cause. Using this statement of the principle of causality, the existence of a First Cause can be demonstrated as follows:

Everything that comes to be is caused by another.

The universe came to be.

Therefore, the universe was caused by another.

Of course, one must show that the universe came to be. This the theist does by science and philosophy (*see* BIG BANG ; KALAM COSMOLOGICAL ARGUMENT).

Another way to prove the existence of God uses a different statement of the principle of causality:

Every contingent being is caused by another.

The universe is contingent in its being.

Therefore, the universe is caused by another.

Here too, the burden of proof is on showing that the universe as a whole is contingent. This is generally done by showing that the universe as a whole could, or did, come into being, so it is contingent. Likewise, the universe could cease to exist. It must have a cause to account for why it exists, rather than does not exist.

Of course, if one desires to show that this cause of the universe is intelligent or moral, then the principle of analogy must be used to show that effects resemble their efficient cause (*see* ANALOGY, PRINCIPLE OF ; FIRST PRINCIPLES). For example:

Effects resemble their causes in their being.

The universe manifests intelligent design in its being.

Therefore, the universe has an intelligent Designer.

Objections. Most answers to objections leveled against the principle of causality are implied in what has been stated.

There Is No Need for a Cause. Some atheists (*see* ATHEISM) argue that there is no need for a cause. They insist that there is nothing incoherent about something coming into existence from nothing. This is contrary to reality as it is known and lived and to the scientific enterprise, which seeks a causal explanation. It is counterintuitive to believe that things just pop into and out of existence. Those who hold such a position must also face the fact that something that does not even exist has no power to do anything.

If Everything Is Caused, So Is God. This objection is based on a misunderstanding. The principle of causality does not affirm that *everything* has a cause. It only asserts that everything *that has a beginning* (and so is finite) needs a cause. For example, if the universe had no beginning, then it does not need a cause of its beginning. Likewise, if God had no beginning, then neither does he need a cause. Only what has a beginning needs a cause. But few people argue that the universe had no beginning. Ultimately the universe needs a Cause that does not have a beginning, for the universe cannot spring into being out of nothing.

The Principle of Causality Does Not Apply to Reality. Some critics insist that the principle of causality belongs in the realm of logic but does not apply to reality (*see* REALISM). This is self-defeating. One cannot consistently affirm that the laws of thought cannot be affirmed regarding reality. It is inconsistent to think about reality that it cannot be thought about. Since the principle of causality is a fundamental principle of reason (*see* FOUNDATIONALISM), it must apply to reality. Otherwise, one ends in a self-defeating position that what is known about reality cannot be known. The principle of causality is a principle about reality. When it says "Nonbeing cannot produce being," *being* means what is real and *nonbeing* what is not real.

There Is No Need for a Here-and-Now Cause. Some critics argue that even if there may have once been a cause of the beginning of the universe, there does not need to be one now. Either such a Cause has gone out of existence, or else it may still be in existence but is not required for continually sustaining the universe.

The theistic God demonstrated by the cosmological argument cannot have caused the universe and then subsequently ceased to exist. The theistic God is a Necessary Being, and a Necessary Being cannot cease to be. If it exists, it must by its very nature exist necessarily. A Necessary Being cannot exist in a contingent mode any more than a triangle can exist in a five-sided mode.

A Necessary Being must continue to cause its contingent being(s). A contingent being must remain contingent as long as it exists, since it can never become a Necessary Being. But this is the only other alternative for a contingent being other than going out of existence or remaining a contingent being. But if a contingent being is always contingent, then it always needs a Necessary Being on which it depends for its existence. Since no contingent being holds itself in existence, it must have a Necessary Being to hold it from going into nonexistence—at all times.

The hidden assumption in positing a former Necessary Being who no longer exists is that simultaneous causality does not make sense. But there is no contradiction in saying that an effect is being effected at the very instant it is being caused. This is clearly the case in the relationship between the premises (cause) and the conclusion (effect) in a syllogism. Cause and effect are simultaneous, for the instant one takes away the premise(s) the conclusion does not follow. Likewise, the causal relation between one's face and the image in the mirror is simultaneous.

What clouds the understanding is the confusion of an *effect* with an *after-effect.* For example, when the ball is thrown, it continues to move after the thrower is no longer throwing it. The clock continues to run after it is wound. However, in these and similar examples, the after-effect is also being directly and simultaneously effected by some cause, after the original cause is gone.

The force of inertia keeps the baseball moving; the forces of tension and reaction keep the spring moving the clock. If any of these forces would go out of existence, the after-effect would stop dead. If inertia ceased the very instant after the ball left my hand, the ball would instantly stop in midair. Likewise, the clock would stop ticking the instant the physical laws effecting it were no longer operative. Every so-called after-effect is only an effect of some simultaneous cause(s).

There are no existential after-effects. Whatever is, exists in the here-and-now. And whatever is being caused to exist right now must have something causing it to exist right now. A basic distinction will help illustrate the point. The artist is not the cause of the being of a painting; he is only the cause of the becoming (or coming to be) of the painting. The painting continues to be after the artist takes his hands away from the canvas. The father does not cause the *being* of the son, but only causes the son's *becoming,* for when the father dies the son continues to live.

Finite beings clearly need a cause, not only of their becoming, but also of their here-and-now being. For at every moment of their existence they are dependent for existence on another. They never cease to be limited, finite, contingent beings. And, as such, they demand a cause for every moment of their existence. It does not matter whether we are referring to John Doe at moment one, two, or three of his existence. He is still existing, he has a received existence, and therefore he is receiving existence from something outside himself.

Part of the problem would be removed if we did not talk of exist- *ence* as though the whole package were received at once, but of exist- *ing* , a moment-by-moment process. The word *being* may be even more misleading in this regard. No one receives his whole being at once, nor even the next instant of it. Each creature has a present "being." Existence comes a moment at a time. But at each moment of dependent being there must be some independent Being who gives that moment of being. In this respect, the distinction between the Latin *esse* (to be) and *ens* (being, thing) is helpful. God is pure Esse and our present esse (to-be-ness) is dependent on him. Pure Existence must existentialize our potentiality for existence; otherwise we would not exist. God as pure Actuality is actualizing everything that is actual. Hence, it is the present actuality of all that is actual that demands a causal ground.

Quantum Physics Shows that Subatomic Events Are Uncaused. Heisenberg's principle of uncertainty (*see* INDETERMINACY, PRINCIPLE OF) is a principle of quantum mechanics which states that "the position and speed of a particle cannot be simultaneously known with complete certainty. According to this view, for example, it is possible to predict accurately what fraction of uranium atoms will radioactively disintegrate over the next hour, but it is impossible to predict *which* atoms will do so" (ibid.). It is reasoned that if some events are unpredictable they must be uncaused.

However, this conclusion does not follow for several reasons discussed in the article Indeterminacy, Principle of. First, Heisenberg's principle is not a principle of *uncausality* but a principle of *unpredictability* . Second, it is only the position of a particular particle that cannot be predicted, not the overall pattern. Third, since the subatomic realm cannot be "observed" without bombarding it, the scientist cannot be sure what it is really like. Not all physicists agree with Heisenberg. Einstein's response was, "God does not play dice with the universe."

Conclusion. There are other negative arguments about the principle of causality (*see* GOD, OBJECTIONS TO PROOFS FOR), but they do not deny the principle of causality as such. For example, the argument that there may be an infinite number of causes does not deny the principle of causality; it assumes it. The principle of causality itself is as sound as any first principle. Without it neither science in particular nor rational thought in general would be possible. All natural knowledge about the external world depends on a causal connection between it and our minds.

Celsus. Celsus was a second-century pagan philosopher. His *The True Doctrine* (or *Discourse*) is the oldest known writing attacking the Christian faith (ca. 178). It is known through Origen's eight-book reply, *Contra Celsum* , which preserves most of Celsus' discourse. No other copies are extant.

Origen depicts Celsus' beliefs as a combination of a Platonic view (*see* PLATO) of God and Greek polytheism . The result was an unknown God who set his various demons over human experience. True religion is demonstrated by concentrating on God and propitiating cultic demons. Worship is due to the emperor by celebrating public feasts, holding public office, and joining the army (see Douglas, 206).

Celsus presents himself as a detached pagan observer with no strong feelings about religion. He praises Christianity for its Logos doctrine and high morals, but he objects strongly to its exclusivity. He criticizes much of biblical history for its miracle claims and expresses repugnance to the doctrines of the incarnation and crucifixion. He also objects to Christian nonconformity, which he believed tended to undermine the Roman government. His charges boiled down to religious superstition, intolerance, and political nonconformity.

The charges were answered by Origen. Celsus failed to appreciate the historical evidence (*see* NEW TESTAMENT, HISTORICITY OF) and the philosophical justification of biblical miracles (*see* Miracle; MIRACLES, ARGUMENTS AGAINST). He also failed to understand the evidence supporting the deity of Christ (*see* CHRIST, DEITY OF) and the uniqueness of Christianity (*see* CHRIST, UNIQUENESS OF ; WORLD RELIGIONS AND CHRISTIANITY).

Certainty/Certitude. *Certainty* is the confidence that something is true. Sometimes certainty is distinguished from *certitude* . Certainty is objective, but certitude is subjective. A first principle or self-evident statement is objectively certain, whether a person is sure about it or not. Certitude involves a knower's assent to that which is certain; it is a subjective acceptance of what is objectively so. In common usage the terms are employed interchangeably. The difference is that certainty exists where there is objective reasons or evidence that are commensurate to the degree of certainty claimed. With certitude, however, there need not be a commensurate degree of objective reasons or evidence for the degree one possesses.

Kinds of Certainty. Certainty falls into categories of logical, moral, practical, and spiritual.

Logical Certainty. Logical certainty is found largely in mathematics and pure logic. This kind of certainty is involved where the opposite would be a contradiction. Something is certain in this sense when there is no logical possibility it could be false. Since mathematics is reducible to logic it fits into this category. It is found in statements such as $5 + 4 = 9$. It is also found in

tautologies or statements that are true by definition: All circles are round, and no triangle is a square.

Metaphysical Certainty. There are, however, some other things of which we can be absolutely certain that are not statements empty of content. For example, I know for certain that I exist. This is undeniably so, since I cannot deny my existence without existing to make the denial. First principles can also be known for certain, since the subject and predicate say the same thing: “Being exists”; “Nonbeing is not Being.” “Nonbeing cannot produce Being” is also certain, since *produce* implies an existing producer.

Moral Certainty. Moral certainty exists where the evidence is so great that the mind lacks any reason to veto the will to believe it is so. One rests in a moral certainty with complete confidence. Of course, there is a logical possibility that things of which we are morally certain are false. However, the evidence is so great there is no reason to believe it is false. In legal terms this is what is meant by “beyond all reasonable doubt.”

Practical Certainty (High Probability). Practical certainty is not as strong as moral certainty. Persons claim to be “certain” about things they believe have a high probability of truth. One may be certain she had breakfast today, without being able to prove it mathematically or metaphysically. It is true unless something changed her perception, so that she was deluded into thinking she ate breakfast. It is possible to be wrong about these matters.

Spiritual (Supernatural) Certainty. If we grant the theist God’s existence, he could give supernatural assurance that something is true. Likewise, if God speaks directly to a person (for example, Abraham in Genesis 22), then that person could have a spiritual certainty that transcends other kinds of certainty, because it comes directly from God. Those *who have direct mystical experiences* of God (*see* MYSTICISM), such as Paul describes in 2 Corinthians 12 , have this kind of certainty. It would be greater than any other kind of certainty, since an omniscient being is its guarantor and omniscience cannot be wrong. As to how or whether such assurance actually exists apart from a supernatural act is a moot point among theologians, although many classical apologists and others argue that it does (*see* HOLY SPIRIT, ROLE IN APOLOGETICS).

Certainty and Assent. Certainty is always accompanied by assent. That is, the mind always assents to propositions that are certain, *if it properly understands them* . However, not all assent is accompanied by certitude. In everyday life, one frequently assents to something as being only probable and not necessary. In business affairs there is usually no absolute certainty; one must assent based on varying degrees of probability . This is virtually always the case in inductive reasoning, since the reasoner is moving from particular to general and is not sure about all the particulars. A complete induction would be an exception, since every particular is known. For instance, “There are three and only three marbles in my right hand” can be known with moral certainty. Though it is possible the person has not seen or counted correctly, the probability of correctness is high enough for the proposition to be morally certain (*see* INDUCTIVE METHOD).

A person can possess intellectual certainty about a proposition, yet lack subjective or emotional certitude. That is the common experience with doubt. There is emotional fear, despite

rational verification. A person might have moral certainty that God exists and still feel his absence.

Subjective certitude often works in the opposite direction as well. A feeling of conviction so overpowers rational analysis as to move the will to assent with little or no evidence.

Certainty and Error. Subjective certitude is one way in which it is possible to have moral certainty and/or certitude about the truth of some thing that is objectively false. The will to believe may overpower the lack of evidence, so that one has tenacity of belief without the veracity of it. Reasons for error include defective senses or mental processes, incomplete consciousness, the drive of the will, and the need to act in the absence of compelling evidence.

One cannot be wrong about first principles or self-evident propositions. Once the mind understands them it is compelled to assent to them. There is no freedom not to assent to a self-evident truth. While this natural inclination to the truth is an unconscious drive, it would seem that, properly speaking, the assent to certitude is conscious. One can only be certain who understands that the truth is a first principle or reducible to it. This degree of analysis requires awareness. Only when one understands the principle and the truth becomes unmistakably clear is assent necessary and certitude guaranteed.

Certitude Involves a Repose. Since certitude involves a conscious assent to the certainty of the truth for which a human being has an unconscious appetite, the possession of this truth by the intellect is the reward of certitude. In the presence of such truths, nothing in the world could deprive the intellect of this possession. The reward of the hunger for truth is certitude which one consciously enjoys who perceives the certainty and necessity of the truth he or she has possessed.

Chance. The concept of *chance* has evolved in meaning. *Chance* for Aristotle and other classical philosophers was merely the fortuitous intersection of two or more lines of causality. In modern times, however, the term has taken on two different meanings. Some regard chance as the lack of

any cause. As Mortimer Adler put it, some take chance to mean “that which happens totally without cause—the absolute spontaneous or fortuitous” (cited in Sproul, xv).

Others view chance as a real cause itself, only a blind, rather than an intelligent, cause. Naturalists and materialists often speak this way. For example, since David Hume, the teleological argument has been countered with the alternative that the universe resulted from chance, not from intelligent design. Although Hume himself did not do so, some have taken this to mean that the universe was caused by chance, instead of by God.

Chance and Theism. *Chance* , conceived either as the lack of a cause or as a cause in itself, is incompatible with theism. As long as chance rules, Arthur Koestler noted, “God is an anachronism” (cited in Sproul, 3). The existence of chance tips God off his cosmic throne. God and chance are mutually exclusive. If chance exists, God is not in complete control of the universe. There cannot even exist an intelligent Designer.

The Nature of Chance. Definition of the word *chance* depends partly on the worldview agenda of the one doing the defining. Two usages are commonly confused when speaking about the origin of things: chance as a mathematical probability and chance as a real cause. The first is merely abstract. When rolling a dice the chances are one in six that the number six will come out on top. The odds are one in thirty-six that two dice will both come up six and one in 216 that three sixes will be thrown on three dice. These are abstract mathematical probabilities. But chance did not cause those three dice to turn up sixes. What did it was the force of throwing them, their starting position in the hand, the angle of the toss, how they deflected off objects in their way, and other results of inertia. Chance had nothing to do with it. As Sproul put it, “chance has no power to do anything. It is cosmically, totally, consummately impotent” (Sproul, 6).

Lest one think we have loaded the dice by citing a theist, hear the words of Hume: “Chance, when strictly examined, is a mere negative word, and means not any real power which has anywhere a being.” He added, “Though there be no such thing as *Chance* in the world; our ignorance of the real cause of any event has the same influence on the understanding, and begets a like species of belief or opinion” (Hume, Sect 6).

Attributing Causal Power to Chance. Herbert Jaki in *God and the Cosmologists* has an insightful chapter titled “Loaded Dice.” He refers to Pierre Delbert who said, “Chance appears today as a law, the most general of all laws” (Delbert, 238).

This is magic, not science. Scientific laws deal with the regular, not the irregular (as chance is). Also, the laws of physics do not cause anything; they simply describe the way things happen regularly in the world as the result of physical causes. Likewise, the laws of mathematics do not cause anything. They simply insist that if I put five pennies in my empty right pocket and then put seven more, then I must have twelve pennies there. The laws of math never put one penny in anyone’s pocket.

The basic fallacy of making chance into a causal power was stated well by Sproul. “1. Chance is not an entity. 2. Nonentities have no power because they have no being. 3. To say that something happens or is caused by *chance* is to suggest attributing instrumental power to

nothing" (Sproul, 13). But it is absurd to claim that nothing produced something. Nothing does not even exist and, hence, has no power to cause anything (*see* CAUSALITY, PRINCIPLE OF).

Intelligent Cause(s) and "Chance" Results. Not all chance events occur from natural phenomena. Intelligent causes can juxtapose as "chance" encounters. Two scientists, working independently from different approaches, make the same discovery. One rational being buries a treasure in the earth. Another finds it by chance while digging the foundation for a house.

What appears to be a random mixture is not necessarily without rational purpose. There is a rational purpose behind the designing of a random mixture of number sequences in a lottery drawing. There is a rational purpose for the random mixture of carbon dioxide we exhale into the surrounding air; otherwise we would rebreathe it and die of oxygen deprivation. In this sense, God the designer and chance randomness are not incompatible concepts. However, to speak of a chance cause is meaningless.

Conclusion. Strictly speaking, there can be no chance cause or origin of the universe and life. Every event has an adequate cause. The choices are either intelligent causes or nonintelligent causes, either a natural cause or a non-natural cause. The only way we can know which is by the kind of effect produced (*see* ORIGINS, SCIENCE OF). Since the universe manifests intelligent design, it is reasonable to posit an intelligent cause (*see* TELEOLOGICAL ARGUMENT). The apparent chance or randomness (like the lottery or the mixture of air molecules) may be part of the overall intelligent design.

Chesterton, Gilbert K. Gilbert K. Chesterton (1874–1936) was a brilliant and witty English essayist and poet, to whom C. S. Lewis acknowledged his debt. Chesterton abandoned training in art for journalism and in 1922 the Church of England for Roman Catholicism. His religious works include *Heretics* (1905), *Orthodoxy* (1908), *The Everlasting Man* (1925), and *Avowals and Denials* (1934). His *Autobiography* (1936) provides many insights into the religious scene from 1895 to 1936.

Views. *God.* Chesterton defended orthodox Catholicism, and his writings are filled with witty apologetic arguments for the Christian faith. In *Orthodoxy* , he declared that "There never was anything so perilous or so exciting as orthodoxy" (106). Anyone could fall into religious fads, from gnosticism to Christian Science, "but to have avoided them all has been one whirling

adventure; and in my vision the heavenly chariot flies thundering through the ages, the dull heresies sprawling and prostrate, the wild truth reeling but erect" (ibid., 107).

Chesterton was critical of nontheistic worldviews. He called atheism "the most daring of all dogmas. . . . It is the assertion of a universal negative; for a man to say there is no God in the universe is like saying that there are no insects in any of the stars" (*Five Types* , 59). He criticized pantheism for being unable to inspire moral action. "For pantheism implies in its nature that one thing is as good as another; whereas action implies in its nature that one thing is greatly preferable to another" (*Orthodoxy* , 143). Even paganism is better than pantheism, he added. "Paganism is free to imagine divinities, while pantheism is forced to pretend, in a priggish way, that all things are equally divine" (*Catholic Church and Conversion* , 89).

Chesterton distilled the difference between Christianity and Buddhism to the insightful observation: "The Christian pities men because they are dying, and the Buddhist pities them because they are living. The Christian is sorry for what damages the life of a man; but the Buddhist is sorry for him because he is alive" (*Generally Speaking* , 115–16).

In his vivid personal testimony, Chesterton confessed: "I had always believed that the world involved magic; now I thought perhaps it involved a magician. . . . This world of ours has some purpose; and if there is a purpose, there is a person. I had always felt life first as a story; and if there is a story there is a storyteller" (*Orthodoxy* , 61).

Miracles. Chesterton held that God actively intervenes in the world. He defined *miracle* as "the swift control of matter by mind" (ibid., 137). The reality of miracles was central to Chesterton's apologetic defense. He insisted that miracles must be confirmed by evidence, just as other events of history. "My belief that miracles have happened in human history is not a mystical belief at all; I believe in them upon human evidence as I do the discovery of America" (ibid., 161). "A conspiracy of facts" forces this admission on the mind. The witnesses were not mystical dreamers, but fishermen, farmers, and others who were "coarse and cautious" (ibid., 163). Denials of miracles on the other hand, are not based on evidence at all, but on philosophical commitment. "There is only one reason an intelligent person doesn't believe in miracles. He or she believes in materialism" (*St. Francis of Assisi* , 204). Believers accept miracles because they have evidence for them. Disbelievers deny them because they have a doctrine against them.

Creation. Creation to Chesterton was the "greatest of all revolutions" (*Chaucer* , 27). He does not seem to have denied the possibility of creation through evolution (*see* EVOLUTION, THEISTIC), but he also recognized the deficiencies of evolution as a theory of origins (*see* EVOLUTION, BIOLOGICAL). Even if the theory were true, "evolution as explanation, as an ultimate philosophy of the cause of living things, is still faced with the problem of producing rabbits out of an empty hat; a process commonly involving some hint of design" (ibid., 172). Chesterton declared that the suggestion that evolution produced the human mind, "is like telling a man who asks who rolled a cab-wheel over his leg that evolution rolled it. To state the process is scarcely to state the agent" (*Handful of Authors* , 97–98). Further, "it is absurd for the evolutionist to complain that it is unthinkable for an admittedly unthinkable God to make

everything out of nothing (*see* CREATION, VIEWS OF), and then pretend that it is more thinkable that nothing should turn itself into anything” (*Saint Thomas Aquinas* , 173).

Sin. Chesterton also affirmed the fall of Adam and original sin. It is bad enough that we are trapped in a bad world, he said, but we have misused a good world. Evil is the wrong use of will, and so things can be righted only through the right use of will. “Every other creed except that one is some form of surrender to fate” (*The Thing* , 226). Chesterton described the effects of the fall by saying that the doctrine of original sin is “the doctrine of the equality of men.” For now all are fools (*Heretics* , 165–66).

Evaluation. Chesterton was a witty, brilliant defender of Christian Faith in general and Roman Catholic faith in particular. He is among the great intellectual Catholic apologists of the twentieth century. His approach is more literary than logical in form, but it is rational and penetrating.

Christ, Death of. The death of Christ is the necessary prerequisite to his resurrection (*see* RESURRECTION, EVIDENCE FOR), which is the crowning proof of Jesus' claim to be God (*see* APOLOGETICS, ARGUMENT OF). Further, Islam, one of the chief opponents of Christianity, denies that Jesus died on the cross (McDowell, 47f.). Many skeptics (*see* AGNOSTICISM) challenge the reality of Christ's death.

Evidence for Christ's Death. There is overwhelming historical and factual evidence that Jesus died on the cross and rose again on the third day (*see* RESURRECTION, EVIDENCE FOR). The evidence for Christ's death is greater than that for almost any other event in the ancient world. The historicity of the Gospel records has been confirmed by a multitude of New Testament Manuscripts and contemporary eyewitnesses (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF).

Alternative Explanations. Skeptics and Muslims choose from among various versions of the theory that Jesus did not die on the cross. One is that a drug put Jesus in a coma-like state, so that he later revived in the tomb. The clear witness of Matthew's narrative is that he refused even the drug customarily offered to the victim before crucifixion to help deaden pain (27:34). He accepted only vinegar later (vs. 48) to quench his thirst.

If the Bible has any credibility whatsoever, its New Testament authors all say specifically or speak from the necessary implication that they believed Christ died on the cross (cf. Rom. 5:8 ; 1 Cor. 15:3 ; 1 Thess. 4:14). Neither fainting nor swooning nor being drugged would have produced the vigorous victor over death described in the resurrection appearances. The evidence that Christ actually died on the cross is overwhelming:

A Death Predicted. The Old Testament predicted (*see* PROPHECY AS PROOF OF THE BIBLE) that the Messiah would die (Ps. 22:16 ; Isa. 53:5–10 ; Dan. 9:26 ; Zech. 12:10). Jesus fulfilled this and nearly 100 other Old Testament prophecies about the Messiah (see, for example, Matt. 4:14 ; 5:17–18 ; 8:17 ; John 4:25–26 ; 5:39).

Jesus predicted many times during his ministry that he was going to die and rise again (Matt. 12:40 ; Mark 8:31 ; John 2:19–21 ; 10:10–11). One of the more explicit is Matthew 17:22–23 : "The Son of Man is going to be betrayed into the hands of men. They will kill him, and on the third day he will be raised to life."

All predictions of his resurrection in the Old Testament (cf. Ps. 2:7 ; 16:10), and New Testament (cf. Matt. 12:40 ; 17:22–23 ; John 2:19–21) assume that he would die (*see* RESURRECTION, EVIDENCE FOR).

Death by Crucifixion. Jesus' injuries made death unavoidable. He had no sleep the night before he was crucified; he was beaten and whipped, and he collapsed while carrying his cross. This prelude to the crucifixion alone was life-draining.

The nature of the crucifixion assures death. For a description of one crucified man whose bones have been uncovered, see ARCHAEOLOGY, NEW TESTAMENT . Jesus hung on the cross from 9 in the morning until just before sunset (Mark 15:25 , 33). He bled from gashes in his hands

and feet and from the thorns that pierced his scalp. These wounds would have drained away much blood over more than six hours. Plus, crucifixion demands that one constantly pull up by the hands and push on the injured feet in order to breathe. This caused excruciating pain from the nails. A day of this would kill someone in good health (see Tzaferis).

Beyond these injuries, Jesus' side was pierced with a spear. From this wound flowed a mixture of blood and water (John 19:34), a proof that physical death had occurred. This detail alone, and its confirmation by modern medical experts, strongly validates the claim that this narrative is an eyewitness account. An article in the *Journal of the American Medical Association* (21 March 1986) concluded:

> Clearly, the weight of historical and medical evidence indicates that Jesus was dead before the wound to his side was inflicted and supports the traditional view that the spear, thrust between his right rib, probably perforated not only the right lung but also the pericardium and heart and thereby ensured his death. Accordingly, interpretations based on the assumption that Jesus did not die on the cross appear to be at odds with modern medical knowledge. [1463]

Jesus said he was dying when he declared on the cross, "Father, into your hands I commit my spirit" (Luke 23:46). And when "he had said this, he breathed his last" (vs. 46). John renders this, "he gave up his spirit" (John 19:30). His death cry was heard by those who stood nearby (Luke 23:47–49).

The Roman soldiers, accustomed to crucifixion and death, pronounced Jesus dead. Although it was a common practice to break the legs of the victim to speed death (so that the person could no longer breathe), they did not believe it necessary to break Jesus'legs (John 19:33).

Pilate double-checked to make sure Jesus was dead before he gave the corpse to Joseph to be buried. "Summoning the centurion, he asked him if Jesus had already died. When he learned from the centurion that it was so, he gave the body to Joseph" (Mark 15:44–45).

Jesus was wrapped in about 100 pounds of cloth and spices and placed in a sealed tomb for three days (Matt. 27:60 ; John 19:39–40). If he was not dead by then, the lack of food, water, and medical treatment would have finished him.

References to the Crucifixion. The article ARCHAEOLOGY, NEW TESTAMENT includes accounts by several non-Christian historians and writers from the first and second centuries who recorded the death of Christ as indisputable fact. Among these are the Talmud and Jewish historian of the time of Christ, Josephus, and the Roman historian Cornelius Tacitus (A.D . 55?–117).

According to Julius Africanus (ca. 221), the first-century Samaritan-born historian, Thallus (ca. 52), "when discussing the darkness which fell upon the land *during the crucifixion of Christ* ," spoke of it as an eclipse (Bruce, 113, emphasis added). The second-century Greek writer, Lucian, speaks of Christ as " *the man who was crucified in Palestine* because he introduced a new cult into the world." He calls him the *"crucified sophist"* (Geisler, 323). The "letter of Mara

Bar-Serapion" (ca. A.D . 73), housed in the British Museum, speaks of Christ's death, asking: "What advantage did the Jews gain from *executing their wise King?* " (Bruce, 114). Finally, there was the Roman writer, Phlegon, who spoke of Christ's death and resurrection in his *Chronicles,* saying, "Jesus, while alive, was of no assistance to himself, but that *he arose after death, and exhibited the marks of his punishment, and showed how his hands had been pierced by nails* " (Phlegon, *Chronicles,* cited by Origen, 4:455). Phlegon even mentioned "the eclipse in the time of Tiberius Caesar, in whose reign Jesus appears to have been crucified, and the great earthquakes which then took place" (ibid., 445).

The earliest Christian writers after the time of Christ affirmed his death on the cross by crucifixion. Polycarp, a disciple of the apostle John, repeatedly affirmed the death of Christ, speaking, for example, of "our Lord Jesus Christ, who for our sins suffered even unto death" (Polycarp, 33). Ignatius (30–107), a friend of Polycarp, wrote, "And he really suffered and died, and rose again." Otherwise, he adds, all his apostles who suffered for this belief, died in vain. "But, (in truth) none of these sufferings were in vain; for *the Lord was really crucified* by the ungodly" (Ignatius, 107). In *Dialogue with Trypho* the Jew, Justin Martyr noted that Jews of his day believed that "Jesus [was] a Galilean deceiver, whom we crucified" (Martyr, 253).

This unbroken testimony from the Old Testament to the early Church Fathers, including believer and unbeliever, Jew and Gentile, is overwhelming evidence that Jesus suffered and died on the cross.

Christ, Deity of. Central to Christianity is the belief that Jesus Christ is the Son of God, that is, God manifest in human flesh. The evidence for this is as follows:

1. Truth about reality is knowable (*see* TRUTH, NATURE OF ; AGNOSTICISM).

2. Opposites cannot both be true (*see* PLURALISM, RELIGIOUS ; LOGIC).

3. God exists (*see* GOD, EVIDENCE FOR).

4. Miracles are possible (*see* MIRACLE).

5. A miracle is an act of God to confirm the truth of God claimed by a messenger of God (*see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES AS CONFIRMATION OF TRUTH).

6. The New Testament documents are reliable (*see* NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT, HISTORICITY OF).

7. In the New Testament Jesus claimed to be God.

8. Jesus proved to be God by an unprecedented convergence of miracles (*see* MIRACLES IN THE BIBLE).

9. Therefore, Jesus was God in human flesh.

Since the first six points are treated in the materials noted, this article will stress points five and six.

Jesus' Claim to Be God. Jesus claimed to be God, both directly and by necessary implication from what he said and did.

Jesus Claimed to Be Yahweh. Yahweh (*YHWH* ; sometimes appearing in English translations as "Jehovah" or in small capital letters as " LORD") is the special name given by God for himself in the Old Testament. It is the name revealed to Moses in Exodus 3:14 , when God said, "I AM WHO I AM." Other titles for God may be used of humans, such as *Adonai* ("Lord") in Gen. 18:12 , or false gods, such as *elohim* ("gods") in Deut. 6:14 . *Yahweh* , however, only refers to the one true God. No other person or thing was to be worshiped or served (Exod. 20:5), and his name and glory were not to be given to another. Isaiah wrote, "This is what the L ORD says. . . . I am the first, and I am the last; apart from me there is no God" (Isa. 44:6) and, "I am the L ORD ; that is my name! I will not give my glory to another, or my praise to idols" (42:8).

Jesus claimed to be *Yahweh* . He prayed, "And now, O Father, glorify thou me with thine own self with the glory which I had with thee before the world was" (John 17:5). But *Yahweh* of the Old Testament said, "my glory will I not give to another" (Isa. 42:8). Jesus also declared, "I am the first and the last" (Rev. 1:17)—precisely the words used by Jehovah in Isaiah 42:8 . He said, "I am the good shepherd" (John 10:11), but the Old Testament said, " *Yahweh* is my shepherd" (Ps. 23:1). Further, Jesus claimed to be the judge of all people (Matt. 25:31f .; John

5:27f .), but Joel quotes Jehovah as saying, “for there I will sit to judge all the nations on every side” (Joel 3:12). Likewise, Jesus spoke of himself as the “bridegroom” (Matt. 25:1) while the Old Testament identifies Jehovah in this way (Isa. 62:5 ; Hos. 2:16). While the Psalmist declares, “The LORD is my light” (Ps. 27:1), Jesus said, “I am the light of the world” (John 8:12).

Perhaps the strongest claim Jesus made to be *Yahweh* is in John 8:58 , where he says, “Before Abraham was, I am.” This statement claims not only existence before Abraham, but equality with the “I AM” of Exodus 3:14 . The Jews around him clearly understood his meaning and picked up stones to kill him for blaspheming (cf. John 8:58 and 10:31–33). The same claim is made in Mark 14:62 and John 18:5–6 .

Jesus Claimed to Be Equal with God. Jesus claimed to be equal with God in other ways. One was by claiming for himself the prerogatives of God. He said to a paralytic, “Son, your sins are forgiven” (Mark 2:5–11). The scribes correctly responded, “Who can forgive sins but God alone?” So, to prove that his claim was not an empty boast he healed the man, offering direct proof that what he had said about forgiving sins was true also.

Another prerogative Jesus claimed was the power to raise and judge the dead: “I tell you the truth, a time is coming and has now come when the dead will hear the voice of the Son of God and those who hear will live . . . and come out—those who have done good will rise to live, and those who have done evil will rise to be condemned” (John 5:25 , 29). He removed all doubt about his meaning when he added, “For just as the Father raises the dead and gives them life, even so the Son gives life to whom he is pleased to give it” (John 5:21). But the Old Testament clearly taught that only God was the giver of life (Deut. 32:39 ; 1 Sam. 2:6) and the one to raise the dead (Ps. 2:7) and the only judge (Deut. 32:35 ; Joel 3:12). Jesus boldly assumed for himself powers that only God has.

Jesus also claimed that he should be honored as God. He said that all men should “honor the Son just as they honor the Father. He who does not honor the Son does not honor the Father, who sent him” (John 5:23). The Jews listening knew that no one should claim to be equal with God in this way, and again they reached for stones (John 5:18).

Jesus Claimed to Be Messiah-God. Even the *Qur’an* recognizes that Jesus was the Messiah (sura 5:17, 75). But the Old Testament teaches that the coming Messiah would be God himself. So when Jesus claimed to be that Messiah, he was also claiming to be God. For example, the prophet Isaiah (in 9:6) calls the Messiah, “Mighty God.” The psalmist wrote of Messiah, “Your throne, O God, will last for ever and ever” (Ps. 45:6 ; cf. Heb. 1:8). Psalm 110:1 records a conversation between the Father and the Son: “The LORD (*Yahweh*) says to my Lord (*Adonai*): ‘Sit at my right hand.’ ” Jesus applied this passage to himself in Matthew 22:43–44 . In the great messianic prophecy of Daniel 7 , the Son of Man is called the “Ancient of Days” (vs. 22), a phrase used twice in the same passage of God the Father (vss. 9 , 13). Jesus also said he was the Messiah at his trial before the high priest. When asked, “Are you the Christ [Greek for “Messiah”], the Son of the Blessed One?” Jesus responded, “I am. . . . And you will see the Son of Man sitting at the right hand of the Mighty One and coming on the clouds of heaven.” At this, the high priest tore his robe and said, “Why do we need any more witnesses? . . . You have heard

the blasphemy!" (Mark 14:61–64). There was no doubt that in claiming to be Messiah, Jesus also claimed to be God (see also Matt. 26:54 ; Luke 24:27).

Jesus Claimed to Be God by Accepting Worship. The Old Testament forbids worshiping anyone other than God (Exod. 20:1–4 ; Deut. 5:6–9). The New Testament agrees, showing that humans refused worship (Acts 14:15), as did angels (Rev. 22:8–9). But Jesus accepted worship on numerous occasions, showing he claimed to be God. A healed leper worshiped him (Matt. 8:2), and a ruler knelt before him with a request (Matt. 9:18). After he stilled the storm, "those who were in the boat worshiped him saying, 'Truly you are the Son of God' " (Matt. 14:33). A group of Canaanite women (Matt. 15:25), the mother of James and John (Matt. 20:20), the Gerasene demoniac (Mark 5:6), all worshiped Jesus without one word of rebuke. The disciples worshiped him after his resurrection (Matt. 28:17). Thomas saw the risen Christ and cried out, "My Lord and my God!" (John 20:28). This could only be allowed by a person who seriously considered himself to be God. Not only did Jesus accept this worship due to God alone without rebuking those who gave it, but he even commended those who acknowledged his deity (John 20:29 ; Matt. 16:17).

Jesus Claimed to Have Equal Authority with God. Jesus also put his words on a par with God's. "You have heard that it was said to the people long ago. . . . But I tell you . . ." (Matt. 5:21 , 22) is repeated over and over again. "All authority in heaven and on earth has been given to me. Therefore go and make disciples of all nations . . ." (Matt. 28:18–19). God had given the Ten Commandments to Moses, but Jesus said, "A new commandment I give you: Love one another" (John 13:34). Jesus said, "until heaven and earth disappear, not the smallest letter, not the least stroke of a pen, will by any means disappear from the Law" (Matt. 5:18), but later Jesus said of his words, "Heaven and earth will pass away, but my words will never pass away" (Matt. 24:35). Speaking of those who reject him, Jesus said, "that very word which I spoke will condemn him at the last day" (John 12:48). There is no question that Jesus expected his words to have equal authority with God's declarations in the Old Testament.

Jesus Claimed to Be God by Requesting Prayer in His Name. Jesus not only asked people to believe in him and obey his commandments, but he asked them to pray in his name. "And I will do whatever you ask in my name. . . . You may ask me for anything in my name, and I will do it" (John 14:13–14). "If you remain in me and my words remain in you, ask whatever you wish, and it will be given you" (John 15:7). Jesus even insisted, "No one comes to the Father except through me" (John 14:6). In response to this, the disciples not only prayed in Jesus' name (1 Cor. 5:4), but prayed to Christ (Acts 7:59). Jesus certainly intended that his name be invoked both before God and as God in prayer.

In view of these clear ways in which Jesus claimed to be God, any unbiased observer of the Gospels should recognize that Jesus of Nazareth did claim to be God in human flesh. He claimed to be identical to *Yahweh* of the Old Testament.

Alleged Counter-claims of Christ. In spite of these repeated claims to be God, some critics take certain statements of Jesus as denials of deity. Two such incidents are commonly used: In one, a rich young ruler came to Jesus and addressed him as "Good teacher." But Jesus rebuked

him, saying, “Why do you call me good? No one is good—except God alone” (Mark 10:17–18 ; see Mark 10:17–27 ; cf. parallels Matt. 19:16–30 ; Luke 18:18–30).

Notice, however, that Jesus did not deny that he was God; he asked the young man to examine the implications of what he said. Jesus was saying, “Do you realize what you are saying when you call me good? Are you really saying that I am God?” Of course, the man did not realize the implications of either his statements or what the law was really saying, so Jesus was forcing him into a very uncomfortable dilemma. Either Jesus was good and God, or he was evil and human, for each human is evil and does not deserve eternal life.

The second supposed counter-example is found in John 14:28 , where Jesus said, “My Father is greater than I.” How can the Father be greater if Jesus is equal to God? The answer is that, as a man, Jesus subordinated himself to the Father and accepted limitations inherent with humanity. So, *as man* the Father was greater. Further, in the economy of salvation, the Father holds a higher office than does the Son. Jesus proceeded from the Father as a prophet who brought God’s words and a high priest who interceded for his people. In nature of being as God, Jesus and the Father are equals (John 1:1 ; 8:58 ; 10:30). An earthly father is equally human with his son, but holds a higher office. So the Father and Son in the Trinity are equal *in essence* but different *in function* . In like manner, we speak of the president of a nation as being greater in dignity of office, but not in character.

Jesus cannot be said to have considered himself less than God by nature. This summary helps us understand the differences:

Jesus and the Father as God

Jesus Is Equal . . .	**Jesus Is Subordinate . . .**
in his divine nature.	in his human nature.
in his divine essence.	in his human function.
in his divine attributes.	in his human office.
in his divine character.	in his human position.

Jesus’ Claim to Be God. In addition to Jesus’ claim about himself, his disciples also acknowledged his claim to deity. This they manifested in many ways, including the following:

Disciples Attributed the Titles of Deity to Christ. In agreement with their Master, Jesus’ Apostles called him “the first and the last” (Rev. 1:17 ; 2:8 ; 22:13), “the true light” (John 1:9), their “rock” or “stone” (1 Cor. 10:4 ; 1 Peter 2:6–8 ; cf. Pss. 18:2 ; 95:1), the “bridegroom” (Eph. 5:28–33 ; Rev. 21:2), “the chief shepherd” (1 Peter 5:4), and “the great shepherd” (Heb. 13:20). The Old Testament role of “redeemer” (Ps. 130:7 ; Hos. 13:14) is given to Jesus in the New Testament (Titus 2:13 ; Rev. 5:9). He is seen as the forgiver of sins (Acts 5:31 ; Col. 3:13 ; cf. Ps. 130:4 ; Jer. 31:34) and “savior of the world” (John 4:42 ; cf. Isa. 43:3). The apostles also taught of him, “Christ Jesus, who will judge the living and the dead” (2 Tim. 4:1). All of these titles are unique to Jehovah in the Old Testament but are given to Jesus in the New.

Disciples Considered Jesus the Messiah-God. The New Testament opens with a passage concluding that Jesus is Immanuel (God with us), which refers to the messianic prediction of Isaiah 7:14 . The very title "Christ" carries the same meaning as the Hebrew appellation *Messiah* ("anointed"). In Zechariah 12:10 , Jehovah says, "They will look on me, the one they have pierced." But the New Testament writers apply this passage to Jesus' crucifixion (John 19:37 ; Rev. 1:7). Paul interprets Isaiah 45:22–23 ("For I am God, and there is no other. . . . Before me every knee will bow; by me every tongue will swear") as applying to Jesus: "At the name of Jesus every knee should bow . . . and every tongue confess that Jesus Christ is Lord, to the glory of God the Father" (Phil. 2:10–11). Paul says that all created beings will call Jesus both *Messiah* (Christ) and *Yahweh* (Lord).

Disciples Attributed the Powers of God to Jesus. Works and authority that are God's alone are attributed to Jesus by his disciples. He is said to raise the dead (John 5:21 ; 11:38–44) and to forgive sins (Acts 5:31 ; 13:38). He is said to have been the primary agent in creating (John 1:2 ; Col. 1:16) and sustaining (Col. 1:17) the universe.

Disciples Associated Jesus' Name with God's. His followers used Jesus' name as the agent for answering and the recipient of prayer (Acts 7:59 ; 1 Cor. 5:4). Often in prayers or benedictions, Jesus' name is used alongside God's, as in, "Grace and peace to you from God our Father and the Lord Jesus Christ" (Gal. 1:3 ; Eph. 1:2). The name of Jesus appears with equal status to God's in the so-called trinitarian formulas: Jesus commanded to baptize "in the name [singular] of the Father and of the Son and of the Holy Spirit" (Matt. 28:19). This association is made at the end of 2 Corinthians (13:14): "May the grace of the Lord Jesus Christ, and the love of God, and the fellowship of the Holy Spirit be with you all."

Disciples Called Jesus God. Thomas saw Jesus' wounds and cried, "My Lord and my God!" (John 20:28). Paul calls Jesus the one in whom "all the fullness of Deity lives in bodily form" (Col. 2:9). In Titus, Jesus is "our great God and Savior" (2:13), and the writer to the Hebrews says of him, "Your throne, O God, will last for ever and ever" (Heb. 1:8). Paul says that before Christ existed in the form of man, which clearly refers to being really human, he existed in the "form of God" (Phil. 2:5–8). The parallel phrases suggest that if Jesus was fully human, then he was also fully God. A similar phrase, "the image of God," refers in Colossians 1:15 to the manifestation of God. This description is strengthened in Hebrews where it says, "The Son is the radiance of God's glory and the exact representation of his being, sustaining all things by his powerful word" (1:3).

The prologue to John's Gospel states categorically, "In the beginning was the Word, and the Word was with God, and *the Word [Jesus] was God* " (John 1:1).

Disciples Considered Jesus Superior to Angels. The disciples did not simply believe that Christ was more than a man; they believed him to be greater than any created being, including angels. Paul says Jesus is "far above all rule and authority, power and dominion, and every title that can be given, not only in the present age but also in the one to come" (Eph. 1:21). The demons submitted to his command (Matt. 8:32). Angels that refused the worship of humans are seen worshiping him (Rev. 22:8–9). The author of Hebrews presents a complete argument for Christ's superiority over angels, saying, "For to which of the angels did God ever say, 'You are

my Son; today I have become your Father'? . . . And again, when God brings his firstborn into the world, he says, 'Let all God's angels worship him' " (Heb. 1:5–6).

Disciples' Alleged Counter-claims to Jesus' Deity. Critics offer texts to argue that Jesus' disciples did not believe he was God. They need to be briefly examined in context. Jehovah's Witnesses use John 1:1 to show that Jesus was " *a* god," not " *the* God," because no definite article *the* appears in the Greek. This misunderstands both the language and the verse. In Greek, the definite article is normally used to stress "the individual," and when it is not present the reference is to "the nature" of the one denoted. Thus, the verse can be rendered, "And the Word was of the nature of God." In the context of the following verses and the rest of John (for example, 1:3 ; 8:58 ; 10:30 ; 20:28) it is impossible that John 1:1 suggests that Jesus is anything less than divine. The rest of the New Testament joins John in forthrightly proclaiming that Jesus is God (for example, in Colossians 1:15–16 and Titus 2:13).

Further, some New Testament texts use the definite article and clearly refer to Christ as "the God." It does not matter whether John used the definite article in 1:1 . He and other writers of Scripture considered Jesus as God, not "a god" (see Heb. 1:8).

Critics also use Colossians 1:15 , where Paul classifies Christ as "firstborn of all creation." This seems to imply that Christ is a creature, the first creature as the universe was made. This interpretation likewise is contrary to the context, for Paul in Colossians 1:16 has just said that Christ "created all things" and he is about to say that "the fullness of the Godhead" is in him (2:9). The term *firstborn* frequently refers to a position of preeminence in the family which it clearly does in this context (cf. 1:18). Christ is heir of all things, creator and owner. He is before all things.

The same applies to Revelation 3:14 , another verse used to deny Christ's deity. John refers to Christ as the "beginning of the creation of God." This sounds as if Christ was the first created being. Here, though, the meaning is that Christ is the *Beginner of* God's creation, not the *beginning in* God's creation. The same Greek word for *beginning* is used of God the Father in Revelation 21:6–7 : "It is done. I am the Alpha and the Omega, *the Beginning* and the End. To him who is thirsty I will give to drink without cost from the spring of the water of life. He who overcomes will inherit all this, and *I will be his God* and he will be my son."

Force of the Testimony. There is manifold testimony from Jesus and from those who knew him best that Jesus claimed to be God and that his followers believed that he was. Whether this was the case, there can be no doubt that this is what they believed. As C. S. Lewis observed, when confronted with the boldness of Christ's claims, we are faced with distinct alternatives.

> I am trying here to prevent anyone saying the really foolish things that people often say about Him: "I'm ready to accept Jesus as a great moral teacher, but I don't accept His claim to be God." That is the one thing we must not say. A man who was merely a man and said the sort of things Jesus said would not be a great moral teacher. He would rather be a lunatic—on a level with the man who says he is a poached egg—or else he would be the Devil of Hell. [Lewis, 55–56]

Evidence That Jesus Is God. To say that Jesus and his disciples claimed that he was God in human flesh does not in itself prove that he is God. The real question is whether there is any good reason to believe the claims. To support his claims to deity, Jesus showed supernatural power and authority that is unique in human history.

Fulfilled Messianic Prophecies. There were dozens of predictive prophecies in the Old Testament regarding the Messiah (*see* PROPHECY AS PROOF FOR BIBLE). Consider the following predictions, made centuries in advance, that Jesus would be:

1. born of a woman (Gen. 3:15 ; cf. Gal. 4:4).

2. born of a virgin (Isa 7:14 ; cf. Matt. 1:21f .) (*see* VIRGIN BIRTH).

3. cut off (would die) 483 years after the declaration to reconstruct the temple in 444 B.C . (Dan. 9:24f .; this was fulfilled to the year. See Hoehner, 115–38).

4. The seed of Abraham (Gen. 12:1–3 and 22:18 ; cf. Matt. 1:1 and Gal. 3:16).

5. of the tribe of Judah (Gen. 49:10 ; cf. Luke 3:23 , 33 and Heb. 7:14).

6. a descendant of David (2 Sam. 7:12f .; cf. Matt. 1:1).

7. born in Bethlehem (Micah 5:2 ; cf. Matt. 2:1 and Luke 2:4–7).

8. anointed by the Holy Spirit (Isa. 11:2 ; cf. Matt. 3:16–17).

9. heralded by a messenger (Isa. 40:3 and Mal. 3:1 ; cf. Matt. 3:1–2).

10. a worker of miracles (Isa. 35:5–6 ; cf. Matt. 9:35 ; *see* MIRACLES IN THE BIBLE).

11. cleanser of the temple (Mal. 3:1 ; cf. Matt. 21:12f .).

12. rejected by Jews (Ps. 118:22 ; cf. 1 Peter 2:7).

13. die a humiliating death (Ps. 22 and Isa. 53 ; cf. Matt. 27:31f .). His death would involve:

    enduring rejection by his own people (Isa. 53:3 ; cf. John 1:10–11 ; 7:5 , 48).

    standing silence before his accusers (Isa. 53:7 ; cf. Matt. 27:12–19).

    being mocked (Ps. 22:7–8 ; cf. Matt. 27:31).

    having hands and feet pierced (Ps. 22:16 ; cf. Luke 23:33).

    being crucified with thieves (Isa. 53:12 ; cf. Mark 15:27–28).

praying for his persecutors (Isa. 53:12 ; cf. Luke 23:34).

the piercing of his side (Zech. 12:10 ; cf. John 19:34).

burial in a rich man’s tomb (Isa. 53:9 ; cf. Matt. 27:57–60).

the casting of lots for his garments (Ps. 22:18 ; cf. John 19:23–24).

14. being raised from the dead (Ps. 2:7 and 16:10 ; cf. Acts 2:31 and Mark 16:6).

15. ascending into heaven (Ps. 68:18 ; cf. Acts 1:9).

16. sitting at the right hand of God (Ps. 110:1 ; cf. Heb. 1:3).

These prophecies were written hundreds of years before Christ was born. They are too precise to have been based on reading trends of the times or just intelligent guesses, like “prophecies” in a supermarket tabloid.

They are also more precise than the so-called prophecies of Muhammad in the *Qur’an* (*see* QUR’AN ALLEGED DIVINE ORIGIN OF). Even the most liberal critics admit that the prophetic books were completed at least 400 years before Christ and the Book of Daniel no later than 165 B . C (*see* DANIEL, DATING OF). There is good evidence to date these books much earlier (some Psalms and early prophets to the eighth and ninth centuries B.C .). But any reasonable dating places these writings long before Jesus lived. It is humanly impossible to make clear, repeated and accurate predictions 200 years in the future. The fulfillment of these prophecies in a theistic universe is miraculous and points to a divine confirmation of Jesus as the Messiah.

Some have suggested that there is a natural explanation for what only seem to be supernatural predictions here. One explanation is that the prophecies were accidentally fulfilled in Jesus. He happened to be in the right place at the right time. But what are we to say about the prophecies involving miracles? “He just happened to make the blind man see?” “He just happened to be resurrected from the dead?” These hardly seem to be chance events. If a God is in control of the universe, then chance is ruled out. Further, it is unlikely that these events would have converged in the life of one man. The probability of sixteen predictions being fulfilled in one man has been calculated at 1 in 1045. If we go to forty-eight predictions, the probability is 1 in 10157. It is almost impossible to conceive of a number that big (Stoner, 108).

But it is not just a logical improbability that rules out this theory; it is the moral implausibility of an all-powerful and all-knowing God letting things get out of control so that all his plans for prophetic fulfillment are ruined by someone who just happened to be in the right place at the right time. God cannot lie, nor can he break a promise (Heb. 6:18). So we must conclude that he did not allow his prophetic promises to be thwarted by chance. All the evidence points to Jesus as the divinely appointed fulfillment of the messianic prophecies. He was God’s man, confirmed by God’s signs. If God made the predictions to be fulfilled in the life of Christ, he would not allow them to be fulfilled in the life of any other. The God of truth would not allow a lie to be confirmed as true (*see* MIRACLES AS CONFIRMATION OF TRUTH).

A Miraculous and Sinless Life. The very nature of Christ's life demonstrates his claim to deity. To live a truly sinless life would be a momentous accomplishment, but to claim to be God and offer a sinless life as evidence is another matter. Muhammad did not (*see* MUHAMMAD, CHARACTER OF). Nor did Buddha nor any other religious leader (*see* CHRIST, UNIQUENESS OF). Some of Jesus' enemies brought false accusations against him, but the verdict of Pilate at his trial has been the verdict of history: "I find no basis for a charge against this man" (Luke 23:4). A soldier at the cross agreed, saying, "Surely this was a righteous man" (Luke 23:47), and the thief on the cross next to Jesus said, "this man has done nothing wrong" (Luke 23:41). But the real test is what those who were closest to Jesus said of his character. His disciples had lived and worked with him for three years at close range, yet their opinions of him were not diminished. Peter called Christ, "a lamb without blemish or defect" (1 Peter 1:19) and added, "no deceit was found in his mouth" (2:22). John called him, "Jesus Christ, the Righteous One" (1 John 2:1 ; cf. 3:7). Paul expressed the unanimous belief of the early church that Christ "had no sin" (2 Cor. 5:21), and the writer of Hebrews says that he was tempted as a man, "yet was without sin" (4:15). Jesus himself once challenged his accusers, "Can any of you prove me guilty of sin?" (John 8:46), but no one was able to find him guilty of anything. He forbid retaliation (Matt. 5:38–42). Unlike Muhammad, he never used the sword to spread his message (Matt. 26:52). This being the case, the impeccable character of Christ gives a double testimony to the truth of his claim. It provides supporting evidence as he suggested, but it also assures us that he was not lying when he said that he was God.

Beyond the moral aspects of his life, the miraculous nature of his ministry is a divine confirmation. Jesus performed an unprecedented display of miracles. He turned water to wine (John 2:7f .), walked on water (Matt. 14:25), multiplied bread (John 6:11f .), opened the eyes of the blind (John 9:7f .), made the lame to walk (Mark 2:3f .), cast out demons (Mark 3:11f .), healed the multitudes of all kinds of sickness (Matt. 9:35), including leprosy (Mark 1:40–42), and even raised the dead to life on several occasions (John 11:43–44 ; Luke 7:11–15 ; Mark 5:35f .). When asked if he was the Messiah, he used his miracles as evidence to support the claim saying, "Go back and report to John what you hear and see: The blind receive sight, the lame walk, those who have leprosy are cured, the deaf hear, the dead are raised" (Matt. 11:4–5). This special outpouring of miracles was a special sign that Messiah had come (see Isa. 35:5–6). The Jewish leader Nicodemus even said, "Rabbi, we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him" (John 3:2). To a first-century Jew, miracles such as Christ performed were clear indications of God's approval of the performer's message (*see* MIRACLES AS CONFIRMATION OF TRUTH). But in Jesus' case, part of that message was that he was God in human flesh. Thus, his miracles verify his claim to be true deity.

The Resurrection. Nothing like the resurrection of Christ is claimed by any other religion, and no other miracle has as much historical confirmation. Jesus Christ rose from the dead on the third day in the same physical body, though transformed, in which he died. In this resurrected physical body he appeared to more than 500 disciples on at least one of twelve different occasions over a forty-day period and conversed with them (Acts 1:3 ; 1 Cor. 15:3–6 ; *see* RESURRECTION, ORDER OF EVENTS). The nature, extent, and times of, these appearances remove any doubt that Jesus indeed rose from the dead in the numerically same body of flesh and bones in which he died. During each appearance he was seen and heard with the natural senses of the

observer. On at least four occasions he was touched or offered himself to be touched. At least twice he definitely was touched with physical hands. Four times Jesus ate physical food with his disciples. Four times they saw his empty tomb, and twice he showed them his crucifixion scars. He literally exhausted the ways it is possible to prove that he rose bodily from the grave. No event in the ancient world has more eyewitness verification than does the resurrection of Jesus (*see* RESURRECTION, EVIDENCE FOR).

What is more amazing about the resurrection is the fact that both the Old Testament and Jesus predicted that he would rise from the dead. This highlights the evidential value of the resurrection of Christ in a unique way.

Old Testament prediction of the resurrection. Jewish prophets predicted the resurrection in specific statements and by logical deduction. The apostles applied specific Old Testament texts to the resurrection of Christ (Ps. 2:7 ; cf. Heb. 1:5 and Acts 13:33). Peter says that, since we know that David died and was buried, he must have been speaking of the Christ when he said, "you will not abandon me to the grave, nor will you let your Holy One see decay" (Ps. 16:8–11 , quoted in Acts 2:25–31). No doubt Paul used this and similar passages in the Jewish synagogues when "he reasoned with them from the Scriptures, explaining and proving that the Christ had to suffer and rise from the dead" (Acts 17:2–3).

Also, the Old Testament teaches the resurrection by logical deduction. There is clear teaching that the Messiah was to die (cf. Ps. 22 ; Isa. 53) and equally evident teaching that he is to have an enduring political reign from Jerusalem (Isa. 9:6 ; Dan. 2:44 ; Zech. 13:1). There is no viable way to reconcile these two teachings unless the Messiah who dies is raised from the dead to reign forever. There is no indication in the Old Testament of two Messiahs, one suffering and one reigning, as some Jewish scholars have suggested. References to the Messiah are always in the singular (cf. Isa. 9:6 ; 53:1f .; Dan. 9:26). No second Messiah is ever designated.

Yet Jesus had begun no reign when he died. Only by his resurrection could the prophecies of a Messianic kingdom be fulfilled.

Jesus' prediction of his resurrection. On several occasions Jesus also predicted his resurrection from the dead. In the earliest part of his ministry, he said, "Destroy this temple, [of my body] and I will raise it again in three days" (John 2:19 , 21). In Matthew 12:40 , he said, "as Jonah was three days and nights in the belly of a huge fish, so the Son of Man will be three days and nights in the heart of the earth." To those who had seen his miracles and stubbornly would not believe, he said, "A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of the prophet Jonah" (Matt. 12:39 ; 16:4). After Peter's confession, "he then began to teach them that the Son of Man must suffer many things . . . and that he must be killed and after three days rise again" (Mark 8:31). This became a central part of his teaching from that point until his death (Matt. 27:63 ; Mark 14:59). Further, Jesus taught that he would raise himself from the dead, saying of his life, "I have authority to lay it down and I have authority to take it up again" (John 10:18).

Philosopher of science Karl Popper argued that, whenever a "risky prediction" is fulfilled, it counts as confirmation of the theory that predicted it. If so, then the fulfillment of Jesus'

prediction of his own resurrection is confirmation of his claim to be God. For what could be riskier than predicting your own resurrection? If a person will not accept these lines of evidence as support of Christ's truth claim, then he has a bias that will not accept anything as evidence.

Summary. Jesus claimed to be God and proved it by a convergence of three unprecedented sets of miracles: fulfilled prophecy, a miraculous life, and his resurrection from the dead. This unique convergence of supernatural events confirms his claims to be God in human flesh. It also answers David Hume 's objection that, since all miracles have similar claims, their proof claims are mutually canceling. Not all religions have like miracle claims. Only in Christianity does its leader claim to prove to be God by a convergence of unique supernatural events such as Jesus offered (*see* CHRIST, UNIQUENESS OF). Hence, only Christ is miraculously confirmed to be God and, by virtue of that, to be believed in whatever he teaches as true.

Christ, Uniqueness of. Orthodox Christians believe that Jesus is the unique Son of God in human flesh (*see* CHRIST, DEITY OF). However, some unbelievers, who may or may not believe Jesus existed, do not believe that Jesus was necessarily a wise or a particularly good man. Others, such as Muslims (*see* ISLAM), think that Jesus was a prophet, along with other prophets. Hinduism depicts Christ as one among many great gurus. Liberal Christians and many others hold Christ as a good human being and a great moral example.

CT *Christianity Today*

In his essay "Why I Am Not a Christian," the agnostic Bertrand Russell wrote, "Historically it is quite doubtful whether Christ ever existed at all, and if he did we know nothing about him." As to Christ's character, he said, "I cannot myself feel that either in the matter of wisdom or in the matter of virtue Christ stands quite as high as some other people known to history. I think I should put Buddha and Socrates above him in those respects" (Russell, *Why I Am Not a Christian*).

Deity and Humanity. Christianity is unique among world religions, and Christ's true uniqueness is the centerpiece of Christianity. The truth about Christ is based primarily on the New Testament documents which have been shown elsewhere to be authentic (*see* NEW TESTAMENT MANUSCRIPTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF). The New Testament record, especially the Gospels, is one of the most reliable documents from the ancient world. From these documents we learn that numerous facets of Christ are absolutely unique.

Jesus Christ was unique in that he alone, of all who ever lived, was both God and man. The New Testament teaches the fully unified deity and humanity of Christ. The Nicene Creed (325) states the uniform belief of all orthodox Christianity that Christ was fully God and fully man in one person. All heresies regarding Christ deny one or both of these propositions. This as a claim alone makes him unique above all other religious leaders or persons who have ever lived, and it can be backed up with factual evidence. Some of this evidence is seen in other aspects of Christ's uniqueness (*see* CHRIST, DEITY OF).

The Supernatural Nature of Christ. *Unique in Messianic Prophecies.* Jesus lived a miracle-filled and supernaturally empowered existence from his conception to his ascension. Centuries before his birth he was foretold by supernatural prophecy (*see* MIRACLES IN THE BIBLE ; PROPHECY, AS PROOF OF THE BIBLE).

The Old Testament, which even the most ardent critic acknowledges was in existence centuries before Christ, predicted the *where* (Micah 5:2), the *when* (Dan. 9:26), and the *how* (Isa. 7:14) of Christ's entry into the world. He would be born of a woman (Gen. 3:15) from the line of Adam's son Seth (Gen. 4:26), through Noah's son Shem (Gen. 9:26–27), and Abraham (Gen. 12:3 ; 15:5). He would come through the tribe of Judah (Gen. 49:10) and would be the son of David (2 Sam. 7:12f .). The Old Testament predicted that Christ would die for our sins (Psalm 22 ; Isaiah 53 ; Dan. 9:26 ; Zech. 12:10) and would rise from the dead (Pss. 2:7 ; 16:10).

All of these supernatural prophecies were uniquely fulfilled in Jesus Christ. This is not true of any great religious leader or person who has ever lived, including Muhammad (*see* MUHAMMAD, ALLEGED MIRACLES OF).

Unique in Conception. Christ was not only supernaturally anticipated; he was also miraculously conceived. While announcing his virgin conception, Matthew (1:22–23) points to the prophecy of Isaiah (7:14). Luke, a physician, records this miraculous inception of human life (Luke 1:26f .); Paul alludes to it in Galatians 4:4 . Of all human conceptions, Jesus' stands as unique and miraculous (*see* VIRGIN BIRTH).

Unique in Life. From his very first miracle in Cana of Galilee (John 2:11), Jesus' ministry was marked by its miracles (cf. John 3:2 ; Acts 2:22). These were not healings of delusional illnesses, nor were they explainable on natural grounds. They were unique (*see* MIRACLE) in that they were immediate, always successful, had no known re lapses, and healed illnesses that were incurable by medicine, such as persons born blind (John 9). Jesus even raised several people from the dead, including Lazarus whose body was already to the point of rotting (John 11:39).

Jesus turned water to wine (John 2:7f .), walked on water (Matt. 14:25), multiplied bread (John 6:11f .), opened the eyes of the blind (John 9:7f .), made the lame to walk (Mark 2:3f .), cast out demons (Mark 3:10f .), healed all kinds of sicknesses (Matt. 9:35), including leprosy (Mark 1:40–42), and even raised the dead to life on several occasions (Mark 5:35f .; Luke 7:11–15 ; John 11:43–44). When asked if he was the Messiah, he used his miracles as evidence to support the claim saying, "Go back and report to John what you hear and see: The blind receive sight, the lame walk, those who have leprosy are cured, the deaf hear, the dead are raised" (Matt. 11:4–5). This outpouring of miracles was set forth ahead of time by prophets as a special sign that Messiah had come (see Isa. 35:5–6). Nicodemus even said, "Rabbi, we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him" (John 3:2).

Unique in Death. Events surrounding Christ's death were miraculous (*see* CHRIST, DEATH OF). This included the darkness from noon to 3 P . M . (Mark 15:33) and the earthquake that opened the tombs and rent the temple veil (Matt. 27:51–54). The manner in which he suffered the excruciating torture of crucifixion was miraculous. The attitude he maintained toward his mockers and executioners was miraculous, saying, "Father forgive them, for they do not know what they are doing" (Luke 23:34). The way in which he actually died was miraculous. As Jesus said, "I lay down my life—only to take it up again. No one takes it from me, but I lay it down of my own accord" (John 10:18). At the very moment of his departure, he was not overcome by death. Rather, he voluntarily dismissed his spirit. "Jesus said, 'It is finished.' With that, he bowed his head and gave up his spirit" (John 19:30).

Unique in the Resurrection. The crowning miracle of Jesus' earthly mission was the resurrection (*see* RESURRECTION, EVIDENCE FOR). It was not only predicted in the Old Testament (Psalms 2 , 16), but Jesus himself predicted it from the very beginning of his ministry: He said, " 'Destroy this temple, and I will raise it again in three days.' . . . But the temple he had spoken of was his body" (John 2:19 , 21 ; Matt. 12:40–42 ; 17:9). Jesus demonstrated the reality of his resurrection in twelve appearances over forty days to more than 500 people.

Unique in the Ascension. Just like his entrance into this world, Jesus' departure was also miraculous. After commissioning his disciples, "he was taken up before their very eyes, and a cloud hid him from their sight. They were looking intently up into the sky as he was going, when suddenly two men dressed in white stood beside them" (Acts 1:10). Contrary to the view of some (see Harris, 423), this was not a "parable" but a literal bodily ascension into heaven from which he will return in the same literal body to reign in this world (Acts 1:11 ; Rev. 1:7 , 19–20). The great Christian creeds clearly emphasize the miraculous bodily ascension of Christ.

Unique in Sinlessness. Some of Jesus' enemies brought false accusations against him, but the verdict of Pilate at his trial has been the verdict of history: "I find no basis for a charge against this man" (Luke 23:4). A soldier at the cross agreed saying, "Surely this was a righteous man" (Luke 23:47), and the thief on the cross next to Jesus said, "This man has done nothing wrong" (Luke 23:41).

For a description of what those closest to Jesus thought of his character, Hebrews says that he was tempted as a man "yet without sinning" (4:15). Jesus himself once challenged his accusers, "Which of you convicts me of sin?" (John 8:46), but no one was able to find him guilty of anything. This being the case, the impeccable character of Christ gives a double testimony to the truth of his claim. Jesus' sinlessness was unique.

The Character of Christ Is Unique. Christ's character was unique in other ways. To a perfect degree he manifested the best of virtues. He also combined seemingly opposing traits.

In Exemplifying Virtues. Even Bertrand Russell , who fancied he saw flaws in Christ's character, confessed nonetheless that "What the world needs is love, Christian love, or compassion." But this belies a belief in what most others acknowledge, namely, that Christ was the perfect manifestation of the virtue of love.

Jesus' willing submission to the ignominious suffering and death by crucifixion, while he maintained love and forgiveness toward those killing him is proof of this virtue (Luke 23:34 , 43). He alone lived perfectly what he taught in the Sermon on the Mount (Matt. 5–7). He did not retaliate against his enemies; instead, he forgave them. He rebuked his disciples for misusing the sword (Matt. 26:52), and miraculously reattached and healed the amputated ear of one of the mob who came to take him to his death (Luke 22:50).

Jesus was the perfect example of patience, kindness, and compassion. He had compassion on the multitudes (Matt. 9:36), to the point of weeping over Jerusalem (Matt. 23:37). Even though he justly condemned (in no uncertain terms) the Pharisees who misled the innocent (Matt. 23), he did not hesitate to speak with Jewish leaders who showed interest (John 3).

In Combining Seemingly Opposite Traits. One of the unique things about Christ is the way he brought together in his person characteristics that in anyone else would seem impossible. He was a perfect example of humility, to the extent of washing his disciples' feet (John 15). Yet he made bold claims to deity, such as, "I and the Father are One" (John 10:30) and "before Abraham was, I AM" (John 8:58 ; cf. Exod. 3:14). The claim, "I am meek and lowly in heart" (Matt. 11:29) sounds arrogant, but he backed his words among little children (Matthew 18). Yet he was so strong as to overturn the tables of those who merchandised God's house, cracking a whip to chase away their animals (John 2). Jesus was known for the virtue of kindness, yet he was severe with hypocrites who misled the innocent (Matthew 23).

Life and Teaching. As Jesus himself declared, the substance of what he taught finds its roots in the Old Testament (Matt. 5:17–18). He condemned meaningless traditions and misinterpretations of the Old Testament (Matt. 5:21f ., 15:3–5 ; *see* ACCOMMODATION THEORY

). Though the essence of what he taught was not new, the form and the manner in which he taught it was unique. The Sermon on the Mount employs a fresh teaching method.

The vivid parables, such as the good Samaritan (Luke 10), the prodigal son (Luke 15), and the lost sheep (Luke 15:4f .), are masterpieces of communication. Parables stand at the heart of Jesus' teaching style. By drawing on the lifestyles of the people to illustrate the truths he wished to convey, Jesus communicated truth and refuted error. Also, by speaking in parables he could avoid "casting pearls before swine." He could confound and confuse those who did not wish to believe (the outsider), yet illuminate those who did desire to believe (the insider). While the use of allegories and parables themselves was not unique, the manner in which Jesus employed parables was. He brought the art of teaching eternal mystery in terms of everyday experience to a new height. The "laws of teaching" identified by modern pedagogues (Shafer, *Seven Laws*), were practiced perfectly in Jesus' teaching style.

The manner in which Jesus taught was unique. The Jewish intellectuals admitted, "No one ever spoke the way this man does" (John 7:46). As he taught in parables, he was thronged by the multitudes (Matt. 13:34). As a lad, he impressed even the rabbis in the temple. For "Everyone who heard him was amazed at his understanding and his answers" (Luke 2:47). Later, he confounded those who attempted to trick him so that "No one could say a word in reply, and from that day on no one dared to ask him any more questions" (Matt. 22:46).

Christ Is Superior. Jesus Christ was unique in every way. From his complete deity to his perfect humanity; from his miraculous conception to his supernatural ascension; from his impeccable character to his incomparable teaching—Jesus stands above all other religious or moral teachers.

Christ Is Superior to Moses. As a Jew himself, Jesus had no argument with Moses, the prophet who brought the Jewish law and led the Israelites out of Egyptian bondage to freedom as an independent nation. Moses and Jesus were prophets of the same God, and Jesus said that he did not come to abolish the law (found in the writings of Moses) but to fulfill it (Matt. 5:17). Jesus implies that Moses' words are God's words (compare Matt. 19:4–5 with Gen. 2:24). However, in many respects, we find that Jesus is superior to Moses.

Christ is a superior prophet to Moses. In Deuteronomy 18:15–19 , Moses predicted that God would raise up a Jewish Prophet with a special message. Anyone who did not believe this prophet would be judged by God. This passage has been traditionally interpreted as referring to Messiah. Genesis 3:15 is also understood by many to refer to Jesus as the seed of the woman who would crush the head of the serpent.

Christ's revelation is superior to that of Moses. "The Law was given through Moses; Grace and truth were realized through Jesus Christ" (John 1:17). While Moses set up the moral and social structures which guided the nation, the law could not save anyone from the penalty of their sins, which is death. As Paul says, "by the works of the law no flesh will be justified in his sight; for through the law comes the knowledge of sin" (Rom. 3:20). The revelation which came through Jesus, though, was one in which the sins which the law made known are forgiven, "being justified as a gift by his grace through the redemption which is in Christ Jesus" (Rom.

3:24). Christ's revelation builds on the foundation of Moses by solving the problem of which the law made us aware.

Christ's position is superior to that of Moses. Moses is the greatest of the Old Testament prophets, but Jesus is more than a prophet. As the Epistle to the Hebrews says, "Moses was faithful *in* all his house as a servant, for a testimony of those things which were to be spoken later; but Christ was faithful as a Son *over* his house" (Heb. 3:5–6). While Moses served God, Jesus was declared to be the Son of God with the right to rule over all servants.

Christ's miracles are superior to those of Moses. Moses performed great miracles, but Christ's miracles were greater in degree (*see* MIRACLES IN THE BIBLE). Moses lifted the bronze serpent to give healing to those who would look, but in this he was merely following instructions. He never made the blind to see, or the deaf to hear. Also, there is nothing in Moses' ministry to compare with the resurrection of Lazarus or of Christ.

Christ's claims are superior to those of Moses. Moses never made a claim to be God and did nothing other than fulfill his role as a prophet. Jesus did claim to be God and predicted his own resurrection to prove it.

Christ Is Superior to Muhammad. Muhammad, the founder of Islam agreed with Jesus and Moses that God is one (*see* ISLAM), that he created the universe, and that he is beyond the universe. There is considerable agreement over the events of the first sixteen chapters of Genesis, to the point where Hagar was cast out from Abram's house. After this, the Bible focuses on Isaac while Islam is concerned with what happened to their forefather, Ishmael. The teaching of Muhammad may be summarized in the five doctrines:

1. Allah is the one true God.
2. Allah has sent many prophets, including Moses and Jesus, but Muhammad is the last and greatest.
3. The *Qur'an* is the supreme religious book (*see* QUR'AN, ALLEGED DIVINE ORIGIN OF), taking priority over the Law, the Psalms, and the Injil (Gospels) of Jesus.
4. There are many intermediate beings between God and us (angels), some of whom are good and some evil.
5. Each man's deeds will be weighed to determine who will go to heaven and hell at the resurrection. The way to gain salvation includes reciting the Shahadah several times a day ("There is no God but Allah; and Muhammad is his prophet."), praying five times a day, fasting a month each year, almsgiving, and making pilgrimages to Mecca.

Christ offers a superior message. Jesus made superior claims to those made by Muhammad. Jesus claimed to be God (*see* CHRIST, DEITY OF). Muhammad claimed only to be a mere man who was a prophet (*see* MUHAMMAD, ALLEGED DIVINE CALL OF). If Jesus, then, is not God, he is certainly no prophet. Jesus offered a superior confirmation for his claims. Jesus performed

numerous miracles. Muhammad performed no miracles and admitted in the *Qur'an* that Jesus did many. Only Jesus died and rose from the dead.

Christ offers a better way of salvation. Unlike the God of Islam, the God of the Bible reached out to us by sending his Son to earth to die for our sins. Muhammad offered no sure hope for salvation, only guidelines for working oneself into Allah's favor. Christ provided all that is needed to get us to heaven in his death, "For Christ also died once for all, the just for the unjust, in order that he might bring us to God" (1 Peter 3:18).

Christ offers a superior model life. Muhammad spent the last ten years of his life at war. As a polygamist he exceeding even the number of wives (four) he had prescribed for his religion. He also violated his own law by plundering caravans coming to Mecca, some of whom were on pilgrimage. He engaged in retaliation and revenge, contrary to his own teaching (*see* MUHAMMAD, CHARACTER OF).

Jesus Is Superior to Hindu Gurus. In Hinduism (*see* HINDUISM, VEDANTA) a *guru* is a teacher. The Hindu scriptures cannot be understood by reading; they must be learned from a guru. These holy men are worshiped even after their deaths as supposed incarnations of the gods. What they teach is that humans need liberation from the endless cycle of reincarnation (*samsara*) which is brought on by *karma* , the effects of all words, deeds, and actions in the present and all former lives. Liberation (*moksha*) is obtained when the individual expands his being and consciousness to an infinite level and realizes that *atman* (the self) is the same as *Brahman* (the one absolute being from which all multiplicity comes).

In other words, each Hindu must realize personal godhood. Such a realization can only be achieved by following *Jnana Yoga*— salvation by knowledge of the ancient writings and inward meditation; *Bhakti Yoga*— salvation by devotion to one of the many deities; *Karma Yoga*— salvation by works, such as ceremonies, sacrifices, fasting, and pilgrimages, which must be done without thought of rewards. Each of these methods will to some extent include *Raja Yoga* , a meditation technique involving control over the body, breathing, and thoughts.

Hinduism as it is actually practiced consists largely of superstition, legendary stories about the gods, occult practices, and demon worship.

Christ teaches a superior worldview. Jesus teaches a theistic worldview (*see* THEISM). But pantheism, the realization of godhood, is the heart of Hinduism.

Christ's teaching is morally superior. Orthodox Hinduism insists that suffering people be left to suffer, because it is their destiny, as determined by *karma* . Jesus said, "Love your neighbor as yourself." He defined neighbor as anyone in need of help. John said, "But whoever has the world's goods, and sees his brother in need and closes his heart against him, how does the love of God abide in him?" (1 John 3:17). Also, many, if not most, gurus use their esteemed position to exploit their followers financially and sexually. The Bagwan Sri Rajneesh accumulated dozens of Rolls Royces as gifts from his followers. The Beatles became disenchanted with the Maharishi Mahesh Yogi when they learned that he was much more interested in the body of one of the

women in their party than with any of their spirits. They admitted, “We made a mistake.” Even the respected guru Mahatma Gandhi slept with women other than his wife.

Jesus gives a superior path to enlightenment. While the gurus are necessary to understand the sacred writings of *Bhagavad Gita* and the *Upanishads* , there is no esoteric or hidden truth in the Bible that must be explained apart from ordinary understanding. Christian meditation is not an effort to empty the mind, but rather to fill it with the truth of Scriptural principles (Psalm 1). Inward meditation is like peeling an onion; you keep tearing off layer after layer until, when you reach the middle, you find that there is nothing there. Meditation on God’s Word begins with content and opens up the meaning until it yields contentment of soul.

Christ teaches a better way of salvation. The Hindu is lost in the karmic cycle of reincarnation until he reaches *moksha* and is left to work the way out of this maze alone. Jesus promised that we would be saved by faith (Eph. 2:8–9 ; Titus 3:5–7), and that we could know that our salvation is guaranteed (Eph. 1:13–14 ; 1 John 5:13).

Christ Is Superior to Buddha. Siddhartha Gautama (*Buddha* is a title meaning “enlightened one”) is inferior to Christ. Buddhism began as a reformation movement within Hinduism, which had become a system of speculation and superstition. To correct this, Gautama rejected the rituals and occultism and developed an essentially atheistic religion (though later forms of Buddhism returned to the Hindu gods). His basic beliefs are summed in the Four Noble Truths:

1. Life is suffering.

2. Suffering is caused by desires for pleasure and prosperity.

3. Suffering can be overcome by eliminating desires.

4. Desire can be eliminated by the Eightfold Path.

The Eightfold Path is both a system of religious education and the moral precepts of Buddhism . It includes (1) right knowledge (“Four Noble Truths”), (2) right intentions, (3) right speech, (4) right conduct (no killing, drinking, stealing, lying, or adultery), (5) right occupation (which causes no suffering), (6) right effort, (7) right mindfulness (denial of the finite self), and (8) right meditation (*Raja Yoga*).

The goal of all Buddhists is not heaven or being with God, for there is no God in Gautama’s teaching. Rather they seek nirvana, the elimination of all suffering, desires, and the illusion of self-existence. While a liberal branch of Buddhism (Mahayana Buddhism) now has deified Gautama as a savior, Theravada Buddhism stays closer to Gautama’s teachings and maintains that he never claimed divinity. As to his being a savior, it is reported that Buddha’s last words were, “Buddhas do but point the way; work out your salvation with diligence.” As a variant form of Hinduism, Buddhism is subject to all of the criticisms mentioned above. Jesus’ teaching is superior. Further:

Christ fills life with more hope. Jesus' teaching is superior to Buddha's in that Jesus taught hope in life, while Buddhism sees life only as suffering and selfhood as something to be eradicated. Jesus taught that life is a gift of God to be enjoyed (John 10:10) and that the individual is to be honored supremely (Matt. 5:22). Furthermore, he promised hope in the life to come (John 14:6).

Christ offers a better way of salvation. The Buddhist also teaches reincarnation as the means of salvation. However, in this form the self or individuality of the soul is eradicated at the end of each life. So even though you live on, it is not you as an individual who has any hope of attaining nirvana. Jesus promised hope to each man and woman as an individual (John 14:3) and said to the thief on the cross beside him, "Today you shall be with me in paradise" (Luke 23:43).

Jesus is a better Christ. Jesus claimed and proved to be God in human flesh. Buddha was a mere mortal man who died and never rose again. Jesus, however, rose bodily from the grave. Gautama simply wanted to bring his "enlightenment" to others to help them to nirvana, where all desires and individual existence is lost.

Christ Is Superior to Socrates. Although Socrates never started a religion, he has attracted a great following. Socrates never wrote anything, but Plato , his disciple, wrote a great deal about him, although these accounts may be as much Plato's ideas as the thought of Socrates. Plato presents Socrates as a man convinced that God has appointed him to the task of promoting truth and goodness by making humans examine their words and deeds to see if they are true and good. Vice, in his opinion, was merely ignorance, and knowledge led to virtue. He is credited as the first person to recognize a need to develop a systematic approach to discovering truth, though the system itself was finally formulated by Aristotle—a disciple of Plato's.

Like Christ, Socrates was condemned to death on the basis of false accusations from authorities who were threatened by his teaching. He could have been acquitted if he had not insisted on making his accusers and judges examine their own statements and lives, which they were unwilling to do. He was content to die, knowing that he had carried out his mission to the end, and that death, whether a dreamless sleep or a wonderful fellowship of great men, was good.

Christ has a superior basis for truth. Jesus, like Socrates, often used questions to make his hearers examine themselves, but his basis for knowing the truth about human beings and God was rooted in the fact that he was the all-knowing God. He said of himself, "I am the way, the truth, and the life." He was, in his very being, the fount from which all truth ultimately flowed. Likewise, as God, he was the absolute Goodness by which all other goodness is measured. He once asked a young man to examine his words by saying, "Why do you call me good? No one is good except God alone." Jesus was the very truth and good which Socrates wanted to understand.

Christ gives more certain knowledge. While Socrates taught some true principles, he often was left to speculate about many important issues, such as what happens at death (*see* CERTAINTY/CERTITUDE). Jesus gave a sure answer to such questions, because he had certain knowledge of the human destination (John 5:19–29 ; 11:25–26). Where reason (Socrates) has

insufficient evidence to make a definite conclusion, revelation (Jesus) gives answers which might never be anticipated.

Christ's death was more noble. Socrates died for a cause and did so with courage, which is certainly to be commended. However, Jesus died as a substitute for others (Mark 10:45) to pay the penalty that they deserved. Not only did he die for his friends, but also for those that were, and would remain, his enemies (Rom. 5:6–7). Such a demonstration of love is unequaled by any philosopher or philanthropist.

Christ's proof of his message is superior. Rational proofs are good when there is sound evidence for their conclusions (*see* GOD, EVIDENCE FOR). But Socrates cannot support his claim to be sent by God with anything that compares to the miracles of Christ and his resurrection (*see* RESURRECTION, EVIDENCE FOR). Pagan prophets and prophetesses, such as the Oracle of Delphi, do not compare with the precise biblical prediction and miracles (*see* PROPHECY AS PROOF OF THE BIBLE). In these acts there is a superior proof that Jesus' message was authenticated by God as true (*see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES AS CONFIRMATION OF TRUTH).

Christ Is Superior to Lao Tse (Taoism). Modern Taoism is a religion of witchcraft, superstition, and polytheism, but it was originally a system of philosophy, and that is how it is being presented to Western culture today. Lao Tse built this system around one principle which explained everything in the universe and guided it all. That principle is called the Tao. There is no simple way to explain the Tao (*see* ZEN BUDDHISM). The world is full of conflicting opposites—good and evil, male and female, light and dark, yes and no. All oppositions are manifestations of the conflict between *Yin* and *Yang* . But in ultimate reality *Yin* and *Yang* are completely intertwined and perfectly balanced. That balance is the mystery called the Tao. To understand the Tao is to realize that all opposites are one and that truth lies in contradiction, not in resolution (*see* LOGIC ; FIRST PRINCIPLES).

Taoism goes beyond this to urge living in harmony with the Tao. A person should enter a life of complete passiveness and reflection on such questions as, "What is the sound of one hand clapping?" or "If a tree falls in the forest when no one is there to hear it, does it make a sound?" One should be at peace with nature and avoid all forms of violence. This system of philosophy has many similarities with Zen Buddhism.

Christ brings superior freedom. Jesus allows humans to use their reason. In fact, he commands them to do so (Matt. 22:37 ; cf. 1 Peter 3:15); Taoism does not, at least on the highest level. Taoism engages in the claim that "Reason does not apply to reality." That statement itself is self-defeating, for it is a reasonable statement about reality. It is either true or false about the way things really are, and not contradictory, yet it claims that ultimately truth lies in contradiction. Jesus commanded: "Love the Lord your God with all your heart, and with all your soul, *and with all your mind* . This is the great and foremost commandment" (Matt. 22:37–38 , emphasis added). God says, "Come now, and let us reason together," (Isa. 1:18). Peter exhorts us to "give a reason for the hope that you have" (1 Peter 3:15b).

Jesus encouraged the use of freedom to choose, never imposing himself on the unwilling (Matt. 23:37). Taoism asks each follower to set will on the shelf; to give up the power to change

things. Jesus says that each person has a choice and that this choice makes the difference. Each chooses to believe or not believe (John 3:18), to obey or disobey (John 15:14), to change the world or be changed by it (Matt. 5:13–16).

Jesus allows each person the freedom to be saved. Taoism offers only a way to resign oneself to the way things are. Christ offers a way to change both who we are and what we are, so that we might know the joys of life. Rather than accepting death as an inevitable end, Christ provides a way to conquer death by his resurrection. Lao Tse can make no such claim.

Conclusion. Christ is absolutely unique among all who ever lived (*see* WORLD RELIGIONS AND CHRISTIANITY). He is unique in his supernatural nature, in his superlative character, and in his life and teaching (*see* CHRIST, DEITY OF). No other world teacher has claimed to be God. Even when the followers of some prophet deified their teacher, there is no proof given for that claim that can be compared to the fulfillment of prophecy, the sinless and miraculous life, and the resurrection. No other religious leader (except some who copied Christ) offered salvation by faith, apart from works, based on acting to take away the guilt for human sin. No religious or philosophical leader has displayed the love for people that Jesus did in dying for the sins of the world (John 15:13 ; Rom. 5:6–8). Jesus is absolutely unique among all human beings who ever lived.

Christ of Faith vs. Jesus of History. The distinction between the "Christ of faith" and the Jesus of history is often traced to Martin Kahler (1835–1912), though he probably did not mean by the term what most contemporary critics do. Even before Kahler, Gotthold Lessing (1729–1781) laid the ground for the separation of the Christ of faith from the Jesus of history. What happened in that separation through the "quests for the historical Jesus" is discussed in the article, Jesus, Quest for the Historical.

Lessing's "Ditch." As early as 1778, Lessing viewed the gulf between the historical and the eternal as "the ugly ditch which I cannot get across, however often and however earnestly I have tried to make the leap" (Lessing, 55). This gulf separated the contingent truths of history from the necessary truths of religion. And there is simply no way to span it from our side. Hence, he concluded that no matter how probable one finds the Gospel accounts, they can never serve as the basis for knowing eternal truths.

Kant's Gulf. In 1781, Immanuel Kant spoke in his *Critique of Pure Reason* of a gulf between the contingent truths of our experience and the necessary truths of reason. Hence, he believed it necessary to destroy any philosophical or scientific basis for belief in God. "I have therefore found it necessary," he said, "to deny *knowledge* , in order to make room for *faith* " (Kant "Preface," 29). Kant held that one must approach the realm of religion by faith. It was the realm of practical reason, not of theoretical reason. He set up an impassable gulf between the objective, scientific, knowable realm of facts and the unknowable realm of value (morality and religion). This fact/value dichotomy is at the basis of the later disjunction between the Christ of faith and the Jesus of history.

Kahler's Historical/Historic Divide. The title of Kahler's book described the dichotomy he saw as necessary: *The So-Called Historical Jesus and the Historic, Biblical Christ* (1892). This volume is credited with originating the distinction between "historical" (*historisch*) Jesus and "historic" (*Geschichtlich*) Christ. What Kahler had in mind by "historical," though, was the reconstructed Jesus of liberal critical scholarship of his time, not the real first-century Jesus.

Kahler did ask: "Should we expect [believers] to rely on the authority of the learned men when the matter concerns the source from which they are to draw the truth for their lives?" He added, "I cannot find sure footing in probabilities or in a shifting mass of details, the reliability of which is constantly changing" (Kahler, 109, 111). While Kahler did not accept an inerrant (errorless) Bible, he did maintain that the Gospels are generally reliable. He spoke of their "comparatively remarkable trustworthiness." Kahler's confusion about how to view the Gospels led him to see even the Gospel "legends" as trustworthy, "so far as this is conceivable" (ibid., 79–90, 95, 141–42).

What "we want to make absolutely clear," said Kahler, is "that ultimately we believe in Christ, not on account of any authority, but because he himself evokes such faith from us" (ibid., 87). He asked the critical question of the church of his day, "How can Jesus Christ be the real object of faith for all Christians if what and who he really was can be ascertained only by research methodologies so elaborate that only the scholarship of our time is adequate to the task?" (see Soulen, 98).

Kierkegaard's "Leap." Also setting the stage for the latter disjunction between the Christ of faith and the historical Jesus was the Danish iconoclast, Soren Kierkegaard . Kierkegaard asked, "How can something of an historical nature be decisive for an eternal happiness?" (*Concluding Unscientific Postscripts* , 86). Therefore, Kierkegaard downplayed the historical basis of Christianity. Real history was unimportant compared to belief "that in such and such a year the God appeared among us in the humble form of a servant, that he lived and taught in our

community, and finally died" (*Philosophical Fragments* , 130). Only a "leap" of faith can place us beyond the historical into the spiritual (*see* FIDEISM).

Christ vs. Jesus. Rudolph Bultmann made the final definitive and radical disjunction between the Christ of Faith and the Jesus of History. The view can be summarized:

The Historical Jesus	**The Historic Christ**
Not relevant for faith	Relevant for faith
Jesus of scholars	Christ of believers
Jesus of critical history	Christ of the Gospels
Uncertain foundation	Certain foundation
Inaccessible to most Christians	Accessible to all Christians
The facticity of Jesus	The significance of Jesus
The Jesus of the past	The Christ of the present

The often-drawn implication of this disjunction is that the historical has little or no importance to the spiritual. As Kierkegaard argued, even if you could prove the historicity of the Gospels in every detail, it would not necessarily bring one closer to Christ. Conversely, if the critics could disprove the historicity of the Gospels, save that a man lived in whom people believed God dwelt, it would not destroy the foundations of true faith.

Evaluation. The whole dichotomy between the Jesus of history and the Christ of faith is based on highly dubious assumptions. The first has to do with the historicity of New Testament documents.

What Is Needed for Salvation. This concept that belief in the facts of the Gospel are historically irrelevant is contrary to the New Testament claim of what is necessary for salvation. The apostle Paul made essential the beliefs that Jesus died and rose bodily from the grave (*see* CHRIST, DEATH OF ; RESURRECTION, EVIDENCE FOR). He wrote that

> if Christ has not been raised, our preaching is useless and so is your faith. More than that, we are then found to be false witnesses about God, for we have testified about God that he raised Christ from the dead. . . . And if Christ has not been raised, your faith is futile; you are still in your sins. Then those also who have fallen asleep in Christ are lost. If only for this life we have hope in Christ, we are to be pitied more than all men. [1 Cor. 15:14–19]

The Concern of the Writers. This indifference in historicity also is not shared with the New Testament writers themselves, who seem preoccupied with the details of an accurate account, not a broad-stroke myth. Luke actually tells us his research techniques and his goal as historian:

> Many have undertaken to draw up an account of the things that have been fulfilled among us, just as they were handed down to us by those who from the first were eye-

witnesses and servants of the word. Therefore, since I myself have carefully investigated everything from the beginning, it seemed good also to me to write an orderly account for you, most excellent Theophilus, so that you may know the certainty of the things you have been taught. [Luke 1:1–4]

Luke expresses this historical interest by tying the story to persons and events that are part of the public record of history (*see* ACTS, HISTORICITY OF ; LUKE, ALLEGED ERRORS IN), such as Herod the Great (1:5), Caesar Augustus (2:1), Quirinius (2:2), Pilate (3:1), and many others through Luke and Acts. Note his historical detail in dating John the Baptist's announcement of Christ "in the fifteenth year of the reign of Tiberius Caesar—when Pontius Pilate was governor of Judea, Herod tetrarch of Galilee, his brother Philip tetrarch of Iturea and Traconitis, and Lysanias tetrarch of Abilene—during the high priesthood of Annas and Caiaphas" (Luke 3:1–2a).

There is an unjustified assumption that the New Testament, and particularly the Gospels, lack adequate historical support. This is just not true (*see* NEW TESTAMENT ARCHAEOLOGY ; NEW TESTAMENT, DATING OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF , and other articles relating to the accuracy of the New Testament record).

A False Dichotomy. The separation of historical Jesus from historic Christ is based on a false dichotomy of fact and faith (*see* FAITH AND REASON) or of fact and value. The historic significance of Christ cannot be separated from his historicity. If he did not live, teach, die, and rise from the dead as the New Testament claims, then he has no saving significance today.

Even after a century of usage, the distinction remains ambiguous and varies in meaning from author to author. Kahler used it to defend "critical pietism." For Bultmann it meant Martin Heidegger's brand of existentialism (Meyer, 27). John Meyer observes that "the Christ of Faith exalted by Bultmann looks suspiciously like a timeless gnostic myth or a Jungian archetype" (ibid., 28). Nearer the other end of the spectrum, such scholars as Paul Althaus (1888–1966) used Kahler's distinction to defend a more conservative approach to the historicity of Jesus. Kahler would have accepted neither Bultmann's nor Althaus's conception. Albert Schweitzer (1875–1965) is more aware of what Kahler intended. He bitterly denounces those who, in the name of this distinction, have made the historic Christ responsible for every sort of trend from the destruction of ancient culture to the progress of the modern achievements. So the distinction between *historical* and *historic* has become a catch phrase and carrier of all sorts of baggage (ibid.).

Christ's Death, Moral Objections to. Many critics of Christianity, including Muslim and Liberal scholars, reject the doctrine of salvation through the cross on moral grounds. One reason Muslims give is that, according to Islam, the major prophets in history have always been victorious against their enemies. If the Christ of God was killed on the cross by his adversaries, then what would have become of the constant Qur'anic theme that those who did not obey God's prophet did not triumph? Isn't admission of the cross an acknowledgment that the unrighteous ultimately triumphed over the righteous? (Bell, 154).

Liberal Christian scholars object to the cross because it seems eminently unjust to punish an innocent person for the guilty. Indeed the Bible itself declares that "the son shall not bear the guilt of the father . . ." (Ezek. 18:20).

Muslim Rejection of the Crucifixion. Islamic disbelief in the crucifixion of Jesus is centered around their understanding of him as a prophet. Islamic distaste for the crucifixion of a prophet is based on their concept of the sovereignty of God and rejection of belief in human depravity.

Crucifixion Is Contrary to God's Sovereignty. All orthodox Muslims agree that God would not allow one of his prophets to suffer such an ignominious death as crucifixion (*see* CHRIST'S DEATH, SUBSTITUTION LEGEND ; ISLAM). Muffasir summarized the view well when he said "Muslims believe that Jesus was not crucified. It was the intention of his enemies to put him to death on the cross, but God saved him from their plot" (Muffasir, 5).

Several passages in the *Qur'an* teach that Jesus was not crucified on the cross for our sins. Sura 4:157–58 is a key text; at face value it seems to say that Jesus did not die at all. It certainly denies that he died by crucifixion. It reads: "That they said (in boast), 'We killed Christ Jesus the son of Mary, the apostle of God';—But they killed him not, nor crucified him, but so it was made to appear to them, And those who differ therein are full of doubts, with no (certain) knowledge, but only conjecture to follow, For of a surety they killed him not:—Nay, God raised him up unto himself; and God is exalted in power, wise."

A sovereign God has control over all things, and he would not allow his servant to suffer such a death. Rather, a sovereign God, such as Allah is, would deliver his servant from his enemies. Abdalati, in a typical Muslim fashion asks, "Is it consistent with God's mercy and wisdom to believe that Jesus was humiliated and murdered the way he is said to have been?" (Abdalati, 160). The *Qur'an* states, "When Allah said: O Jesus! Lo! I am gathering thee and causing thee to ascend unto me, and am cleansing thee of those who disbelieve and am setting those who follow thee above those who disbelieve until the day of resurrection" (sura 3:55).

A Response to the Muslim View of Sovereignty. The Islamic belief in God's sovereignty defeats their own objection to the cross. If God can do anything he wants, then he can allow his own Son to die by crucifixion. The Quran declares:

> God! There is no god but he—the living, the self-subsisting, eternal. . . . Nor shall they [his creatures] compass aught his knowledge except as he willeth. His throne doth extend over the heavens and the earth, and he feeleth no fatigue in guarding and preserving them for he is the most high, the Supreme (in glory) (sura 2:255).

Many of the ninety-nine names for God express his sovereignty. *Al-Aziz,* "the Sublime," mighty in his sublime sovereignty (59:23); *Al-Ali,* "the High One," who is mighty (2:255–56); *Al-Qadir,* "the Able," who has the power to do what he pleases (17:99–101); *Al-Quddus,* "the Most Holy One," to whom all in heaven and on earth ascribe holiness (62:1); *Al-Mutaali,* "the Self-Exalted," who has set himself high above all (13:9–10); *Al-Muizz,* "the Honorer," who honors or abases whom he will (3:26); *Malik al-Mulk,* "Possessor of the Kingdom," who grants sovereignty to whom he will (3:26); *Al-Wahed,* "the One," unique in his divine sovereignty (13:16–17); *Al-Wahid,* "the Unique," who alone has created (74:11); *Al-Wakil,* "the Administrator," who has charge of everything (6:102).

Allah can do what he jolly well pleases, so he could allow his Servant to be crucified if he wished. Indeed, one passage in the *Qur'an* seems to apply this very truth to Christ: "Who then can do aught against Allah, if he had willed to destroy the Messiah son of Mary, and his mother and everyone on earth? Allah's is the sovereignty of the heavens and the earth and all that is between them. He createth what He will: And Allah is able to do all things" (sura 5:17).

Granting God is sovereign, it is utterly presumptuous to determine what he should or should not do. As the prophet Isaiah informs us, God said, "My thoughts are not your thoughts, Nor are your ways my ways" (Isa. 55:8). The prophet Isaiah instructs us that God did indeed approve of the ignominious death of his Servant:

> He had no beauty or majesty to attract us to him, nothing in his appearance that we should desire him. . . . we considered him stricken by God, smitten by him, and afflicted. . . . But, he was pierced for our transgressions, he was crushed for our iniquities; the punishment that brought us peace was upon him, and by his wounds we are healed. [Isa. 53:2–5]

So Jesus' crucifixion was not only approved by God, it was predicted (cf. Ps. 22:16 ; Zech. 12:10). It should be no surprise to a reader of the New Testament that the message of the crucifixion is

offensive to unbelievers. Indeed, Paul even referred to the “offense of the cross” but added that “God was pleased through the foolishness of what was preached to save those who believe” (1 Cor. 1:21). For “the foolishness of God is wiser than man’s wisdom” (vs. 25).

Then too, the idea of God allowing his servants to be insulted is not uncharacteristic. Muhammad’s biographer, Haykai, tells of insulting experiences suffered by Muhammad. He notes, for example, that “the tribe of Thaqif, however, not only repudiated Muhammad’s call but sent their servants to insult him and throw him out of their city. He ran away from them and took shelter near a wall. . . . there he sat under a vine pondering his defeat with the sight of the sons of Rabi’ah” (Haykai, 137).

What is more, even if it is assumed with Muslims that God would deliver his prophets from their enemies, it is wrong to conclude that he did not deliver Christ from his enemies. Indeed, this is precisely what the resurrection is. For “God raised him from the dead, freeing him from the agony of death, because it was impossible for death to keep its hold on him” (Acts 2:24). According to the Scriptures, God raised Christ up because, as he said: “You are my Son; today I have become your Father” (Acts 13:33). Further, the Scriptures declare that God kept his promise to his people (in Ps. 16:10) and saw to it “that he was not abandoned to the grave, nor did his body see decay.” Thus, he was “exalted to the right hand of God” (Acts 2:31 , 33).

Indeed, it was by Christ’s death and resurrection that “death has been swallowed up in victory” (1 Cor. 15:54) and we can say, “Where, O death, is your victory? Where, O death, is your sting?” (1 Cor. 15:55).

Contrary to Islamic teaching, the death and resurrection of Christ did manifest God’s mercy. Indeed, without it there would have been no mercy for a sinful world. Paul wrote: “You see, at just the right time, when we were still powerless, Christ died for the ungodly.” Thus “God demonstrates his own love for us in this: While we were still sinners, Christ died for us” (Rom. 5:6 , 8). He adds elsewhere that it is “not because of righteous things we had done, but because of his mercy” (Titus 3:5). As Jesus himself said, “Greater love has no one than this, that he lay down his life for his friends” (John 15:13). Yet he died for us when “we were [his] enemies” (Rom. 5:10).

Crucifixion Is Rooted in Original Sin. Another Muslim reason for rejecting the crucifixion is based on their rejection of the doctrine of depravity. Islamic scholars are quick to connect the Christian claim that Jesus died on the cross for our sins and the doctrine of depravity.

A. R. I. Doi notes that “connected with the Christian belief in crucifixion of Isa [Jesus] is the irreconcilable concept to original sin” (Doi, 19). He adds categorically that “Islam does not believe in the doctrine of the original sin. It is not Adam’s sin that a child inherits and manifests at birth. Every child is born sinless and the sins of the fathers are not visited upon the children.” Further, “Islam denies emphatically the concept of original sin and hereditary depravity. Every child is born pure and true; every departure in afterlife from the path of truth and rectitude is due to imperfect education.” Citing the prophet Muhammad, Doi affirms that “Every child is born in a religious mold; it is his parents who make him afterward a Jew, a Christian, or a Sabaean. . . . In other words, good and evil is not created in man at birth. Infants have no positive moral

character." Rather, "every human being . . . has two inclinations—one prompting him to do good and impelling him thereto, and the other prompting him to do evil and thereto impelling him; but the assistance of God is nigh" (Doi, 20).

Response to the Argument against Depravity. The orthodox Christian also connects the atoning death with human depravity. If God were not unchangeably just, and mankind not incurably depraved, the death of Christ for our sins would not have been necessary. However, contrary to Muslim belief, mankind is depraved and, hence, the suffering and death of Christ was necessary. Islamic rejection of total depravity is without foundation—as is even implied in Islamic teaching.

Even Muslims acknowledge that human beings are sinful. Otherwise, why do they need God's mercy? Indeed, why have so many (including all Christians) committed the greatest of all sins (*shirk*) , attributing partners to God (sura 4:116)? Why did God need to send prophets to warn them of their sin, if they are not constant sinners? The whole prophetic ministry, which is at the heart of Islam, is occupied with a call to repentance from the sin of idolatry. But why does humankind have this insatiable appetite for false gods if people are not depraved?

What is more, why are the unbelievers sent to hell to suffer forever? This seems to imply great sinfulness to deserve such a severe penalty as eternal suffering. It is both unrealistic and un-Qur'anic to deny the inherent sinfulness of humankind.

"Some Muslim theologians have held to a doctrine of Hereditary Sin. . . . Also, there is a famous tradition that the Prophet of Islam said, 'No child is born but the devil hath touched it, except Mary and her son Jesus' " (Nazir-Ali, 165). *Qur'an* texts support the doctrine of human depravity. Humankind is sinful or unjust (sura 14:34/37; 33:72), foolish (33:72), ungrateful (14:34/37), weak (4:28/32), despairing or boastful (11:9/12–10/13), quarrelsome (16:4), and rebellious (96:6; Woodberry, 155). The *Qur'an* even declares that "If God were to punish men for their wrong-doing, He would not leave, on the (earth), A single living creature" (sura 16:61). Ayatollah Khomeini went so far as to say that "man's calamity is his carnal desires, and this exists in everybody, and is rooted in the nature of man" (Woodberry, 159).

Jesus Had to Repent for Sins. Muslim denial of Christ's death by crucifixion is based on a misunderstanding of repentance. Abdalati, for example, lists the following among his reasons for rejecting the crucifixion of Christ: "Is it just on God's part, or anybody's part for that matter, to make someone repent for the sins or wrongs of others, the sins to which the repenter is no party?" (Abdalati, 160).

Response to the Charge That Jesus Had to Repent. Nowhere in the Bible does it say that Christ repented for our sins. It simply says that he "died for our sins" (1 Cor. 15:3). *Judicially,* "God made him who had no sin to be sin for us" (2 Cor. 5:21). But at no time did he confess anyone's sins. He taught his disciples to pray, "Forgive us our debts" (Matt. 6:12), but he nowhere joins them in that petition. This is a total distortion of the concept of a substitutionary atonement.

The Bible teaches that Jesus took our place; he paid the penalty of death for us (cf. Mark 10:45 ; Rom. 4:25 ; 1 Peter 2:22 ; 3:18). This concept of life for life is the same principle behind Muslim belief in capital punishment. When a murder takes another's life, he must forfeit his own as a penalty. Several doctrines regarding God's justice and God's forgiveness, heaven and hell make no real sense apart from substitutionary atonement.

God Can Forgive without Punishing. Another misconception underlying the Islamic rejection of the crucifixion is that a merciful God can forgive sin without justly condemning it. This is reflected in Abdalati's question "Was God the Most Merciful, the Most Forgiving and the Most High unable to forgive men's sins except by inflicting this cruel and most humiliating alleged crucifixion on one who was not only innocent but also dedicated to his service and cause in a most remarkable way" (Abdalati, 162)?

Response to a Forgiveness Without an Atonement. Two basic mistakes are at work here. First, it is implied that what Jesus did was not voluntary, but was merely inflicted upon him. The Gospels declare that Jesus gave his life voluntarily and freely. Jesus said, "I lay down my life—only to take it up again. No one takes it from me, but I lay it down of my own accord. I have authority to lay it down and authority to take it up again" (John 10:17–18).

Muslims seem not to appreciate the basis on which the just and holy God can forgive sins. While God is sovereign, he is not arbitrary about right and wrong (see Geisler, *Christian Ethics,* 136–37). Muslims, like Christians, believe that God will punish forever in hell those who do not repent (cf. suras 14:17; 25:11–14). But if God's holy justice demands that those who do not accept him be eternally punished for their sins, then it would follow that God cannot arbitrarily forgive without a just basis for this forgiveness. In Muslim theology there is forgiveness but no basis for this forgiveness. For they reject Christ's sacrificial payment for sin to a just God by which he can then declare righteous the unrighteous who accept Christ's payment on their behalf (cf. Rom. 3:21–26).

A truly just God cannot simply close his eyes to sin. Unless someone capable of paying the debt of sin owed to God does so, then God is obligated to express his wrath, not his mercy. Lacking the Crucifixion, the Muslim system has no way to explain how Allah can be merciful when he is also just.

The theological blind spot in the Muslim system created by a rejection of Christ's atoning sacrifice leads to other unfounded statements, such as Abdalati's rhetorical question: "Does the [Christian] belief of crucifixion and blood sacrifice appear in any religion apart from pagan creeds or the early Greeks, Romans, Indians, Persians, and the like" (Abdalati, 160)?

The answer is a clear "Yes." It is the very heart of historic Judaism, as even a casual acquaintance with the Old Testament reveals. Moses told Israel: "For the life of a creature is in the blood, and I have given it to you to make atonement for yourselves on the altar; it is the blood that makes atonement for one's life" (Lev. 17:11). This is why the children of Israel were asked to sacrifice the Passover lamb, commemorating their deliverance from bondage (Exod. 12:1f .). This is why the New Testament speaks of Christ as "the Lamb of God, who takes away the sin of the world" (John 1:29). And the apostle Paul called "Christ, our Passover lamb, [who]

has been sacrificed” (1 Cor. 5:7). The writer of Hebrews adds, “without the shedding of blood there is no forgiveness” (Heb. 9:22).

Of course, Muslim scholars argue that the original Old Testament was distorted too. However, like the New Testament, the ancient Dead Sea manuscripts of the Old Testament reveal that the Old Testament today is substantially the same as the one in the time of Christ, over 600 years before Muhammad (see Geisler and Nix, chap. 21). Therefore, since the *Qur'an* urges the Jews in Muhammad's day to accept God's revelation in the Law (sura 10:94), and since the Jewish Old Testament is substantially the same today as it was in Muhammad's day, then Muslims should accept that blood sacrifices for sins was a command of God.

Liberal Rejection of the Cross. With Muslims, nonorthodox “liberal” Christians reject the absolute justice of God (*see* ESSENTIALISM, DIVINE); the depravity of man, and substitutionary atonement. Liberals do not generally reject the historicity of the cross, but rather what they regard as its immorality. They insist that it is essentially irrational and immoral to punish an innocent person in the place of the guilty.

The Cross Is Irrational. Nothing seems more contradictory or irrational than the idea of salvation by substitution. Even the apostle Paul hinted at this when he said “For the message of the cross is foolishness to those who are perishing” (1 Cor. 1:18). In fact, did not the early church father Tertullian (ca. 160s–ca. 215–20) say of the cross “I believe because it is absurd” (Tertullian, 5)?

Few if any past Christian scholars have ever claimed that the cross was irrational. Certainly, Tertullian never said the death of Christ was absurd, which would have been the Latin word *absurdum* . He said it was “foolish” (Lat.: *ineptum*) to those who were perishing—unbelievers—exactly as Paul said. Tertullian everywhere promotes the use of reason and rational consistency in his theology. He said, “nothing can be claimed as rational without order, much less can reason itself dispense with order in any one” (ibid.). Even when speaking of the mystery of human free choice, Tertullian declared that “it cannot even in this be ruled to be irrational” (ibid., 1.25).

Even regarding the Trinity and incarnation of Christ, orthodox Christians have insisted that Christian teachings are rational (*see* LOGIC). The “mysteries” of faith may go beyond our reason to attain by special revelation, but never against our ability to apprehend with logical consistency (*see* MYSTERY). The Trinity, for example, is not held to be a contradiction. It does not affirm three persons in one *Person* but three persons in one *essence* .

The Cross Is Immoral. Liberals have extolled the virtues of Christ's death as an example of sacrificial love. But both Muslims and liberals loathe the idea of a substitutionary punishment for sin. This view seems to them to be essentially immoral. How can an innocent person be punished for the guilty? Does not even the Bible itself affirm “The son will not share the guilt of the father, nor will the father share the guilt of the son. The righteousness of the righteous man will be credited to him, and the wickedness of the wicked will be charged against him” (Ezek. 18:20)?

A virtually universal human practice is to consider commendable the actions of one who dies in defense of the innocent. Soldiers are honored for dying for their country. Parents are called compassionate when they die for their children. But this is precisely what Jesus did. As the apostle Paul put it, “Very rarely will anyone die for a righteous man, though for a good man someone might possibly dare to die. But God demonstrates his love for us in this: While we were still sinners, Christ died for us” (Rom. 5:7–8).

Sacrificial death is not alien to Islam. The Muslim practice of *Id Ghorban* (feat of sacrifice) features the sacrifice of a sheep in memory of Abraham’s sacrifice of his son. For some this is associated with the forgiveness of sins. Muslim soldiers who sacrifice their lives for the cause of Islam are awarded Paradise (sura 3:157–; 22:58–59). Neither is it without human precedent for one person to pay a debt for another, even by the sacrifice of his life for them.

If Allah could call upon his servants to die for Islam, why is it so strange that God could call upon his Son to die so salvation can be offered to Muslims, and the rest of the world? The *Qur’an* gives a beautiful example of a substitutionary atonement in describing Abraham’s sacrifice of his son on Mount Moriah. Sura 37:102–7 reads:

> He said: “O my son! I see in vision That I offer thee in *sacrifice* . . . . So when they had both Submitted their wills (to God), And he laid him Prostrate on his forehead (For *sacrifice*), We [God] called out to him, “O Abraham! . . . And We *ransomed* him With a momentous *sacrifice.* ” [emphasis added]

The use of the words *sacrifice* and *ransom* are precisely what Christians mean by Christ’s death on the cross. Jesus used such words of his own death (Mark 10:45). So the sacrificial death of Christ is not opposed to the Qu’ran.

As noted, the weight of this critique of the cross rests on the false premise that Jesus’ death was involuntary. But it was not forced upon him. Looking forward to the Cross, he said to the Father “yet not my will, but yours be done” (Luke 22:42). Earlier in the Gospel of John Jesus referred to the giving of his life in saying, “No one takes it from me, but I lay it down of my own accord” (John 10:18). The book of Hebrews records Jesus’ words “Then I said, ‘Here I am—it is written about me in the scroll—I have come to do your will, O God’ ” (Heb. 10:7).

There is no other way for the debt of sin to be paid than for the sinless son of God to do so. As Anselm argued (in *Cur Deus Homo?*) the penalty for sin must be paid to God. God’s justice demands that sin be atoned for (cf. Lev. 17:11 ; Heb. 9:22). So, rather than being unjust, it is justice that demands the substitutionary atonement of Christ. The *Qur’an* teaches God is just (see sura 21:47–48). Absolute justice means that God cannot simply *overlook* sin. A penalty must be paid, either by the persons themselves or by someone else for them which enables them to go to heaven.

It does not break a moral absolute to punish an innocent person for the guilty provided he is willing and a higher moral law calls for the suspension of the lower law (see Geisler, *Christian Ethics*). In the case of the cross, it is the salvation of the world for which Christ the innocent voluntarily accepted the injustice of dying on a cross.

Conclusion. The moral critique of the cross relies on circular reasoning. It makes no sense to claim that a substitutionary atonement is *essentially* im-moral unless something is essentially moral, an unchangeably moral nature of God. But the unchangeably just and holy nature of God requires that sin be punished. Unless God's justice is satisfied by someone else on behalf of lawbreakers, the essential moral and eternal prin ciple used by liberals would demand that everyone be eternally punished for their sins in hell. But that doctrine liberals also find repugnant. So if God is loving, as liberals do happily admit, then he must find a way to pay for our debt of sin and set us free. Christ volunteered and satisfied God's justice, "the just for the unjust" (1 Peter 3:18), so as to release God's redeeming love and set us free of the guilt and consequences of our sins (John 3:16 ; Rom. 5:8). There was no other way.

Christ's Death, Substitution Legend. The death and resurrection of Christ are absolutely crucial to the truth of historic Christianity (1 Cor. 15:1–4). Indeed, orthodox Christianity stands or falls on whether Christ rose bodily from the dead (Rom. 10:9 ; 1 Cor. 15:12–19). But if Christ did not die, then he obviously did not rise from the dead. One of the ways skeptics (*see* AGNOSTICISM) and critics (*see* BIBLICAL CRITICISM) of Christianity have attempted to avoid the truth of the resurrection (*see* RESURRECTION, EVIDENCE FOR) is to posit that someone else was substituted to die on the cross for Jesus at the last moment.

Substitution Legends. Forms of the substitution legend were offered as early as the second century by opponents of Christianity as an alternative explanation to the Christian affirmation that Christ died and rose from the dead. But the factual evidence for Christ's death on the cross is substantial, and it stands on its own apart from any theological beliefs.

The substitution legend is now most commonly taught among Muslims, so their view will be answered in this article. This answer necessarily includes a rationale for the Christian position on salvation in the light of the cross. The effort to defend Christ's death as both historical and theologically intelligible is partly undertaken in the overview article, Christ, Death of, and the related article on Islamic and liberal problems with the crucifixion, Christ's Death, Moral Objections to. The following content assumes, and will avoid repeating, that content.

Reasons to Reject the Death of Christ. At one level, the Islamic reticence to accept the historical event of Christ's death is odd. Not only is there a total lack of evidence for a substitution, but Islam historically teaches that . . .

1. Jesus would die (sura 3:55; cf. 19:33).
2. Jesus would rise from the dead (19:33).
3. Jesus' disciples who witnessed the event believed that it was Jesus, not someone else in his place, who was crucified.
4. The Roman soldiers and the Jews believed that it was Jesus of Nazareth whom they had crucified.
5. Jesus performed miracles, including raising people from the dead.

If all this is accepted by Muslims, then there is no reason they should reject the fact that Jesus died on the cross, or even that he was raised from the dead three days later.

Early Substitution Legends. Substitution legends are not unique to Islam. Some early opponents of Christianity offered similar speculations. According to the second-century church father Frenacus, Basilides the Gnostic (*see* GNOSTICISM) taught that "at the Crucifixion He [Jesus] changed form with Simon of Cyrene who had carried the cross. The Jews mistaking Simon for Jesus nailed him to the cross. Jesus stood by deriding their error before ascending to

heaven" (Lightfoot, 156ff.). In the third century, Mani of Persia, founder of the Manichaean religion, taught that the son of the widow of Nain, whom Jesus had raised from the dead, was put to death in his place. According to another Manichaean tradition, the devil, who was trying to crucify Jesus, was himself the victim of this switch. Photius (ca. 820–ca. 895) referred in his writings to an apocryphal book, *The Travels of Paul,* in which it was said that another was crucified in Jesus' place (Abdul-Haqq, 136).

Muslim Substitution Legends. Muslims have been drawn to the notion that Judas or Simon of Cyrene died in Jesus' place on the cross. A competing view that he swooned on the cross and was taken down while still alive, does not help their hypothesis. Al-Tabari, well-known Muslim historian and commentator on the *Qur'an* , reports that Wahab B. Munabih, who lived around 700, propagated the lore that a human form but not a person was substituted. His version is reported:

> They brought him the gibbet on which they intended to crucify him, but God raised him up to himself and a simulacrum was crucified in his place. He remained there for seven hours, and then his mother and another woman whom He had cured of madness came to weep for him. But Jesus came to them and said, "God has raised me up to himself, and this is a mere simulacrum." [Abdul-Haqq, 135–36]

Another example of the growth of this legendary tradition is the view of Thalabi, who lived some 300 years after Munabih. "The shape of Jesus was put on Judas who had pointed him out, and they crucified him instead, supposing that he was Jesus. After three hours God took Jesus to himself and raised him up to heaven" (see Bruce, 179).

More recently, A. R. I. Doi offers the hypothesis that, when the Roman soldiers came with Judas to arrest Jesus, "the two Jews got mixed up in the dark, and the soldiers mistakenly arrested Judas instead of Jesus. Jesus was thus saved and raised up" (Doi, 21). In support, Muslims often cite the spurious *Gospel of Barnabas* .

The Inadequate Basis. Substitution legends simply are not historically credible:

They contradict the extant record of eyewitness testimony that Jesus of Nazareth was crucified (Matthew 27 ; Mark 14 ; Luke 23 ; John 19).

They are contrary to the earliest extrabiblical Jewish, Roman, and Samaritan testimony (Habermas, 87–118, Bruce, 31; *see summary in* ARCHAEOLOGY, NEW TESTAMENT ; CHRIST, DEATH OF). In spite of the fact that all of these writers were opponents of Christianity, they agree that Jesus of Nazareth was crucified under Pontius Pilate. There is not a shred of first-century testimony to the contrary by friend or foe of Christianity. The earliest substitution legends begin in about 150 among those heavily influenced by Gnosticism. None is based on evidence of eyewitnesses or contemporaries to the events.

They are implausible, since they demand total ignorance on the part of those closest to Jesus, his disciples, and the Romans. They suppose that Jesus told his mother and another woman that someone who looked like him was crucified and that they never informed the disciples nor

corrected them as they promptly went out to preach under threat of death that Jesus had died and risen from the dead.

Since most Muslims reject the fact of Christ's crucifixion and death, they understandably have great difficulty explaining the resurrection appearances and ascension of Christ. Since they believe Christ was merely a human being, they accept the fact of Christ's mortality. They believe Jesus will eventually be resurrected with all other humans, but, after rejecting his death on the cross, they are forced to find some other place for Christ's death.

This dilemma has encouraged ingenious speculation. Many Muslim scholars believe Jesus Christ was transported into heaven alive. His death still must happen sometime in the future, when he returns to the earth before the last day. This they take from a literal understanding of sura 4:157–58: "That they said (in boast), 'We killed Christ Jesus the son of Mary, the apostle of God';—But they killed him not, nor crucified him, but so it was made to appear to them, And those who differ therein are full of doubts, with no (certain) knowledge, but only conjecture to follow, For of a surety they killed him not:—Nay, God raised him up unto himself; and God is exalted in power, wise."

Others hypothesize that Jesus died a natural death at some unknown time after the crucifixion and remained dead for three hours, or according to another tradition, seven hours—after which he was resurrected and taken to heaven (Abdul-Haqq, 131). There is no historical testimony to support such speculation.

A few Islamic writers, like Ahmad Khan of India, believe that Jesus was crucified, but did not die on the cross. Rather, he merely swooned (*see* RESURRECTION, ALTERNATE THEORIES OF) and was taken down after 3 hours (Abdul-Haqq, 132). Other Muslims in north India added the legend that Jesus visited Tibet. Abdul-Haqq notes that Ghulam Ahmad "home brew[ed] a theory that Jesus Christ took His journey to Kasmir . . . after His crucifixion. To further support his theory he conveniently found a grave in Sirinagar, Kashmir, which he declared to be the grave of Jesus." However, the Ahmadiyyas sect's "speculations have been condemned as heretical by the Muslim orthodoxy" (ibid., 133).

Abdalati notes that "whether he [Jesus] was raised alive in soul and body or in soul only after he died a natural death has not much bearing on the Islamic belief." Why? "It is no Article of Faith, because what is important and binding to a Muslim is what God reveals; and God revealed that Jesus was not crucified but was raised to Him" (see Abdalati, 159). He cites sura 4:157 (quoted above).

Most Muslims, however, believe that Jesus will be physically resurrected from the dead in the general resurrection of the last day. Nothing else is essential to the Muslim faith. Therefore, rejecting Jesus' death by crucifixion leads to a rejection of his resurrection three days later and leaves the enigma of the ascension before any death or resurrection.

The Misunderstanding. The Muslim denial of Christ's death by crucifixion is based on a theological misunderstanding. Abdalati, for example, lists the following among his reasons for rejecting the crucifixion of Christ: "Is it just on God's part, or anybody's part for that matter, to

make someone repent for the sins or wrongs of others, the sins to which the repenter is no party?" (Abdalati, 160).

This, of course, is based on a complete misunderstanding of what Christians believe about the atonement of Christ. As noted in another article (CHRIST'S DEATH, MORAL OBJECTIONS TO), he did not confess or repent of our sins. He died for our sins (1 Cor. 15:3). *Judicially,* he was "made to be sin for us" (2 Cor. 5:21)—the substitution that Christians gladly admit. He paid the penalty of death in our place, so that we could stand before God without guilt (Mark 10:45 ; Rom. 4:25 ; 1 Peter 2:22 ; 3:18). This concept of life for life is not foreign to Islam. It is the principle behind their belief in capital punishment; a murderer who takes another's life must forfeit a life.

Another misconception beneath the Islamic rejection of the crucifixion is that a merciful God can forgive sin without justly condemning it. Actually there are two basic mistakes here. Muslim theology makes the first error when it implies that what Jesus did was not voluntary but was inflicted upon him. Jesus said, "I lay down my life—only to take it up again. No one takes it from me, but I lay it down of my own accord. I have authority to lay it down and authority to take it up again" (John 10:17–18). When Jesus died, the Bible relates, "He [freely] dismissed his spirit" (John 19:30).

The second error is that a sovereign God can be holy, yet arbitrarily change the rules about right and wrong (*see* CHRIST'S DEATH, MORAL OBJECTIONS TO). Muslims, like Christians, believe in hell for the unrepentant (sura 14:17; 25:11–14). But if holy justice demands that those who do not accept him be eternally punished, then God cannot arbitrarily forgive anyone for anything without a just basis for forgiveness. Muslim theology has none. Muslims reject Christ's sacrificial payment for sin to a just God, by which the unjust who accept Christ's payment on their behalf can be declared just (cf. Rom. 3:21–26). Unless someone capable of paying the penalty for sin does so, God is obligated to express wrath, not mercy. Lacking the crucifixion, the Muslim system has no way to explain how Allah can be merciful when he is also just.

Salvation in Christ. Superficially, it would seem that salvation by grace through faith in the death and resurrection of Christ is incomprehensible to Muslims. This, we believe, is not the case. While the unbeliever does not *receive* (Gk.: *dekomai*) God's truth (1 Cor. 2:14), nevertheless, he can *perceive* it. According to Romans 1:18–20 , unbelievers are "without excuse" in view of God's revelation in nature. The very fact that unbelievers are called upon to believe the Gospel implies that they can understand it (cf. Acts 16:31 ; 17:30–31). Jesus rebuked unbelievers for not understanding what he was talking about, declaring, "If you were blind, you would not be guilty of sin; but now that you claim you can see, your guilt remains" (John 9:41).

An Islamic Basis for Salvation by Substitution. Even from within Islam the Christian concept of the cross makes sense. Islam has several doctrines, God's justice and God's forgiveness, heaven and hell, that make no real sense apart from a substitutionary atonement. For Islam teaches that God is just (*see* ISLAM). But absolute justice must be satisfied. God cannot simply *overlook* sin. A penalty must be paid for it which enables them to go to heaven, either by the persons or by someone else for them. In a letter to a friend explaining why he became a Christian, Daud Rahbar, argues, "the Qur'anic doctrine of God's justice demands that such a

God be himself involved in suffering and be seen as involved in suffering. Only then can he be a just judge of suffering humanity." For "a God that is preserved from suffering will be an arbitrary and capricious judge" (Nazir-Ali, 28).

A Rational Basis for Salvation by Substitution. There is nothing contradictory or incredible about salvation by substitution. The Muslim mind should not have any more difficulty with this concept than any other mind. This concept is in accord with a virtually universal human practice. It is considered commendable for people to die in defense of the innocent. Warriors are hailed for dying for their tribe. Soldiers are honored for dying for their country. Parents are called compassionate when they die for their children. This is precisely what Jesus did. As the apostle Paul put it, "Very rarely will anyone die for a righteous man, though for a good man someone might possibly dare to die. But . . . While we were still sinners, Christ died for us" (Rom. 5:7–8).

Further, even in the Islamic understanding sacrificial death occurred. The Muslim practice of *id ghorban* (feat of sacrifice) features the sacrifice of a sheep in memory of Abraham's sacrifice of his son. For some this is associated with the forgiveness of sins. Furthermore, Muslim soldiers who sacrificed their lives for the cause of Islam were awarded Paradise (3:157–58; 22:58–59). If Allah could call upon his servants to die for Islam, why think it so strange that God could call upon his Son to die for salvation of Muslims, indeed of the world?

Conclusion. Much of the Islamic rejection of Christ is based on a misunderstanding of the facts about him. Since they believe in the divine inspiration of the original Old and New Testaments, Jesus' virgin birth, sinless life, divinely authoritative teaching, death, eventual resurrection (*see* RESURRECTION, EVIDENCE FOR), ascension, and second coming. It is a tragedy that the rejection of his claims to be the Son of God and Savior of the world are lost in the midst of all they do accept. The primary problem is rejection of the authenticity of the Bible. Perhaps a better understanding of the factual basis for the authenticity of the Bible (*see* NEW TESTAMENT, HISTORICITY OF) could open a way to take more seriously the *Qur'an* when it urges doubters to go to the Scriptures:

> If thou wert in doubt As to what we have revealed unto thee, then ask those who have been reading the Book [the Bible] from before thee: The truth hath indeed come to thee from thy Lord: So be in no wise of those in doubt (10:94).

Chronology Problems in the Bible. ***See*** **GENEALOGIES, OPEN OR CLOSED .**

Clark, Gordon H. Gordon Clark (1902–1985) was born in Philadelphia and received his Ph.D. in philosophy in 1929. He taught at Wheaton College, Reformed Episcopal Seminary, and Covenant College and was chairman of the Philosophy Department at Butler University for twenty-eight years. His teaching career spanned sixty years.

Clark was a rational presuppositionalist, as differentiated from Cornelius Van Til, who was a revelational presuppositionalist (*see* PRESUPPOSITIONAL APOLOGETICS). His students included Carl F. H. Henry, John Edward Carnell, and Ronald Nash.

His thirty books covered a wide variety of philosophical, ethical, and theological topics. Some of his works of philosophy and apologetics included a complete history of philosophy, *Thales to Dewey* ; *A Christian View of Men and Things* ; *Religions, Reason, and Revelation* ; and *Historiography, Secular and Religious* . He also wrote a logic textbook.

Clark’s Reformed theology centered in the sovereignty of God, and his apologetics took the triune God as revealed in Scripture as his presuppositional starting point. His test for truth was the law of noncontradiction (*see* FIRST PRINCIPLES).

Epistemological Darkness. *Empirical Skepticism.* In epistemology, Clark was an empirical skeptic (*see* AGNOSTICISM), agreeing with David Hume . The senses deceive and cannot be trusted. Universal and necessary principles go beyond the limits of empirical experience. As Hume showed, the senses never receive impressions of a necessary connection. Nothing,

therefore, can be proved empirically. Clark doubted all that his senses reported about an external world. He held that, apart from divine revelation, we cannot be sure that we exist.

Clark framed three chief objections to empiricism: First, it is impossible to discover a "necessary connection" between ideas and events. This denies causality and makes all historical and scientific investigation futile. At best, knowledge can extend only so far as what is impressed on the brain at this moment, and what traces remain at this moment of memories of past impressions. Second, the ongoing task of integrating self into one's current environment inevitably influences perceptions and makes them untrustworthy. Memory is effectively annihilated in this process. Third, and most fundamentally, empiricism uses time and space surreptitiously at the beginning of the learning process. But accurate time-space perceptions can only come at the end of the learning process, so the mind is continually faced with information that it is not competent to judge accurately ("Special Divine Revelation," 33).

Historical Skepticism. Clark's historical skepticism is parallel to his empirical doubts. Thus, Clark denies the validity of historical apologetics. Even if we could know that the resurrection of Christ is a fact from empirical testimony, it would prove nothing (*see* RESURRECTION, EVIDENCE FOR). "Suppose Jesus did rise from the grave. This only proves that his body resumed its activities for a time after his crucifixion; it does not prove that he died for our sins or that he was the Son of God. . . . The resurrection, viewed purely as an isolated historical event, does not prove that Christ died for our sins." Historical and archaeological research are incompetent to deal with such questions (Clark, "Philosophy of Education," 35).

Innate Ideas. Clark considered himself Augustinian in epistemology, beginning with God-given, innate ideas (*see* AUGUSTINE). Apart from divine illumination via innate ideas, the mind would be locked in epistemological darkness. By the light of the *Logos* we can see the world. Clark boldly translated John 1:1 , "In the beginning was Logic. And Logic was with God, and Logic was God" (cited in Nash, *The Philosophy of Gordon Clark,* 67, 118; *see* LOGIC). Since each human being was created by God, each person is an innate idea of God. But a person's blank mind is not able to lift itself above its sensory context to an abstract spiritual level. So unaided, no person can know God. The theories of empiricism from Aristotle to Thomas Aquinas to John Locke , therefore, do not work (*Religions, Reason, and Revelation* , 135). We cannot know God, certainly not in any saving way. God, however, revealed himself in Scripture, his infallible, inerrant Word (*see* BIBLE, CANONICITY OF). Christianity based on this revelation is the only true religion (*see* CHRIST, UNIQUENESS OF ; WORLD RELIGIONS, CHRISTIANITY AND). Christianity is known to be true because it alone is free from internal contradictions in its truth claims. All opposing systems have contradictory beliefs in one or more central teachings.

Rejection of Theistic Proof. Like most other presuppositionalists, Clark rejected the traditional proofs for the existence of God (*see* GOD, EVIDENCE FOR). His reasons were much the same as those of Hume and Immanuel Kant . Since our senses cannot be trusted, we cannot begin in experience and prove anything about the world, much less about God. He referred to Thomas Aquinas's classical apologetics as a "Christianized interpretation of Aristotelianism" (*Christian View of Men and Things* , 309). He found Aquinas's arguments for God to be circular, purely formal, invalid, and indefensible (*Religions, Reason, and Revelation* , 35).

Thomism, Clark said, requires the concepts of *potentiality* and *actuality* , yet Aristotle never succeeded in defining precisely what is meant by those ideas ("Special Divine Revelation as Rational," 31). The reasoning is circular: *Motion* is used to define *actuality* and *potentiality* , yet *actuality* and *potentiality* are used to define *motion* (ibid., 36).

Thomas traces back the causes of motion with the assumption that there is a first cause, since causes cannot go backward into infinity. But this is also the conclusion Thomas draws. Therefore, he is begging the question (ibid., 31).

For Thomas there are two ways to know God. We can know by negation what God is not, and we can know what he is like by analogy (*see* ANALOGY, PRINCIPLE OF). There can be no identical meanings derived from these two methods. But unless the terms can be univocal, the argument is a fallacy (ibid.).

Thomism identifies God as the Unmoved Mover. Suppose the existence of the Unmoved Mover has been demonstrated. This would not prove the Unmoved Mover to be God; it is simply a physical cause of motion. Nothing in the argument provides this force with a transcendent personality. "In fact, if the argument is valid, and if this Unmoved Mover explains the processes of nature, the God of Abraham, Isaac, and Jacob is superfluous, and indeed impossible" (ibid., 37).

The argument for the existence of God is, at best, useless. It proves no more than a finite or physical God. It allows, but does not prove, the existence of a good God, but he need neither be omnipotent nor the cause of all that happens.

All causal arguments involve an equivocation. This argument involves Clark's criticism of analogy (see the following section).

On these bases, Clark finds the cosmological argument "worse than useless. In fact, Christians can be pleased at its failure, for if it were valid, it would prove a conclusion inconsistent with Christianity" (*Religions, Reason, and Revelation* , 41).

Rejection of Analogy. Clark contended that the doctrine of analogy, as implied in theistic arguments, involves a logical fallacy of equivocation. Taking the propositions: "Contingent things in motion exist, which have both actuality and potentiality," and "God exists as all actuality with no potentiality," Clark questions whether the verb *exists* can be defined the same way when applied to Necessary Beings as when applied to contingent beings. He fears there is too much divergence for the argument to be valid (*Thales to Dewey* , 227, 278). *Exists* has too much of a temporal, human sense to be appropriately applied to God. "In this sense of the word *exist* , God does not exist" (ibid., 312).

"If we should arrive validly at the conclusion, God exists, this existence at which we have arrived would not be God's existence. Syllogisms [*see* LOGIC] and valid arguments require their terms to be used univocally" (ibid.).

The Test for Truth. Clark was an unyielding defender of the validity of the law of noncontradiction (*see* FIRST PRINCIPLES). Noncontradiction was the "inescapable" basis of all knowledge and the test for truth (*Christian View of Men and Things* , 313). Clark's defense of the law of noncontradiction was what Van Til would call a transcendental argument. Without the forms of logic, Clark averred, no discussion on any subject would be possible (ibid., 308). Using noncontradiction, apologetics has a two-fold task:

Negative Task. Apologetics must show that all non-Christian systems are contradictory within their truth claims. Clark did this in his history of philosophy, *Thales to Dewey* . He brought all the great philosophers before the bar of rationality, and found each of them wanting.

Positive Task. Clark believed that only Christianity is free from contradiction and, hence, only it can be proven true. Using a geometric method reminiscent of Rene Descartes, Clark reduced Christianity to its basic axioms in order to show their internal consistency. He concluded: "Christianity is a comprehensive view of all things; it takes the world, both ma terial and spiritual, to be an ordered system" (ibid., 33).

Clark was aware that no finite system could be expected to provide answers to all problems, since no mortal is omniscient. He reasoned that "if one system can provide plausible solutions to many problems, while another leaves too many questions unanswered, if one system tends less to skepticism and gives more meaning to life, if one world view is consistent while others are self-contradictory, who can deny us, since we must choose, the right to choose the more promising first principle?" (ibid., 34).

Common Ground with Non-Christians. In opposition to his contemporary in Reformed theology, Cornelius Van Til, Clark believed that common ground could be found with unbelievers. This common ground is found in the laws of logic and "a few divine truths," which unbelievers know by virtue of the image of God in them (*Barth's Theological Method* , 96). In response to Karl Barth , Clark affirmed that "Faith is a mental activity and by definition presupposes a rational subject. Reason, therefore, can be considered to be an element in common to believer and unbeliever" (ibid., 102).

Evaluation. *Positive Contributions.* In addition to the overall contributions Clark has made to a creative evangelical rethinking of its task, Clark has had strong influence on individual evangelicals, notably John Carnell, Carl Henry, and Ronald Nash.

Clark's system offers a comprehensive test for truth in all systems. Noncontradiction can be applied to every belief system. It is offered as a means both for discovering which are false, and in giving evidence of the true one. The law of noncontradiction is employed by all rational people, so it is something of an indisputable standard, whatever the worldview. It is both fair and universal.

Unlike some multi-step philosophical tests for truth, Clark gives only one, and it is a simple one: Truth cannot conflict with itself. Either a view is noncontradictory or it is not. Clark's criterion also is rational. It is clear and consistent, not apt to get lost in subjective, mystical experience.

As Nash correctly observes, Clark stressed "the importance of refusing to separate faith" (cited in Robbins, 89). He was an arch enemy of fideism, insisting on the need for rational religious belief.

Another positive feature is Clark's stress on objective, propositional truth (*see* TRUTH, NATURE OF). He correctly emphasizes this, not only in general, but in the propositional revelation expressed in Scripture.

Negative Critique. Empirical skepticism unjustified. Clark claimed not to trust his senses, yet he needed them to read his Bible. How could he believe what he read? Like other skeptics, Clark inconsistently trusted his senses in everyday affairs. How else could he have eaten or crossed a busy street? Also, how can one know his or her senses are unreliable unless that can be determined by senses? For example, we learn by our senses to make allowances for the appearance of a straight stick that looks crooked when thrust into the water. We could not know not to trust the bent reflection unless we could trust our senses.

And like other empirical skeptics, Clark was not skeptical about his skepticism (*see* AGNOSTICISM). He accepted it uncritically as a necessary step in his presuppositionalism. But why should skepticism have been the starting point? Why not assume we can gain knowledge by way of our senses? Many of the criticisms in the article DAVID HUME as well as in the critique of PRESUPPOSITIONAL APOLOGETICS can be leveled at Clark.

Circular reasoning. Clark commits the fallacy of *petitio principii* or begging the question (*see* LOGIC). He admits that his system involves circular reasoning, but attempts to resolve the problem, in part, by claiming that all other systems have the same problem. "Non-Christian arguments regularly assume the point in dispute before they start. The questions are so framed as to exclude the Christian answer from the beginning" (*Religions, Reason, and Revelation* , 27). He believes that he escapes the problem because skepticism is self-defeating (*Thales to Dewey* , 29–30). It hardly seems to further his cause to reduce his argument to the level of the rest, and this does not eliminate the possibility that other views are just as self-consistent.

Fallacious arguments against proof. Clark's rejection of theistic proofs (*see* GOD, ALLEGED DISPROOFS OF) was no better than that of his agnostic mentors Hume and Kant (*see* AGNOSTICISM). Clark's apologetic offers a strange rationalism. First he defended the skeptics in their arguments against God, only to argue later the need to rationally defend God by presuppositionalism. It would have been simpler to use classical arguments from the beginning.

A survey of all systems? To be fair, before Clark proves his point, he must prove every other system in history and on the contemporary scene to be inconsistent. He takes the conclusion of his argument beyond the evidence. The finiteness of the investigator limits the support for his thesis (Lewis, 119). One lifetime is simply too short to survey every other conceivable system. Clark might force the conclusion of a probability that Christianity is true by this method, but Clark reduces all probability to skepticism. By his own standard, then, his apologetic method leaves us in skepticism.

Consistency within other systems. A similar problem is that Clark uses internal consistency as the only test for the truth of a system. But he cannot know that all systems are contradictory simply using the law of noncontradiction. By Christian standards this might be possible, but many systems are self-consistency within their own view of reality. The pantheist (*see* PANTHEISM) says, "I am God." If this were an internally contradictory statement, then God himself could not say it. But he can and does. "God is all, and all is God" may be a contradictory statement to a theistic view, but to a pantheist who believes the real world is an illusion, it is perfectly self-consistent (*see* HINDUISM ; MONISM).

A negative test only. At best the law of noncontradiction is a negative test for truth. It can falsify a worldview truth claim, but it cannot verify one. It cannot prove that one alone is true, since more than one view may be internally self-consistent. As Gordon Lewis put it, "Contradiction is the surest sign of error, but consistency is not a guarantee of truth" (120).

Conclusion. Clark has provided a great service to Christian apologetics by stressing the laws of logic on which all rational arguments are based. The law of noncontradiction is absolutely necessary to the affirmation and confirmation of all truth claims. However, logic is only a set of formal principles. It tells what *could be* true; not what *is* true. To know what is really true, sooner or later one must touch base with the external world. This is what classical apologetics does.

Clark's own view depends on his acceptance of the validity of sense impressions and probability (*see* INDUCTIVISM), which he denies have any validity as a test for truth. On his own principles his view could not be true. He must trust his senses, even when reading books on other views. He must confess only a probability that *all* non-Christian views are false, since he has not examined each of them. He must trust his senses even when he accepts the claim that the Bible is true. Clark's apologetic method fails to be a comprehensive positive test for the truth of Christianity.

Clarke, Samuel. Samuel Clarke (1675–1729) was an important English philosopher, physicist, and apologist of his time. Clarke studied at Cambridge and became a Newtonian in an atmosphere dominated largely by the science of Rene Descartes (1596–1650). He was ordained in the Church of England. His posts included rector at St. James, Westminster.

His writings are collected in *The Works of Samuel Clarke* , which include his Boyle lectures of 1704, “A Demonstration of the Being and Attributes of God,” and 1705, “A Discourse Concerning the Unchangeable Obligations of Natural Religion, and The Truth and Certainty of the Christian Revelation in Answer to Mr. Hobbes, Spinoza , the Author of the Oracles of Reason, and Other Deniers of Natural and Revealed Religion.” Several volumes of sermons survive. Clarke’s works exerted an influence on Joseph Butler (1692–1752) in his *Analogy in Religion* (1736).

Classical Apologetic Approach. Clarke’s approach falls into the category of classical apologetics. He began with a strong cosmological argument for God’s existence as expressed in natural theology. He proceeded to defend the Christian supernatural revelation (*see* MIRACLE). As the extended title of his book indicates, it is directed at Thomas Hobbes (1588–1679), Benedict Spinoza (1632–1677), and other naturalistic approaches (*see* NATURALISM).

Existence and Attributes of God. The 1704 Boyle lectures consisted of “one argument in a chain of propositions.” The first three are the most important:

Proposition one. It is undeniable that something has existed from all eternity. Since something is, it is evident that something always was. Otherwise, things that are were produced out of nothing, without a cause. Something cannot be effected unless there is something that effected it. This is a “first plain and self-evident truth” (“Discourse Concerning the Being and Attributes,” 1).

Proposition two. An unchangeable and independent being has existed from eternity. “Either there has always existed some one unchangeable and independent being, from which all other beings that are or ever were in the universe, have received their origin; or else, there has been an infinite succession of changeable and dependent beings produced from one another in an endless succession” (ibid., 2). There cannot be an endless succession of beings, for such a series must be caused either from within or without. It cannot be caused from without, since supposedly everything is within the series. It cannot be caused from within because no being in the series is

self-existent and necessary, and such a series arose from either necessity, mere possibility, or chance. It cannot be from necessity, since the infinite regress doesn't allow anything necessary. It cannot be from chance, which is a mere word without any meaning. It cannot be explained by mere possibility, since pure potentiality for existence does not explain why anything actually exists. Therefore, "there must have existed from eternity some one immutable and independent being" (ibid.).

Proposition three. That unchangeable, independent being which existed from all eternity must be self-existent, or necessarily-existing. Whatever exists must come into being from nothing, without cause, or it must be self-existent. To arise without cause from nothing is a contradiction. "To have been produced by some external cause cannot possibly be true of everything; but something must have existed eternally and independently; as has likewise been shown already" (ibid., 3). The being must be self-existent. This eternal, necessary being cannot be the material universe (*see* MATERIALISM). The material universe is neither eternal nor necessary since many of its properties are contingent. It cannot be necessary and eternal, since its nonexistence can be conceived. And the nonexistence of a necessary being is not possible.

Morality and Christianity. The Boyle lecture of 1705 on natural religion and the truth of Christianity set out fifteen propositions. The first four are devoted to obligations of natural religion. Propositions five to fifteen are on the truth and certainty of Christian revelation. The argument is typical of the classical approach in that it defends the possibility of miracles and the historicity of supernatural events supporting Christianity (*see* APOLOGETICS, HISTORICAL ; MIRACLES, ARGUMENTS AGAINST).

Evaluation. Most of the points of an evaluation of Clarke are covered in detail in the articles GOD, EVIDENCE FOR , and GOD, OBJECTIONS TO PROOFS FOR .

Positive Contributions. Clarke provided a strong classical defense of theism and Christianity (*see* APOLOGETICS, ARGUMENT OF). His argument, especially the first part of it, is one of the most powerful ever offered for an eternal, Necessary Being. It later had a strong influence on the American apologist Jonathan Edwards . It bears strong similarities to the "third way" of Thomas Aquinas.

Likewise, Clarke saw what other classical theists have seen, that the defense of Christianity must come in two steps. First there must be a rational defense of the existence of God. Second there must be a historical defense of the supernatural origin of Christianity.

Negative Critique. Unfortunately, Clarke's logic in the latter part of his argument is not so tight as in the first. While it is clear that (1) something undeniably exists and (2) something must be eternal and necessary; it is not so clear from his treatment that this "something" must be (3) absolutely one. His arguments that matter cannot be eternal are dependent on Newton's physics. In the context of modern science, the evidence of a sudden, explosive origin is more compelling (*see* BIG BANG THEORY).

Classical Apologetics. *Classical apologetics* is so called because it was the apologetic method practiced by the first thinkers who studied and practiced the application of reason to the defense of Christianity. These pioneer apologists included Augustine , Anselm , and Thomas Aquinas (*see* APOLOGETICS, TYPES OF). The roots of classical apologetics are found in some second- and third-century apologists as well. Modern classical apologetics is represented by William Paley , John Locke , C. S. Lewis , B. B. Warfield , John Gerstner, R. C. Sproul, William Craig, J. P. Moreland, and Norman L. Geisler.

Classical apologetics stresses rational arguments for the existence of God (*see* GOD, EVIDENCES FOR) and historical evidence supporting the truth of Christianity. Stress is placed on miracles as a confirmation of the claims of Christ and the biblical prophets and apostles.

Contrasts with Presuppositional and Evidential Apologetics. Classical apologetics differs from various forms of presuppositional apologetics in its handling of proofs for the existence of God and its use of historical evidence. Classical differs from evidential apologetics over whether there is a logically prior need to establish the existence of God before arguing for the truth of Christianity (e.g., the deity of Christ and inspiration of the Bible [*see* CHRIST, DEITY OF]).

Classical apologetics is characterized by two basic steps. Its first step is to establish valid theistic arguments for the truth of theism apart from (but with appeal to) special revelation in Scripture. Its second step is to compile historical evidence to establish such basic truths of Christianity as the deity of Christ and the inspiration of the Bible. The use of the resurrection of Christ often plays an important role in this second step.

Validity of Theistic Proofs. Classical apologetics accepts, and presuppositionalists reject, the validity of traditional theistic proofs for God. Some presuppositionalists replace traditional proofs with transcendental arguments for God of their own (*see* PRESUPPOSITIONAL APOLOGETICS ; VAN TIL, CORNELIUS). Not all classical apologists accept *all* the traditional proofs for God. For example, many reject the validity of the Ontological Argu ment. But most accept some form of the Cosmological Argument and the Teleological Argument. Many also believe the Moral Argument is valid.

Presuppositional apologists reject the validity of theistic proofs for God (*see* GOD, EVIDENCE FOR). Most of them accept the validity of much of what David Hume and Immanuel Kant said in

their critiques of theistic argumentation (*see* GOD, OBJECTIONS TO PROOFS FOR). Some, such as Gordon Clark , do this on the basis of empirical skepticism. Cornelius Van Til and others do it because they believe facts have no meaning apart from the presupposed trinitarian world view. Whatever the grounds, all true presuppositionalists join atheists and agnostics in rejecting the validity of traditional theistic proofs for God (*see* AGNOSTICISM ; ATHEISM).

Historical Evidence and Theism. One apologetic tactic is to show the historical reliability of the New Testament (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS) and argue from that credibility to the New Testament's testimony that Jesus claimed to be, and was miraculously proven to be, the Son of God (*see* CHRIST, DEITY OF). From this, Jesus' own voice is added to historical evidence that the Old Testament is the Word of God. His promise of the ministry of the Holy Spirit does the same for the New Testament (*see* BIBLE, JESUS' VIEW OF).

Sometimes classical apologists begin this second step by showing that the Bible claims to be, and is supernaturally proven to be, the Word of God. In doing so they often use the same basic evidence as is used by evidential apologetics. This includes miracles (*see* MIRACLE ; MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE), fulfilled prophecy (*see* PROPHECY, AS PROOF OF THE BIBLE), the unity of the Bible, and other indications of its supernatural origin (*see* BIBLE, EVIDENCES FOR). The difference between the evidentialists and the classical apologists at this point is that the latter see the need to first establish a theistic universe in order to establish the possibility of miracles. Evidentialists do not see theism as a logically necessary precondition of historical apologetics.

The basic argument of the classical apologist is that it makes no sense to speak about the resurrection as an act of God unless as a logical step it is established that there is a God who can act. Likewise, the Bible cannot be the Word of God, unless there is a God who can speak. And Christ cannot be shown to be the Son of God except on the logically prior premise that there is a God who can have a Son.

While some evidentialists use theistic proofs, they do not believe it is logically necessary to do so. They believe this is simply an alternate approach. The works of John Warwick Montgomery and Gary Habermas fit this category.

At this point there is a similarity between classical apologetics and presuppositionalism. Both believe that one cannot argue legitimately from historical data unless he begins with the prior premise that a theistic God exists. They differ about how to establish this prior premise. The presuppositionalists claim that each worldview acts as a presuppositional grid to filter incoming facts and attempt to make them fit the individual's idea of how the world works. But underlying that process is a built-in, suppressed knowledge of the truth, as expressed by Romans 1 and Augustine 's dictum that every human being is "doing business" with God. The apologist is dependent on the work of the Holy Spirit to show the failure of the held worldview and to excite the innate knowledge. Classical apologists insist that the apologist takes a more active role in partnership with the Holy Spirit to reason through the truth about God and until it is established and admitted in the heart of the unbeliever.

Objections to Classical Apologetics. Other Christian views make several important objections to classical apologetics. Some of these come from evidentialists and others from presuppositionalists or fideists (*see* FIDEISM), who reject the validity of traditional theistic arguments.

Invalidity of Traditional Proofs. Both fideists and strict presuppositionalists reject all the classical arguments for God's existence. Their specific objections are considered elsewhere (*see* GOD, OBJECTIONS TO PROOFS FOR).

Invalidity of Historical Arguments. Fideists and presuppositionalists contend that no appeal to any kind of evidence, including historical evidence is valid, since the same data is interpreted differently under varying worldview perspectives. There are no bare facts. All facts are interpreted, and the interpretation derives from one's worldview. If the dead body of Jesus can be agreed to have come back to life, even that information can be understood differently by different worldviews. A Christian theist (*see* THEISM) sees the event as a supernatural resurrection that confirms Christ's claim to be the Son of God. But the pantheist (*see* PANTHEISM) views it simply as a manifestation of the One Being, of which we are all a part. It reveals Christ to be a guru, not God the Creator revealed in human flesh. The atheist or naturalist views the event as a myth or at most an anomaly that has a purely natural explanation.

In response to this objection, many classical apologists, the author included, agree with the basic point made by the presuppositionalists but note that this does not affect the approach, since classical apologetics believes it is logically necessary to establish theism first as the worldview context in which facts of history are properly understood.

Classical apologists and the presuppositionalists disagree on two matters. First, classical apol ogists contend that they can establish theism by traditional rational arguments, and presuppositionalists do not. Second, classical apologists argue that it is only logically necessary to establish theism before one can properly understand the historical evidence. Many presuppositionalists, following Van Til, insist that one must presuppose a Triune (*see* TRINITY) God who has revealed himself in Scripture as a necessary presupposition for any historical evidence in support of Christianity. But this, to the classical apologists, is simply arguing in a circle.

The Validity of Transcendental Arguments. Not every presuppositionalist discards *all* arguments in favor of Christianity. Some use a transcendental argument (e.g., Greg Bahnsen). They insist that the only valid way to argue for the truth of Christianity is to show that it is transcendentally necessary to posit the basic truth of Christianity as a condition for making any sense out of our world. On no other presupposition can one even assume there is any meaning in history or science, or even attempt to communicate.

The classical apologists agree that this is true so far as theism is necessary to view life as meaningful and coherent. In a closed system there is no ultimate meaning, no ultimate values, and no "miracle" happens that cannot be accounted for by naturalistic phenomenon (cf. John 3:1–2 ; Acts 2:22 ; Heb. 2:3–4). But it is not necessary to presuppose that the God is triune, has a Son incarnated as Jesus of Nazareth, and has revealed himself in the sixty-six inspired books of

Christian Scripture. One can make sense of the world by assuming less than the whole truth of Christianity.

Other differences are detailed elsewhere. It is sufficient to note here that they involve the role of faith and reason, especially the use of logic or reason to demonstrate God's existence which classical apologists use and pure presuppositionalists reject.

Clement of Alexandria. Church Fathers of the second and third centuries were apologists who defended the faith against the attacks of both Jewish and pagan thinkers. Among the first apologists was Clement of Alexandria (ca. 150–ca. 213).

The Apologetics of Clement. To some the position of some early apologists, such as Clement, seems overly rationalistic, and stresses Greek philosophy too heavily. On closer

analysis, however, the first postapostolic defenders of the Faith were more Christian in apologetic than would at first appear (*see* FAITH AND REASON).

Clement affirmed that “before the advent of our Lord, philosophy was necessary to the Greeks for righteousness. . . . Perchance, too, philosophy was given to the Greeks directly and primarily, till the Lord should call the Greeks. For this was a schoolmaster to bring ‘the Hellenic mind’ as the law, the Hebrews, ‘to Christ’ ” (*Stromata* 1.5). He also spoke of the inspiration of Greek poets (*Exhortation to the Heathen* 8), and went so far as to declare that “by reflection and direct vision, those among the Greeks who have philosophized accurately, saw God” (*Stomata* 1.19).

However, Clement was not so rationalistic that he did not affirm *sola Scriptura,* insisting of the Bible that “certainly we use it as a criterion in the discovery of things.” For “what is subjected to criticism is not to be believed till it is so subjected; so that what needs criticism cannot be a first principle” (*Stromata* 7.16).

However, Greek philosophy at best served only a preparatory role for Christ. For “Hellenic philosophy comprehends not the whole extent of the truth, and . . . it prepares the way for the truly royal teaching . . . and fitting him who believes in providence for the reception of the truth” (*Stromata* 1.16).

There were limitations to philosophy. The Greeks had only “certain scintillations of the divine word” (*Exhortation* 7). Faith is the means of attaining the full revelation of God (*Exhortation* 8).

Like Justin Martyr , Clement believed that the truth of philosophy was borrowed from the Hebrew Scriptures. He wrote: “I know thy teachers, even if thou woulds’t conceal them. You have learned geometry from the Egyptians, astronomy from the Babylonians; . . . but for laws that are consistent with truth, and your sentiments respecting God, you are indebted to the Hebrews” (*Exhortation* 6). However, what truth philosophers possessed did have did not directly reveal Christ. He said plainly: “I do not think that Philosophy directly declared the Word, although in many instances philosophy attempts and persuasively teaches us probable arguments” (*Stromata* 1.19).

It is often overlooked that Clement believed that faith is a prerequisite of philosophy; believing is a precondition of knowing. For according to him all knowledge is based on first principles and “first principles are incapable of demonstra tion. . . . Accordingly, faith is something superior to knowledge and [is] its criterion” (*Stromata* 2.4).

Evaluation. Within its context, Clement’s defense of the Christian faith was effective. From mastery of the prevailing philosophy, he defended the superiority of the Christian revelation. While non-Christian philosophers possessed some truth, it too came from God, either by general or special revelation. Apart from Christianity the Greeks at best had only a preparatory and partial knowledge of God. The fullness of truth is found only in Christ. Indeed, what truth the pagans possessed they borrowed from the Christian Scriptures.

Coherentism. ***See*** **TRUTH, DEFINITION OF .**

Coherence as Test of Truth. ***See*** **CLARK, GORDON ; TRUTH, DEFINITION OF .**

Common Ground. The question of "common ground" is largely a debate between classical apologetics and presuppositional apologetics. The issue is whether there is any area of neutral evidence or starting point at which Christian and non-Christian can meet (*see* HISTORICAL APOLOGETICS). Revelational presuppositionalists deny that there is a common ground to which both sides can connect in establishing the truth of Christianity.

Cornelius Van Til strongly believed the noetic effects of sin so vitiated human understanding that there is no common understanding of the facts. One cannot build an apologetic argument on the facts of experience or history apart from the supernatural work of the Holy Spirit in the heart and mind (*see* HOLY SPIRIT, ROLE IN APOLOGETICS). One's worldview must be presupposed or posited by a transcendental argument in order to give an interpretive framework to otherwise bare facts.

Both historical and classical apologists reject this view, claiming there are starting points in reason (*see* FAITH AND REASON ; LOGIC) from which to build a case for a theistic and Christian worldview (*see* APOLOGETICS, ARGUMENT OF ; GOD, EVIDENCE FOR).

Comte, Auguste. Auguste Comte (1797–1857) was from a rationalist (*see* RATIONALISM) French Catholic family. He studied science and was secretary of Saint-Simone at *Ecole Polytechnique* . He said he "naturally ceased believing in God" at age fourteen. Comte is the father of both positivism and sociology. He coined the latter term. He developed a mystical (*see* MYSTICISM), nontheistic, humanistic religious cult in which he installed himself as high priest (*see* HUMANISM, SECULAR).

Comte's main works were *Cours, The Positive Philosophy of Auguste Comte* (1830–42, trans. 1853) and *The Catechism of Positive Religion* (1852, trans. 1858). *The Catechism* included a calendar of secular "saints."

Comte's Positivistic Philosophy. With an epistemological starting point in Immanuel Kant 's antimetaphysical agnosticism and G. W. F. Hegel's historical developmentalism, Comte developed his "law of growth." It included three stages of human development: *theological* (child)—ancient, *metaphysical* (youth)—medieval, and *positivistic* (adulthood)—modern. The first featured primitive belief in personal gods, later replaced by the Greek idea of impersonal law, only to be superseded by the modern (positivistic) belief in the methodological unity of science. These three stages represent the mythological (mythos), metaphysical (logos), and

scientific (positivistic) stages of the human race. According to Comte, human beings move forward from the personal explanation of nature, to impersonal law, and finally to an objective method. They advance from belief in supernatural beings to acceptance of natural forces, to understanding through phenomenal (empirical) descriptions. Instead of animating spirits or impersonal powers, natural laws are posited. In this three-stage growth spiritual and then rational causes are discarded for purely natural (positivistic) descriptions.

The religious stage has its own evolution. People move from polytheistic (*see* POLYTHEISM) manifestations of nature to multiple gods and finally a monotheism which consolidates all the forces that are not understood into a single godhead. The problem with the religious interpretation is that it anthropomorphizes nature. The problem with the metaphysical stage is that it makes ideas real, rather than merely describing and interrelating them, as does the positivistic stage.

Comte's goal was to find a general law by which all phenomena are related. Such a law, he believed, would be the ideal result of positivistic philosophy. However, the best likely result is a unity in scientific method.

For Comte, sociology is the final science, the science of society. Social progress is dialectical, moving from Feudalism (*see* FREUD, SIGMUND), through the French Revolution to Positivism. Freedom of thought is as out of place in society as in physics. True freedom lies in rational subjection to scientific laws. One law is that society must develop in a positivistic direction.

Comte's three stages were expressed politically as well. First, the Middle Ages society shared common religious ideas (theological stage). Second, the French Revolution society had common political ideals (metaphysical stage). Finally, the Modern (positivistic) society must share the scientific method. In this stage the Catholic priesthood was replaced by a scientific-industrial elite. Dogma is based on science and proclaimed by this elite.

Karl Marx denied that he had read Comte before 1886, but a Comptian friend (E. S. Beesley) chaired the 1864 meeting of the Marxist International Workingmen's Association. Comte's views undoubtedly influenced the development of Marx's dialectical understanding of history.

Comte's Religious Views. Comte disliked Protestantism, pronouncing it negative and productive of intellectual anarchy. He developed his own nontheistic humanistic religion, in which Comte was the high priest of the Cult of Humanity. His mistress, Clothilde Vaux, was high priestess. Comte developed a Humanistic Religious Calendar, with such "saints" as Frederick the Great, Dante, and Shakespeare.

Evaluation. Comte's views are prey to a variety of philosophical, scientific, and historical weaknesses. Critique of some of his ideas is found elsewhere, particularly in the article, Humanism, Secular.

Comte's Atheism Is Inadequate. As other atheists (*see* GOD, ALLEGED DISPROOF OF), Comte never succeeded in eliminating God. He provided no real rebuttal to arguments for the existence

of God (*see* GOD, EVIDENCE FOR). Instead, he tried to explain them away through his theories of historical development.

Comte's Historical Development Is Unfounded. Comte's philosophy of history is both gratuitous and unfounded. It is neither philosophically justified nor does it fit the facts. History simply does not fit into the neat stages of development his view demands. For example, there remain great modern and contemporary metaphysical views, such as panentheism , represented by Alfred North Whitehead , and monotheism predated polytheism, as demonstrated by the Ebla tablets (*see* MONOTHEISM, PRIMITIVE)

Comte's Humanistic Beliefs Are Bizarre. Even other atheists and humanists are embarrassed by Comte's religious beliefs. They depict a religious and superstitious perspective that he himself characterized as primitive. If religion is outdated by the scientific, then why establish another religion, with a high priest, priestess, and holy days?

In effect, Comte deified the scientific method for studying nature. Yet Comte protested that others had deified nature. The positivist approach was not just *a* method for discovering some truth, but *the* method for discovering all truth. As such, it involved self-defeating beliefs in materialism. It was weakened as a worldview by a denial of metaphysics and absolute morality (*see* MORALITY, ABSOLUTE NATURE OF).

Contradiction. *See* FIRST PRINCIPLES .

Conventionalism. *Conventionalism* is the theory that all meaning is relative. Since all truth claims are meaningful statements, this would mean that all truth is relative. But this is contrary to the Christian claim that there is absolute truth (*see* TRUTH, ABSOLUTE NATURE OF). Absolute truths are true at all times, in all places, for all people.

Conventionalism is a reaction to Platonism (*see* PLATO), which contends that language has an unchanging essence or ideal forms. Conventionalists believe that meaning changes to fit each situation. Meaning is arbitrary and relative to culture and context. There are no transcultural

forms. Language (meaning) has no essence of itself; linguistic meaning is derived from the relative experience on which language is based.

Some of the modern proponents of conventionalism are Ferdinand Saussure (d. 1913), Gottlob Fregge (d. 1925), and Ludwig Wittgenstein (d. 1951). Their view is widely accepted in current linguistic philosophy.

Symbols and Meaning. An important difference separates a conventionalist theory of symbols and a conventionalist theory of meaning. Other than natural symbols (for example, smoke signifying fire) and onomatopoetic terms (for example, *crash* , *bang* , *boom*) whose sound express to the words' meanings, virtually all linguists acknowledge that symbols are conventionally relative. The word *down* has no intrinsic relation to the fluffy feathers of a duck. The word also refers to a lower position, a psychological state, a type of mountain landscape, an attempt to move the ball in American football, and the direction south. The same or similar group of sounds may carry far different meanings in other languages, and many languages will have differing sounds to refer to the feathers on a duck. This is true of most words.

This is not the same as claiming that the meaning of a sentence is culturally relative. It is only to say that the words used to convey meaning are relative. That is, individual symbols are relative, but not the significance a combination of symbols carries into a sentence.

Evaluation. As a theory of meaning, conventionalism has serious faults. First, it is a self-falsifying theory. If the theory were correct, the statement "All linguistic meaning is conventional" would be relative and ultimately meaningless. But the conventionalist who makes such statements assumes that sentences do carry objective meaning, so he makes objectively meaningful statements to argue that there are no objectively meaningful statements.

Second, if conventionalism were correct, universal statements would not translate into other languages as universal statements. But this is not the case. The sentence "All triangles have three sides." is understood to be universally true in Mongolian, Spanish, or any language with words for *triangle* , *three* , and *side* . The same is true of the statement "All wives are married women." If meaning were culturally relative, no such universal, transcultural statement would be possible.

There would be no universal truths in any language. One could not even say that 3 + 4 = 7. In logic there would be no law of noncontradiction. In fact, no consistent conventionalist can even deny such absolute first principles without using them. The very statement that "The meaning of all statements is relative to a culture" depends for meaning on the fact that laws of logic are not relative to a culture, but in fact transcend cultures and languages.

Third, if conventionalism were true, we would not know any truth prior to knowing the context of that truth in that language. But we can know 3 + 4 = 7 before knowing any conventions of a language. Mathematics may depend on relative symbols to express itself, but the truths of mathematics are independent of culture. Likewise, laws of logic are independent of human convention. Logic is not arbitrary, and its rules are not created in a cultural context, but are rather discovered. They are true prior to language and cultural expression.

Fourth, a related problem is that conventionalism confuses the *source* of meaning with its ultimate *ground* . The source of a person's knowledge that "All wives are married women" may be social. One may have learned it from a parent or a teacher. But the ground for knowing that this is a true statement is not social but logical. It represents a first principle of logic in that the predicate is reducible to the subject (wife = married woman). It is true by definition, not acculturation.

Fifth, if conventionalism were correct, no meaning would be possible. If all meaning is based on changing experience, which in turn gets meaning from changing experience, there is no basis for meaning. An infinite series is impossible in finding a first cause for the universe, and it is impossible in finding the beginning of meaning if all meanings depend on other meanings. A statement without any basis for meaning is a baseless statement.

Sixth, conventionalism has only an internal criterion for meaning. But internal criteria don't help adjudicate meaning conflicts of the same statement from different worldview vantage points. Either a theist (*see* THEISM) or a pantheist (*see* PANTHEISM) can make the statement "God is a Necessary Being." The words in themselves, without objective definitions behind the words to fall back to, lack any sort of relation to truth. The theist and pantheist can talk for hours, leaving one another with the impression that they believe the same things about God. By being able to unpack firm meanings for *God* and *Necessary Being* , however, the conversants can discuss the differences in their worldviews.

It is easy to see that no truly descriptive knowledge of God is possible for a conventionalist. Language is strictly based in experience. It tells us only what God *seems to be to us in our experience* . It cannot tell us what he *really is in himself* . This reduces to self-defeating agnosticism or the claim that we know that we cannot know anything about the nature of God (*see* ANALOGY, PRINCIPLE OF *)*. Conventionalists reduce the meaning of *God* to a mere interpretive framework, rather than a being beyond the world. Theism shows God to be (*see* COSMOLOGICAL ARGUMENT ; GOD, EVIDENCE FOR ; KALAM COSMOLOGICAL ARGUMENT).

Seventh, conventionalism has a circular justification. It really does not justify its claims, but merely asserts them. A conventionalist asked for the basis of this belief that all meaning is conventional cannot give a nonconventional basis. If she could she would no longer be a conventionalist. But a conventional basis for conventionalism would be a relative reason for relativism. Such an argument could only be circular.

Eighth, conventionalists often distinguish between surface and depth grammar to avoid some of their dilemmas. However, such a distinction assumes that they have a vantage point independent of language and experience. Conventionalism, by its very nature, does not allow such a vantage point outside one's culture. So even this distinction is logically inconsistent with the theory.

Conclusion. The conventionalists' theory of meaning is a form of semantic relativism. Like other forms of relativism, conventionalism is self-defeating. The very theory that all meaning is relative is itself a nonrelative concept. It is a meaningful statement intended to apply to all

meaningful statements. It is a nonconventional statement claiming that all statements are conventional.

Cosmological Argument. The arguments traditionally used to prove God's existence are *the cosmological argument* , *the teleological argument* , *the moral argument* , and *the ontological argument* . Respectively, these are the arguments from the cosmos, from design, from moral law, and from the idea of an absolutely perfect (or necessary) being.

Forms of the Argument. There are two basic forms of the cosmological argument: the *horizontal* or kalam cosmological argument and the *vertical* . The horizontal cosmological argument reasons back to a Cause of the *beginning* of the universe. The vertical cosmological argument reasons from the *being* of the universe as it now exists. The former, explaining how the universe *came to be* , was championed by Bonaventure (1221–1274). The latter, explaining how it *continues to be* , flows from Thomas Aquinas (1224–1274). The first calls for an *originating* Cause, and the latter for a *sustaining* Cause. Forms of the cosmological argument combine both dimensions.

A Survey of Cosmological Arguments. The basic idea of this argument is that, since there is a universe rather than none at all, it must have been caused by something beyond itself. This reasoning is based on the law of causality (*see* CAUSALITY, PRINCIPLE OF), which says that every finite or contingent thing is caused right now by something other than itself.

Aristotle: Unmoved Mover(s). Plato's (428–348 B.C .) student Aristotle (384–322 B.C .) gave further sophistication to his teacher's argument for God. In its strongest form, Aristotle's cosmological argument is unfolded in the article on Aristotle. Aristotle's argument presupposed a polytheistic (*see* POLYTHEISM) universe. He moved from the fact of change and its movements to the existence of pure actualities or unmoved movers. These necessary beings can act upon contingent beings. They move potential change so that it becomes actualized change.

Aristotle's cosmology postulated dozens of unmoved movers, but ultimately one heaven and one God. For only material things can be numerically differentiated.

Noteworthy about Aristotle's argument is that it introduces the question of an infinite regress of causes (*see* INFINITE SERIES). Aristotle struggles with a view that there must have been a plurality of first causes, but unlike Plato's " *Demiurgos* ," Aristotle's First Cause is a final (purposing) cause.

This purposing cause should not, however, be confused with the efficient or producing cause of later Christian thinkers. Neither Plato's World Soul, Former, or *Demiurgos* (*see* CREATION, VIEWS OF), nor Aristotle's Unmoved Mover is identical with the absolutely perfect Being of Christian theism. Aristotle's Unmoved Mover was not a personal God and had no religious significance. No worship was due this pantheon. The First Cause was not infinite. Only what is formless or indefinite could be considered infinite to the Greeks.

Anselm: Cosmological-Type Arguments. Before Anselm , St. Augustine offered a "proof" for God. After him Anselm (1033–1119). He is best known for his ontological argument in the *Proslogion* , but an earlier work, the *Monologion* , offered three *a posteriori* proofs for God's existence (Anselm 1–3). A description of his arguments is given in the article on Anselm.

Anselm's first argument is from the existence of good things:

1. Good things exist.

2. The cause of this goodness is either one or many.

3. If it were many, there would be no way to compare their goodness. But some things are better than others.

4. So there is one Supreme Good who causes all goodness in all good things.

The second argument is similar but works from perfection:

1. Some beings are more nearly perfect than are others.

2. But things cannot be more or less perfect unless there is one wholly perfect standard for comparison.

3. That standard is a Most Perfect Being.

The third argument, from being, is most obviously cosmological:

1. Something exists, and

2. owes its existence either to nothing or to something.

3. Nothing cannot cause something.

4. There is, then, a something, which is either one or many.

5. If many, the beings would be mutually dependent for their own existence or dependent on another.

6. They cannot be mutually dependent for their existence. Something cannot exist through a being on which it confers existence.

7. Therefore, there must be one being through which all other beings exist.

8. This being must exist through itself.

9. Whatever exists through itself, exists in the highest degree of all.

10. Therefore, a supremely perfect Being exists in the highest degree.

These arguments, unlike Plato's but like the reasoning of Plotinus , identify the Creator with the supreme Good. Unlike Aristotle's, the arguments view God as the *efficient* , not the *final* , Cause of the world. Unlike Plato or Aristotle, Anselm holds that this efficient Cause does not merely operate on eternally existing matter. Rather this Cause causes everything, including matter.

These Christian theistic arguments combined at least three elements: (1) Efficient causality from Plato's *Timaeus* argument; (2) identification of this God with the Good of Plato's *Republic* , the supremely perfect Being; (3) identification of this God with the Hebrew-Christian God. This God causes the very being, not merely the forms of being, of everything that exists.

Alfarabi : Necessary Existence Argument. Arabian and Jewish philosophers of the Middle Ages influenced later Christian forms of the cosmological argument. The Muslim thinker Alfarabi (870?–950) provided the heart of later scholastic arguments by his distinction between *essence* and *existence* .

Aristotle distinguished between *what* a thing is and *that* it is. But Alfarabi stated this distinction as between a thing's essence and its existence. This distinction implies an argument for God's existence, the form of which is shown in the article on Alfarabi (see also Maurer, 95–97). This reasoning establishes the concept of "possible beings," whose essence is distinct from their existence. These beings do not "have" to exist. Once they did not exist, for existence is not part of their essence. It can be said that they exist *accidentally* , rather than *essentially* .

Such beings must have received existence from another being. That causing being may also have been caused. But some uncaused being had to start all the causing. This First Cause must be an essential Being, whose essence is to exist. Only existence of such a Necessary Being explains the existence of all accidental beings.

Stated philosophically, if there are beings whose essence is *not to exist* , then there must be a Being whose essence is *to exist* . Possible beings are not possible unless there is a Necessary Being from whom they can receive existence. And since a being cannot give existence to another when it is dependent for its own existence on another, there must be a Being whose existence was not given to it by another, but who gives existence to all others.

Avicenna : First Cause Argument. Following Alfarabi, the Muslim philosopher Avicenna formulated a similar cosmological argument that was emulated in many forms by later scholastics. For the form, see the article AVICENNA . The proof begins with Alfarabi's "possible beings," which must have a cause for their being. There cannot be an infinite series of causes of being, since the cause of being must exist at the same time as it causes another. Through this First Cause, all other beings exist. This First Cause must be a Necessary Being. The cause of all possible beings cannot itself be a possible being. It must be a Necessary Being.

By borrowing some neo-Platonic (*see* PLOTINUS) premises and a ten-sphere cosmology, Avicenna extended his argument to argue that this necessary First Cause created a series of angels or "intelligences." These control the ten cosmic spheres. He reasoned that the Necessary Being, who is essentially one, can create only one effect at a time. Since thinking is creating and God necessarily thinks, since he is a Necessary Being, there must be an emanation from God of ten beings, called "intelligences," who do the actual work. The last of these beings, called "Agent Intellect," forms the four elements of the cosmos and informs the human mind of all truth.

Avicenna's God, then, was a Necessary Being from whom a serial creative force of ten gods followed with absolute necessity. Unlike the Christian God who freely created and who is directly responsible for the existence of everything else that exists, Avicenna's chain of Gods is necessary and these Gods create all below them.

The Jewish philosopher Moses Maimonides (1135–1204) anticipated several later Christian formulations of cosmological-type arguments. He argued for a First Mover, a First Cause, and a Necessary Being, as in Aquinas's first three arguments. He insisted that the "I AM" of the Old Testament (Exod. 3:14) meant "absolute existence" and that God alone exists absolutely and necessarily. All creatures have existence only as an "accident" superadded to their essence by their Cause.

Thomas Aquinas: Five Arguments. When Aquinas formulated his "Five Ways," he was not creating arguments that were substantially new. Maimonides had the first three arguments. Alfarabi and Avicenna had the first two proofs. Anselm had an argument for perfection similar to the fourth argument. And Aquinas's fifth proof was more of a teleological argument, which such scholars as Thierry of Chartes and William of Conches had adapted from Plato's *Timaeus* argument. Aquinas does, of course, state the arguments out of the context of his own philosophy, which is more Aristotelian than that of most of his Christian predecessors. The first four arguments of Aquinas may be summarized:

The Argument from Motion (Aquinas, 1.2.3).

1. Things do move. Motion is the most obvious form of change.

2. Change is a passing from *potency* to *act* (i.e., from potentiality to actuality).

3. Nothing passes from potency to act except by something that is in actuality, for it is impossible for a potentiality to actualize itself.

4. There cannot be an infinite regress of actualizers or movers. If there is no First Mover, there can be no subsequent motion, since all subsequent motion depends on prior movers for its motion.

5. Therefore, there must be a first, Unmoved Mover, a pure actualizer with no potentiality in it that is unactualized.

6. Everyone understands this to be God.

The Argument from Efficient Causality.

1. There are efficient causes in the world (i.e., producing causes).

2. Nothing can be the efficient cause of itself, for it would have to be prior to itself in order to cause itself.

3. There cannot be an infinite regress of (essentially related) efficient causes, for unless there is a first cause of the series there would be no causality in the series.

4. Therefore, there must be a first, uncaused, efficient Cause of all efficient causality in the world.

5. Everyone gives to this the name of God.

The Argument from Possibility and Necessity.

1. There are beings that begin to exist and cease to exist (i.e., possible beings).

2. But not all beings can be possible beings, because what comes to exist does so only through what already exists. Nothing cannot cause something.

3. Therefore, there must be a Being whose existence is necessary (i.e., one that never came into being and will never cease to be).

4. There cannot be an infinite regress of Necessary Beings, each of which has its necessity dependent on another because

    a. An infinite regress of dependent causes is impossible because of the reasoning in the argument for efficient causality.

b. A Necessary Being cannot be a dependent being.

5. Therefore, there must be a first Being that is necessary in itself and not dependent on another for its existence.

The Argument from Gradation *(Perfection) in Things.*

1. There are different degrees of perfections among beings (some are more nearly perfect than others).

2. But things cannot be more or less perfect unless there is a wholly perfect.

3. Whatever is perfect is the cause of the less-than-perfect (the higher is the cause of the lower).

4. Therefore, there must be a perfect Being that is causing the perfections of the less-than-perfect beings.

5. This we call God.

The argument for a First Cause of being. There seems to be a basic form behind all of these arguments with only a different starting point. Each argument begins in some characteristic of being (change, causality, contingency, and perfection, respectively) and then argues to a First Cause:

1. Some dependent beings exist.

2. All dependent beings must have a cause for their dependent existence.

3. An infinite regress of existentially dependent causes is impossible.

4. Therefore, there must be a first, uncaused Cause of the existence of every dependent being.

5. This independent Being is identical with the "I AM" of Scripture. The implication is that it is impossible to have more than one absolutely necessary and independent being upon which everything else exists for its being.

Duns Scotus: Argument from Producibility. John Duns Scotus (1265?–1308?) modified the cosmological argument of Aquinas in two important ways. First, he began with the *producibility* of being, not merely with produced beings. Second, he amplified on the argument against an infinite regress of dependent causes. The full form of Scotus's proof (Scotus, 39–56) is:

1. Being is produced (i.e., beings come into being). This is learned through experience (by observing beings produced), but it is also true independent of experience (i.e., it would be

true of beings that do not exist). It would be true, even if God had not willed to create anything.

2. What is produced is producible, either by itself, by nothing, or by something else.

3. But no being can produce itself. In order to cause its own existence, it would have to exist prior to its own existence.

4. Neither can something be caused by nothing. This is contradictory.

5. Therefore, being is producible only by some being that is productive. Only beings can produce beings.

6. There cannot be an infinite regress of productive beings, each producing the being of the one following it, because

   a. This is an essentially related, not an accidentally related, series of causes (1) where the primary cause is more nearly perfect than the secondary, (2) where the secondary cause depends on the primary for its very causality, and (3) where the cause must be simultaneous to the effect.

   b. An infinite series of essentially related causes is impossible, because, (1) if the whole series is dependent for its causality (every cause depending on a prior cause), then there must be something beyond the series that accounts for the causality in the series. (2) If an infinite series were causing the effect, then there would have to be an infinite number of causes simultaneously causing a single effect. This is impossible. There cannot be an actual infinite number in a series, for it is always possible to add one more to any number. (3) Wherever there are prior causes, there must be a prime (first) cause. One cause would not be nearer to the beginning than any other unless there is a beginning. (4) Higher causes are more nearly perfect than lower causes, and this implies a perfect Cause at the head of all less-than-perfect causes. (5) An infinite regress of causes implies imperfection, since each cause lacks the ability to explain the succeeding causes. But an imperfect series implies something perfect beyond the series as a ground for the imperfect.

7. Therefore, there must be a first, productive Cause of all producible beings.

8. This First Cause of all producible beings must be one, because

   a. It is perfect in knowledge, and there cannot be two beings that know everything perfectly, for one would know itself more completely than would the other.

   b. It is perfect in will; hence, it loves itself more completely than it loves anything else, which means that the other infinite would be loved less than perfectly.

c. It is infinitely good, and there cannot be two infinitely good beings, for then there would be more than an infinite good, and this is impossible since there cannot be more than the most.

d. It is infinite in power. If there were two with infinite power, this would mean that there would be two total primary causes of the same effect, and this is impossible, since there cannot be two causes each doing all the causing.

e. Absolute infinite cannot be excelled in perfection, since there cannot be a more perfect than the wholly Perfect.

f. There cannot be two Necessary Beings, for to differ, one would have to have some perfection the other lacked (if there is no real difference, they do not really differ). But whatever a Necessary Being has, it must have necessarily. Hence, the one lacking what the other had necessarily would not be a Necessary Being.

g. Omnipotent will cannot be in two beings, for then one could render impotent what the other wills omnipotently. Even if they agreed not to hinder each other, they would still be incompatible, for each would be the total primary (and direct) cause of any given thing that they agreed should exist. But an omnipotent Cause must be the total primary (and direct) Cause of what it wills. The cause agreeing to, but not directly willing, the effect would be only the indirect cause and hence not the direct (omnipotent) Cause of the effect.

Leibniz : The Argument from Sufficient Reason. The most influential form of the cosmological argument in modern times arose from Gottfried Wilhelm Leibniz (1646–1716), the German rationalist. The proof (Leibniz, 32–39) is stated:

1. The entire (observed) world is changing.

2. Whatever is changing lacks within itself the reason for its own existence.

3. There is a sufficient reason for everything, either in itself or else beyond itself.

4. Therefore, there must be a cause beyond this world for its existence.

5. This cause is either its own sufficient reason or else it has a cause beyond it.

6. There cannot be an infinite regress of sufficient reasons, for the failure to reach an explanation is not an explanation; but there must be an explanation.

7. Therefore, there must be a First Cause of the world that has no reason beyond it but is its own sufficient reason. The sufficient reason is in itself and not beyond itself.

Under the influence of Leibniz's disciple, Christian Wolff (1679–1754), this proof became the pattern for cosmological argument in the modern world. Wolff started the argument (Collins, 137–38) in a slightly different manner:

1. The human soul exists (i.e., we exist).

2. Nothing exists without a sufficient reason for existence.

3. The reason for our existence must be contained either in ourselves or else in another, diverse from ourselves.

4. The reason for our existence is not in ourselves. Our nonexistence is possible or conceivable.

5. So the reason for our existence must be outside of ourselves.

6. One does not arrive at a sufficient reason for existence without reaching a being that has within itself the reason for its own existence. If it did not, then there must be a sufficient reason for its existence beyond itself.

7. A being that has within itself the reason for its own existence is a Necessary Being.

8. Therefore, there must be a Necessary Being beyond us that is the sufficient reason for our existence. If there is not a Necessary Being beyond us, we would be Necessary Beings, having the reason for own existence in ourselves.

9. It is logically impossible for a Necessary Being not to exist. Self-existence or ascetic flows necessarily from the nature of a Necessary Being.

10. Hence, this Necessary Being is identical with the self-existent God of Scripture.

The Leibniz-Wolffian formulation of the cosmological argument rests heavily on the principle of sufficient reason (*see* SUFFICIENT REASON, PRINCIPLE OF), which is usually defended as a self-evidently true analytic principle. The argument is *a posteriori* in form, but not existential. It begins with the existence of something, but then proceeds toward its conclusion, so it is based on a conceptual certainty, not an actual (existential) certainty. This is precisely the point at which modern criticism of the cosmological argument begins. Even scholastic philosophers were highly influenced by this kind of reasoning (Gurr). Their reformulation of Aquinas's cosmological argument is subject to the same criticism.

Meeting Objections to the Argument. Objections against the cosmological argument, emanating largely from Immanuel Kant and David Hume, are treated at length in biographical articles on those philosophers and in the article God, Objections to Proofs for.

Taylor: Restating the Cosmological Argument. Richard Taylor occasioned renewed interest in the cosmological argument by a restatement that evades many traditional objections. Taylor's restatement takes this shape (Taylor, 279–95).

1. The universe as a whole does not explain its own existence.

   a. No observable part explains its own existence.

   b. Nor does the whole explain its existence (its nonexistence is conceivable).

   c. Answering the questions *Where* ? *How long* ? *What?* or *How large?* does not answer *why* the world exists when it need not exist (e.g., a large ball found in the forest needs an explanation as to *why* it exists; expanding the ball to the size of the whole universe does not eliminate the need for an explanation).

2. Whatever does not explain its own existence calls for an explanation beyond itself.

   a. It is logically possible that the principle of sufficient reason is not true. It is not analytically true; it can be denied without contradiction.

   b. But it is implausible and unreasonable to deny its truth as applied to the world. The nonexistence of the world is conceivable, whether it includes only one grain of sand or all the stars, and we assume the principle of sufficient reason in all our thought.

3. An infinite regress of reasons is impossible, for it fails to give a sufficient reason; it just indefinitely avoids giving the reason that is demanded by existence. Therefore, there must be a first self-sufficient, (independent) cause of the whole universe.

Taylor adds that it is no less meaningful to speak of God as an independent or Necessary Being than it is to speak of square circles not existing. If it is meaningful to speak of beings that are impossible, then it is meaningful to speak of a Being that is necessary. A concept of a Being that cannot *not* exist is just as meaningful as a concept of one that *cannot* exist (i.e., one that can be nonexistent).

A few comments are in order on the state of the cosmological argument in the light of Taylor's revision. It does not provide a rationally inescapable conclusion. He admits that it is logically possible that the principle of sufficient reason is not true. Taylor's argument does appear to lend plausibility to a cosmological type of argument, since it shows that it is meaningful to ask for a cause of the whole world. It shows how the concept of a Necessary Being is meaningful and argues forcefully against infinite regress. The argument is grounded in the need for an existence-explanation for the world, not in some alleged conceptual or logical necessity, as in the ontological argument.

Despite these positive factors for theism, Taylor's argument is subject to the criticisms of the rationalistic Leibniz-Wolffian tradition. It places the success of the cosmological argument in the hands of the principle of *sufficient reason* , rather than basing it squarely on the principle of

existential causality . The world demands a real cause and not merely an explanation or reason. This cannot be accomplished by confusing and/or equating a ground for the actual here-and-now "be-ing" of the world with an explanation of the inconceivability of its nonexistence. Conceptual problems call for conceptual solutions. Real dependent beings call for an independent Being on which they are depending for their present.

Conclusion. The vertical cosmological argument is based on the premise that something is keeping the universe in existence right now. Something has not only caused the world to *come into being* (Gen. 1:1), but is also causing it to *continue to be* (cf. Col. 1:17). The world needs both an *originating* cause and a *conserving* cause. This argument provides an answer to one of the most basic of all questions: "Why is there something (right now) rather than nothing?" Briefly, it can be put this way:

1. Every part of the universe is dependent.

2. If every part is dependent, then the whole universe must also be dependent.

3. Therefore, the whole universe is dependent right now on some independent Being beyond it for its present existence.

In response, critics argue that the second premise is the fallacy of composition. Just because every piece of a mosaic is square does not mean the whole mosaic is square. Also, putting two triangles together does not necessarily make another triangle; it may make a square. The whole may (and sometimes does) have a characteristic not possessed by the parts.

Defenders of the vertical form of the cosmological argument are quick to note that sometimes there is a necessary connection between the parts and the whole. For example, if every piece of a floor is oak, then the whole floor is oak. If every tile in the kitchen is brown, then the floor is brown. The reason for this is that it is of *the very nature of* patches of brown tile that when you put more like patches of brown tile, you still have a patch of brown. And putting two triangles together does not necessarily make another triangle. Nevertheless, putting two triangles together will necessarily make another geometric figure.

Likewise, *it is of the very nature of dependent beings that when you put more of them together, you still have a dependent being.* If one thing is dependent for its being, then another dependent being can no more hold it up than can one parachutist save another if neither of their parachutes open.

Some critics respond that the whole is greater than the parts. While the parts are dependent, the whole universe is not. However, either the sum of the parts is equal to the whole or it is more than the whole. If the whole universe is equal to its parts, then the whole must be dependent, just as the parts are. Proof of this is that, when all the parts are taken away, the whole would vanish too. Thus, it must be contingent also.

If, on the other hand, the whole universe is more than the parts and would not vanish were the parts all destroyed, then the "whole" is the equivalent of God. For it is an uncaused,

independent, and eternal, and Necessary Being on which the entire universe depends for its existence.

Creation and Origins. The Bible's Hebrew word for "creation" (*bara*) and its Greek counterpart (*ktisis*) are usually reserved for the origin or beginning of things. However, even though God has completed his work *of* creation (Gen. 2:2 ; Exod. 20:13), he is not finished with his work *in* creation (John 5:17). Belief in a theistic creation and continued preservation of the world are often dismissed today as unscientific (*see* ANTHROPIC PRINCIPLE ; BIG BANG ; ORIGINS, SCIENCE OF). This view is built partly on a misunderstanding of the biblical teaching on God's creation and providence and partly on a naturalistic bias. It is notable that most founders of modern science, who were assuredly scientific in outlook, believed that evidence from the scientific world pointed to a Creator.

This is a study of importance, both in the scientific search for truth, and in Christian faith. God's literal creation of the universe is vital to Christianity (*see* CREATION, VIEWS OF ; EVOLUTION ; EVOLUTION, BIOLOGICAL). In addition to its implications for theism generally, Christians find in the New Testament a direct relationship between the literal creation of Adam (*see* ADAM, HISTORICITY OF) and the most basic Christian teachings.

God's Work of Origin. There is a difference between God's work in the *origin* of the world and his work in the *operation* of it. In most biblical references, there is no doubt that the word *creation* refers to the origination of the universe. Where a process may be implied, it is not the creation of the physical universe in view but the propagation of animal or human life.

The Hebrew word *Bara* is used of God's operation of the world only rarely, as in Psalm 104:30 and Amos 4:13 . It is used of the origin of the world or universe in Genesis 1:1 , 21 , 27 ; 2:3 , 4 ; 5:1 , 2 ; 6:7 ; Deuteronomy 4:32 ; Psalm 89:11 , 12 ; 148:5 ; Isaiah 40:26 ; 42:5 ; 43:1 , 7 ; 45:8 , 12 ; and Malachi 2:10 . The Greek *Ktisis* refers to creation in Mark 10:6 ; 13:19 ; Romans 1:20 ; 1 Corinthians 11:9 ; Ephesians 3:9 ; Colossians 1:16 ; 1 Timothy 4:3 , and Revelation 3:14 ; 4:11 , and 10:6 .

The Old Testament Word Bara. Genesis 1:1 (cf. 1:21 , 27). "In the beginning God created the heavens and the earth." This obviously refers, not to the functioning of the universe, but to its genesis.

Genesis 2:3 . "God blessed the seventh day and made it holy, because on it he rested from all the work of creating that he had done." The fact that God *rested* (ceased the act of creating) and is still in that rest (Heb. 4:4–5) proves that the word *creation* is used here of the past, singular, unrepeated events of origin.

Genesis 2:4 . "This is the account of the heavens and the earth when they were created. When the LORD God made the earth and the heavens." This places the creation event in the past.

Genesis 5:1–2 . The creation of Adam and Eve is also said to be past: "When God created man, he made him in the likeness of God. He created them male and female and blessed them. And when they were created, he called them 'man.' "

Genesis 6:7 . God cries out to Noah, "I will wipe mankind, whom I have created, from the face of the earth—men and animals, and creatures that move along the ground, and birds of the air—for I am grieved that I have made them." Though this seems to refer to the humans alive in Noah's time, nonetheless, their *creation as a race* in Adam (Rom. 5:12) was a past event of origin. Of course, God continues with the propagation of the race (Gen. 1:28 ; 4:1 , 25). But the creation of Adam was an event of beginning that was not repeated.

Deuteronomy 4:32 . Moses said, "Ask now about the former days, long before your time, from the day God created man on the earth; ask from one end of the heavens to the other. Has anything so great as this ever happened, or has anything like it ever been heard of?"

Job 38:4 , 7 ; Psalm 148:5 . Of the angels the psalmist says, "he commanded and they were created." Job tells us the angels were already there when God "laid the earth's foundation." So the reference to creation in this psalm returns to the very beginning.

Psalm 89:11–12 . Creation is used of all things God made, which are now his and give him glory: "The heavens are yours, and yours also the earth; you founded the world and all that is in it. You created the north and the south; Tabor and Hermon sing for joy at your name."

Isaiah 40:26 ; 42:5 ; 43:1 , 7 . God created the stars, numbered, and named them, relates Isaiah 40:26 . In 42:5 he declares that God "created the heavens . . . [and] the earth and all that comes out of it" (see also Isa. 45:8 , 12). God created Jacob and "everyone who is called by my [God's] name" (Isa. 43:1 , 7).

Malachi 2:10 . Referring to creation of the human race, Malachi says, "Have we not all one Father? Did not one God create us?" While the race has been propagated since Adam, the Bible makes it clear that it was created in Adam (Gen. 1:27 ; cf. Rom. 5:12). So the creation of mankind is viewed as an event of origin. Even Jesus referred to it as an event which occurred at "the beginning the Creator 'made them male and female' " (Matt. 19:4).

The New Testament Word Ktisis. Like the Old Testament, the New Testament consistently uses the word creation (*ktisis*) only to refer to a past event of origin.

Mark 10:6 . When Jesus says that "at the beginning of creation God 'made them male and female,' " he no doubt means creation as a past singularity, not a regular, observable process.

Mark 13:19 . "Those will be days of distress unequaled from the beginning, when God created the world, until now—and never to be equaled again." This is an unmistakable reference to creation as the point of beginning, not a process of continuing.

Romans 1:20 . Paul declared that "since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made." Paul refers both to the original work of making the world and the evidence remaining from that creation event.

1 Corinthians 11:9 . Original creation of a literal Adam and Eve are in view in the acts by which God made "woman from man" and "for man."

Ephesians 3:9 ; Colossians 1:16 . Ephesians speaks of creation as a past completed action, referring to the "God, who created all things." Paul adds in Colossians that "all things *were created* through him and for him" [Christ].

1 Timothy 4:3 . First Timothy 4:3 declares that "God created [all foods] to be received with thanksgiving by those who believe and who know the truth." Now while foods are being produced in the present, the reference here is to the *original* creation of food. This is evident from the use of the aorist tense, indicating completed action. Also, the phrase "to be received" points to the original purpose of the creation of food.

Revelation 3:14 . The book of Revelation refers to creation as the past work of God by which things began. John noted Christ's preeminence from the very "beginning of God's creation" (Rev. 3:14 ; cf. Col. 1:15 , 18). The heavenly host around God's throne praise God because by him all things "were created" (4:11). And the angel swore by him "who created the heavens and all that is in them, the earth and all that is in it, and the sea and all that is in it" (10:6 ; cf. 14:7).

God's Ongoing Creation. Some uses of *bara* and *ktisis* do refer to God's continuing work or providence. God did not cease to relate to the world he had created. He continually operates in it. He sustains its very existence.

Psalm 104:30 . "When you send your Spirit, they are created, and you renew the face of the earth." Here *create* (*bara*) is used, not of the initial *generation* of life, but of its continual

regeneration . The context speaks of God causing "the grass [to] grow for the cattle, and plants for man to cultivate" (vs. 14). It is "He [who] makes springs pour water into the ravines; it flows between the mountains" (Ps. 104:10) and who "bring[s] darkness, [and] it becomes night" (vs. 20). It is a God who continually provides food for all living things (vs. 28). The repeated emphasis is on God's preservation of his world.

Amos 4:13 . "He [God] who forms the mountains, creates the wind, and reveals his thoughts to man, he who turns dawn to darkness, and treads the high places of the earth—the LORD God Almighty is his name." *Bara* here seems to be used of God's work in his creation, not simply of his original work of creation. The word *made* which is often used interchangeably with the word *create* (cf. Gen. 1:26 , 27 ; 2:18) is used in other texts to describe God's continual providence (cf. Ps. 104:3 , 4 , 10).

Other Descriptions . In numerous ways, the Bible presents God at work. In addition to creating and making, he is "doing" and "causing" the operations of nature. He *sustains* it (Heb. 1:3), *holds it together* (Col. 1:17), causes it to *have being* (Rev. 4:11), *produces* life in it (Ps. 104:14). He is the continual cause of its existence. There would be no reality of creation, past or present, were it not for God.

Comparing Creation and Providence. God's dual work of creating and preserving the world are often presented in the same passage, even the same verse. Notice these revealing contrasts.

God produced and yet produces. Genesis 1:1 says "God *created* the heavens and the earth" and later he is at work through the land " *producing* vegetation" (vs. 11). The first was an act of origin; the second was one of operation. Both are the work of God.

God rested and yet is at work. Genesis 2:3 declares that "God *rested* " from his original "work of creating." But Jesus affirmed that God *"is always at his work"* (John 5:17). The former describes the commencement of his work of creation; the latter depicts the *continuance* of his work in creation.

God laid foundations of earth and yet is making it productive. Psalm 104:5 declares that God " *set* the earth on its foundations." A few verses later God is " *bringing forth* food from the earth" (vs. 14). The first is a work of originating, the second of operating. God does both.

God brought the world into being and yet keeps it in being. In Acts 17:24 the Scriptures teach that God " *made* the world." A couple of verses later it says "in him we live and move and *have our being* " (vs. 28). God is both the past cause of its *becoming* and also the present cause of its *being* .

God created the world and yet holds it together. Colossians 1:16 expresses God's past work as one by which "all things *were created* ." The very next verse explains "in him all things *hold together* ." The former is an act of causing to come to be. The latter is God's act of causing to continue to be.

God made the universe and yet he still sustains it. Hebrews 1:2 declares that "through him [Christ] he [God the Father] *made* the universe." Verse 3 reveals that Christ is also " *sustaining* all things by his powerful word."

The cosmos was created by God and yet has its being through him. In Revelation 4:11 , the apostle John contrasts God's works of creation and preservation. He wrote, "by your will they *were created* " and also " *have* their being." All things *got* being from God and also still *have* being from him.

The reality of creation deals with origins and present operation. The Creator is necessary, not only to make it, but also to sustain it. No picture of creation is complete that neglects either work.

Explaining God's Work. As we have seen, God's work in relation to the world's existence falls into two broad categories: creating and preserving (providential care). In each of these categories there are three areas of contrast: the actor (God), his acts, and the result of his actions. The acts of God in creation and preservation can be contrasted.

God's Acts of Creating and Preserving. Scriptures already shown declare that God's acts are necessary both for the world *coming to be* as well as for it *continuing to be* . There are several ways this may be stated that highlight nuances of the distinction:

- God brought the universe from nothing, and he keeps it from returning to nothing.
- God is the beginning cause and the conserving cause of all that exists.
- God was active in life's production, and he is active in its reproduction.
- God was operative in the generating of the world, and he actively governs it. Providence refers most specifically to God's governance of all that exists and occurs.
- God was involved in making the universe, and he is involved in caring for it.
- God is responsible for originating and operating the cosmos.

These can be summarized as a chart:

Acts of Creation	**Acts of Preservation/Providence**
Creating the world	Preserving the world
Coming to be	Continuing to be
Bringing from nothing	Keeping from nothing
Beginning	Conserving
Producing	Reproducing

Generating	Governing
Making	Caring for
Originating	Operating

God as Actor: Primary and Secondary Causality. By focusing on God as both *Originator* and chief *Operator* of creation, one can see God as both directly and indirectly involved in his world from beginning to end. While he is the *Primary Cause* of all things, God works through *secondary causes* . What we commonly refer to as the processes of nature are, in reality, God's indirect acts through secondary (or natural) causes. In this capacity, God is the *Remote Cause,* while natural forces are *proximate* causes of events. Another way to state this is that God is the *Ultimate Cause,* while nature is the *immediate* cause of most happenings. The relation between God's two roles of *Originator* and *Operator* can be summarized:

Directly, in Creation God is:	**Directly, in Providence God Is:**
Originator	Operator
Source	Sustainer
Creator	Conserver
Producer	Provider
Indirectly, God Is:	**As He Works Through:**
Primary Cause	Secondary causes
Remote Cause	Proximate causes
Ultimate Cause	Immediate causes
Original Commander	Subauthorities in chain of command

The Results. God acts in his world in two ways: by *direct intervention* (as in creation) and by *indirect action* (as in preservation). The first is an *immediate* act of God and the other is a *mediate* action. The direct acts of God are *instantaneous;* the indirect ones involve *a process* . Also, God's acts of creation are *discontinuous* with what has gone before. They are *ex nihilo* ("out of nothing") (*see* CREATION, VIEWS OF), or *de nova* (brand new). For example, he produced something from nothing, life from nonlife, and the rational from the nonrational. These are discontinuities spanned by a direct act of God (*see* EVOLUTION, BIOLOGICAL).

Further, God's acts of creation brought about *unique* events of origin, whereas his acts of preservation involve a *repetition* of events. The one produced *singularities* and the other *regularities* . The original creation events are *unobserved* today, but God's operation of the world can be *observed* in the present. The result of God's actions can be contrasted like this:

Result of God's Action(s)

Result of Direct Intervention	**Result of Indirect Action**
Immediate	Mediate

Instantaneous	A process
Discontinuous with past	Continuous with past
Unique event	Repetition of events
Singularity	Regularities
Unobserved	Observed

This distinction between past singularities and present regularities, both of which are acts of God, is the basis for two kinds of science: origin science and operation science.

Scientific Importance. Until after the lifetime of Darwin, the developers of modern science were creationists, in that they believed in the supernatural origin of the universe and of life. Their number includes:

Johann Kepler (1571–1630), celestial mechanics, physical astronomy

Blaise Pascal (1623–1662), hydrostatics

Robert Boyle (1627–1691), chemistry, gas dynamics

Nicholas Steno (1638–1687), stratigraphy

Isaac Newton (1642–1727), calculus, dynamics

Michael Faraday (1791–1867), field theory

Charles Babbage (1792–1871), computer science

Louis Agassiz (1807–1873), glacial geology, ichthyology

James Simpson (1811–1870), gynecology

Gregor Mendel (1822–1884), genetics

Louis Pasteur (1822–1895), bacteriology

William Kelvin (1824–1907), energetics, thermodynamics

Joseph Lister (1827–1912), antiseptic surgery

James Clerk Maxwell (1831–1879), electrodynamics, statistical thermodynamics

William Ramsay (1852–1916), isotopic chemistry

In addition to these founders of scientific and mathematical fields were their forerunners, who also held to supernatural creation. Their number included Roger Bacon, 1220–1292),

Nicolaus Copernicus (1473–1543), and Galileo Galilei (1564–1642). With few exceptions, scientists before 1860 were Christians. Newton's statement is typical of what scientists believed during the first two and one-half centuries of the Enlightenment:

> This most beautiful system of the sun, planets, and comets, could only proceed from the counsel and dominion of an intelligent and powerful Being. And if the fixed stars are the centres of other like systems, these, being formed by the like wise counsel, must be all subject to the dominion of One. [Newton, 369]

Kepler clarified his motives for doing science when he wrote:

> May God make it come to pass that my delightful speculation [*The Mysterium Cosmographicum*] have everywhere among reasonable men fully the effect which I strove to obtain in the publication; namely, that the belief in the creation of the world be fortified through this external support, that thought of the Creator be recognized in nature, and that his inexhaustible wisdom shine forth daily more brightly. [cited in Holton, 84]

Not only were founders of modern science creationists, but the very concept of creation was a significant factor in the impetus for science. M. B. Foster, writing in the prestigious English journal, *Mind* , in 1934 observed that:

> The general question arises: What is the source of the un-Greek elements which were imported into philosophy by the post-reformation philosophers, and which constitute the modernity of modern philosophy? And . . . what is the source of those un-Greek elements in the modern theory of nature by which the peculiar character of the modern science of nature was to be determined? The answer to the first question is: The Christian revelation, and the answer to the second: The Christian doctrine of creation. [Foster, 448]

The Turn to Naturalism. After Charles Darwin (1809–1882) published *On The Origin of Species* in 1859, the scene changed radically. At first a naturalistic explanation of species became dominant (*see* NATURALISM). However, added to the last paragraph of the second edition of his bombshell book, Darwin made the disclaimer that he was not insisting on a naturalistic explanation of the origin of the first living thing(s). He wrote, "There is grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one." Although Darwin believed life arose in a "warm little pond," he did not attempt a totally naturalistic explanation of the universe (*see* EVOLUTION, COSMIC), though his view naturally pointed in that direction. Ultimately, such naturalistic explanations gained dominance.

Fallacies of Antisupernaturalism. The naturalistic bias in science is due to the rise of antisupernaturalism following the work of Benedict Spinoza , who argued that miracles are impossible, and David Hume , who insisted that the miraculous is incredible. Both of these arguments have flaws, as shown in the article MIRACLES, ARGUMENTS AGAINST .

Indeed, much has happened in late-twentieth-century science to turn attention back to a supernatural Creator, especially by way of the big bang view, the anthropic principle, and developments in molecular biology.

Origin Science and Operation Science. Connected with an antisupernatural presupposition, the current scientific rejection of creationist views is based on a failure to distinguish between *operation science* , which deals with observed present regularities, and *origin science* , the speculative reconstruction of unobserved past singularities. The former is an empirical science; the later operates more like a forensic science. Neither macro-evolution nor creation is an operational science. Both operate on the principles of origin science (*see* ORIGINS, SCIENCE OF). Creation is just as much a science—an origin science—as is macro-evolution.

Theological Importance. It is the created world that manifests God's glory. "The heavens declare the glory of God; and the firmament shows his handiwork" (Ps. 19:1 KJV). The psalmist declared: "O LORD , our Lord, how majestic is your name in all the earth! You have set your glory above the heavens" (Ps. 8:1). From this statement flows the basis for theistic worship.

That creatures are to worship is evident throughout Scripture. John wrote that in heaven the glory of creation will be a theme for praise. The righteous will sing: "You are worthy, our Lord and God, to receive glory and honor and power, for you created all things, and by your will they were created and have their being" (Rev. 4:11).

Paul affirmed that this worship mandate extends to all humanity and that no one is truly ignorant of the need to worship the Creator: "Since what may be known about God is plain to them, because God has made it plain to them. For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen." However, "they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened" (Rom. 1:19–20).

Because the universe is created, and is not God, it is idolatry to worship it or any part of it. The cosmos is not made of God-stuff; it is made by God from nothing. See the section on creation *ex nihilo* in CREATION, VIEWS OF . It is a grievous sin to worship and serve the "created things rather than the Creator" (Rom. 1:25). For this reason the Bible strongly condemns idolatry. God commanded: "You shall not make for yourself an idol in the form of anything in heaven above or on the earth beneath or in the waters below" (Exod. 20:4). God is as different from the world as a potter is different from the clay pot (Rom. 9:20–21). Admiration and worship should go to the Craftsman, not the thing made.

Social/Ethical Importance. *Creation Sanctifies Marriage.* Jesus rooted the moral basis for marriage in the literal creation of Adam and Eve. Responding to the question, "Is it lawful for a man to divorce his wife for any and every reason?" (Matt. 19:3), Jesus said, "Haven't you read . . . that at the beginning the Creator 'made them male and female,' and said, 'For this reason a man will leave his father and mother and be united to his wife, and the two will become one

---

kjv King James Version

flesh'? So they are no longer two, but one. Therefore what God has joined together, let man not separate" (vss. 4–6).

Creation Endows Humans with Dignity. Moses said that *killing* humans was wrong because "in the image of God has God made man" (Gen. 9:6). James added that *cursing* other humans is wrong for the same reason: "With the tongue we praise our Lord and Father, and with it we curse men, who have been made in God's likeness" (James 3:9).

Creation Gives Meaning to Morality. All moral principles (*see* MORALITY, ABSOLUTE NATURE OF). are rooted in the absolute perfection and unchangeable nature of God (*see* GOD, NATURE OF). Creation most particularly speaks to moral principles related to relationships among human beings as fellow image-bearers of God. For example, the prohibition against killing another human being is because only God gives and has the right to take away human life (Gen. 9:6 ; Job 1:21). We dare not do the same without authorization, because we did not create human life and do not own it. Our moral responsibility to protect and preserve human life springs from the fact that it is created by God.

Creation Unifies Humanity. God created Adam and Eve (Gen. 1:27), and commanded them to bear children (1:28), which they did (5:1). All human beings are their descendants (1 Chron. 1:1 ; Luke 3:38). On the basis of this doctrine of human unity in the first parents, Paul declares to the Greek philosophers that, from one, God made every nation (Acts 17:26–29). Malachi asked, "Have we not all one father? Did not one God create us?" (2:10). One implication of this created unity is that racism is both morally wrong before the Creator and it is incorrect. There is one race only, the Adamic race, which is divided into ethnic groups. Intermarriage among these groups is permitted. Ethnic hatred is a direct attack on God's design.

Creation Defines Sexual Equality. The doctrine of creation opposes attempts by either men or women to assert preeminence over the other. Despite charges leveled against conservative Christians to the contrary, abusive and demeaning behavior violates the teaching of Scripture. God declares that both sexes are equal in his sight: "God created them, male and female . . . in his image" (Gen. 1:27). This is equality in essence. Jesus repeated this truth in Matthew 19:4 . Likewise the apostle Paul noted the interdependence of man and woman: "Neither was man created for woman, but woman for man. . . . However, woman is not independent of man, nor is man independent of woman. For as woman came from man, so also man is born of woman. But everything comes from God" (1 Cor. 11:9–12).

Creation Legitimizes Government Authority. The Bible declares that "there is no authority except that which God has established. The authorities that exist have been established by God" (Rom. 13:1). In Genesis 9:6 , stated above, the image of God in created humanity is so important that murderers are to be executed. Protection of human life and punishment of those who violate it became a function of government. According to the apostle Paul, the one who governs "is God's servant to do you good. But if you do wrong, be afraid, for he does not bear the sword for nothing. He is God's servant, an agent of wrath to bring punishment on the wrongdoer" (Rom. 13:4b).

Creation Grounds Roles and Authority. Male leadership or headship is a contentious issue in churches where members hold to the biblical view of creation. It is not that conservative Christians (men and women) are misogynists, as feminist-rights advocates frequently charge. Equal value and respect of men and women and an order that stresses male headship are taught in Genesis and applied to the church in the New Testament.

Paul states the principles strongly in 1 Timothy 2:11–14 : “A woman should learn in quietness and full submission. I do not permit a woman to teach or to have authority over a man; she must be silent. For Adam was formed first, then Eve. And Adam was not the one deceived; it was the woman who was deceived and became a sinner.” In regard to the family authority structure, Paul wrote: “Now I want you to realize that the head of every man is Christ, and the head of the woman is man, and the head of Christ is God. . . . For man did not come from woman, but woman from man; neither was man created for woman, but woman for man” (1 Cor. 11:3 , 8–9). It is evident here that the order of creation is given as one basis for the authority structure within a family.

Both by order of creation and Adam’s role as head of the covenant between God and humanity, the authority structure in home and church was established through the male. Adam’s was the ultimate responsibility to keep the provisions of the covenant. It was his sin that brought death to the human race (see, for example, Rom. 5:12–14).

In a brief mention of a complex issue, it must be stressed that this mandate must not be considered grounds for denying the essential equality of male and female (see above). God’s plan for separate roles does not speak to relative importance or value in the spiritual body of Christ where “there is neither Jew nor Greek, slave nor free, male nor female, for you are all one in Christ Jesus” (Gal. 3:28).

Creation and Fall Are Related to Salvation. Romans 5 expressly connects redemption with the literal creation of Adam: “Therefore, just as sin entered the world through one man, and death through sin, and in this way death came to all men, because all sinned. . . . For if, by the trespass of the one man, death reigned through that one man, how much more will those who receive God’s abundant provision of grace and of the gift of righteousness reign in life through the one man, Jesus Christ” (Rom. 5:12 , 17). In this text, the fact of literal death, which all humans experience, is directly connected with a literal Adam and his fall. Likewise, by direct comparison, the literal death of Christ and deliverance from sin is related to this literal Adam.

Creation Is Related to the Resurrection. Citing Genesis 2:24 , Paul wrote in 1 Corinthians 15:45–49 :

> “The first man Adam became a living being”; the last Adam, a life-giving spirit. The spiritual did not come first, but the natural, and after that the spiritual. The first man was of the dust of the earth, the second man from heaven. As was the earthly man, so are those who are of the earth; and as is the man from heaven, so also are those who are of heaven. And just as we have borne the likeness of the earthly man, so shall we bear the likeness of the man from heaven.

Paul compares a literal Adam and a literal Christ in teaching the meaning of the literal resurrection of Christ. Since Christ is the firstfruit (1 Cor. 15:20) of the believer's physical resurrection, the doctrine of Adam's creation connects with that of Christ's resurrection and believers.

Creation Is Related to the Second Coming. The apostle Peter exhorted:

> First of all, you must understand that in the last days scoffers will come, scoffing and following their own evil desires. They will say, "Where is this 'coming' he promised? Ever since our fathers died, everything goes on as it has since the beginning of creation." But they deliberately forget that long ago by God's word the heavens existed and the earth was formed out of water and by water. By these waters also the world of that time was deluged and destroyed. By the same word the present heavens and earth are reserved for fire, being kept for the day of judgment and destruction of ungodly men. But the day of the Lord will come like a thief. The heavens will disappear with a roar; the elements will be destroyed by fire, and the earth and everything in it will be laid bare. That day will bring about the destruction of the heavens by fire, and the elements will melt in the heat. But in keeping with his promise we are looking forward to a new heaven and a new earth, the home of righteousness. [2 Peter 3:1–13]

Peter vividly compares the literal creation of the world and its eventual literal destruction and eventual salvation. The truth of one is interdependent with the other. That is, the believer's confidence in the ultimate purging and restoring of creation is based on the evidence for the creation of the universe.

Conclusion. The God of the Bible is active both in the *origination* and in the *conservation* of the universe. He is the cause of it *coming to be* as well as the cause of it *continuing to be* . The kalam cosmological argument is evidence of the first kind of God's causal relation to the universe (a *horizontal causality*). And the traditional cosmological argument is evidence of God's *vertical causality* in sustaining the universe's existence right now. This last kind of causality stands in contrariety to deism. Both kinds of causality support *ex nihilo* creation. Each corresponds to a kind of science: God's originating causality is the object of *origin science* (*see* ORIGINS, SCIENCE OF), and his conserving causality is the object of *operation science* .

Science would have developed far differently had its founders from Roger Bacon on had the atheistic outlook of much of the late-twentieth-century scientific community. Most strongly believed in a planned theistic creation, with knowable, discoverable laws set in place by a Designer. Post-Darwin prejudice against any supernatural explanation for creation is actually based on a confusion between origin and operation sciences.

Indeed, even redemption is described as a new *creation* (2 Cor. 5:17), which implies connection with the "old" one. Even the doctrine of the inspiration of Scripture (*see* BIBLE, EVIDENCE FOR), flows from the fact that there is a God who can speak the universe into existence (for example, Gen. 1:3 , 6). The apostle Paul declared that the "God, who said, 'Let light shine out of darkness,' made his light shine in our hearts to give us the light of the

knowledge of the glory of God in the face of Christ" (2 Cor. 4:6). Like his creation, the Word of God comes "from the mouth of God" (Matt. 4:4).

Creation, Views of. Three basic views seek to explain the origin of the universe. Theists (*see* THEISM) hold that all things were created *ex nihilo* , "from nothing." Pantheists (*see* PANTHEISM

) believe the material universe arose *ex Deo* , "out of God," an aspect of an impersonal God's being, rather than the work of a cognizant being who acts outside of himself. Materialism (*see* MATERIALISM) affirms creation *ex materia* (out of pre-existing material).

Materialists, including atheists (*see* ATHEISM) and dualists (*see* DUALISM), think that origins do not involve creation at all, if *creation* is defined as the executed work of a being. For comparison, however, materialism and pantheism can be joined under the rubric of creation. Materialistic origin can be called Creation *ex materia,* "from matter."

Creation ex Materia. A materialistic (or dualistic) view of existing things usually asserts that matter (or physical energy) is eternal. Matter always has been, and for that matter, always will be. As the physicist claims in the first law of thermodynamics, "energy can neither be created nor destroyed."

There are two basic subdivisions in the "creation-out-of-matter" view: those that involve a God and those that do not.

God Created Out of Preexisting Matter. Many ancient Greeks (dualists) believed in creation by God out of some previously existing, eternal "lump of clay" (see Plato, 27f.). That is, both God and the "stuff" of the material universe (cosmos) were always there. "Creation" is the eternal process by which God has been continually giving shape to the stuff of the universe.

Plato called matter the *formless* (or chaos). God was the *Former* (or *Demiurgos*). Using an eternal world of *forms* (ideas), God gave shape or structure to the formless mass of matter. The Former (God), by means of the forms (ideas which flowed from the form), formed the formless (matter) into the formed (cosmos). In Greek terms, the *Demiurgos,* by means of the *eidos* (Ideas), which flowed from the *agathos* (good), formed *chaos* into a *cosmos* . Elements of platonic dualism can be disassembled easily:

Matter is eternal. The basic stuff of the universe has always been. There never was a time when the elements of the physical universe did not exist.

"Creation" means formation, not origination. "Creation" does not mean bringing something into existence. Rather, it means formation. God organizes matter that is.

The "Creator" is a Former, not a Producer. So *Creator* does not mean *Originator* , but *Builder* . God is an Architect of the material universe, not the Source of all things.

God is not sovereign over all things. Such a God is not in ultimate control, for there is something eternal besides God. Eternal matter stands in dualistic tension with God, and he cannot do anything about it. He can shape matter within certain parameters. Just as there are limits on what can be made out of paper (it is good for making kites but not space ships), so the very nature of matter is a handicap. Both the existence and nature of matter place limits on God.

There Was No God to Do the Creating. A second view is generally called atheism , although many agnostics (*see* AGNOSTICISM) hold nearly the same worldview. An atheist says there is no

God; an agnostic claims not to know whether there is a God. But neither believes it necessary to posit God in order to explain the universe. Matter is simply there. The universe is ultimately all that exists. Even mind came from matter.

The strict materialist responds to the question of where the universe came from with the question: Where did God come from? The materialist's worldview makes the question nonsensical, because the universe fills much of the conceptual place normally reserved for the Creator (*see* CAUSALITY, PRINCIPLE OF).

That creation came out of matter has been held by thinkers since the ancient atomists (*see* ATOMISM). Karl Marx (1818–1883) was the modern philosopher who sought to carry materialism to its ultimate conclusion in socialism (Marx, 298). A century later, astronomer Carl Sagan popularized the view on television and in popular books. Much of the Western world heard Sagan's creed: *"The Cosmos is all that is, or ever was, or ever will be"* (Sagan, 4). Humanity is simply stardust pondering stars. Human beings created God. As Marx put it, mind did not create matter; matter created mind (Marx, 231).

Granting the eternal existence of matter and motion, the atheist explains everything else by the doctrines of *natural evolution* (*see* EVOLUTION, COSMIC) and *natural laws* . Natural evolution (*see* EVOLUTION, BIOLOGICAL) works by the interaction of *matter, plus time, plus chance* . Even the complexities of human life can be explained by the purely natural laws of the physical universe. Given enough time, monkeys at a typewriter can produce the works of Shakespeare. No intelligent Creator is necessary.

The Tenets of Creation ex Materia. Nontheism's concept of origins can be summarized under four points:

Matter Is Eternal. As noted above, the central premise of materialism is that matter has always been. Or, as one atheist put it, if matter came to be, it came into existence *from* nothing and *by* nothing (Kenny, 147). The material universe is a self-sustaining and self-generating closed system. Isaac Asimov speculated that there was an equal chance that nothing would come from nothing or that something would come from nothing. As luck would have it, something emerged (Asimov, 148). So either matter is eternal or else it came from nothing spontaneously without a cause.

The original materialists, atomists (*see* ATOMISM), believed matter to be a mass of innumerable indestructible pellets of reality called atoms. With the splitting of the real atom and emergence of Albert Einstein's theory of E = MC2 (Energy equals mass times the speed of light squared), materialists now speak of the indestructibility of energy (the first law of thermodynamics). Energy does not pass out of existence; it simply takes on new forms. Even at death, all the elements of our being are reabsorbed by the environment and reused by other things. So the process goes on.

No Creator Is Necessary. Strict materialism demands the premise of atheism or nontheism. There is no God, or at least there is no need for a God. The world explains itself. As *The*

Humanist Manifesto II put it, “As non-theists, we begin with humans not God, nature not deity” (Kurtz, 16).

Humans Are Not Immortal. Another implication is that there is no immortal (*see* IMMORTALITY) soul or spiritual aspect to human beings. *The Humanist Manifesto I* rejected “the traditional dualism of mind and body. . . . Modern science discredits such historic concepts as the ‘ghost in the machine’ and the ‘separable soul’ ” (ibid., 8, 16–17). The strict materialist does not believe in spirit or mind at all. There is no mind, only a chemical reaction in the brain. Thomas Hobbes (1588–1679) defined matter:

> The world (I mean not the earth only, that denominates the lovers of it “worldly men,” but the *universe* , that is, the whole mass of all things that are) is corporeal, that is to say, body; and hath the dimensions of magnitude, namely, length, breadth, and depth: also every part of body is likewise body, and hath the like dimensions; and consequently every part of the universe is body, and that which is not body is no part of the universe: and because the universe is all, that which is no part of it is nothing, and consequently nowhere. [Hobbes, 269]

Less stringent materialists admit the existence of a soul but deny that it can exist independently of matter. For them the soul is to the body what the image in the mirror is to the one looking at it. When the body dies, so does the soul. When matter disintegrates, the mind is also destroyed.

Humans Are Not Unique. Among those holding creation out of matter there are differences regarding the nature of human beings. Most accord a special status to humans, as the highest point in the evolutionary process. However, virtually all agree that humans differ only in degree, not in kind, from lower forms of life. Human beings are simply the highest and latest animal form on the evolutionary ladder. They have more highly developed abilities than primates. Certainly humans are not unique *over* the rest of the animal kingdom, even if they are the highest *in* it.

An Evaluation of Creation ex Materia. For a critique of dualism, see FINITE GODISM . The atheist position is critiqued under ATHEISM . Further, the evidence for theism is evidence against an eternal universe (*see* COSMOLOGICAL ARGUMENT ; KALAM COSMOLOGICAL ARGUMENT ; THEISM). Contemporary science has provided powerful arguments against the eternality of matter from the big bang cosmology (*see also* EVOLUTION, COSMOLOGICAL).

Creation, ex Deo. While atheists and dualists believes in creation *ex materia* , pantheism holds to creation *ex deo,* out of god. All pantheists fall into one of two categories: absolute and nonabsolute pantheism.

Absolute Pantheism. An absolute pantheist claims that only mind (or spirit) exists. What we call “matter” is an illusion, like a dream or mirage. It appears to exist, but it really does not. This view was defended by two classical representatives, Parmenides from the West (a Greek) and Shankara from the East (a Hindu).

Parmenides argued that all is one (*see* MONISM), because to assume more than one thing exists is absurd (Parmenides, 266–83). Two or more things would have to differ from one another. But the only ways to differ are by something (being) or nothing (nonbeing). It is impossible to differ by nothing, since to differ by nothing (or nonbeing) is just another way of saying there is no difference at all. And two things cannot differ by being because being (or existence) is the only thing they have in common. That would mean they differ in the very respect in which they are the same. Hence, it is impossible to have two or more things; there can be only one being. All is one, and one is all. Nothing else really exists.

In the terminology of creation, this means that God exists and the world does not. There is a Creator but no creation. Or at least we can only say there is a creation by reckoning that creation comes out of god the way a dream comes from a mind. The universe is only the nothing else of which god thinks. God is the totality of all reality. And the nonreal about which he thinks and which appears to us is like a zero. It is literally nothing.

Shankara described the relation of the world to God, illusion to reality, by the relation of what appears to be a snake but on closer examination turns out to be a rope (see Prabhavananda, 55). When we look at the world, what is there is not reality (Brahman). Rather, it is merely an illusion (*maya*).

Likewise, when a person looks at himself, what appears to be (body) is only an illusory manifestation of what really is (soul). And when one looks into his soul, he discovers that the depth of his soul (Atman) is really the depth of the universe (Brahman). Atman (humanity) is Brahman (God). To think we are not God is part of the illusion or dream from which we must awake. Sooner or later we must all discover that all comes from God, and all is God.

Nonabsolute Pantheism. Other pantheists hold a more flexible and elastic view of reality. While they believe all is one with god, they accept a multiplicity in the unity of God. They believe all is in the one as all radii are in the center of a circle or as all drops merge into one infinite pond. Representatives of this view include the second-century neoplatonic philosopher, Plotinus (205–270), the modern philosopher, Benedict Spinoza (1632–1677), and the contemporary Hindu, Radhakrishnan.

According to nonabsolute pantheism, there are many things in the world, but they all spring from the essence of the One (god). The many are in the One, but the One is not in the many. That is, all creatures are part of the Creator. They come from him the way a flower unfolds from a seed or sparks come from a fire. Creatures are simply many drops that splash up from the Infinite pond, only to eventually drop back in and blend with the All. All things come from God, are part of God, and merge back into God. Technically speaking, for the pantheist, there is no creation but only an emanation of all things from God. The universe was not made out of nothing (*ex nihilo*) *,* nor out of something preexisting (*ex materia*). It was made out of God (*ex deo*).

Significant elements in this pantheistic view of origins can be briefly outlined:

There is no absolute distinction between Creator and creation. Creator and creation are one. They may differ in perspective, as two sides of a saucer, or relationally, as cause to effect. But

creator and creation are no more different than the reflection in a pond differs from the swan swimming on it. One is a mirror image of the other, real thing. Even for those who believe the world is real, Creator and creation are simply two sides of the same coin. There is no real difference between them.

The relationship between Creator and creation is eternal. Pantheists believe that God caused the world, but they insist that he has been causing it forever, just as rays shine forever from an eternal sun. The universe is as old as God. Just as one stone could rest forever on another in an eternal world, so the world could be dependent on God forever.

The world is made of the same substance as God. Pantheists believe God and the world are of the same substance. Both are comprised of god-stuff. The creation is part of the Creator. It is one in nature with God. God is water. God is trees. As Marilyn Ferguson put it, when milk is poured into cereal, God is poured into God (Ferguson, 382)! Ultimately there is only one substance, one stuff in the universe, and it is divine. We are all made of it, so we are all God.

Humanity Is God. If all of creation is the emanation of God, then so is mankind. The pop theologian of New Age pantheism, Shirley MacLaine, believes one can say with equal truthfulness, " *I am God* ," or " *I am Christ* ," or " *I am that I am* " (MacLaine, 112). In her television special miniseries, "Out on a Limb" (January 1987), she waved to the ocean and proclaimed, "I am God. I am God!" Lord Maitreya, believed by many to be the "Christ" of the New Age, declared through Benjamin Creme, his press agent, "My purpose is to show man that he need fear no more, that all of Light and truth rests within his heart, that when this simple fact is known man will become God."

An Evaluation of Creation ex Deo. There are several ways to evaluate *ex deo* creation. Since it is part of a pantheistic worldview, the criticisms of pantheism apply to it. For example, there is a real distinction between the finite and the infinite, the contingent and the necessary, the changing and the unchanging. And since I am not a necessary or unchanging Being, then I must be a contingent being. But a contingent being is one that *can* not be. And such a being actually exists only because it was caused to exist by God where otherwise it would not have existed. In short, it exists out of nothing (*ex nihilo*).

Second, as the kalam cosmological argument shows, the universe is not eternal. Hence, it came to be. But before it existed it was nothing. Or, more properly, there was nothing (except God), and after he created the world there was something (besides God). This is what is meant by *ex nihilo* creation. Therefore, whatever comes into being (as the universe did) does so from nothing, that is, *ex nihilo* .

Creation ex Nihilo. *Ex nihilo* is from the Latin meaning "from or out of nothing." It is the theistic view of origins that affirms that God brought the universe into existence without using preexisting material. Theism declares that only God is eternal and that he brought everything else into being without the use of preexisting material and without making the universe out of "pieces" of his own substance. Rather, it was made "from nothing" (*ex nihilo*).

The Coherence of ex Nihilo Creation. Some critics contend *ex nihilo* creation is a meaningless concept. Others claim it is unbiblical, a later philosophical insertion into Christian thinking. The argument that *ex nihilo* creation is incoherent goes like this:

1. To create "out of" implies preexisting material.

2. But *ex nihilo* creation insists there was no preexisting material.

3. Hence, *ex nihilo* creation is a contradiction in terms.

In response, theists deny the first premise, pointing out that "out of nothing" is simply a positive way to state a negative concept—"not out of something." That is, God did not create the universe out of any preexisting material. The dictum that "nothing comes from nothing" is not to be understood absolutely. It means that something cannot be caused *by nothing* , not that something cannot come *after nothing* . That is, something can be created from nothing but not by nothing. God brought the universe into existence from nonexistence. *Ex nihilo* simply denotes movement from a state of nothing to a state of something. It does not imply that nothing is a state of existence *out of which* God formed something. Nothing (other than God) is a state of nonexistence that preceded the universe coming into being. When atheists and pantheists use the preposition *ex* they mean "out of" in the sense of a material cause. By *ex* a theist means an efficient cause. Midday comes "from morning," *after* morning but not literally out of it.

The Logic of ex Nihilo Creation. The basis for *ex nihilo* creation is twofold: First, the only logical alternatives are unacceptable. Second, it is the logical conclusion from the First-Cause argument for God's existence (*see* COSMOLOGICAL ARGUMENT).

The three possibilities. That *ex deo* and *ex materia* creation are incompatible with theism has been shown. Hence, *ex nihilo* creation must be true.

First of all, a theistic God cannot create *ex deo* . Since God is a simple being (*see* GOD, NATURE OF), he cannot take a "part" of himself and make the world. Simplicity means without division or parts. Thus, there is no way the created world can be a part of God. Such a view is pantheism, not theism.

Further, a theistic God is a Necessary Being, viz., one that cannot not be. He cannot come into being or cease to be. Creation is a contingent being; creation is a being that is but can not be. So, it is impossible for creation to be a part of God, since it is contingent and he is necessary. In short, a Necessary Being has no extraneous elements of his being out of which to make something. One might say God has no *parts* with which he can *part* . If he could part with them, they would not be necessary. If they are necessary he cannot part with them. So *ex deo* creation is impossible for a theistic God.

Further, a theistic God cannot create *ex materia* . For the belief that there is something eternal outside of God is not theism but dualism. There cannot be another infinite being outside of God, since it is impossible to have two infinite beings. If there are two, they must differ, and two infinite beings cannot differ in their being, since they are the very same kind of being. Two

univocal beings cannot differ in their being, since that is the very respect in which they are identical. They could only differ if they were different kinds of beings (*see* ONE AND MANY, PROBLEM OF). Hence, there cannot be two infinite beings.

And if there is one infinite and one (or more) finite being(s), then the finite being cannot be an eternal Necessary Being. It cannot be necessary since it is limited by its potentiality, and any being with the potentiality not to be is not a Necessary Being. It cannot be eternal, since what is limited in its being never reaches to eternity. Therefore, it could not have preexisted forever (*see* GOD, EVIDENCES FOR).

However, if the universe is not eternal, and if God cannot create out of himself*,* then he must have created *ex nihilo,* since there is no alternative. For a theist, *ex nihilo* creation is thus proven.

The Argument from the First Cause. The horizontal form of the cosmological argument (*see* KALAM COSMOLOGICAL ARGUMENT) argues that there is a beginning of the material, space-time universe. But if the universe has a beginning, then it has not always existed. This eliminates creation *ex materia* (out of preexisting material), since there was no material before matter came into existence. There was nothing, and then there was matter which was created by God but not from any preexisting matter. In other words, if all finite being came into existence by a First Cause who always existed, then "before" it existed there was nothing other than the eternal First Cause. Hence, all finite being came into existence out of nonexistence.

Elements of ex Nihilo Creation. *The Absolute Difference between Creator and Creation.* Christian theism holds that there is a fundamental difference between the Creator and his creation. The following contrasts will focus these differences.

Creator	**Creation**
Uncreated	Created
Infinite	Finite
Eternal	Temporal
Necessary	Contingent
Changeless	Changing

God and the world are radically different. One is Maker and the other is made. God is the Cause and the world is the effect. God is unlimited and the world is limited. The Creator is self-existing but creation is entirely dependent on him for its existence.

Some illustrations may help to further clarify the real distinction between Creator and creation. In pantheism , God is to the world what a pond is to the drops of water in it, or what a fire is to the sparks that come from it. But in theism God is to the world what the painter is to a painting or the playwriter is to a play. While the artist is, in some sense, manifest *in* the art, he is also *beyond* it. The painter is not the painting. Its maker is beyond, over, and above it. The Creator of the world causes it to exist and is revealed in it; but God is not the world.

Creation Had a Beginning. Another crucial element of the theistic view of creation from nothing is that the universe (everything except God) had a beginning. Jesus spoke of his glory with the Father "before the world was" (John 17:5). Time is not eternal. The space-time universe was brought into existence. The world did not always exist. The world did not begin *in* time. The world was the beginning *of* time. Time was not there *before* creation and then at some moment in time God created the world. Rather, it was not a creation *in* time but a creation *of* time.

This does not mean that there was a time when the universe was not. For there was no time before time began. The only thing "prior" to time was eternity. That is, God exists forever; the universe began to exist. Hence, he is prior to the temporal world ontologically (in reality), but not chronologically (in time).

To say that creation had a beginning is to point out that it came into being out of nothing. First it did not exist, and then it did. It was not, and then it was. The cause of that coming to be was God.

Illustrating ex Nihilo Creation. There really are no perfect illustrations of *ex nihilo* creation, since it is a unique event that does not occur in our experience. We only experience something coming from something. Nonetheless, there are imperfect but helpful analogies. One is the creation of a new idea, which brings into existence something that did not exist before. We literally conceive it or conjure it up. We create it, as it were, out of nothing. Of course, unlike the physical universe, ideas are not matter. But like God's *ex nihilo* creation, they are brought into existence by a creative intelligence.

Another illustration of *ex nihilo* is an act of free will, by which a free agent initiates an action that did not before exist. Since a free choice (*see* FREE WILL) is self-determined, it did not spring from previous conditions. Hence, much like *ex nihilo,* it does not flow from previous states. Rather, a free choice is not determined by anything else; it literally creates the action itself.

Support for ex Nihilo Creation. One of the oldest extrabiblical recorded statements on creation known to archaeologists, over 4,000 years old, makes a clear statement on *ex nihilo* creation: "Lord of heaven and earth: the earth was not, you created it, the light of day was not, you created it, the morning light you had not [yet] made exist" (*Ebla Archives,* 259). Creation from nothing is clearly expressed outside the Bible in 2 Maccabees 7:28 . It says, "Look at the heavens and the earth and see everything that is in them, and recognize that God did not make them out of things that existed."

While the Hebrew word for "creation," *bara* , does not necessarily mean to create from nothing (cf. Ps. 104:30), nevertheless, in certain contexts it can mean only that. Genesis 1:1 declares: "In the beginning God created the heavens and the earth." Given the context that this is speaking about the original creation, *ex nihilo* seems to be implied here. Likewise, when God commanded: "Let there be light," there was light (Gen. 1:3), *ex nihilo* creation is involved. For light literally, and apparently instantaneously, came to be where previously it was not.

Psalm 148:5 declares: "Let them [angels] praise the name of the Lord, for he commanded and they were created."

Jesus affirmed: "And now, Father, glorify Me in Your presence with the glory I had with You before the world began" (John 17:5). This phrase is repeated in 1 Corinthians 2:7 and 2 Timothy 1:9 . Obviously, if the world had a beginning, then it did not always exist. It literally came into existence out of nonexistence. In this sense, every New Testament passage that speaks of the "beginning" of the universe assumes *ex nihilo* creation (cf. Matt. 19:4 ; Mark 13:19). Romans 4:17 asserts *ex nihilo* creation in very clear and simple terms: "God who gives life to the dead and calls things that are not as though they were." In Colossians 1:16 the apostle Paul added, "For by him all things were created: things in heaven and on earth, visible and invisible." This eliminates the view that the visible universe is simply made out of invisible matter, since even the invisible created realm was brought into existence.

In the Apocalypse John expressed the same thought, declaring, "for You created all things, and by Your will they were created and have their being" (Rev. 4:11).

From Genesis to Revelation, the Bible declares the doctrine of God's creation of everything else that exists, other than himself, out of nothing.

Criticism of Ex Nihilo Creation. There are several important implications of creation *ex nihilo* . Most of them arise out of misunderstandings of the view.

It Does Not Imply Time before Time. It is objected that the view implies that there was time before time began, since it holds that time had a beginning and yet God existed before (a temporal term) time began. This objection is answered by the theist by pointing out that *before* is not used here as a temporal term, but to indicate ontological priority. Time did not exist before time, but God did. There was no time before time, but there was eternity. For the universe, nonbeing came "before" being in a logical sense, not a chronological one. The Creator is "before all time" only by a priority of nature, not of time. God did not create in time; he executed the creation of time.

It Does Not Imply Nothing Made Something. Sometimes *ex nihilo* creation is criticized as though it affirmed that nothing made something. It is clearly absurd to assert that nonbeing produced being (*see* CAUSALITY, PRINCIPLE OF). For in order to create there must be an existing cause, but nonexistence does not exist. Hence, nothing cannot create something. Only something (or someone) can cause something. Nothing causes nothing.

In contrast to nothing producing something, *ex nihilo* creation affirms that Someone (God) made something from nothing. This is in accord with the fundamental law of causality which demands that everything that comes to be is caused. Nothing cannot bring something into existence, but Someone (God) can bring something other than himself into existence, where prior to that it did not exist. So, for theism, creation from nothing does not mean creation by nothing.

It Does Not Imply "Nothing" Is Something. When the theist declares that God created "out of nothing," he does not mean that "nothing" was some invisible, immaterial something that God

used to make the material universe. Nothing *means* absolutely nothing. That is, God, and utterly nothing else, existed. God created the universe, and then alone did something else exist.

Conclusion. *Ex nihilo* creation is both biblically grounded and philosophically coherent. It is an essential truth of Christian theism which clearly distinguishes it from other worldviews, such as pantheism (*ex deo*) and atheism (*ex materia*). Objections to *ex nihilo* creation do not stand in the face of careful scrutiny.

Daniel, Dating of. The book of Daniel contains an incredible amount of detailed predictive prophecy. It claims to speak of many of the great kingdoms in the course of human history well in advance of their times: Babylon, Medo-Persia, Greece, and Rome. If true, it is one of the great evidences of the divine origin of the Bible, and by comparison, of other books of the Bible (*see* PROPHECY, AS PROOF OF THE BIBLE).

History or Predictive Prophecy? Daniel looked ahead in time to the kingdoms of the Gentiles from the reign of Nebuchadnezzar, starting about 605 B.C ., down to the Roman Empire, which began to exercise dominance as early as 241 B.C . and, under the Roman general Pompey, took over Palestine in 63 B.C . So the book of Daniel describes world events hundreds of years into the future (Dan. 2:7). Daniel 11 presents a sweeping display of detail from the reign of Cyrus the Great to the reign of antichrist, the millennial kingdom, and the end of the age.

If Daniel wrote in the sixth century B.C ., as conservative scholars have maintained, then it is a powerful example of predictive prophecy. However, if Daniel is dated around 170 B.C ., as many critical scholars argue, he is writing history and not prophecy. One of the great arguments for the supernatural origin of biblical prophecy is then lost.

Internal Evidence Supports an Early Writing. There is persuasive evidence that Daniel lived and wrote in the sixth century B.C . and that, therefore, his detailed descriptions of history were supernatural predictions.

These events are presented as future. Their writing is dated by specific years of the reigns of kings of Babylon and Media-Persia (for example, the opening verses of chapters 2 , 7 , 9 , 10 , and 11). They were things that the wisest men in the greatest kingdom on earth could not divine (cf. Dan. 2:1–13). The text states explicitly that they were about the future, “what will be in the later days” (Dan. 2:28 ; cf. 9:24–29). It even declares that “the appointed time was long” in Daniel 10:1 , indicating the distant future. Hence, an attack on the predictive nature of Daniel’s words is an attack on his character. Yet only Joseph among Old Testament figures shows the impeccable character of Daniel (cf. Dan. 1:4 , 8 ; 6:3). Even his enemies recognized that they could not find fault in his character or dedication (Dan. 6:5).

The historical parts of Daniel are such clear, detailed, and accurate descriptions of his times as to lend credibility to his discourse when they speak about the future. Daniel’s clear distinction

of the present from the future alone is evidence that he was consciously writing prophecy, not history, in his great visions.

Before the rise of modern antisupernaturalism, the sixth-century date for Daniel (and, hence, its predictive nature) was not questioned among biblical scholars. Interestingly, it was not discovery of some archaeological or historical fact that led modern scholars after Benedict Spinoza to attribute a second-century date to Daniel. Rather, the (unproved) philosophical presupposition of antisupernaturalism led them to assume a late date (*see* MIRACLE ; MIRACLES, ALLEGED IMPOSSIBILITY OF).

That Daniel's prophecies were postdated in historical accounts shows his accuracy. Otherwise, why all the effort on the part of those who reject the supernatural origin of his prophecies to date them after the time in which events actually occurred?

Witnesses Support an Early Writing. Josephus (*see* FLAVIUS JOSEPHUS), a Jewish historian from the time of Christ, listed Daniel among *the Prophets* (the second section of the Jewish Old Testament), not among *the Writings* (the third and last section). At that date, then, Daniel was considered a prophet, not a historian. Also, the Prophets were considered to be older. Indeed, one reason for the late dating of Daniel is that it was listed among the Writings in the later Jewish Talmud (A.D . 400). However, the normal Old Testament division by later Jewish scholars was *the Law* and *the Prophets* (see Dan. 9:2 , 11–13 ; Zech. 7:12 ; Matt. 5:17 ; Luke 24:27). The unconventional Talmud listing may have been designed for liturgical, topical, or literary uses (see Geisler, chap. 14).

Jesus confirmed that Daniel was a prophet. In fact, Jesus used the example of a prediction made by Daniel that was yet future in Jesus' day. Looking ahead to the coming destruction of Jerusalem and the temple by the Roman army of Titus, Jesus referred to abomination that causes desolation," which would be standing in the holy place of the temple (Matt. 24:15). And there is strong historical evidence that the Synoptic Gospels were written before A.D . 70 (*see* ACTS, HISTORICITY OF ; BIBLE CRITICISM ; NEW TESTAMENT, HISTORICITY OF). The evidence supports Jesus' claim to be the Son of God. Such an intertwining of prophetic credentials means that to deny the predictive nature of Daniel's prophecies is a step toward denial of the deity of Christ (*see* CHRIST, DEITY OF).

Dead Sea manuscripts support an early Daniel. A fragment of Daniel from possibly the second century B.C . was found among the Dead Sea scrolls at Qumran. Since this was only a copy, it would place the book earlier.

Daniel the man is mentioned in Ezekiel 14:14 , 20 ; 28:3 . Even critics recognize Ezekiel as contemporary with the sixth century. But if the only Daniel the prophet known in Old Testament times came from the sixth century, there is no reason to reject his prophecies as coming from this period as well. This is particularly true in view of the vivid, firsthand, eyewitness nature of the book.

The Jewish Talmud attributes the book of Daniel to the prophet Daniel who lived in the sixth century B.C . This lends the support of later Jewish scholars.

Even a Late Daniel Accurately Predicted. Even a late date of about 170 B.C . would make some of Daniel's predictions still future and supernaturally accurate. Some of his most sensational predictions were fulfilled at the time of Christ. Daniel 9:24–27 predicted that Christ would die, having made "reconciliation for iniquity" and having brought in "everlasting righteousness" some 483 years after 444 B.C . According to the Jewish lunar year of 360 days there are exactly 483 between 444 B.C . and 33 A.D . For added to the 477 lunar years (444 + 33) must be another six years (= 483). There are five more days (365) in an actual year than in a lunar year (360). And five days times 477 is 2385 days. That adds up to another six and one-half years (*see* HOEHNER, X).

Objections to a Predictive Daniel. *Jewish Scripture Lists Daniel as a "Writing."* Why, critics ask, if Daniel was a prophet, is his book not listed among the Prophets in the Jewish Bible but only later among the Writings? As noted above, this was a late decision, about A.D . 400 Daniel was originally listed among the Prophets. In the first century A. D ., the Jewish historian Josephus listed Daniel among the prophets (*Against Apion* 1.8). In the later division of the Prophets into Prophets and Writings it was understandable that Daniel would fit in the Writings. Chapters 1 through 6 contains much history. Also, Daniel was a prophet by gift but not office, since he had a significant political role to play in the Babylonian government.

The Theology Is Too Highly Developed. Some critics assert that Daniel could not have written in the sixth century because the book's highly developed view of angels, the Messiah, the resurrection, and the final judgment are known to exist only in a later period.

This argument begs the question. If Daniel is an earlier book, then Daniel is proof that this "highly developed" theology existed at that time. Job and Isaiah are earlier books, and they refer to the resurrection (Job 19:25 , 26 ; Isa. 26:19). Both Malachi and Zechariah were written before the second century, and they refer to the Messiah (Zech. 3:1 ; 6:12 ; Mal. 3:1 ; 4:2). Angels are prominent in Genesis (see chaps. 18 , 19 , 28) and throughout Zechariah.

Daniel Allegedly Erred. Some critics charge that the book makes historical errors. This argument shows that what is actually in dispute is not the dating of Daniel, but the divine inspiration of Scripture. It would make more sense if an early Daniel would be historically inaccurate. A later writer would know what happened.

However, none of the errors charged to Daniel has stood (see Archer, 380–93). For example, according to Daniel 5:31 , the kingdom of Belshazzar fell to an invading army, and "Darius the Mede" became king. However, modern scholars have found no mention of such a person in ancient documents. Some modern scholars claim that the author of Daniel mistakenly thought that the Medes, rather than the Persians, conquered Babylon. They claim that this author confused Darius I, king of Persia (521–486 B.C .), with the conqueror of Babylon and identified this figure as Darius the Mede. This, they charged, appears to be an error in Daniel's account.

Modern archaeological evidence (*see* ARCHAEOLOGY, OLD TESTAMENT) shows that Darius the Mede could easily have been a different person than Darius I of Persia. Two men equally fit Daniel's references. Cyrus the Great, who ruled a united Medo-Persian empire, may well have been from the Median side of this alliance and could have been known outside official

communications as Darius the Mede. That Daniel identifies this Darius as Median fits the Persian context where that would have been noteworthy.

A better candidate who has turned up in cuneiform texts is *Gubaru* , who was appointed by Cyrus to be governor over all of Babylonia. The common practice in Babylonian and Persian aristocracy, particularly for emigrants, was for private names to reflect an individual's background and family, while an official name represented political realities of the person's new allegiances. Daniel was known in his official capacities as Belteshazzar (Dan. 1:7). Shadrach, Meshach, and Abed-nego were Babylonian names for the Hebrew men Hananiah, Mishael, and Azariah.

In the article "Daniel in the Historians' Den," William Sierichs, Jr. affirms that Belshazzar was not the "son" of Nebuchadnezzar, and "Belshazzar was not the ruler as the Book of Daniel claims, and he was never king" (*TSR,* vol. 7.4, p. 8). But even the radical critic Dr. Philip R. Davies has admitted that both are "weak arguments" (Philip R. Davies, *Daniel* [Sheffield: JSOT Press, 1985], p. 31). He wrote:

> Critical commentaries, especially around the turn of the century, made much of the fact that Belshazzar was neither a son of Nebuchadnezzar nor king of Babylon. This is still sometimes repeated as a charge against the historicity of Daniel, and resisted by conservative scholars. But it has been clear since 1924 (J.. A. Montgomery, *Daniel,* International Critical Commentary [Edinburgh: T and T Clark/New York: C. Scribner's Sons, 1927], pp. 66–67) that although Nabonidus was the last king of the Neo-Babylonian dynasty, Belshazzar was effectively ruling Babylon. In this respect, then, Daniel is correct. The literal meaning of 'son' should not be pressed. . ." (pp. 30–31).

Daniel's Vocabulary is From a Later Period. Linguistic critics find terms in Daniel that supposedly were not in use until the second century B.C . It is alleged that such words as *harp* , *sackbut* , and *psaltery* originated in the later Maccabean period (second century B.C .) and not the sixth century. Old Testament scholar R. K. Harrison observes that "this argument no longer constitutes a problem in the criticism of the book, because as [William F.] Albright has shown, it is now well recognized that Greek culture had penetrated the Near East long before the Neo-Babylonian period" (Harrison, 1126). Further, this argument is logically a fallacy from ignorance. Just because a word is not *known* to have been used at any earlier period doesn't mean it was not, unless we have omniscience about language use throughout a past society. And as more is known linguistically about ancient cultures, scholars are finding evidence of earlier usage (see Archer, 380–93).

Conclusion. There is strong evidence that Daniel's predictions come from the sixth century B.C ., making them amazing predictions of the course of history from Babylon through Medo-Persia, Greece and Rome to after the time of Christ. Critics gain nothing by postdating Daniel. Their latest date still demands that Daniel wrote outstanding examples of supernatural predictive prophecy (Daniel 9). If those are true prophecies, why not the others?

Darrow, Clarence. Clarence Darrow (1857–1938) was a well-known attorney practicing criminal law through the early twentieth century. He is best known for his defense of a man who was charged with teaching evolution (*see* EVOLUTION, BIOLOGICAL) in public schools. Through the Scopes trial in Dayton, Tennessee (1925), Darrow was able to champion his own strongly held views as an evolutionist and agnostic (*see* AGNOSTICISM). The Christian statesman William Jennings Bryan (1860–1925) represented the state and died a few days after the verdict.

The Real Darrow. Darrow has been widely quoted as saying, "It is bigotry for public schools to teach only one theory of origins" (McIver, 1–13). Wendell Bird, whose 1978 *Yale Law Review* article has been responsible for many of the citations of this alleged quotation, has subsequently recognized that this statement probably is not authentic.

Darrow also has been misquoted to the effect that he believed creation was a scientific view. He declared at the Scopes trial that children should have "both" creation and evolution. He meant evolution should be taught as science and creation as theology. This fits his argument at the trial and his declaration a few years later: "In fact, there is no other theory to teach regarding the origin of the various animal species, including man" (Darrow, 275).

Darrow and the Charge of Bigotry. He did believe that passing and defending the Tennessee creation law was "bigotry" and used the word *bigotry* or *bigot* six times on only two pages of trial transcript (Hilleary, 75, 87). Bryan said on the witness stand, "I am perfectly willing that the world shall know that these gentlemen have no other purpose than ridiculing every Christian who believes in the Bible." Darrow snapped back, "We have the purpose of preventing *bigots* and ignoramuses from controlling the education of the United States and you know it, and that is all" (ibid., 299, emphasis added).

In another place Darrow argued that "Unless there is left enough of the spirit of freedom in the state of Tennessee, and in the United States, there is not a single line of any constitution that

can withstand *bigotry* and ignorance when it seeks to destroy the rights of the individual; and bigotry and ignorance are ever active" (ibid., 75, emphasis added).

Darrow even refers to Thomas Jefferson , asking, "Can a legislative body say, 'You cannot read a book or take a lesson, or make a talk on science until you first find out whether what you are saying [is] against Genesis. . . .' It could—except for the work of Thomas Jefferson, which has been woven into every state constitution of the Union, and has stayed there like the flaming sword to protect the rights of man against ignorance and *bigotry* " (ibid., 83).

At another point Darrow appealed to the judge, pleading, "Your honor knows that the fires that have been lighted in America to kindle religious *bigotry* and hate. . . . You know that there is no suspicion which possesses the mind of men like *bigotry* and ignorance and hatred" (ibid., 87, emphasis added). Even the lawyers opposing Darrow took note of his use of the word *bigots* , saying, "They say it is sponsored by a lot of religious *bigots* . Mr. Darrow said that, substantially that" (ibid., 197, emphasis added).

These citations leave no doubt that Darrow believed that those who produced, promoted, and defended the Tennessee anti-evolution law were bigots for denying the right to teach evolution in the public schools, even though creation was not being taught. It is interesting to observe precisely what Darrow himself was promoting to see if he himself remains above the charge of bigotry.

What Darrow Was Defending. Darrow obviously was challenging the law in order to establish the teaching of evolution. Yet, even evolutionists acknowledge that "the Dayton public schools were only teaching one view—evolution—and that was what Darrow was trying to defend" (McIver, 9). If so, then Darrow's plea, "Let them have both. Let them both be taught" rings hollow. Certainly he did not advocate that the Genesis account be taught in public schools, even as theology. Darrow was categorically opposed to teaching religion in the public schools.

Darrow's reference to Jefferson is infelicitous, since Jefferson believed that "all men were created . . ." and even refers to the "Creator" in *The Declaration of Independence* . Jefferson would be surprised to return to America and find that a new society has declared it unconstitutional to teach the truths of the *Declaration of Independence* in public schools. Jefferson himself set up a department of divinity in his state supported University of Virginia and signed into law a treaty with the Kaskaskia Indians (1803) to pay a Catholic missionary to do mission work with them.

Evaluation. The view that only evolution is scientific and only creation is religious is a form of definitional bigotry. If creation is not scientific, then most of the major scientists between 1620 and 1860 were not scientific when they said that scientific evidence points to a Creator (*see* CREATION AND ORIGINS).

As argued elsewhere (*see* ORIGINS, SCIENCE OF), creation is as scientific as is macro-evolution (Geisler, *Origin Science,* chaps. 6, 7). Neither creation nor macro-evolution represents an *empirical* science. No creature observed the origin of the universe and life, and it is not being repeated today. However, both creationist and evolutionist views are "scientific" in the sense of

forensic science. They are simply speculative reconstructions of past unobserved events on the basis of remaining evidence. To argue that we can allow public school science teachers to teach evolution is to allow speculation about possible natural causes but not possible intelligent causes. By this same logic, archaeologists are not scientific when they posit an intelligent cause for ancient pottery. Darrow would have been more consistent in defending scientific inquiry and academic freedom if he had actually said the statement attributed to him: "It is bigotry for public schools to teach only one theory of origins!"

Darwin, Charles. Charles Robert Darwin (1809–1882) was born in Shrewsbury, England, the son of a physician. As a naturalist, he won sponsors and government backing for an expedition on the military sailing ship HMS Beagle, where he made his famous observations on the differences in finches. Later he used what he had learned on this ship as evidence for his theory of evolution (*see* CREATION AND ORIGINS ; CREATION, VIEWS OF ; EVOLUTION ; EVOLUTION, BIOLOGICAL ; EVOLUTION, CHEMICAL ; MISSING LINKS).

Darwin is most famous for his *On the Origin of Species* (1859), in which he suggested in the last lines of the first edition that "whilst this planet has gone cycling on according to the fixed law of gravity," therein, "life, with its several powers, having been originally breathed [by the Creator] into a few forms or into one . . . from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved." The bracketed phrase was added in the second edition of *Origin* . Not until his later work, *The Descent of Man* (1871), did Darwin proclaim that humans too had evolved by natural processes from lower forms of life. This view caused a revolution in the sciences, the reverberations of which are still being felt.

It was a turning point in modern thought because, in the minds of many, Darwin gave the first plausible explanation of how evolution could have occurred. By applying the principle of natural selection (the survival of the fittest) to variations within populations, Darwin was able to argue persuasively that over long periods of time small changes added up to large ones. These large changes can account for the origin of new species without the direct intervention of a supernatural Power, except perhaps to get the whole process going.

Evolution of Darwin's God. Darwin began as a Christian theist, was baptized in the Church of England, and despite his rejection of Christianity, was buried in Westminster Abbey. Darwin's life is a microcosm of the increasing disbelief of the late eighteenth century (*Darwin's Early Religious Training*).

Although an Anglican, Darwin was sent to a school conducted by a Unitarian minister (Moore, 315). He later entered the University of Cambridge in 1828 where, his father had decided, he should prepare for the ministry (ibid.). At this early age, and with the aid of Pearson's *Exposition of the Creed* and Bishop Sumner's *Evidence of Christianity Derived from Its Nature and Reception* (1824), "Darwin abandoned whatever were his scruples about professing belief in all the doctrines of the Church" (ibid.). Nonetheless, Darwin was deeply impressed with William Paley's *A View of the Evidences of Christianity* (1794); and *Natural Theology;* or, *Evidences of the Existence and Attributes of the Deity* (1802).

Darwin's Original Theistic Beliefs. He accepted Paley 's design argument (*see* TELEOLOGICAL ARGUMENT). In his *Autobiography* he referred to his Journal entry "that whilst standing in the midst of the grandeur of a Brazilian forest 'it is not possible to give an adequate idea of the higher feelings of wonder, admiration, and evolution which fill and elevate the mind.' " He adds, "I remember my conviction that there is more in man than the mere breath of his body" (Darwin, *Autobiography,* 91).

Darwin recognized "the extreme difficulty or rather impossibility of conceiving this immense and wonderful universe, including man with his capacity of looking far backward and far into futurity, as the result of blind chance or necessity." Thus, "when reflecting I feel compelled to look to a First Cause having an intelligent mind in some degree analogous to that of man; and I deserve to be called a Theist." Darwin acknowledged that he once had been a creationist. He even spoke of it as a view "which most naturalists until recently entertained, and which I formerly entertained" (Darwin, 30). "This conclusion was strong in my mind about the time, as far as I can remember, when I wrote the *Origin of Species;* and it is since that time that it has very gradually become weaker" (Darwin, *Autobiography,* 92–93).

Darwin's Rejection of Christianity. By 1835, before Darwin set sail on the *Beagle* (in 1836), he was yet a creationist. Darwin describes his own religious descent in his *Autobiography* . He wrote, "Whilst on board the *Beagle* [October 1836–January 1839] I was quite orthodox, and I remember being heartily laughed at by several of the officers (though themselves orthodox) for quoting the bible as an unanswerable authority on some point of morality." However, he did not believe the Bible was an unanswerable authority on science at this time. According to Ernst Mayr, Darwin had become an evolutionist some time between 1835 and 1837 (Mayr, x). "By 1844, his views [on evolution] had reached considerable maturity, as shown by his manuscript 'Essay' " (ibid.). Charles Darwin's son and biographer, Francis Darwin said that "Although Darwin had nearly all the key ideas of the *Origin* in mind as early as 1838, he deliberated for twenty years before committing himself publicly to evolution" (F. Darwin, 3.18). Only a decade later (1848) Darwin was fully convinced of evolution, defiantly declaring to J. D. Hooker: "I don't care what you say, my species theory is all gospel" (cited by Moore, 211).

Darwin's declining Christian beliefs began with an erosion of the trustworthiness of the Bible. It is true that as late as 1848 he read Harvard's Professor Andrew Norton *(The Evidence of the Genuineness of the Gospels)* who argued that the Gospels "remain essentially the same as they were originally composed" and that "they have been ascribed to their true authors" (Moore, 212). However, his faith in the Old Testament had eroded some years before this (*see* BIBLICAL CRITICISM).

The acceptance of negative higher criticism. But "I had gradually come, by this time to see that the Old Testament from its manifestly false history of the world, with its Tower of Babel, the rainbow as a sign, etc., etc., and from its attribution to God the feelings of a revengeful tyrant, was no more to be trusted than the sacred books of the Hindoos, or the beliefs of any barbarian" (Darwin, *Autobiography,* 85).

The acceptance of antisupernaturalism. Both Benedict Spinoza in 1670 and David Hume a century later had attacked the basis of supernatural intervention in the world. Darwin added, "By further reflection that the clearest evidence would be requisite to make any sane man believe in miracles by which Christianity is supported—that the more we know of the fixed laws of nature the more incredible do miracles become—that the men of that time were ignorant and credulous to a degree almost incomprehensible by us—that the Gospels cannot be proved to have been written simultaneously with the events—that they differ in many important details, far too important as it seemed to me to be admitted as the usual inaccuracies of eyewitnesses—by such reflections as these . . . I gradually came to disbelieve in Christianity as a divine revelation" (*Autobiography,* 86).

Nonetheless, Darwin added, "I was very unwilling to give up my belief. . . . thus disbelief crept over me at a very slow rate, but was at last complete. The rate was so slow that I felt no distress, and have never since doubted even for a single second that my conclusion was correct" (ibid., 87).

The "damnable doctrine" of hell . Darwin notes that the orthodox belief in hell was a particular influence in his rejection of Christianity. He wrote: "I can indeed hardly see how anyone ought to wish Christianity to be true; for if so plain language of the text seems to show that the men who do not believe, and this would include my Father, Brother and almost all my best friends, will be everlastingly punished. And this is a damnable doctrine" (ibid., 87).

The death of Darwin's daughter. Darwin's increased skepticism was completed by the death of his beloved daughter, Anne in 1851. Biographer James Moore notes that "Two strong emotions, anger and grief, in the *Autobiography* mark off the years from 1848 to 1851 as the period when Darwin finally renounced his faith" (Moore, 209). This, of course, was just after his view in evolution had solidified (1844–1848) and before he wrote his famous *Origins* (1859).

Although Darwin's heirs suppressed the effect this death had on Darwin, his own words betray its impact (see Moore, 220–23). Connected to the doctrine of eternal punishment, Darwin could see no reconciliation between the life of a perfect child and a vengeful God (ibid., 220). Referring to himself as a "horrid wretch," one of the condemned, in May 1856 he warned a young entomologist: "I have heard Unitarianism called a feather-bed to catch a falling Christian;

& I think you are now on just such a feather bed, but I believe you will fall much lower & lower" (cited by Moore, 221). A month later, Darwin referred to himself as "the Devil's Chaplain," a satirical figure of speech of a confirmed unbeliever (Moore, 222; *see* EVIL, PROBLEM OF).

Darwin's Descent. Darwin gradually discarded theism for deism , leaving the single act of divine intervention for the creation of the first form or forms of life. This was apparently his view at the time of *On the Origin of Species* (1859) where, in the second edition he spoke of "life, with its several powers, having been originally breathed *by the Creator* into a few forms or into one . . . from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved" (emphasis added).

Paley's design argument rejected. Although Darwin clung to a deistic God who created the world but let it operate by "fixed natural laws," gradually he came to reject even the cogency of the design argument. He said he was "driven" to the conclusion that "the old argument of design in nature, as given by Paley, which formerly seemed to me so conclusive, fails, now that the law of natural selection had been discovered. . . . there seems to be no more design in the variability of organic beings and in the action of natural selection, than in the course which the wind blows. Everything in nature is the result of fixed laws" (ibid., 87). Darwin wrote: "I am inclined to look at everything as resulting from designed laws, with the details, whether good or bad, left to the working out of what we may call chance" (F. Darwin, 1.279; 2.105).

With chance as his only continuing faith, the naturalist ventured so far as to call natural selection "my deity," For to believe in miraculous creations or in the "continued intervention of creative power," said Darwin, "is to make 'my deity "Natural Selection" superfluous' and to hold *the* Deity—if such there be—accountable for phenomena which are rightly attributed only to his magnificent laws" (cited by Moore, 322). Here Darwin not only stated his deism but signaled his growing agnosticism by the phrase "if such there be."

Finite Godism? Darwin seemed in the later stages of his deism to flirt with a finite god (*see* FINITE GODISM) like that John Stuart Mill had embraced. As early as 1871 in *The Descent* , Darwin appeared to deny belief in an infinitely powerful God. He wrote: " *Belief in God—Religion.* There is no evidence that man was aboriginally endowed with the ennobling belief in the existence of an Omnipotent God" (*Descent,* 302). Here he hints at finite godism. If so, it was short-lived; Darwin definitely eventuated an agnostic (*see* AGNOSTICISM).

Agnosticism. By 1879 Darwin was an agnostic, writing: "I think that generally (and more and more as I grow older), but not always, that an Agnostic would be the more correct description of my state of mind" (cited by Moore, 204). Eventually, he wrote: "The mystery of the beginning of all things is insoluble by us; and I for one must be content to remain an Agnostic" (Darwin, *Autobiography,* 84).

His agnosticism notwithstanding, Darwin clearly denies ever being an atheist. He said, "In my most extreme fluctuations I have never been an atheist in denying the existence of God" (cited by Moore, 204). Historians reject the apocryphal story of Darwin's deathbed conversion.

As late as 1879, many years after the *Descent* (1871), Darwin declared, "It seems to me absurd to doubt that a man may be an ardent Theist and an evolutionist" (Letter 7, May 1879). Darwin himself was content to remain an agnostic.

Evaluation. In contrast to the dogmatism of many contemporary evolutionists who claim "evolution is a fact," Darwin was more reserved, at least in his published writings.

Positive Aspects of Darwin's Views. Darwin should be commended for being generally careful not to overstate his case. Certainly this is the case in *On the Origin of Species.*

Evolution is only a theory. Darwin acknowledged that his view was a theory, not a fact. He called it the "theory of evolution" as opposed to the "theory of Creation," phrases he used many times in *On the Origin of Species* (e.g., 235, 435, 437) **.** Technically, macro-evolution is more an unconfirmed hypothesis than a theory (*see* EVOLUTION, BIOLOGICAL). Many, including some evolutionists, believe it is an unfalsifiable tautology. Robert H. Peters, in *The American Naturalist,* stated that evolutionary theories "are actually tautologies and, as such, cannot make empirical testable predictions. They are not scientific theories at all" (Peters, 1). Others, like Stephen Toulmin and Langdon Gilkey have come to similar conclusions, calling it a "scientific myth" (Gilkey, 39).

Both sides should be considered. In contrast to many current evolutionists, Darwin believed that both evolution and its logical antithesis of creation should be considered, weighing the evidence carefully for both. In the "Introduction" to *Origin* Darwin stated: "For I am well aware that scarcely a single point is discussed in this volume on which facts cannot be adduced, often apparently leading to conclusions directly opposite to those at which I have arrived." He adds, "A fair result can be obtained only by fully stating and balancing the facts and arguments on both sides of each question; and this is here impossible." This seems to support a two-model theory which many creationists suggest for public schools, but the mandating of which was rejected by the Supreme Court (*Edwards,* 19 June, 1987).

Micro-evolution was confirmed. Darwin is credited, even by creationists, with confirming the existence of small changes in the natural development of species. They are even observable, as his study of the finches reveals. While creationists differ with Darwin as to whether these small changes can add up to large ones by natural selection over long periods of time, Darwin and others should be credited with the demise of the older platonic view of fixed forms on the level of what biologists call species.

The law of natural selection was explained. Darwin also correctly saw the valuable function that natural selection plays in the development of life. The survival of the fittest is a fact of animal life, as a perusal of an African nature film will reveal. Again, creationists and evolutionists differ over just how much change natural selection can make and whether it is upward. But there is agreement that natural selection can and does make some significant biological changes in the development of life.

“Missing links” were noted. Darwin was well aware of the fact that the evidence for (or against) evolution was in the fossil record and that there were gaping holes in it (see below). He, of course, hoped that future finds would fill in these gaps and confirm his “theory.”

Negative Aspects. A more complete critique of biological and human evolution is found in the article Evolution, Biological. Here focus will be on the failings of Darwin’s personal views.

The lack of fossil evidence. Sensing the lack of intermediate forms in the fossil record, Darwin confessed: “Geology assuredly does not reveal any such finely graduated organic change, *and this is perhaps the most obvious and serious objection which can be urged against the theory [of evolution]* ” (Darwin, *Origin of Species,* 152, emphasis added). Darwin confessed that we do not find “an infinite number of those fine transitional forms which, on our theory, have connected all the past and present species of the same group into one long and branching chain of life” (ibid., 161). He attributed this to the scarcity of the “geological record as a history of the world imperfectly kept” (ibid.) and, others, to the alleged sparsity of transitional forms. But this is a virtually unfalsifiable argument from silence and begs the question in favor of transitional forms being there to begin with. The reality is that there are no missing links, but a missing chain, with only a few links here and a few there.

The fossil record is the only real evidence of what *actually did occur* , as opposed to what *could have* happened, so this is a very serious objection. And the subsequent period of about 140 years has not been friendly to Darwin. In spite of thousands of fossil finds, to borrow a term from Fred Hoyle, “the evolutionary record leaks like a sieve” (Hoyle, 77). But Harvard paleontologist Stephen Jay Gould admitted that “the extreme rarity of transitional forms in the fossil record persists as the trade secret of paleontology. The evolutionary trees that adorn our textbooks have data only at the tips and nodes of their branches; the rest is inference, however reasonable, not the evidence of fossils” (Gould, 14). Indeed, the lack of evidence for Darwin’s theory has forced many contemporary evolutionists like Gould to resort to more speculative solutions such as “punctuated equilibria” where by nature takes big leaps in relatively short periods of time.

Micro-evolution does not prove macro-evolution. All that Darwin successfully showed was that small changes occur within specific forms of life, not that there is any evolution between major types. Even granting long periods of time, there is no real evidence for major changes. To cite Gould again, “The history of most fossil species includes two features particularly inconsistent with gradualism:

1. *Stasis.* Most species exhibit no directional change during their tenure on earth. They appear in the fossil record looking much the same as when they disappear; morphological change is usually limited and directionless.

2. *Sudden appearance.* In any local area, a species does not arise gradually by the steady transformation of its ancestors; it appears all at once, fully formed (Gould, ibid., 13–14).

The fossil evidence clearly gives a picture of mature, fully functional creatures suddenly appearing and staying very much the same. This is evidence of creation, not evolution.

Leaps are evidence of creation. In view of the great omissions in the fossil record, Darwin's own statements are self-incriminating. He said, "he who believes that some ancient form was transformed suddenly . . . enter[s] into the realms of miracles, and leave[s] those of science" (cited by Denton, 59). Even as a student, Darwin, commenting on Sumner's *Evidences of Christianity,* said that "when one sees a religion set up, that has no existing prototype . . . it gives great probability to its divine origin." As Howard Gruber put it, "Nature makes no jumps, but God does. Therefore, if we want to know whether something that interests us is of natural or supernatural [origin], we must ask: Did it arise gradually out of that which came before, or suddenly without any evident natural cause?" (cited ibid.). But clearly by Darwin's own premises, then, macro-evolution does not follow, for he admits that there are great jumps in the fossil record, which are a sign of creation, not evolution.

Darwin made a false analogy. Much of the persuasiveness of Darwin's view came from the apparently plausible argument that if artificial selection can make significant small changes in a short time, then surely natural selection can make large changes in a long period of time. But as E. S. Russell noted, "the *action of man in selective breeding is not analogous to the action of 'natural selection,'* but *almost its direct opposite* ." For "Man has an aim or an end in view; 'natural selection' can have none. Man picks out the individuals he wishes to cross, choosing them by the characteristics he seeks to perpetuate or enhance." Rather, "He protects them and their issue by all means in his power, guarding them thus from the operation of natural selection, which would speedily eliminate many freaks; he continues his active and purposeful selection from generation to generation until he reaches, if possible, his goal." But "Nothing of this kind happens, or can happen, through the blind process of differential elimination and differential survival which we miscall natural selection (cited in Moore, 124). Thus, a central pillar of Darwin's theory is based on a false analogy (*see* EVOLUTION, BIOLOGICAL for further development of this point).

Darwin admitted to serious objections. Darwin dedicated a whole chapter of *On the Origin of Species* to what he called "a crowd of difficulties" (80). For example, "Can we believe that natural selection could produce . . . an organ so wonderful as the eye" (ibid.). How could organisms that need it survive without it while it was evolving over thousand or millions of years? Indeed, most complex organs and organisms must have all of the parts functioning together at once from the beginning. Any gradual acquiring of them would be fatal to their functioning. Further, "can instincts be acquired and modified through natural selection?" (ibid.). Darwin admits the difficulties with evolution that "some of them are so serious that to this day I can hardly reflect on them without being in some degree staggered" (ibid.).

Evidence reveals separate ancestors. Interestingly, Darwin himself acknowledged the misleading nature of analogy his view was based on. Elaborating of his oft quoted last words of the *Origin* that God created "one" or a "few" forms of life, Darwin admits two revealing things. First, he acknowledged some eight to ten created forms. He said, "I believe that animals are descended from at most four or five progenitors, and plants from an equal or lesser number" (Darwin, *Origin of Species,* 241). Beyond this, he admitted that one can only argue by analogy, adding: "Analogy would lead me one step further, namely, to the *belief* that all animals and plants are descended from some one prototype. *But analogy may be a deceitful guide* " (ibid.,

emphasis added). This is a very revealing admission in view of the demonstrably false analogy used between artificial and natural selection.

Darwin's theory not derived from nature. Even some evolutionists admit that Darwin did not derive his theory from the study of nature but from a naturalistic worldview. George Grinnell wrote: "I have done a great deal of work on Darwin and can say with some assurance that Darwin also did not derive his theory from nature but rather superimposed a certain philosophical world-view on nature and then spent 20 years trying to gather facts to make it stick" (Grinnell, 44). This is particularly interesting in view of the fact that the Federal Court ruled in the "Scopes II" trial (McLean, 22 January 1982) that creation is not science because, for one thing, it has a non-scientific source—the Bible. The judge ruled that creation could not be taught alongside evolution because " 'creation science' . . . has as its unmentioned reference the first eleven chapters of the Book of Genesis" (cited in Geisler, 173).

One cannot help but wonder why creation is not scientific because it has a nonscientific source, whereas Darwin's view is. The truth is that a scientific theory does not need a scientific *source* but only some possible or actual scientific *support* . As the author pointed out in testimony at the "Scopes II" trial, many valid scientific views had nonscientific, even religious, sources. Nikola Tesla's idea for the AC motor came from a vision while reading a pantheistic poet. And Kekule's model of the benzene molecule was derived from a vision of a snake biting its tail (ibid., 116–17).

Darwin's View Is Tantamount to Atheism. Although Darwin, and many Darwinists, stoutly deny that Darwin's view is in principle atheistic, the charge has been laid very seriously at his door. The Princeton scholar, Charles Hodge (1797–1878), in a penetrating analysis, asked and answered his own question: "What is Darwinism? It is Atheism. This does not mean that Mr. Darwin himself and all who adopt his views are atheists; but it means that his theory is atheistic, that the exclusion of design from nature is . . . tantamount to atheism" (Hodge, 177). Hodge's logic is challenging. Evolution excludes design, and if there is no design in nature then there is no need for a Designer of nature. So, protests to the contrary, evolution is in principle an atheistic theory, since it excludes the need for an intelligent Creator (*see* COSMOLOGICAL ARGUMENT ; FLEW, ANTONY).

Even many evolutionists acknowledge that Darwin's scenario of a "warm little pond" in which first life spontaneously generated excludes God entirely from the realm of biology. He wrote: "It is often said that all the conditions for the first production of a living organism are now present which could ever have been present." Thus, spontaneous generation would be possible if "we could conceive in some warm little pond with all sorts of ammonia and phosphoric salts, light, heat, electricity present that a protein was formed ready to undergo still more complex changes" (cited by F. Darwin, 3.18). Francis Darwin admitted that "Darwin never claimed his theory could explain the origin of life, but the implication was there. *Thus, not only was God banished from the creation of species but from the entire realm of biology* " (ibid.). What need for a Creator? All one need do is posit what many long believed, that the material universe was eternal and there appears to be no place for a First Cause, for God. There is, of course, mounting evidence against both spontaneous generation of first life (*see* EVOLUTION, CHEMICAL) and an

eternal universe (*see* BIG BANG THEORY ; KALAM COSMOLOGICAL ARGUMENT). And, hence, there is need for God, Darwinism not withstanding (*see* GOD, EVIDENCES FOR).

Reasons for denying Christianity were invalid. Not only were Darwin's deism and agnosticism unjustified, but so was his rejection of Christianity. For it was based on a prevailing negative higher criticism (*see* BIBLICAL CRITICISM) of his day, which was prearchaeological and has long since been discredited.

Likewise, Darwin wrongly assumed that the God of the Old Testament was vengeful and not loving, something contrary to the Old Testament statement of God's love, mercy, and forgiveness (see Exod. 20:6 ; Jonah 4:2). Indeed, God's love is mentioned more in the Old Testament than in the New Testament.

Further, Darwin's concept of hell was severely truncated. The very idea that hell is unjust implies there must be an absolutely just God. And an absolutely just God must punish sin.

What is more, Darwin seemed to have no concept of hell as a consequence of a loving God not forcing free creatures to believe in him contrary to their choice.

Finally, Darwin's family downplays the fact that once Darwin had given up his Christian belief he could not cope with the death of his beloved daughter. The very time when he needed the Christian hope of the resurrection (*see* RESURRECTION, EVIDENCE FOR) and reunion with loved ones, it was not there because his increasing antisupernaturalism had eliminated any firm basis on which he could believe it. Instead, he turned on God—whatever was left of him—and blamed God for being "vengeful." Such is the condition of an ungrateful and unbelieving heart (cf. Rom. 1:18f .).

Dead Sea Scrolls. Discovery of the Dead Sea Scrolls (hereafter DSS) at Qumran, beginning in 1949, had significant apologetic implications. These ancient texts, hidden in pots in cliff-top caves by a monastic religious community, confirm the reliability of the Old Testament text. They provide significant portions of Old Testament books—even entire books—that were copied and studied by the Essenes. These manuscripts date from as early as the third century B.C . and so give the earliest window so far found into the texts of the Old Testament books and their predictive prophecies. The Qumran texts have become an important witness for the divine origin of the Bible (*see* PROPHECY, AS PROOF OF BIBLE). They provide further evidence against the negative biblical criticism (*see* BIBLE CRITICISM) of such crucial books as Daniel and Isaiah (*see* DANIEL, DATING OF ; OLD TESTAMENT MANUSCRIPTS ; REDACTION CRITICISM, OLD TESTAMENT).

The DSS manuscripts date from the third century B.C . to the first century A.D . They include one complete Old Testament book, Isaiah (*see* ISAIAH, DEUTERO), and thousands of fragments, which together represent every Old Testament book except Esther. William F. Albright called this "the greatest manuscript discovery of modern times" (see Trever, 55).

Dating the Dead Sea Scrolls. Important, though not crucial, to the apologetic value of the DSS are their dates. Dating used several lines of evidence.

Carbon 14 Dating. Carbon 14 dating is a reliable form of scientific dating when applied to uncontaminated material several thousand years old. Since it destroys a portion of the material tested, this process is used sparingly. Half of a two-ounce piece of linen wrapping from a scroll in cave 1 was tested by Dr. W. F. Libby of the University of Chicago in 1950 to give a general idea of the age of the collection. Results indicated an age of 1917 years with a 200–year (10 percent) variant, which left the date somewhere between 168 B.C . and A.D . 233.

Paleographical and Orthographical Dating. Paleography (ancient writing forms) and orthography (spelling) were more helpful, indicating that some manuscripts were inscribed before 100 B.C . Albright studied photographs of the complete Isaiah scroll and set its date at

around 100 B.C . “What an absolutely incredible find!” he wrote. “And there can happily not be the slightest doubt in the world about the genuineness of the manuscript” (ibid., 55).

Archaeological Dating. Collaborative evidence for an early date came from archaeology. Pottery accompanying the manuscripts was Late Hellenistic (ca. 150–63 B.C .) and Early Roman (ca. 63 B.C . to A.D . 100). Coins found in the monastery ruins proved by their inscriptions to have been minted between 135 B.C . and A.D . 135. The weave and pattern of the cloth supported an early date. Evidence also came from the Murabba’at Discoveries south of Bethlehem, where self-dated manuscripts were discovered in 1952. Bearing dates from A.D . 132–35, these proved to be paleographically younger than the DSS (Zeitlin). In the end there was no reasonable doubt that the Qumran manuscripts came from the century before Christ and the first century A.D . Thus, they are 1000 years older than the Masoretic manuscripts of the tenth century. Before 1947, the Hebrew text was based on three partial and one complete manuscript dating from about A.D . 1000. Now, thousands of fragments are available, as well as complete books, containing large sections of the Old Testament from one millennium before the time of the Masoretic manuscripts.

Support for the Masoretic Text. The nature and number of these finds are of critical value for establishing the true text (*see* OLD TESTAMENT MANUSCRIPTS). With innumerable fragments of the entire Old Testament, there are abundant samples with which to compare the Masoretic Text. The evidence points to the following general conclusions.

Confirmation of the Hebrew Text. The scrolls give an overwhelming confirmation of the faithfulness with which the Hebrew text was copied through the centuries. By the tenth-century Masoretic copies, few errors had crept in. Millar Burrows, in *The Dead Sea Scrolls,* writes, “It is a matter of wonder that through something like a thousand years the text underwent so little alteration. As I said in my first article on the scroll, “Herein lies its chief importance, supporting the fidelity of the Masoretic tradition” (Burrows, 304). R. Laird Harris points out that “evidently the difference between the standard text of A.D . 900 and the text of 100 B.C . is not nearly so great as that between the Neutral and Western text in the New Testament study” (Harris, 99). Gleason Archer observes that the two copies of Isaiah discovered in Qumran Cave 1 “proved to be word for word identical with our standard Hebrew Bible in more than 95 percent of the text. The 5 percent of variation consisted chiefly of obvious slips of the pen and variations in spelling” (Archer, 19). To return to the original and “all important question” framed by Old Testament scholar Frederic Kenyon (1863–1952) a generation ago, it may now be more confidently asserted than ever before that the modern Hebrew text faithfully represents the Hebrew text as originally written by the authors of the Old Testament. Dead Sea discoveries have enabled us to answer this question with much greater assurance than was possible before 1948 (Bruce, 61–69).

Support for the Septuagint. Since the New Testament most often cites the Greek Septuagint (hereafter LXX) translation of the Old Testament, the reliability of this text is important, particu larly where it is quoted in the New Testament. The DSS provide early support for the LXX and answers questions about variations between the Hebrew and LXX Greek:

LXX Septuagint

1. A fragment containing Deuteronomy 32:8 reads, “according to the number of the sons of God,” which is translated “angels of God” by the LXX , as in Genesis 6:4 (margin); Job 1:6 ; 2:1 ; and 38:7 . The Masoretic Text reads, “according to the number of the children of Israel.”

2. The Masoretic Text of Exodus 1:5 reads “seventy souls,” whereas the LXX and its quotation in Acts 7:14 read “seventy-five souls.” A DSS fragment of Exodus 1:5 reads “seventy-five souls,” in agreement with the LXX .

3. Hebrews 1:6b , “Let all God’s angels worship him” is a quote from the LXX of Deuteronomy 32:43 . This quotation does not agree with the Masoretic Text, but DSS fragments containing this section tend to confirm the LXX .

4. Isaiah 9:6 reads, “she shall call his name” in the Masoretic Text, but the LXX and now the great Isaiah scroll read, “His name shall be called,” a matter of one less consonant of the Hebrew alphabet.

5. The Greek version of Jeremiah is sixty verses (one-eighth) shorter than the Hebrew text of Jeremiah. The fragment of Jeremiah supports these omissions.

6. In Cave 11 a copy of Psalm 151 was found, which was previously unknown in the Hebrew text, although it appeared in the Septuagint. Some apocryphal books were also found among the Hebrew manuscripts in the Qumran caves that had previously been known only in the LXX (Vermes, 296).

This should by no means be construed as a uniform picture, since there are not many deviants in the DSS from the Masoretic Text to begin with. In some cases the variants do not consistently agree with the LXX ; in a few cases they do not agree at all. However, even Orlinsky, who is one of the foremost defenders of the Masoretic Text against proposed emendations based on the DSS, admits, “The LXX translation, no less than the Masoretic Text itself, will have gained considerable respect as a result of the Qumran discoveries in those circles where it has long—overlong—been necessary” (cited in Wright, 121).

Light on the New Testament. Some DSS fragments have been identified as the earliest known pieces of the New Testament. Further, the messianic expectations reveal that the New Testament view of a personal messiah-God who would rise from the dead is in line with first-century Jewish thought.

The New Testament fragments? Jose O’Callahan , a Spanish Jesuit paleographer, made headlines around the world in 1972 when he announced that he had translated a piece of the Gospel of Mark on a DSS fragment. This was the earliest known piece of Mark. Fragments from cave 7 had previously been dated between 50 B.C . and A.D . 50 and listed under “not identified” and classified as “Biblical Texts.” O’Callahan eventually identified nine fragments. The center column in the following chart uses the numbering system established for manuscripts. For example, “7Q5” means fragment 5 from Qumran cave 7.

Mark 4:28	7Q6?	A.D . 50
Mark 6:48	7Q15	A.D . ?

Both friend and critic acknowledged from the beginning that, if valid, O'Callahan's conclusions would revolutionize current New Testament theories. The *New York Times* reported: "If Father O'Callahan's theory is accepted, it would prove that at least one of the gospels—that of St. Mark—was written only a few years after the death of Jesus." United Press International (UPI) noted that his conclusions meant that "the people closest to the events—Jesus' original followers—found Mark's report accurate and trustworthy, not myth but true history" (ibid., 137). *Time* magazine quoted one scholar who claimed that, if correct, "they can make a bonfire of 70 tons of indigestible German scholarship" (Estrada, 136).

Of course, O'Callahan's critics object to his identification and have tried to find other possibilities. The fragmentary nature of the ms. makes it difficult to be dogmatic about identifications. Nonetheless, O'Callahan offers a plausible, albeit revolutionary, possibility. If the identification of even one of these fragments as New Testament is valid, then the implications for Christian apologetics are enormous. It would be shown that the Gospel of Mark was written within the life time of the apostles and contemporaries of the events.

A date before A.D . 50 leaves no time for mythological embellishment of the records. They would have to be accepted as historical. It would also show Mark to be one of the earlier Gospels. Further, since these manuscripts are not originals but copies, it would reveal that the New Testament was "published"—copied and disseminated—during the life time of the writers. It would also reveal the existence of the New Testament canon during this early period, with pieces representing every major section of the New Testament: Gospels, Acts, and both Pauline and General Epistles.

The fragment of 2 Peter would argue for the authenticity of this often disputed epistle. The absence of fragments of John's writings might indicate that they were written later (A.D . 80–90) in accordance with the traditional dates. With all these revolutionary conclusions it is little wonder that their authenticity is being challenged.

First-Century Jewish Messianic Expectations. The DSS have also yielded text that, while not referring to the Christ of the New Testament, have some interesting parallels, as well as some

significant differences. The similarities that confirm the New Testament picture accurately describes Jewish expectation of a personal, individual Messiah who would die and rise from the dead. A fragment called " *A Genesis Florilegorium"* (4Q252) reflects belief in an individual Messiah who would be a descendant of David. "Column 5 (1) (the) Government shall not pass from the tribe of Judah. During Israel's dominion, (2) a Davidic descendant on the throne shall [not c]ease . . . until the Messiah of Righteousness, the Branch of (4) David comes" (see Eisenman, 89).

Even the deity of the Messiah is affirmed in the fragment known as "The Son of God" (4Q246), Plate 4, columns one and two: "Oppression will be upon the earth . . . [until] the King of the people of God arises, . . . and he shall become [gre]at upon the earth. [. . . All w]ill make [peace,] and all will serve [him.] He will be called [son of the Gr]eat [God;] by His name he shall be designated. . . . He will be called the son of God; they will call him son of the Most High" (ibid., 70).

"The Messiah of Heaven and Earth" fragment (4Q521) even speaks of the Messiah raising the dead: "(12) then He will heal the sick, resurrect the dead, and to the Meek announce glad tidings" (ibid., 23; cf. 63, 95).

The Dead Sea Scrolls also confirm that Qumran was not the source of early Christianity. There are significant differences between their concept of the "Teacher of Righteousness," apparently an Essene messianic hope, and the Jesus revealed in Scripture and early Christianity. The differences are enough to show that early Christianity was not just an offshoot of the Essenes, as has been theorized (see Billington, 8–10). The Essenes emphasized hating one's enemies; Jesus stressed love. The Essenes were exclusivistic regarding women, sinners, and outsiders; Jesus was inclusive. The Essenes were legalistic sabbatarians; Jesus was not. The Essenes stressed Jewish purification laws; Jesus attacked them. The Essenes believed two messiahs would come; Christians held that Jesus was the only one (see Charlesworth).

Conclusion. The DSS provide an important apologetic contribution toward establishing the general reliability of the Old Testament Hebrew text, as well as the earliest copies of parts of Old Testament books and even whole books. This is important in showing that the predictive prophecies of the Old Testament were indeed made centuries before they were literally fulfilled. Furthermore, the DSS provide possible support for the New Testament. They may contain the earliest known fragments of the New Testament, and they definitely contain references to messianic beliefs similar to those taught in the New Testament.

Deconstructionism. ***See*** **DERRIDA, JACQUES .**

Deism. *Deism* is the belief in a God who made the world but who never interrupts its operations with supernatural events. It is a theism minus miracles (*see* MIRACLE). God does not interfere with his creation. Rather, he designed it to run independent of him by immutable natural laws (*see* SPINOZA, BENEDICT). In nature, he has also provided all that his creatures need to live.

Deism flourished in the sixteenth, seventeenth, and eighteenth centuries but began to die in the nineteenth century. Today its tenets live on in antisupernatural denial of miracles (*see* MIRACLES, ARGUMENTS AGAINST), critical views of the Bible (*see* BIBLE CRITICISM), and the practice of those who believe in a supreme being who has little or nothing to do with their lives.

Deism flourished in Europe, especially France and England, and in late-eighteenth-century America (see Orr, chaps. 3–4). Some of the more prominent European deists were Herbert of Cherbury (1583–1648), the Father of English deism; Matthew Tindal (1656–1733); John Toland (1670–1722), and Thomas Woolston (1669–1731). Some of the notable American deists were Benjamin Franklin (1706–1790), Stephen Hopkins (1707–1785), Thomas Jefferson (1743–

BA *The Biblical Archaeologist*

1826), and Thomas Paine (1737–1809). The effects of views of the American deists, especially Paine and Jefferson, are more widely felt today through the United States' political foundation and heritage (see Morais, chaps. 4, 5).

Various Kinds of Deism. All deists agree that there is one God, who created the world. All deists agree that God does not intervene in the world through supernatural acts. However, not all deists agree on God's concern for the world and the existence of an afterlife for human beings (*see* IMMORTALITY). Based on these differences, four types of deism are discernible. The four range from ascribing minimal concern on the part of God to allowing his maximum concern for the world without supernaturally intervening in it (Morais, 17, 85–126).

The God of No Concern. The first type of deism was largely of French origin. According to this view, God is not concerned with governing the world he made. He created the world and set it in motion, but has no regard for what happens to it after that.

The God of No Moral Concern. In the second form of deism, God is concerned with the ongoing happenings of the world but not with the moral actions of human beings. Man can act rightly or wrongly, righteously or wickedly, morally or immorally. It is of no concern to God.

The God of Moral Concern for This Life. The third type of deism maintains that God governs the world and does care about the moral activity of human beings. Indeed God insists on obedience to the moral law that God established in nature. However, there is no future after death.

The God of Moral Concern for This Life and the Next. The fourth type of deism contends that God regulates the world, expects obedience to the moral law grounded in nature, and has arranged for a life after death, with rewards for the good and punishments for the wicked. This view was common among both English and American deists.

Basic Beliefs. Although there are points upon which deists differ, beliefs they hold in common allow an understanding of their common worldview.

God. All deists agree that there is one God (*see* THEISM). This God is eternal, unchangeable, impassable, all-knowing, all-powerful, all-good, true, just, invisible, infinite—in short, completely perfect, lacking in nothing.

God is an absolute unity, not a trinity . God is only one person, not three persons. The Christian theistic concept of the trinity is false, if not meaningless. God does not exist as three coequal persons. Of this Jefferson scoffed that "the Trinitarian arithmetic that three are one and one is three" is "incomparable jargon." Paine believed that the trinitarian concept resulted in three Gods, and thus was polytheistic (*see* POLYTHEISM). In contrast, deists contend that God is one in nature and one in person.

The Origin of the Universe. The universe is the creation of God (*see* CREATION AND ORIGINS). Before the universe existed, there was nothing except God (*see* CREATION, VIEWS OF). He

brought everything into being. Hence, unlike God, the world is finite. It had a beginning while he has no beginning or end.

The universe operates by natural laws. These laws flow from the very nature of God (*see* ESSENTIALISM, DIVINE). Like him they are eternal, perfect, and immutable, representing the orderliness and constancy of his nature. They are rules by which God measures his activity and rules he expects to be the standard for his creation.

The Relation of God and the Universe. God is as different from the universe as a painter is from a painting, a watchmaker is from a watch, and a sculptor is from a sculpture (*see* TELEOLOGICAL ARGUMENT). But, like a painting, watch, and sculpture, the universe reveals many things about God. Through its design it displays that there exists a cosmic Designer, what this Designer is like, and what he expects. The universe also reveals that it must have been caused to exist by Another and that its regularity and preservation in existence is attributable to Another. There is a God who created, regulates, and sustains the world. And this world is dependent on God, not God on the world.

God does not reveal himself in any other way but through creation. The universe is the deist's Bible. Only it reveals God. All other alleged revelations, whether verbal or written, are human inventions (*see* REVELATION, SPECIAL).

Miracles. Miracles do not occur (*see* MIRACLES, ARGUMENTS AGAINST). God either cannot intervene in nature, or he will not. Those deists who believe God cannot perform miracles often argue from the immutability of the laws of nature. A miracle would violate natural laws. But natural laws are immutable, hence cannot be violated, for a violation would involve a change in the unchangeable. Therefore, miracles are impossible. Those deists who think God could perform a miracle but would not, often argue from the proneness of humans toward superstition and deception, the lack of sufficient evidence in support of a miracle, and the unbroken human experience of nature as uniform. They insist that it magnifies the nature of the perfect Mechanic that he made the machine of nature to run without constant need of repair. For deists all miracle accounts are the result of human invention or superstition.

Human Beings. Deists agree that humanity has been created by God and is adequately suited to live happily in the world. The human being is personal, rational, and free (*see* FREE WILL), endowed with natural rights that should not be violated by any individual, group, or government. The human being has the rational ability to discover in nature all that needs to be known to live a happy and full life.

Like all other animals, *Homo sapiens* was created with strengths and weaknesses. Strengths are reason and freedom. Among weaknesses is a tendency toward superstition and a desire to dominate others of his race. Both of these innate weaknesses have led to supernatural religions and oppressive governments.

Ethics. The basis of human morality is grounded in nature (*see* LAW, NATURE AND KINDS OF ; REVELATION, GENERAL). In nature each person discovers how to be self-governing, to associate with other creatures, and to relate to God. For many deists the only innate human

principle is the desire for happiness. How this innate desire is satisfied is governed according to reason. A person who fails to act by reason becomes miserable and acts immorally.

Deists differ on the universality of moral laws. They agree that the basis of all value is universal, because it is grounded in nature. But they disagree as to which moral laws are absolute and which are relative. The fact that there is a right and a wrong is not in dispute. The problem is in determining exactly what is right and wrong in each case and circumstance. Some deists, such as Jefferson, conclude that specific moral rules are relative. What is considered right in one culture is wrong in another (*see* MORALITY, ABSOLUTE NATURE OF). Other deists would argue that a correct use of reason will always lead one to an absolute right and an absolute wrong, though the application of these absolutes may vary with culture and circumstance.

Human Destiny. Though some deists deny that humanity survives death in any respect, many believe that people live on. For most of these deists, the afterlife is of an immaterial nature where the morally good people will be rewarded by God and the morally bad ones will be punished.

History. In general, deists had little to say about history. They commonly held that history was linear and purposeful. They also held that God did not intervene in history through supernatural acts of revelation or signs called miracles. They differed on whether God concerned himself with what occurs in history. Many French deists in the seventeenth and eighteenth centuries believed God was utterly unconcerned. Most English deists looked to God to exercise a certain degree of providential care over the affairs of history, yet without miraculous intervention.

Many deists held that the study of history had great value. For, if nothing else, history demonstrates the human tendency toward superstition, deception, and domination, and the terrible consequences which follow when this tendency goes unchecked and unchallenged.

An Evaluation of Deism. *Contributions.* Positive things may be learned from deism. Many have agreed with the deists' insistence on the importance and use of reason in religious matters (*see* APOLOGETICS, NEED FOR ; FAITH AND REASON ; LOGIC). The many claims made about miracles and supernatural revelation must be verified. No reasonable person would step into an elevator if he had good reason to believe that it was unsafe. Neither should anyone trust a religious claim without good reason to believe that it is true.

Deists have been commended for their belief that the world reflects the existence of a God (*see* COSMOLOGICAL ARGUMENT). The regularity and orderliness of the world suggests a cosmic Designer. The inadequacy of the world to account for its operations and existence seems to imply an ultimate explanation beyond the world—God. The limited perfections discoverable in nature may imply that there is an unlimited perfect Being beyond nature who created and sustains all things. This natural evidence is available for all to view and respond to in a reasonable way.

Deists have also been credited with exposing much religious deception and superstition. Their relentless attacks on many beliefs and practices have helped people to evaluate their religious faith and to purge it of corruption.

Criticisms of Deism. Yet there is reason to criticize the deistic worldview. A being who could bring the universe into existence from nothing could certainly perform lesser miracles if he chose to do so. A God who created water could part it or make it possible for a person to walk on it. The immediate multiplication of loaves of bread and fish would be no problem to a God who created matter and life in the first place. A virgin birth or even a physical resurrection from the dead would be minor miracles in comparison to the miracle of creating the universe from nothing. It seems self-defeating to admit a great miracle like creation and then to deny the possibility of lesser miracles.

The deists' understanding of universal natural law is no longer valid. Scientists today consider the laws of nature to be general, not necessarily universal. Natural laws describe how nature generally behaves. They do not dictate how nature must always behave (*see* MIRACLES, ARGUMENTS AGAINST).

If God created the universe for the good of his creatures, it seems that he would miraculously intervene in their lives if their good depended on it. Surely their all-good Creator would not abandon his creation. Instead it would seem that such a God would continue to exercise the love and concern for his creatures that prompted him to create them to begin with, even if it meant providing that care through miraculous means (*see* EVIL, PROBLEM OF).

Assuming, then, that miracles are possible, then one cannot reject out of hand every claim to supernatural revelation without first examining the evidence for its support. If it lacks supporting evidence, it should be rejected. But if the evidence does substantiate the claim, then the alleged revelation should be considered authentic. It certainly should not simply be ruled out of court without further investigation.

Further, simply because many individuals and groups have invented and abused religious beliefs is not sufficient ground for rejecting supernatural religions. Scientific discoveries have been abused, but few suggest that abuse makes the discoveries false or a reason to abolish science. Also, the mutability of human language and the fact of human error does not appear to be a valid argument against supernatural revelation (*see* BIBLE, ALLEGED ERRORS IN ; BIBLE, EVIDENCE FOR). An all-powerful, all-knowing God could conceivably overcome these problems. At least such problems should not rule out the possibility that God has revealed himself, either verbally or in written form. Again, the evidence should first be consulted.

Finally, the deists' case against Christianity and the Bible has been found wanting (*see* BIBLE CRITICISM). What antisupernaturalist has adequately answered such Christian theists as J. Gersham Machen, and C. S. Lewis (see Lewis, esp. *Miracles* ; Machen)? They have built an extensive and solid case from science, philosophy, and logic against the belief that miracle stories in the Bible are necessarily mythical (*see* MYTHOLOGY AND THE NEW TESTAMENT).

For example, Paine's belief that most of the books of the Bible were written by people other than the ones who claimed to write them and written very late is still proclaimed as indisputable fact by many critics. But there is not one credible shred of evidence that has not been rejected for good reason by archaeologists and biblical scholars. More than 25,000 finds have confirmed the picture of the ancient world given in the Bible (*see* ARCHAEOLOGY, NEW TESTAMENT ;

ARCHAEOLOGY, OLD TESTAMENT). There is sufficient evidence to support the authorship claims and early dates for most biblical books (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF).

Further, the deistic attack against such Christian teachings as the Trinity, redemption, and deity of Christ (*see* CHRIST, DEITY OF), shows a superficial and naive understanding of these teachings.

Derrida, Jacques. Jacques Derrida is usually regarded as a contemporary French “philosopher,” though some challenge that he is truly a philosopher. He is the father of a movement known as “deconstructionism.” He personally disavows the term’s popular meaning. The movement also is called “postmodern,” though Derrida again does not use the term in describing his view.

Among Derrida’s influential books are *Speech and Phenomena* (1967–68, trans. 1973), *Of Grammatology* (trans. 1978), *Writing and Differance* (trans. 1978), *Positions* (1981), and *Limited Inc.* (1977, trans. 1988).

Pieces of his thinking are drawn from Immanuel Kant (metaphysics), Friedrich Nietzsche (atheism), Ludwig Wittgenstein (view of language), Friedrich Frege (conventionalism), Edmund

Husserl (phenomenological method; *see* TRUTH, ABSOLUTE NATURE OF), Martin Heidegger (existentialism), and William James (pragmatism and the will to believe).

Derrida's views are difficult to understand because of the nature of the positions, his writing, and sometimes poor translations. Because of such factors, he has been often misread. He does not embrace nihilism, for example, which is the negation of all being and value (*see* MORALITY, ABSOLUTE NATURE OF). Nor is he an anarchist who negates all social structure. Despite writings which seem to negate all moral law, neither is Derrida an antinomian.

Deconstructionism is a form of hermeneutics, of interpreting a text. As such it can be distinguished from other interpretive approaches. Yet Derrida is not interested in destroying meaning, but of reconstructing it. It is not negation that dismantles a text, but criticism that remodels it. It stands against fixed rules of analysis. A deconstructionist reads and rereads a text, looking for new, deeper, forgotten meanings.

Deconstructionism embraces *conventionalism* . All meaning is relative to a culture and situation. There is no meaning prior to language.

Deconstructionism accepts *perspectivalism* . All truth is conditioned by one's perspective.

Deconstructionism holds a form of *referentialism* . There is no perfect reference or one-to-one correspondence between words and the meaning they confer. Meaning, therefore, is ultimately untransferrable between writer and reader. We constantly change the context through which we view symbols. This context is limited. We cannot know from an infinite perspective.

Deconstructionism is *differentialism* . All rational structures leave something out. The reader approaches the text with suspicion, looking for the "difference," the unknown something that is not there.

Deconstructionism embraces a form of linguistic *solipsism.* By this view we cannot escape the limits of language. We can broaden our linguistic concepts, but we cannot escape their limits.

Deconstruction holds to *semantic progressivism* . One will never exhaust all possible meanings. A text can always be deconstructed.

Derrida and Deconstructionism. Derrida is an atheist (*see* ATHEISM) regarding the existence of God and agnostic concerning the possibility of knowing absolute truth. He is antimetaphysical, claiming that no metaphysics is possible. He believes we are locked in our own linguistic bubble. Yet he recognizes that using language to deny metaphysics is itself a form of metaphysics. This incoherence points to the need for archi-writing, a poetic protest against metaphysics.

Three factors are key to understanding Derrida's philosophy—grammar, logic, and rhetoric. Grammar expresses acceptable phrases with appropriate modifying words. Logic recognizes the absurdity of contradictory phrases. And rhetoric shows how and when to use the phrases mastered through grammar and logic.

Derrida believes that grammar is relatively superficial, having to do with keeping the signs of language in good order. Logic and rhetoric are more profound, dealing with the use and interpretation of signs. Derrida rejects the history of Western philosophy in which language is based on logic. That would mean there is a logical underpinning of reality. He rejects that assumption.

According to Derrida, language is based on rhetoric, not logic. The sovereignty of logic is rooted in the view that signs (e.g., words) represent ideas. Ideas stand in semantical contrast to other ideas. Language differentiates ideas. We must "deconstruct"language based in logic to learn how linguistic expressions are used in human activity. Language based on logic entails a mistaken belief that there are "private languages" with "inner speech" and "private mental life." If logic is sovereign, then a private language is possible. Ideas would not vary with circumstances.

Rhetoric as Basis of Language. Derrida held that meaning is based in rhetorical force, viz., the role it plays in human activity (*see* WITTGENSTEIN, LUDWIG). Rather than an underlying formal logic, meaning comes out of the stream of life. Words express time-bound experience. So to understand what a text means one must first fully understand its actual life context. This may be seen in five central arguments of Derrida:

1. All Meaning is Complex. No pure and simple meanings stand behind the signs of language. If all language is complex, no essential meaning transcends time and place.

2. All Meaning is Contingent. Every object of language and meaning is contingent upon a changing life reality. There is no objective meaning.

3. All Meaning is Mixed. No pure experiences exist without reference to transient experience. There is no private mental life that does not presuppose an actual world. We cannot even think about a concept without contaminating it with some reference to our own past or future.

4. There is no such thing as a perception. Deconstructionists do not reject everyday experience. They reject idealized concepts disconnected from the everyday world. The nature of what is signified is not independent of the sign that signifies it.

5. Rhetoric is the basis of all meaning. All written language is dependent on spoken language. It is not dependent on the meaning of spoken signs. It is dependent on the pattern of vocalization (phonemics). Phonemes are parts of sound that can be represented by a letter. Without this difference in phonemes letters are impossible. "Differance" is the key to meaning, since all sounds must be differentiated to be distinct and form meaningful sounds.

With Derrida, many believe Western philosophy comes to an end. It literally self-destructs as it deconstructs. Derrida himself believes it goes on endlessly in continuous deconstructions or reinterpretations.

Evaluation. Derrida shows how the linguistic tradition leads to agnosticism. He makes some pointed critiques of Western thought. He reveals that, unless one's philosophy begins in reality, it will never logically end in reality. His critique of "private language," esoteric thought cut off from human experience is insightful.

Nonetheless, Derrida's deconstructionism is open to serious critique.

His difficult (highly metaphorical) expression is obscure and contradictory. This obscures his view, generates misunderstanding, and makes evaluation difficult. His view contains self-defeating claims, such as: "The history of philosophy is closed." Or, "Metaphysics has come to an end." He cannot avoid using philosophy and metaphysics in such statements. His doubt that we can really know anything is self-defeating. How does he know this unless we can know something? What sort of epistemological status should we give to his statements? If they were true, they would be false. If they are mere poeti cal protests, then they do not destroy objective meaning or metaphysics.

Even his denial of logic in rhetoric is highly problematic, if not self-defeating. The very language that denies logic is based in it; otherwise it would be meaningless.

Despite his rejection of (or protest against) metaphysics, Derrida has metaphysical presuppositions. The very fact he discusses "What is real?" indicates an underlying metaphysics. Also, he claims language depends on a relation to the world. That implies a metaphysical view of the world.

His view is a form of nominalism and radical empiricism ("Real" is concrete reality, immediately before me). As such it reduces to a type of solipsism and is subject to the same criticism of these views.

The primacy of difference over identity departs from common sense and makes all real communication impossible. Indeed, Derrida could not even communicate his own position to us if he is right.

Derrida's position is closely associated with logical positivism with its well-known self-defeating nature. (For a critique, see AYER, A. J .) Derrida's conventionalist view of meaning is self-defeating (*see* CONVENTIONALISM). The sentences conveying his view would have no meaning on a conventionalist theory of meaning. In short, he appears to have left himself no ground to stand on—even to express his own view.

Finally, Derrida's "speech" is no better than Kant's unknowable "noumena," Wittgenstein's "silence," or Hume's "flames." For none of them tell us anything about reality.

A faith of sorts is involved in this process, and deconstructionism is fideist (*see* FIDEISM). Faith is always necessary. Since absolute meaning is impossible, indecision is inescapable. We always live somewhere between absolute certainty and absolute doubt, between skepticism and dogmatism. Hence, faith is always necessary.

Descartes, Rene.

Life and Works of Descartes. French theist Rene Descartes was born in 1596 and died in 1650 after giving an early-morning philosophy lesson to Queen Christina of Sweden. He was called to philosophy through a dream on November 10, 1619. He was a great mathematician and learned philosophy from the Jesuits. His main works are *Meditations on First Philosophy* (1641) and *Discourse on Method* (1637).

His Philosophical Method. Descartes sought an Archimedean point at which he could begin thinking. Unlike St. Augustine (*see*), who went through a period of actual doubt, Descartes was never a skeptic. He used doubt as a universal and methodical starting point for his philosophy.

Method Stated. Descartes' method was simple and universal. He proposed to withhold doubt only from what is indubitable. In brief, doubt everything it is consistently possible to doubt.

Method Applied. Applying his method, Descartes found that he could doubt: (1) his senses—since they sometimes deceive (e.g., a stick in water seems crooked); (2) that he was awake—since he might be dreaming he was awake; (3) that 2 + 3 = 5—since his memory may fail to remember the numbers; (4) that there is an external world—since an evil demon may be deceiving him. However, in all his doubt there was one thing Descartes found it impossible to doubt, namely, that he was doubting.

From Doubt to Existence. Descartes had found his universal starting point in doubt. He argued from doubt to thought to existence. He went from *dubito* to *cogito* to *sum* (from "I doubt" to "I think" to "I am").

Descartes reasoned thus: The one thing that I cannot doubt is that I am doubting. But if I am doubting, then I am thinking (for doubt is a form of thought). And if I am thinking, then I am a thinking thing (for only minds can think).

At this point Descartes posited that there is a difference between a thinking thing and an extended thing. My mind is a thinking thing—and I cannot doubt its existence. My body and the world are extended things—and I can doubt their existence. Hence, even though he was a theist, he could find no way to reason directly to God from the external world, such as Aristotle , Thomas Aquinas, Gottfried Leibniz , and many other theists have (*see* COSMOLOGICAL ARGUMENT).

God's Existence Can Be Proven. Nevertheless, Descartes found an indirect way to demonstrate God's existence involving the external world. He would begin with his indubitable starting point in his own existence and reason from it to God and then from God to the external world.

A Cosmological Argument (A Posteriori Proof). Descartes' reasoning proceeded as follows. (1) If I doubt, then I am imperfect (for I lack in knowledge). (2) But if I know I am imperfect, then I must know the perfect (otherwise I would have no way of knowing that I am not perfect). (3) Now knowledge of the perfect cannot arise from me, since I am imperfect (an imperfect mind cannot be the source [basis] of a perfect idea). (4) Hence, there must be a perfect Mind that is the source of this perfect idea. This approach was distinctive, if not unique. Descartes had to prove God existed before he could be sure the world existed!

The Ontological Argument (A Priori Proof). Like St. Anselm before him, Descartes believed the ontological argument for God's existence was valid. His form of it went like this: (1)It is logically necessary to affirm of a concept what is essential to its nature (e.g., a triangle must have three sides). (2) But existence is logically necessary to the nature of a necessary Existent (i.e., Being). 3) Therefore, it is logically necessary to affirm that a necessary Existent does exist.

There were many reactions to Descartes' ontological argument. But he staunchly defended it, restating it in this form to avoid some criticism: (1) God's existence cannot be conceived as only possible but not actual (for then he would not be a necessary Existent); (2) we can conceive of God's existence (it is not contradictory); (3) therefore, God's existence must be conceived as more than possible (namely, as actual).

One objection to his argument that he never answered was that of Pierre Gassendi's insistence that Descartes did not really prove God's existence is not logically impossible. Hence, he did not prove it is logically necessary. Gottfried Leibniz later argued that existence is a perfection and as such is a simple and irreducible quality that cannot conflict with others. Hence, God can have all perfections, including existence. But Immanuel Kant later critiques this view, insisting that existence is not an attribute.

Descartes' Test for Truth. Descartes was a rationalist, followed by Benedict Spinoza and Gottfried Leibniz. As such, he believed that truth was found in the realm of ideas.

Clear and Distinct Ideas. For Descartes the true idea was a clear and distinct idea. Only clear and distinct ideas are true (not mixed ones), namely, those ideas known by rational intuition as self-evident. Or, those which are (geometrically) deducible from self-evident ideas.

Four Rules of Valid Thinking. In his *Discourse on Method* Descartes set forth four rules for determining a true idea. First, the rule of certainty states that only indubitably certain (clear and distinct) ideas should be accepted as true. Second, the rule of division affirms that all problems should be reduced to their simplest parts. Third, according to the rule of order, reasoning should proceed from simple to complex. Finally, the rule of enumeration says that one should review and recheck each step in the argument.

The Source of Errors. Every epistemology must account for error, especially one like Descartes' that exalts certainty. Descartes' answer was that errors arise in judgment (the will), not in thought. For when we judge to be so what we do not clearly know to be so we fall into error.

The Proof of the Existence of an External World via God. Descartes' very method of systematic doubt brought the question of the existence of an external world in question—at least by way of the senses alone. Hence, it was necessary for him to argue for the world's existence in a more circuitous manner. This he did in the following way: (1) I am receiving a strong and steady succession of ideas of a world that are not under my control (hence, I cannot be erring about them); (2) hence, either God is making me believe them falsely or else there is a real external world causing them; (3) but God will not deceive me (nor allow me to be deceived) in what I am perceiving clearly and distinctly, since he is perfect (and deception is a sign of imperfection); (4) therefore, it is true that there is an external world; (5) since the same argument applies to my body, it is true that I have a body.

An Evaluation of Descartes' Views. Descartes is a mixed blessing to Christian theism . On the one hand, he is a rational theist who offers arguments for God's existence. On the other hand, his form of rationalistic dualism is a significant negative factor supporting views that are contrary to biblical theism.

Some Positive Features. On the good side of the ledger, Descartes can be commended for several things. Among them several have apologetic value.

Truth is objective. For one thing, Descartes held that truth is objective (*see* TRUTH, NATURE OF). It is not subjective or mystical. Rather, truth is common to all rational minds.

Truth is knowable. In opposition to agnosticism, Descartes affirmed that truth is knowable. Unlike Immanuel Kant or David Hume , Descartes argued that the truth about reality is knowable by the mind. Further, he held that certitude could be gained in our knowledge. Skepticism was avoidable. Indeed, it is self-refuting.

Truth is rational. Descartes embraced first principles of knowledge, such as the law of non-contradiction. He used them in understanding the world. He believed that without them reality could not be known.

Truth is arguable. Not only is truth knowable and rational, but one can offer rational arguments, such as arguments for the existence of God. This view is helpful for Christian apologetics, particularly for classical apologetics.

Negative Dimensions. Not everything Descartes believed is helpful for the Christian apologist. In fact, some things have proven to be a bane to orthodox Christianity.

The invalid ontological argument. Most Christian apologists do not agree with Descartes' defense of the ontological argument. Most thinkers argue that it involves an illegitimate transition from thought to reality.

His insufficient starting point. A more serious problem is Descartes' starting point. Why should one doubt what is obvious to him, namely, that he has a body and that there are other bodies around him? Why should one doubt everything that is doubtable? Why not doubt only what is necessary to doubt or what one has no good reason to believe? Or to put it another way, one can doubt whether Descartes' starting point in doubt is the best way to approach the world.

Unrealistic starting point. Descartes began his philosophy in thought (indubitable thought) and then moved to reality. He reasoned "I think, therefore, I am." In reality, however, "I am, therefore, I think." He literally got de carte before de horse!

Once one begins in the realm of thought apart from reality, he or she can never legitimately break out of the realm of pure thought. Just is the fate of any rationalism or idealism that does not begin within existence (*see* REALISM).

Unbridgeable dualism of mind and body. Descartes' particular form of rationalism set up an unbridgeable dualism between mind and matter. In fact, they are defined in such a way that they are logically separate. Mind is defined as a thinking but nonextended thing, and matter as a nonthinking extended thing. Thus, by definition "never the twain shall meet." In doing this Descartes opened himself to the criticism of holding that man is "a ghost in a machine." This Cartesian dualism has serious implications for one's view of the nature of human beings as well as the nature of Scripture. For it not only denies the unity of human nature, but sets up a dichotomy in nature between the material and spiritual that supports much of negative biblical criticism (*see* BIBLE CRITICISM ; BIBLE, EVIDENCE FOR ; BIBLE, ALLEGED ERRORS IN).

Other problems. Descartes has been criticized for many other things—space does not permit elaborating. Like Benedict Spinoza , he had a questionable geometric form of deductionism. He does not justify his use of the principle of causality. Nor does Descartes prove that an imperfect mind cannot be the cause of a perfect idea. He lacks appreciation for the role of experience in the pursuit of truth. His criterion of truth is not clear. It cannot apply to concepts, since only judgments are true. And it cannot apply to judgments, since he admits some of them are false. Finally, his view reduces to mental solipsism (namely, I know only while I am thinking—right now—and not when I am not thinking).

Determinism. Determinism is the belief that all events, including human choices (*see* FREE WILL), are determined or caused by another. Proponents of this view believe that human choices are the result of antecedent causes, which in turn were caused by prior causes.

Kinds of Determinism. There are two basic kinds of determinism: naturalistic and theistic. Naturalistic determinists include behavioral psychologist B. F. Skinner, author of *Beyond Freedom and Dignity* and *Beyond Behaviorism* . An atheist (*see* ATHEISM), Skinner wrote that all human behavior is determined by genetic and behavioral factors. On this view, humans are like a brush in the hands of an artist, though in his view the "artist" is a mix of societal manipulation and chance. The human being is at the mercy of these forces, simply the instrument through which they are expressed.

The theistic version of this view insists that God is the ultimate cause who determines all human actions. Martin Luther 's *Bondage of the Will* and Jonathan Edwards ' *Freedom of the Will* are examples of this theistic determinism. It is the view held by all strong Calvinists.

Arguments for Determinism. *The Argument from Alternative Possibility.* All human behavior is either uncaused, self-caused, or caused by something else. However, human behavior cannot be uncaused, since nothing occurs without a cause. Further, human actions cannot be self-caused, for no act can cause itself. To do so, it would have to be prior to itself, which is impossible. The only remaining alternative, then, is that all human behavior is caused by something external to it.

The Argument from the Nature of Causality. Edwards argued from the nature of causality. He reasoned that since the principle of causality (*see* CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES) demands that all actions are caused, then it is irrational to claim that things arise without a cause. But for Edwards a self-caused action is impossible, since a cause is prior to an effect, and one cannot be prior to himself. Therefore, all actions are ultimately caused by a First Cause (God). "Free choice" for Edwards is doing what one desires, but God gives the desires or affections that control action. Hence, all human actions ultimately are determined by God.

The Argument from Sovereignty. If God is sovereign, then all acts must be determined by him (*see* GOD, NATURE OF). For if God is in control of all, then he must ultimately be the cause of all. Otherwise, he would not be in complete control.

The Argument from Omniscience. Some determinists argue from God's omniscience. For if God knows everything, then everything he knows must occur according to his will. If it did not,

then God would be wrong in what he knew. But an omniscient Mind cannot be wrong in what it knows.

A Response to Theistic Determinism. Nondeterminists, especially self-determinists (*see* FREE WILL), reject the premises of determinist arguments. It is important to distinguish two forms of determinism, hard and soft. The determinism rejected here is hard determinism:

Hard Determinism	**Soft Determinism**
Act is caused by God.	Act is not caused by God.
God is the only cause.	God is the primary cause; humans are the secondary cause.
Totally free human choice is eliminated.	Human free choice is compatible with sovereignty.

Soft determinism is sometimes called *compatibolism* , since it is "compatible" with free choice (self-determinism). Only hard determinism is incompatible with free choice or secondary causality of a human free agent.

Response to the Argument from Alternative Possibility. All human behavior is either uncaused, self-caused, or caused by something else. But human behavior can be self-caused, since there is nothing contradictory about a self-caused action (as there is about a self-caused being). For an action does not have to be prior to itself to be caused by oneself. Only the self (I) must be prior to the action. A self-caused action is simply one caused by my self. And my self (I) is prior to my actions.

Response to the Argument from the Nature of Causality. Jonathan Edwards rightly argued that all actions are caused, but it does not follow from this that God is the cause of all these actions. A self-caused action is not impossible, since one's self is prior to his actions. Therefore, all actions need not be attributed to the First Cause (God). Some actions can be caused by human beings to whom God gave free moral agency. Free choice is not, as Edwards contends, doing what one desires (with God giving the desires). Rather, it is doing what one decides. And one does not always do what he desires, as is the case when duty is placed above desire. Hence, it does not follow that all actions are determined by God.

Response to the Argument from Sovereignty. One need not reject God's sovereign control of the universe in order to believe determinism is wrong. For God can control by his omniscience, as well as by his causal power. As the next point reveals, God can control events by willing in accordance with his omniscient knowledge of what will occur by free choice. God need not make (or cause) the choice himself. Simply knowing for sure that a person will freely do something is enough for God to control the world.

Response to the Argument from Omniscience. It is true that everything God knows must occur according to his will. If it did not, then God would be wrong in what he knew. For an omniscient Mind cannot be wrong in what it knows. However, it does not follow from this that all events are determined (i.e., caused by God). God could simply determine that we be self-determining beings in a moral sense. The fact that he knows for certain what free creatures will

do with their freedom is enough to make the event determined. But the fact that God does not force them to choose, is enough to establish that human free acts are not determined (caused) by another but by oneself. God determined the *fact* of human freedom, but free creatures perform the *acts* of human freedom.

Weaknesses of Determinism. Determinism is self-defeating. A determinist insists that both determinists and nondeterminists are determined to believe what they believe. However, determinists believe self-determinists are wrong and ought to change their view. But "ought to change" implies they are free to change, which is contrary to determinism.

Determinism is irrational. C. S. Lewis argued that naturalistic, complete determinism is irrational (see Lewis). For determinism to be true, there would have to be a rational basis for their thought. But if determinism is true, then there is no rational basis for thought, since all is determined by nonrational forces. So, if determinism claims to be true, then it must be false.

Determinism destroys human responsibility. If God is the cause of all human actions, then human beings are not morally responsible. One is only responsible for a choice if there was free will to avoid making it. All responsibility implies the ability to respond, either on one's own or by God's grace. Ought implies can. But if God caused the action, then we could not have avoided it. Hence, we are not responsible.

Determinism renders praise and blame meaningless. Similarly, if God causes all human actions, then it makes no sense to praise human beings for doing good, nor to blame them for doing evil. For if the courageous really had no choice other than to show courage, why reward it? If the evil had no choice but to commit their crime, why punish them? Rewards and punishment for moral behavior makes sense only if the actions were not caused by another.

Determinism leads to fatalism. If everything is determined beyond our control, then why do good and avoid evil? Indeed, if determinism is right, evil is unavoidable. Determinism destroys the very motive to do good and shun evil.

Determinism is unbiblical. Theistic opponents to determinism offer several objections from Scripture. Defining free choice as "doing what one desires" is contrary to experience. For people do not always do what they desire, nor do they always desire to do what they do (cf. Rom. 7:15–16).

If God must give the desire before one can perform an act, then God must have given Lucifer the desire to rebel against him. But this is impossible, for in that case God would be giving a desire against God. God would in effect be against himself, which is impossible.

Theistic determinists like Edwards have a faulty, mechanistic view of human personhood. He likens human free choice to balancing scales in need of more pressure from the outside in order to tip the scales from dead center. But humans are not machines; they are persons made in the image of God (Gen. 1:27).

Edwards wrongly assumes that self-determinism is contrary to God's sovereignty. For God could have predetermined things in accordance with free choice, rather than in contradiction to it. Even the Calvinistic *Westminster Confession of Faith* declares that "Although in relation to the foreknowledge and decree of God, the first cause, all things come to pass immutably and infallibly, yet by the same providence he ordereth them to fall out, *according to* the nature of second causes, either necessarily, freely, or contingently" (5.2 emphasis added).

Dewey, John. John Dewey (1859–1952) has been called the father of modern American education, on which he has had immense influence. As a philosopher and writer he is closely identified with the philosophy of instrumentalism, also known as progressivism or pragmatic humanism. Through the American educational system, his views have influenced virtually every American of the twentieth century. Dewey signed the *Humanist Manifesto* and was a leader in the movement to turn education toward secular humanism (*see* HUMANISM, SECULAR).

Born and educated in Vermont, Dewey took his doctorate at Johns Hopkins University. There he studied the pragmatism of C. S. Pierce, the experimental psychology of G. S. Hall, and the philosophies of G. S. Morris (a neo-Hegelian), and T. H. Huxley. Dewey taught at the universities of Michigan and Chicago and was at Columbia University from 1904 to 1930. Dewey wrote many books and numerous articles on topics ranging from education and democracy (*Democracy and Education* , 1916), to psychology (*Human Nature and Conduct: An Introduction to Social Psychology* , 1930), logic (*Logic: The Theory of Inquiry* , 1938), and even art (*Art as Experience* , 1934). His view of God and religion is best expressed in *A Common Faith* (1934).

Religion in an Age of Science. As a secular humanist, Dewey rejected belief in a theistic God (*see* THEISM). Dewey concluded that modern science made belief in a supernatural origin of the universe untenable. "The impact of astronomy eliminated the older religious creation

stories." And "geological discoveries have displaced creation myths which once bulked large." In addition, "biology has revolutionized conceptions of soul and mind, . . . and this science has made a profound impression upon ideas of sin, redemption, and immortality." Further, "anthropology, history and literary criticism have furnished a radically different version of the historic events and personages upon which Christian religions have built." Psychology "is already opening to us natural explanations of phenomena so extraordinary that once their supernatural origin was, so to say, the natural explanation" (*A Common Faith* , 31).

Science, Dewey believed, had made even agnosticism too mild of a reaction to traditional theism. " 'Agnosticism' is a shadow cast by the eclipse of the supernatural" (ibid., 86). And "generalized agnosticism is only a halfway elimination of the supernatural." As an antitheist or atheist (*see* ATHEISM), he rejected any attempt to support the existence of God. "The cause of the dissatisfaction is perhaps not so much (1) the arguments that Kant used to show the insufficiency of these alleged proofs, as it is the growing feeling (2) that they are too formal to offer any support to religion in action" (ibid., 11). He believed the reality of evil could not be reconciled with the concept of a personal, good, and all-powerful God (*see* EVIL, PROBLEM OF).

From its infancy in the Renaissance through the eighteenth century's protest against ecclesiastical authority, Dewey believed secularism had borne fruit in the nineteenth-century "diffusion of the supernatural through secular life" (ibid., 65). Secular interests had grown independent of organized religion and had "crowded the social importance of organized religions into a corner and the area of this corner is decreasing" (ibid., 83).

Since there is no Creator, human beings were not created. For Dewey modern men and women think in scientific and secular terms, thus, they must now take a naturalistic view of origins (*see* EVOLUTION, BIOLOGICAL). Humanity is a result of naturalistic evolutionary processes, not the special creation by any kind of God.

The Elimination of Supernatural Religion. Dewey adamantly opposed any supernaturalism in religion. Since most religions pay some homage to the supernatural, he opposed religion in concept: "The claim on the part of religions to possess a monopoly of ideas and of the supernatural means by which alone, it is alleged, they can be furthered, stands in the way of the realization of distinctively religious values inherent in natural experience" (ibid., 27–28). Science calls into question the very concept of the supernatural. Many things once thought to be miraculous are now known to have natural explanations. Science will continue to explain the unusual phenomena of nature (*see* MIRACLES, ARGUMENTS AGAINST).

Not only is belief in the supernatural based on ignorance, but it hinders social intelligence. "It stifles the growth of the social intelligence by means of which the direction of social change could be taken out of the region of accident, as accident is defined" (ibid., 78).

Religions "involve specific intellectual beliefs, and they attach . . . importance to assent to these doctrines as true, true in an intellectual sense." That is, "they have developed a doctrinal apparatus it is incumbent upon 'believers' . . . to accept" (ibid., 29). Those beliefs include notions of unseen powers that control human destiny and to which obedience, reverence, and worship are due. Nothing is left in such beliefs that is worth preserving (ibid., 7).

Such beliefs hinder social progress. For "Men have never fully used the powers they possess to advance the good in life, because they have waited upon some power external to themselves and to nature to do the work they are responsible for doing. Dependence upon an external power is the counterpart of surrender of human endeavor" (ibid., 46).

The problem is religion's sacred-secular split. "The conception that 'religious' signifies a certain attitude and outlook, independent of the supernatural, necessitates no such division." For "It does not shut religious values up within a particular compartment, nor assume that a particular form of association bears a unique relation to it. Upon the social side the future of the religious function seems preeminently bound up with its emancipation from religions and a particular religion" (ibid., 66, 67).

Not only is social progress hindered by belief in the supernatural, but social values are deprecated by it. "The contention of an increasing number of persons is that depreciation of natural social values has resulted, both in principle and in actual fact, from reference of their origin and significance to supernatural sources" (ibid., 71).

Even truly religious attitudes are hampered by belief in the supernatural. Dewey wrote, "I have suggested that the religious element in life has been hampered by conceptions of the supernatural that were imbedded in those cultures wherein man had little control over outer nature and little in the way of sure method of inquiry and test" (ibid., 56).

A New Sort of Religion. Despite Dewey's rejection of religion and the supernatural, he by no means considered himself irreligious. He insisted on the need for, and preservation of, the religious. What Dewey did insist on was that religion as traditionally defined—as involving belief in the supernatural beyond this life—be discarded as a religious attitude toward all of life: "I shall develop another conception of the nature of the religious phase of experience, one that separates it from the supernatural and the things that have grown up about it." And "I shall try to show that these derivations are encumbrances and that what is genuinely religious will undergo an emancipation when it is relieved from them; that then, for the first time, the religious aspect of experience will be free to develop freely on its own account" (ibid., 2).

The most serious problem with religion is that it hinders social progress. Its belief in the supernatural hinders achievement of socially desirable goals. Therefore, nothing is lost by eliminating it. In fact, since more people are religious than have a religion, there is much to be gained by rejecting religion. For, said Dewey, "I believe that many persons are so repelled from what exists as a religion by its intellectual and moral implications, that they are not even aware of attitudes in themselves that if they came to fruition would be genuinely religious" (ibid., 9).

The Establishment of Natural Religious Attitudes. Dewey was quick to point out that he was not proposing that a new natural religion replace supernatural religion. Rather, he sought to emancipate elements and outlooks that might be called religious (ibid., 8). The difference between a religion and the religious is that a religion "always signifies a special body of beliefs and practices having some kind of institutional organization, loose or tight." By contrast, "the adjective 'religious' denotes nothing in the way of a specifiable entity, either institutional or as a

system of beliefs." Rather, "it denotes an attitude that may be taken toward every object and every proposed end or ideal" (ibid., 9, 10).

Replacing traditional religion with religious attitudes would readjust and reorient life. Thus Dewey's humanistic definition of the religious is "any activity pursued in behalf of an ideal end against obstacles and in spite of threats of personal loss because of conviction of its general and enduring value is religious in quality" (ibid., 27).

Dewey acknowledges with Friedrich Schleiermacher that a religious experience involves a feeling of dependence. But he insists it must be a dependence without traditional doctrines or fear (ibid., 25). Religious experience helps to develop a sense of unity impossible without it. For by a religious experience "the self is always directed toward something beyond itself and so its own unification depends upon the idea of the integration of the shifting scenes of the world into that imaginative totality we call the Universe" (ibid., 19).

Such experience takes place in different ways in different people. "It is sometimes brought about by devotion to a cause; sometimes by a passage of poetry that opens a new perspective; sometimes as was the case with Spinoza . . . through philosophical reflection." So religious experiences are not necessarily unique species of their own. Rather, "they occur frequently in connection with many significant moments of living" (ibid., 14). Religious experience is a kind of unifying ideal of other experiences in life.

Dewey was willing to use the term *God* , but it meant, not a supernatural being, but " the ideal ends that at a given time and place one acknowledges as having authority over his volition and emotion, the values to which one is supremely devoted, as far as these ends, through imagination, take on unity" (ibid., 42) God represents a unification of one's essential values. For Dewey, progress and achievement were such ideal values.

He thought it essential that persons have such religious ideals. For "Neither observation, thought, nor practical activity can attain that complete unification of the self which is called a whole. The *whole* self is an ideal, an imaginative projection" (ibid., 19). Thus, self-unification can be achieved only through a religious commitment to "God" (that is, to ideal-values). Says Dewey, "I should describe this faith as the unification of the self through allegiance to inclusive ideal ends, which imagination presents to us and to which the human will responds as worthy of controlling our desires and choices" (ibid., 33).

A Common Faith. Dewey's religious form of pragmatic humanism was global. In his "common faith" he saw a religious goal for all. "Here are all the elements for a religious faith that shall not be confined to sect, class, or race. Such a faith has always been implicitly the common faith of mankind. It remains to make it explicit and militant" (ibid., 87). He saw the doctrine of the brotherhood as having the greatest religious significance. "Whether or not we are, save in some metaphorical sense, all brothers, we are at least in the same boat traversing the same turbulent ocean. The potential religious significance of this fact is infinite" (ibid., 84).

Dewey's Ultimate. For Dewey the absolute was democratic progress. Dewey opposed traditional supernatural religion because he perceived that it hindered social progress. He said

“the assumption that only supernatural agencies can give control is a sure method of retarding this effort [of social betterment]” (ibid., 76).

He saw three stages in social development. “In the first stage, human relationships were thought to be so infected with the evils of corrupt human nature as to require redemption from external and supernatural sources.” This must be rejected. “In the next stage, what is significant in these relations is found to be akin to values esteemed distinctively religious.” This too must be surpassed. “The third stage would realize that in fact the values prized in those religions that have ideal elements are idealizations of things characteristic of natural association which have been projected into a supernatural realm for safe-keeping and sanction. . . . Unless there is a movement into what I have called the third stage, fundamental dualism and a division in life continue” (ibid., 73).

Science as the Means to Progress. Naturally, it is up to humankind to achieve social progress. This belief is neither egoistic nor optimistic. The only adequate means of achieving the goal of social progress is science. “There is but one sure road of access to truth—the road of patient, cooperative inquiry operating by means of observation, experimental record and controlled reflection” (ibid., 32). For “were we to admit that there is but one method for ascertaining fact and truth that conveyed by the word ‘scientific’ in its most general and generous sense—no discovery in any branch of knowledge and inquiry could then disturb the faith that is religious” (ibid., 33).

For Dewey faith in science, that is, in the critical intelligence, is more religious than faith in any revelation from God. On the other hand, “Some fixed doctrinal apparatus is necessary for *a* religion. But faith in the possibilities of continued and rigorous inquiry does not limit access to truth to any channel or scheme of things.” This faith reveres intelligence as a force (ibid., 26).

Science has a decided advantage over religion as a means for human progress because it is a method, not a set of fixed beliefs. It is a way to change thinking by tested inquiry. Not only is science superior to religion, but it opposes religious dogma. “For scientific method is adverse not only to dogma but to doctrine as well, provided we take ‘doctrine’ in its usual meaning—a body of definite beliefs that need only to be taught and learned as true.” However, “This negative attitude of science to doctrine does not indicate indifference to truth. It signifies supreme loyalty to the method by which truth is attained. The scientific-religious conflict ultimately is a conflict between allegiance to this method and allegiance to even an irreducible minimum of belief so fixed in advance that it can never be modified” (ibid., 38, 39).

Hence, science and religion are irreconcilable. But a religious dedication to science is essential to human progress.

Evaluation. *Pragmatism.* Dewey’s relativism is manifest in truth and ethics. By the pragmatic view of truth, whatever works is true. But many things that “work” in the short-run are false. Truth is not what works, but what corresponds with the facts (*see* TRUTH, NATURE OF). No pragmatist would appreciate someone misrepresenting his view simply because it worked well to do so. Even pragmatist parents do not want their children to lie to them simply because it is expedient to do so from the child’s perspective. Josiah Royce criticized James’s pragmatism

by asking whether James would take the witness stand in court and "swear to tell the expedient, the whole expedient and nothing but the expedient, so help him future experience!"

Pragmatism fares no better in the realm of ethics. Not everything that works is right. Some things that work very well are simply evil. Cheating, deceiving, and even killing undesirables have been "successful" activities. Ethical questions are not settled by obtaining desired results. All that success proves is that a given course of action *works* ; it does not prove the course of action is *right* .

Progressivism. Dewey's relativism is not total. His system has the absolute of progress or achievement. Whatever works for social progress is good; what hinders it is evil. But by what standard is progress to be judged? If the standard is within society, then we cannot be sure we are *progressing* . Maybe we are only *changing* . If the standard is outside the race, this is a transcendent norm, a divine imperative, which Dewey rejects.

Another problem with progressivism is its lack of a fixed point by which one measures change. Otherwise, one could not even measure the change. If, for example, an observer of a moving car who is in a moving car cannot easily know how fast the other car is moving. If the other car is moving at the same speed in the same direction, the observer cannot even know it is moving unless something else that isn't moving can be used to measure it.

In practice progressivism is grounded in the wishes of those with the power to set the agenda. Why *social* progressivism? Why *democratic* social progressivism? One can progress toward ever-better dictatorships. Dewey's definition of "achievement" or "progress" in social and democratic terms was utterly arbitrary and philosophically unjustified. It stands on no better ground than other goals one may choose.

Relativism. Closely allied to progressivism is relativism. Dewey denies absolutes in the realm of truth (*see* TRUTH, NATURE OF) or ethics (*see* MORALITY, ABSOLUTE NATURE OF). This is inconsistent. To show that *all* is relative, one must have a nonrelative vantage point from which to view all of truth. One cannot relativize all else unless he stands on absolute ground. The statement "All is relative" either means that statement also is relative, or else that at least that statement is absolute. We have seen that Dewey believed in absolutes, but of his own choosing. Thus, his statement is self-defeating and fails according to Dewey's own worldview. He is guilty of special pleading, saying that everything is relative, except what he wants to be absolute. This is pure dogmatism.

Summary. Dewey's humanism was naturalistic, relativistic, optimistic, and even religious, despite its opposition to religion. Some characteristics of this thought are peculiar to Dewey. Dewey's form of humanism was pragmatic, militantly secular, progressive, and democratic. Also, Dewey placed great emphasis on science as the means for human achievement. His definition of *God* as the ideal, unifying goal for human progress is his own. Dewey believed in salvation by education, and the heart of education is experimentation. We learn by doing, and learning is forever incomplete. There is always room for more progress. There will not be a millennium, only a continual and relative process of seeking new goals by means of pragmatic experimentation.

Divine Birth Stories. Since James Frazer published *The Golden Bough* (1890, 1912), it has been common to charge that Christianity is not unique in its story of Christ's incarnation, but that stories of supernatural births are common to pagan gods. If true, this would appear to undermine Christianity by showing that it might have borrowed ideas from other religions.

Several lines of evidence that refute the pagan myth source theory are discussed in detail elsewhere (*see* LUKE, ALLEGED ERRORS IN ; MITHRAISM ; MYTHOLOGY AND THE NEW TESTAMENT ; NEW TESTAMENT, HISTORICITY OF ; VIRGIN BIRTH). Here the main points are summarized:

1. The New Testament was written by contemporaries and is not the result of late myth development. Legends do not develop if the stories are written while eyewitnesses are still alive to refute inaccuracies.

2. The virgin birth records do not show signs of being mythical, nor do they include borrowed elements from known pagan birth myths.

3. Persons, places, and events identified in connection with Christ's birth are accurate historically. Even details once thought to be errors have been vindicated by research.

4. No Greek myth spoke of the literal incarnation of a monotheistic God into human form. In Christianity the second person of the Godhead became human. In pagan religions gods were only disguised as humans; they were not really human. In pagan myths a god and human invariably mated sexually, which was not true in the Christian account.

5. Greek myths of gods who became human postdate the time of Christ, so the Gospel writers could not have borrowed from them.

Divine-Human Legends. ***See*** **APOTHEOSIS .**

Docetism. Docetism (Gk. *dokein* , “to seem”) was a late-first-century heresy asserting that Jesus only seemed to be human (Kelly, 141). Docetism is “The assertion that Christ’s human body was a phantasm, and that his suffering and death were mere appearances. ‘If he suffered he was not God; if he was God he did not suffer’ ” (Bettenson, 49). They denied the humanity of Christ but affirmed his deity. This is the opposite of Arianism, which affirmed the humanity of Jesus but denied the deity of Christ (*see* CHRIST, DEITY OF). Docetism was already present in late New Testament times, as is evident by the exhortation of John the apostle about those who deny “that Jesus Christ has come *in the flesh* ” (1 John 4:2 ; emphasis added. See also 2 John 7).

A Biblical Response. The Scriptures are replete with evidence that Jesus Christ was fully human in every respect, yet without sin (Heb. 4:15). Indeed, he is called “the man, Christ Jesus” (1 Tim. 2:5).

Jesus Had a Human Ancestry. The Gospels affirm that Jesus had an actual human genealogy all the way back to the first man, Adam. This was only possible on his mother’s side, since he was born of a virgin (Matt. 1:20–25 ; Luke 2:1–7 ; *see* VIRGIN BIRTH). Matthew traces Jesus’ genealogy to Abraham through his legal father, Joseph, through whom he inherited the right to the throne of David (Matt. 1:1). Luke apparently traces Jesus’ genealogy through Mary, his actual mother, back to Adam, the actual head of the human race (Luke 3:23–38).

Jesus Had a Human Conception. According to Matthew, “an angel of the Lord appeared to him in a dream and said, “Joseph son of David, do not be afraid to take Mary home as your wife, because what is conceived in her is from the Holy Spirit” (Matt. 1:20). In scientific language, Jesus started the way all human beings do, by the fertilization of a human ovum. Only in his case it was supernaturally fertilized by the Holy Spirit, not by a human sperm.

Jesus Had a Human Birth. According to Dr. Luke,

> Joseph also went up from the town of Nazareth in Galilee to Judea, to Bethlehem the town of David, because he belonged to the house and line of David. He went there to register with Mary, who was pledged to be married to him and was expecting a child. While they were there, the time came for the baby to be born, and she gave birth to her firstborn, a son. She wrapped him in cloths and placed him in a manger, because there was no room for them in the inn. [Luke 2:4–7]

There was nothing unnatural, or even supernatural, about Jesus’ birth. Mary had a nine-month pregnancy (Luke 1:26 , 56 , 57), birth pains, and Jesus was born through the birth canal as other natural children are born. Luke, citing Mosaic law, spoke of Jesus as “a male who opens the

---

CT *Christianity Today*

womb" (Luke 2:23 KJV), the same phrase used of all Jewish male firstborn. It was a natural birth, only in Mary's case she had no birth maid so she gave birth by herself (Luke 2:7).

Paul states Jesus' human birth more simply: "But when the time had fully come, God sent his Son, born of a woman, born under law" (Gal. 4:4). He was "born of woman," as are the rest of us (1 Cor. 11:12).

Jesus Had a Human Childhood. Although little is known of Jesus' childhood, enough is known to conclude that he grew up as did other children, learned, and developed normally. Like other Jewish boys he was circumcised when eight days old and dedicated to the Lord in the temple when he was forty days old (Luke 2:21–22). Apparently he was a precocious child (Luke 2:41–49), impressing the religious leaders with his knowledge of spiritual matters at age 12 (Luke 2:42–47). From that time, Luke reports, "Jesus grew in wisdom and stature, and in favor with God and men" (Luke 2:52). As a man, he was finite in understanding. As God, he was infinite in all things (*see* TRINITY).

Jesus Experienced Human Hunger. Luke records that Jesus went into the wilderness "where for forty days he was tempted by the devil. He ate nothing during those days, and at the end of them he was hungry" (4:2). Jesus' body needed food to sustain it.

Jesus Experienced Human Thirst. John says that "Jesus, tired as he was from the journey, sat down by the well. It was about the sixth hour. When a Samaritan woman came to draw water, Jesus said to her, 'Will you give me a drink?' " (4:6–7). Jesus needed water to sustain his body. When he did not have enough, he felt thirsty.

Jesus Experienced Human Fatigue. Jesus also got tired physically. And when he got tired, he rested. John said Jesus was "wearied with [his] journey" (John 4:6). At other times he withdrew from the crowd, "because so many people were coming and going that they did not even have a chance to eat, he said to them, 'Come with me by yourselves to a quiet place and get some rest' " (Mark 6:31).

Jesus Had Human Emotions. The shortest verse in the Bible says simply, "Jesus wept" (John 11:35) when he stood by his friend's grave. But a moment earlier, the text says, "when Jesus saw her weeping, and the Jews who had come along with her also weeping, he was deeply moved in spirit and troubled" (vs. 33). Jesus wept over Jerusalem, crying out, "O Jerusalem, Jerusalem, you who kill the prophets and stone those sent to you, how often I have longed to gather your children together, as a hen gathers her chicks under her wings, but you were not willing" (Matt. 23:37).

Jesus also experienced anger when he saw the temple being desecrated, "so he made a whip out of cords, and drove all from the temple area, both sheep and cattle; he scattered the coins of the money changers and overturned their tables" (John 2:15). Angered by religious hypocrisy he lashed out at the religious leaders,

---

kjv King James Version

> “Woe to you, teachers of the law and Pharisees, you hypocrites! You travel over land and sea to win a single convert, and when he becomes one, you make him twice as much a son of hell as you are.
>
> “Woe to you, blind guides! You say, ‘If anyone swears by the temple, it means nothing; but if anyone swears by the gold of the temple, he is bound by his oath’ ” (Matt. 23:15–16).

Jesus Had a Human Sense of Humor. Contrary to some austere opinions, Jesus possessed a sense of humor. Humor is based in the sense of the incongruous. Jesus expressed this on several occasions. In the same Matthew 23 denunciation he said to the Scribes and Pharisees: “You blind guides! You strain out a gnat but swallow a camel” (vs. 24). Even after his resurrection he chided his experienced fisherman disciples that they had fished all night without catching one fish (John 21:5).

Jesus Had Human Language and Culture. Jesus was Jewish. He was the Son of Abraham and of David (Matt. 1:1). He had a Jewish mother (Matt. 1:20–25 ; Gal. 4:4). He had a Jewish culture and religion (John 4:5–9 , 21–22). The woman of Samaria immediately recognized him as a Jew by the way he looked and talked (John 4:9).

Jesus Experienced Human Temptation. The writer of Hebrews informs us that “we do not have a high priest who is unable to sympathize with our weaknesses, but we have one who has been tempted in every way, just as we are—yet was without sin” (4:15). The temptation of Christ was real (Matthew 3). As a human being, Christ felt its full force (Matt. 26:38–42).

Jesus Was Human Flesh and Blood. Jesus, like Adam before the fall, did not possess inherent mortality. That came as a result of the fall (Rom. 5:12). Nevertheless, Jesus was capable of dying and did die. Like any other human, Jesus bled when cut. “One of the soldiers pierced Jesus’ side with a spear, bringing a sudden flow of blood and water” (John 19:34). Hebrews shared the implications of that flesh and blood: “Since the children have flesh and blood, he too shared in their humanity so that by his death he might destroy him who holds the power of death—that is, the devil” (2:14).

Jesus Suffered Human Pain. Crucifixion inflicts an agonizing death, and Jesus experienced every moment of it, refusing even a drug to deaden the pain (Matt. 27:34). His pain was both physical and emotional. While on the cross he cried out in agony, “My God, my God, why have you forsaken me?” (Matt. 27:46). Before his death, he agonized in the garden, sweating as it were great drops of blood and confessing, “My soul is overwhelmed with sorrow to the point of death” (Matt. 26:38). The writer of Hebrews describes Jesus’ experience vividly: “During the days of Jesus’ life on earth, he offered up prayers and petitions with loud cries and tears to the one who could save him from death, and he was heard because of his reverent submission” (5:7).

Jesus Experienced Human Death. The Bible repeatedly testifies that Jesus died (for example, Matt. 16:21 ; Rom. 5:8 ; 1 Cor. 15:3 ; *see* CHRIST, DEATH OF). He was “put to death in the body” (1 Peter 3:18). Scriptures say repeatedly that Jesus shed his “blood” for our sins. Paul wrote,

“But now in Christ Jesus you who once were far away have been brought near through the blood of Christ” (Eph. 2:13). Hebrews adds, “How much more, then, will the blood of Christ, who through the eternal Spirit offered himself unblemished to God, cleanse our consciences from acts that lead to death, so that we may serve the living God!” (9:14).

A Theological Response. The denial of Christ’s humanity is as serious an error as to deny his deity. If Jesus is not both God and human, he cannot mediate between God and humans (1 Tim. 2:5). Salvation involves reconciliation of human beings to God (2 Cor. 5:18–19). This is only possible if God becomes human. Anselm made this point in his *Cur Deus Homo?* (*Why the God Man?*) To deny Christ’s true humanity is to deny the basis of our reconciliation to God. It is for this reason that the early church condemned docetism. Among those charged with teaching this false doctrine was Cerinthus, whom the apostle John opposed at Ephesus (see Cross, 413; Douglas, 305).

Dooyeweerd, Herman. Herman Dooyeweerd (1894–1977) was a Dutch Reformed philosopher who attended, and later taught legal philosophy at the Free University in Amsterdam (1926–65). He is best known for his four-volume work, *A New Critique of Theoretical Thought* (1953–58). He founded the journal *Philosophia Reformata* , which was instrumental in the establishing of the Association for Calvinistic Philosophy (later called Christian Philosophy). Other works included *The Christian Idea of the State* , *In the Twilight of Western Thought* , *Roots of Western Culture* , and *Transcendental Problems* . His work followed in the Reformed tradition of Abraham Kuyper (1837–1920), although he went well beyond his predecessor in the critique of Western thought and in the development of his own system.

The Philosophy of Dooyeweerd. Although his thought springs from the Reformed thinker Kuyper, the philosophical roots of Dooyeweerd’s philosophy go deeply into both Immanuel Kant (1724–1804) and the phenomenology of Edmund Husserl (1859–1938). He begins with a critique of the foundations of Western thought, concluding that its basis in reason is ill-founded and unfruitful. It is blind to its own religious commitments, especially the pretended autonomy by which philosophy severed itself from divine revelation. Likewise, he rejected the adequacy of general revelation or common grace as a grounds for building a natural theology (*see* GOD, EVIDENCE FOR).

The Transcendental Critique. One of Dooyeweerd’s legacies is his *transcendental critique* , which was used by Cornelius Van Til in his presuppositional apologetics. The form of argument

follows Kant 's transcendental reduction, whereby one posits the necessary conditions of thought and actions.

The transcendental critique differs from transcendent criticism. The latter is purely external, not getting at the internal root of the issue. The transcendental critique "What is it that makes science possible?" "How does Faith (the religious starting point) direct science (and philosophy)?" "How can it, unfortunately, also misdirect science?" (Klapwijk, 22). According to Jacob Klapwijk, this critique "zeroes in on the phenomena of science itself, retracing from the inside out, as it were, the train of thought which science follows, so as to finally arrive at its point of origin; the hidden religious starting point of all scientific activity" (ibid.).

The transcendental critique seeks out "antithesis," since its task is to conflict with all human-based thought structures. A law of human knowledge is that the truth is gained only in the conflict of opinion (Dooyeweerd, ix). This internal criticism opposes the absolute starting point of an unregenerate heart and "tries to open a thinker's eyes to pretheoretical presuppositions and motivations" that, according to Dooyeweerd, are religious in nature (ibid.). By it one shows "that reasoned argumentation of the human understanding is propelled (and possibly warped) by the motivation of the human heart" (ibid.). For every scientist, consciously or unconsciously, has a "cosmonomic idea" or general framework into which is fit all factual knowledge. "This framework itself, however, is erected on a (believing or unbelieving) religious foundation" (ibid.). So the transcendental method is the key to the door of the heart. Only in service of God can it be used to unlock that door.

The Heart as the Root of Reality. Dooyeweerd regarded the heart as the root of Christian existence. It is the religious center of one's being. The fallen heart is set against God; hence, there is no religiously neutral thought structure to which one can appeal in building a philosophical system (*see* NOETIC EFFECTS OF SIN).

The fallacy of all non-Christian thought is that it attempts to find meaning in creation. But meaning is not found in the immanent creation but in the transcendent Creator. Hence, we must reject human autonomy (*see* SCHAEFFER, FRANCIS) and live in dependence on God's revelation (see Dooyeweerd, *In the Twilight,* 67).

Sphere Sovereignty. Dooyeweerd builds a distinctively Christian system of hierarchically ordered spheres which he claims comprise the foundation of reality. His theory is known as sphere sovereignty, with each sphere of intellectual or practical activity subordinate to God's revelation.

God has set up fifteen spheres for the operation of different aspects of creation:

Succession of Sphere	**Modal Moment**	**Science**
1. numerical	discrete quantity	mathematics
2. spatial	extension	mathematics
3. kinematic	movement	mechanics

4. physical	energy	physics, chemistry
5. biological	organic life	biology, physiology, and morphology
6. psychical	feeling- sensation	empirical psychology
7. analytical	theoretical distinction	logic
8. historical	cultural process	history of the development of human society
9. linguistic	symbolic signification	philology, semantics
10. social	social intercourse	sociology
11. economic	economy	economics
12. aesthetic	harmony	aesthetics
13. juridical	retribution	jurisprudence
14. ethical	love of one's neighbor	ethics
15. pistical-faith	transcendent certainty regarding the origin	theology

(Adapted from: E. L. Hebdon Taylor: *The Christian Philosophy of Law, Politics, and the State* [Nutley, N.J.: Craig, 1969], 274.)

All meaning in created spheres points beyond itself. Dooyeweerd wrote: " *Meaning,* as we said, constantly points *without* and *beyond* itself toward an origin, which is itself no longer *meaning* . It remains within the bounds of the *relative* . *The true* Origin **,** *on the contrary, is* absolute and *self-sufficient!* " (*New Critique,* 10). Further, there are no isolated truths. All truth must be understood in coherence with the whole system of truth. "There exists no partial truth which is sufficient to itself. Partial *theoretical* truth is truth only in the coherence of the theoretical truths, and this coherence in its relativity pre-supposes the fullness or the totality of truth" (ibid., 116).

Only God, the Sovereign, is absolute. Each sphere is relative and subordinate to him. "The concept of an 'absolute theoretical truth' dissolves itself in inner contradiction" (ibid., 156). "This means that the dogma concerning the autonomy of theoretical thought must lead its adherents into a seemingly inescapable *impasse* . To maintain this autonomy, they are obligated to seek their starting point in theoretical thought itself" (Dooyeweerd, *In the Twilight,* 19).

Each sphere is subject to the sovereignty of God. Dooyeweerd quotes Calvin: "God is not subject to the laws [He made], but [He is] not arbitrary" (*A New Critique,* 93). This judgment is at the foundation of all speculative thought. It lays "bare the limits of human reason set for it by God in His temporal world-order" (ibid.).

Influence. Dooyeweerd's philosophy has not had wide acceptance outside Reformed circles, but has nevertheless attracted a small band of dedicated followers. Hans Rookmaaker and Van Til are perhaps his most noted disciples, although Francis Schaeffer popularized many of his ideas.

Evaluation. *Positive Contributions.* Among the valuable aspects of Dooyeweerd's thought is his desire to preserve the sovereignty of God.

A massive critique of non-Christian thought. Few Christian philosophers have aimed more directly at the jugular of non-Christian thought. Dooyeweerd offers a massive critique of the foundations of Western thought, correctly assessing that it is blind to its own religious commitments.

Sovereignty and sphere sovereignty. Dooyeweerd keeps things in proper order. God is first, and he is sovereign. Nothing else is absolutely absolute. All else is dependent on him. With God's absolute sovereignty firmly in place, Dooyeweerd sees all other spheres as derivative. Indeed, the very idea that everything under God is only sovereign *in its sphere* is helpful. For when there are conflicts between spheres, it keeps in focus that they are not absolutely absolute.

The heart. Dooyeweerd's philosophy begins in the heart. For, as the Scriptures says, "Above all else, guard your heart, for it is the wellspring of life" (Prov. 4:23). Indeed, atheism begins in the heart (Ps. 14:1). So, no complete understanding of humanity is possible without including the role of the heart.

The firm starting point. As a firm starting point for his philosophy the post-Kantian Dooyeweerd developed a transcendental argument, which became characteristic of his disciple, Van Til. This approach offers firm epistemological grounds on which to build.

Negative Aspects. Dooyeweerd has critics, even among Reformed theologians. Likewise, he rejected the adequacy of general revelation (*see* REVELATION, GENERAL) or common grace as a grounds for building a natural theology (*see* GOD, EVIDENCE FOR).

The tendency toward voluntarism. Inherent in Dooyeweerd's stress on sovereignty is an implied voluntarism. While he makes a noble attempt to avoid the charge of being arbitrary, he does not seem to succeed. For unchangeable rules of reason common to God and man, but rooted in God's nature, do not seem to be what he has in mind (*see* GOD, NATURE OF).

A confusion of the autonomy and ultimacy of reason. While Dooyeweerd is right in chastising the autonomy of reason apart from God, he does not seem to appreciate that this does not mean that reason can be an ultimate standard for truth. This springs out of his voluntarism, which sees reason as springing from God's will, not as anchored in his very nature.

The lack of biblical support. There is a general failure to demonstrate that all his spheres are rooted in Scripture. From a distinctly Christian perspective, which his view claims to be, this is a serious shortcoming.

A basic inconsistency. Dooyeweerd insists that an autonomous human being cannot self-interpret creation. He must view it with the help of God from God's point of view. Yet, he claims that there is a prescientific (phenomenological) starting point at which the person can interpret creation. In this regard, Dooyeweerd is not consistent with a transcendental approach. For rather

than looking for the transcendentally necessary conditions of all human thought and actions, he seems to root his epistemology in a phenomenological starting point.

A nonrational starting point. Further, this phenomenological method is self-defeating. One cannot *conceive* of the preconceptual nor *think* the prerational. The truth is that reason is inescapable. There is no prerational starting point for rational beings.

A denial of the ultimacy of the laws of logic. For Dooyeweerd, logic as we know it applies only to the created world. But how then can we think about God without these laws of thought? Certainly, truth cannot be found in contradictory statements about God. How would this differ from a Zen Buddhist's *koan* (*see* BUDDHISM), such as one hand clapping, being a key to "understanding" ultimate reality (the Tao)?

Inadequate tests for truth. Dooyeweerd's tests for truth seem to reduce to a subjective one (the witness of the Holy Spirit) and an inadequate one (internal consistency). The latter is really only a test for falsity; all inconsistent views are false. But it is not really a test for truth, since more than one opposing view may be internally inconsistent (*see* CLARK, GORDON).

The insufficiency of general revelation. Like many other Reformed thinkers, Dooyeweerd believes that general revelation is not understandable by fallen humanity. However, this is directly contrary to the claim of the Scriptures (Rom. 1:19–20 ; 2:12) which affirm that general revelation is "clearly perceived" and fallen humanity stands condemned for not responding to it (*see* REVELATION, GENERAL). The fact that the unbelieving heart does not *receive* it (1 Cor 2:14) in no way means that they do not *perceive* God's general revelation (cf. Ps. 19:1–6 ; Acts 14:17).

Double-Truth Theory. *See* AVERROES .

Doubt. *See* CERTAINTY/CERTITUDE ; FAITH AND REASON ; FIRST PRINCIPLES ; INDUCTIVISM ; HOLY SPIRIT, ROLE IN APOLOGETICS .

Dualism. In metaphysics dualism is the belief that there are two coeternal principles in conflict with each other, such as matter and form (or spirit) or of good and evil. Platonism is an example of the former and Zoroastrianism, Gnosticism , and Manichaeism are examples of the latter. Dualists believe in creation *ex materia* , that is, out of preexisting matter or stuff. This is in contrast to theists, who believe in creation *ex nihilo* , out of nothing, and with pantheists (*see* PANTHEISM), who believe in creation *ex Deo* , out of God (*see* CREATION, VIEWS OF).

Difficulties with Dualism. As Thomas Aquinas observed (see Aquinas, passim), not all first principles, such as good and evil, are eternal. Short and tall are opposites, but it does not follow that there must be eternally short and eternally tall beings. Thus, good and evil can be opposed to each other without both being eternal. He reasoned that the problem is the assumption that "because all contraries seem to be compressed under the headings of good and evil, in that one of them by comparison is always deficient, they reckon that the primary active principles are the Good and the Evil." So "there is not one first principle of evil as there is of good." One reason for this is that "the original principle of things is essentially good. [But] nothing can be essentially bad. Every being, as being, is good; evil does not exist except in a good subject" (Aquinas 1.1).

In dualism neither principle can be supreme, since each is limited by the other. But, it would seem that something must be ultimate. As C. S. Lewis observed, "the two Powers, the good and the evil, do not explain each other. Neither . . . can claim to be the Ultimate. More ultimate than either of them is the inextricable fact of their being there together. Each of them, therefore, is *conditioned—* finds himself willy nilly in a situation; and either that situation itself, or some unknown force which produced that situation, is the real Ultimate" (Lewis, *God in the Dock,* 22). "You cannot accept two conditioned and mutually independent beings as self-grounded, self-comprehending Absolute" (ibid.).

In the moral sense, one principle cannot be pronounced "good" and the other "evil," unless they are measured by something outside either of them. But, as Lewis noted, "the moment you say that, you are putting into the universe a third thing in addition to the two Powers: some law or standard or rule of good which one of the powers conforms to and the other fails to conform to." However, since "the two powers are judged by this standard, or the Being who made this standard, then this standard, or the Being who made this standard, is farther back and higher up than either of them, and He will be the real God" (*Mere Christianity,* 49)

"Dualism gives evil a positive, substantive, self-consistent nature, like that of good." But "If evil has the same kind of reality as good, the same autonomy and completeness, our allegiance to good becomes the arbitrary chosen loyalty of a partisan." But "a sound theory of value . . . demands that good should be original and evil a mere perversion; that good should be the tree and evil the ivy; that good should be able to see all round evil (as when sane men understand lunacy) while evil cannot retaliate in kind . . ." (Lewis, *God in the Dock,* 22–23).

As Augustine concluded, evil is the lack of good and not the reverse. For when we take all the evil out of something it is better. But when we take all the good from something there is nothing (Augustine). Hence, good is the ultimate and evil is a limitation in or privation of evil (*see* EVIL, PROBLEM OF).

Ebla Tablets. Sixteen thousand clay tablets from the third millennium B.C. were discovered at Ebla in modern Syria, beginning in 1974. Biovanni Pettinato dates them 2580–2450 B.C. and Paolo Matthiae suggests 2400–2250 B.C. Either period predates any other written material by hundreds of years.

Apologetic Importance of the Tablets. The importance of the Ebla tablets is that they parallel and confirm early chapters of Genesis. Although clouded by subsequent political pressure and denials, the published reports in reputable journals offer several possible lines of support for the biblical record (*see* ARCHAEOLOGY, OLD TESTAMENT).

Tablets reportedly contain names of the cities Ur, Sodom and Gomorrah, and such pagan gods mentioned in the Bible as Baal (see Ostling, 76–77).

The Ebla tablets reportedly contain references to names found in the book of Genesis, including Adam, Eve, and Noah (Dahood, 55–56).

Of great importance is discovery of the oldest known creation accounts outside the Bible. Ebla's version predates the Babylonian account by some 600 years. The creation tablet is strikingly close to that of Genesis, speaking of one being who created the heavens, moon, stars, and earth. Parallels show that the Bible contains the older, less embellished version of the story and transmits the facts without the corruption of the mythological renderings. The tablets report belief in creation from nothing, declaring: "Lord of heaven and earth: the earth was not, you created it, the light of day was not, you created it, the morning light you had not [yet] made exist" (*Ebla Archives,* 259).

There are significant implications in the Ebla archives for Christian apologetics. They destroy the critical belief in the evolution of monotheism (*see* MONOTHEISM, PRIMITIVE) from supposed earlier polytheism and henotheism. This evolution of religion hypothesis has been popular from the time of Charles Darwin (1809–1882) and Julius Wellhausen (1844–1918). Now monotheism is known to be earlier. Also, the force of the Ebla evidence supports the view that the earliest chapters of Genesis are history, not mythology (*see* FLOOD, NOAH'S; SCIENCE AND THE BIBLE).

Eden, Garden of. "Now the LORD God had planted a garden in the east, in Eden; and there he put the man he had formed" relates Genesis 2:8 . Since Adam and Eve are presented as real persons with real children from which the whole human race has come (Gen. 5:1 ; 1 Chron. 1:1 ; Luke 3:38 ; Rom. 5:12), it is also assumed that there was a literal Garden of Eden. Indeed, the Bible speaks of it as an actual place on earth that abounded with trees, plants, and animals. It had rivers and a gate (Genesis 2–3). However, critics point out that there is no archaeological (*see* ARCHAEOLOGY, OLD TESTAMENT) evidence that such a place existed. They conclude that the story of Eden is just a myth (*see* BIBLE CRITICISM).

Arguments for a Real Garden. However, strong evidence to support the literal reality of the Garden of Eden comes from various sources.

Since Scripture says that the Lord sealed off the garden in some way following the fall, this is one place where Christians would not expect to find archaeological ruins (Gen. 3:24). Nor is there any indication that Adam and Eve made pottery or built durable buildings. Whatever might have remained of a Garden of Eden would have been destroyed by the flood which covered the earth (Genesis 6–9 ; 2 Peter 3:5–6).

The Bible does give evidence of the location, since two of the rivers mentioned still exist—the Tigris (Hiddekel) and the Euphrates (Gen. 2:14). Even if the rivers have a different flow since the flood, the placement of very names as rivers indicates that the writer believed this to be a literal place. The Bible even locates them in Assyria (vs. 14), which is modern Iraq.

For a discussion of the reality of Adam and Eve, see ADAM, HISTORICITY OF . There is abundant evidence that these were the first human beings and the literal progenitors of the human race. Literal people need a literal place to live. The Bible calls that place the garden God planted in Eden (Gen. 2:8).

BAR *Biblical Archaeology Review*
Bib. Sac. *Bibliotheca Sacra*

The New Testament refers to events that took place in Eden as historical. It speaks of the creation of Adam and Eve (Matt. 19:4 ; 1 Tim. 2:13) and of their fall into sin (1 Tim. 2:14 ; Rom. 5:12). But these literal historical events need a literal geographic place in which to occur.

The Scriptures affirm that God will one day restore human beings in a literal resurrection body (*see* RESURRECTION, PHYSICAL NATURE OF) to a literal restored paradise (Rom. 8:18–23 ; Revelation 21–22). But what is a literal paradise regained if there was not a literal paradise lost?

Conclusion. For those who place any credibility in the biblical record, the evidence for a literal Eden is very strong. This place intertwines with central teachings of Christian faith, such as a literal Creation, Fall, and restoration which give it even more importance. To deny a literal Eden is to deny a foundation stone for basic Bible teachings for which there is strong evidence.

Edwards, Jonathan. Jonathan Edwards (1703–1758) was a significant theologian-philosopher, revivalist, and pastor in early America. Son of a Congregational minister, Edwards was a classical apologist (*see* CLASSICAL APOLOGETICS). After earning a bachelor's degree at Yale (1720), he entered the ministry in the Presbyterian church in New York in 1726. He died only a few weeks after he began his work as president of the College of New Jersey (now Princeton University) in 1758.

Edwards was heavily influenced by John Locke (1632–1704) and Isaac Newton (1642–1727), and to a lesser extent by the British idealism of George Berkeley (1685–1753). A child prodigy, Edwards produced his first works as a teenager. His first philosophical work "Of Being" contains a powerful cosmological argument, as does his other youthful work "The Mind." Likewise, in his *Miscellanies* he argues for the existence and necessity of God. In his unpublished "Sermon on Romans 1:20 " (1743) Edwards provides a detailed cosmological and teleological argument for God. One of his greatest works, *The Freedom of the Will* (1754), is also apologetic in emphasis, as is *A Treatise Concerning Religious Affections* (1746). His great work on apologetics, *A Rational Divinity,* was never completed.

The Apologetics of Edwards. As a classical apologist in the footsteps of Thomas Aquinas and John Locke, Edwards began with proofs for the existence of God. Edwards used both the cosmological and teleological arguments, though his emphasis was on the former.

The Relation of Faith and Reason. Edwards balanced reason and revelation. Reason had eight basic functions:

> First, reason must prove the existence of God, the Revealer. Second, reason anticipates that there will be a revelation. Third, reason alone can grasp rationally any "pretended" revelation. Fourth, only reason can demonstrate the rationality of revelation. Fifth, reason must verify any revelation as genuine. Sixth, reason

argues revelation's dependability. Seventh, reason, having anticipated mysteries in any genuine divine revelation, defends them, refuting any objections to their presence. Eighth, though the "divine and supernatural light" does not come from reason, it is reason that comprehends what this light illuminates. [*Jonathan Edwards,* 22–23]

There are, however, four significant limitations to human reason.

> First, it cannot make the knowledge of God 'real' to unregenerate man. Second, it cannot yield a supernatural, salvific revelation or even 'sense' it by mere reason. Third, if it does receive a revelation, it cannot thereafter determine what that revelation may and may not contain. Fourth, it cannot even 'apprehend' divine revelation as divine revelation, though it may recognize its presence. [ibid., 27]

Proofs of the Existence of God. Edwards outlines his own approach to God's existence (*see* GOD, EVIDENCE FOR) in *Freedom of the Will* (2.3). The apologist proves *a posteriori,* or from effects, that there must be an eternal cause and then argues that this being must be necessary and perfect *a priori* . Edwards combined cosmological and teleological proofs. He even argued against an eternal universe (see "Sermon on Romans 1:20 ") in the mode of the *kalam* cosmological argument.

God is eternal. That God must be eternal was firm in Edwards' mind from youth. In his essay "The Mind" he concluded that "it is not strange that there should be [something eternal], for that necessity of there being something or nothing implies it." And since there is something, then there must always have been something. Why? Because nothing is an impossibility, since "we can't have any such knowledge because there is no such thing."

Edwards' firm conviction that something is eternal springs out of the law of causality (*see* CAUSALITY, PRINCIPLE OF), which he describes as a self-evident principle, a "dictate of common sense," "the mind of mankind," and "this grand principle of common sense" (*Freedom,* 2.3). In "Miscellanies" he declares that the principle that all effects have a cause is a self-evident truth (*see* FIRST PRINCIPLES). This being the case, "if we suppose a time wherein there was nothing, a body will not of its own accord begin to be." For to hold that something can arise without a cause is abhorrent to the understanding (*Freedom,* 91 , p. 74).

So convinced was Edwards that something could not arise without a cause that he argued even an eternal world would need a cause. For "if we should suppose that the world is eternal, yet the beauty, contrivance, and useful disposition of the world would not less strongly conclude for the being of an intelligent author." For "if we should see such a poem as Vergil's *Aeneid,* would it be any more satisfying to us if we were told that it was from eternity. . . . Would it be at all more satisfying that if we were told that it was made by the causal falling of ink on paper?" (ibid., 312, pp. 79–80).

There must be an eternal being. So God's eternality is necessary because an eternal "nothing" is impossible, since nothing cannot produce something. Something is, so something must always have been. There are only two alternatives: Nothing or God. But as Edwards scholar John Gerstner succinctly put it, "Nothing is nothing at all. That is, we cannot form the notion of Nothing. If we think we have an idea of Nothing, then we think we know that Nothing *is* . *Nothing has become an existent entity;* Nothing then is Something" (Gerstner, "Outline of the Apologetics," 10).

Proofs of the Attributes of God. As Gerstner correctly noted, "Extraordinary theologians such as Thomas Aquinas and Jonathan Edwards find more of God in the ordinary revelation of nature than ordinary theologians find in the extraordinary revelation of Scripture" (ibid., 99).

Edwards summarizes what can be known about God by general revelation (*see* REVELATION, GENERAL): " 'Tis by metaphysics only, that we can demonstrate that God is not limited to a place, or is not mutable; that He is not ignorant, or forgetful; that it is impossible for Him to lie, or be unjust; and there is one God only and not hundreds or thousands"(*Freedom,* 4.13).

God is independent. Since God is eternal and necessary, he must be independent. He is prior to the world, and the world is dependent on him, not the reverse.

God has all perfections. "To have some and not all [perfections] is to be finite. He is limited in some respects, viz., with regard to the number of virtues or perfections." But "this is . . . inconsistent with independent and necessary existence. To be limited as to the virtues and excellent qualities is a contingent being" ("Sermon on Romans 1:20 ").

God is infinite. Edwards asserted that "Nothing is more certain than that an unmade and unlimited Being exists" (*Works,* 97–98). For that which is necessary and independent must be infinite.

God is One. Since God is infinite he must be one. For "to be infinite is to be all and [it] would be a contradiction to suppose two alls" ("Miscellanies," no. 697). All reality is in God, either as his being or in what flows from it. In Edwards' words, "God is the sum of all being and there is no being without His being. All things are in Him, and He in all" (ibid., no. 880).

Edwards' Attack on Deism. Not only did Edwards believe that God existed but that miracles are possible (*see* MIRACLE ; MIRACLES, APOLOGETIC VALUE OF). God is not deistic (*see* DEISM). In fact, Edwards' critique of deism is one of the most penetrating of the eighteenth century.

Deist, in contrast to Christian, theists believed that God created the world and has revealed himself in nature, but he never performs miracles or produces a supernatural revelation. This view was proclaimed in Matthew Tindal 's "Bible of the deists," *Christianity as Old as Creation, or the Gospel, a Republication of the Religion of Nature*

(1730). For Tindal, and other deists, such as Thomas Jefferson , Thomas Paine, and Francois Voltaire , natural revelation was sufficient.

As Gerstner notes, Edwards "refutes the Deists not by an appeal to faith but by rational analysis" (Gerstner, "Outline of the Apologetics," 196). He demonstrates the utter insufficiency of reason as a substitute for revelation (ibid., p. 197). Contrary to Tindal, Edwards argues that, once reason has shown a revelation to be from God, it is reasonable to insist that every doctrine contained in that revelation be true (*Works,* 2.479f.). Once it is known that the Bible is the Word of God, sound reason demands that all its dictates be accepted.

Proof of the Need for Supernatural Revelation. Edwards' argument for divine revelation is threefold: "(1) Though God through nature reveals so much of himself, men do not really 'know' God from nature. (2) Even if they did know God from nature, nature does not reveal whether God will damn or save them. (3) Even if nature did reveal that fact, it would not change man's hostile attitude toward God and salvation" (Gerstner, "Outline of the Apologetics," 198–99).

People do not "know" God from nature. In one of his sermons, Edwards speaks of "Man's Natural Blindness in the Things of Religion" (Edwards, *Works,* 2.247f.). For "there is an extreme brutish blindness in things of religion, which naturally possesses the hearts of mankind" (ibid., 247). This is not the fault of the senses, but the blindness of the heart. From this "plainly appears the *necessity* of divine *revelation* " (ibid., 253).

People do not know whether they will be saved. However good natural revelation is, it is not salvific. Natural revelation brings condemnation, not salvation. It leaves people inexcusable (Rom. 1:20). If they "will not be convinced for salvation, they shall be convinced by damnation" (ibid., 255).

Natural revelation does not soften enmity. Nature leaves humanity at enmity with God. Edwards concluded, "I am of the mind that mankind would have been like a parcel of beasts, with regard to their knowledge in all important truths, if there never had been any such thing as revelation in the world, and that they never would have risen out of their brutality." Furthermore, "None ever came to tolerable notions of divine things, unless by the revelation contained in the Scriptures" ("Miscellanies," 350). As Gerstner put it, "if there is anything natural revelation reveals, it is that natural revelation is not sufficient" (Gerstner, "Outline of the Apologetics," 200).

Proof of Supernatural Revelation in the Bible. Of course, this only shows that we need special revelation, not that we have it. To establish that the Bible is the Word of God Edwards used a twofold argument: (1) It is internally consistent. (2) It is externally confirmed.

The internal test: Rationality. Stated as a negative, Christianity is not false because it has mysteries (*see* MYSTERY) but no internal contradictions (*see* "MISCELLANIES," 544). Right reason and revelation harmonize, and "the Bible does not ask [human beings]

to believe things against reason" ("Sermon on Isaiah 3:10 "). God's way to the heart is through the head.

The external test: Miraculous evidence. Like other classical apologists, Edwards believed that miracles follow from the existence of the theistic God. If God can create the world, he can intervene in it. This miraculous intervention takes one of four forms.

First, there is the miracle of supernatural predictive prophecy (*see* PROPHECY AS PROOF OF THE BIBLE). In "Miscellanies" he deals with the fulfillment of Old Testament predictions, both general and messianic (443, 891, 1335). Only God could make such predictions.

Second, miracles can be used to accredit a messenger of God. Edwards appeals to the miracles of Christ. Sometimes, as in the case of the raising of Lazarus, Jesus stated in advance he would perform the miracle to prove his claim. "Now can it be imagined that God would hear an impostor or so order or suffer it that so extraordinary a thing should be done immediately in consequence of the word and act of an impostor?" (ibid., 444).

Third, he appeals to the supernatural nature of the content of Moses' teaching (*see* MIRACLES AS CONFIRMATION OF TRUTH), arguing that no divine thing can come out of a purely human source. "For example, how could the Jews who were not learned in science or philosophy and were as prone to idolatry as the nations around them come forth with their refined and advanced doctrine of God" (ibid., 159, 1158).

Fourth, he argued from the supernatural results of conversion. How otherwise can a person overcome the fear of death? ("Sermon on Romans 14:7 "). He went to great lengths in "A Treatise Concerning Religious Affections" to show that the joy and peace that characterize Christian conversion are not present in other religions.

The Need for Subjective Illumination. All of his stress on rational and objective evidence notwithstanding, Edwards did not believe that either general or special revelation was sufficient to open depraved hearts to God's truth. Only "the divine and supernatural light" could open the heart to receive God's revelation. Without this divine illumination, no one ever comes to accept God's revelation, regardless of how strong the evidence. A new heart is needed, not a new brain. This comes by illumination of the Holy Spirit. This divine light does not give new truth or new revelation. Rather, it provides a new heart, a new attitude of receptivity to revealed truth (see Gerstner, "Outline of the Apologetics," 295–97; *see* HOLY SPIRIT, ROLE IN APOLOGETICS).

The Reasonableness of Free Will and Predestination. As a strong predestinarian, Edwards believed that God had no obligation to save everyone. All deserve to go to hell . So, "he might, if He had pleased, have left all to perish, or might have redeemed all" (*Jonathan Edwards,* 119). But God chose to predestine some to heaven and left others to their just deserts in hell. How can all be free and yet God irresistibly predetermine that only some will be saved? Edwards attempts to rationally reconcile these two seemingly contradictory doctrines by affirming that Liberty "is the power, opportunity, or

advantage, that any one has to do as he pleases” (ibid., 311). Free choice is doing what one desires, but it is God who gives only the elect the desire to accept him. Hence, only they will be saved (*see* “HEATHEN,” SALVATION OF; INFANTS, SALVATION OF; UNIVERSALISM).

Edwards’ Rational Defense of Hell. Nowhere does Edwards demonstrate his belief in the rationality of Christianity any more than in his defense of the doctrine of eternal conscious punishment. He argued that even one sin deserves hell, since the eternal, holy God cannot tolerate any sin. How much more, then, does a multitude of daily sins in thought, word, and deed make one unfit for his presence? This is compounded by rejection of God’s immense mercy. And add to this a readiness to find fault with God’s justice and mercy, and we have abundant evidence of the need for hell. Thus, he insisted, if we had a true spiritual awareness, we would not be amazed at hell’s severity but at our own depravity (*Works,* 1.109).

Edwards argued that “It is a most unreasonable thing to suppose that there should be no future punishment, to suppose that God, who had made man a rational creature, able to know his duty and sensible that he is deserving punishment when he does it not; should let man alone, and let him live as he will, and never punish him for his sins, and never make any difference between the good and the bad. . . . How unreasonable it is to suppose, that he who made the world, should leave things in such confusion, and never take any care of the governing of his creatures, and that he should never judge his reasonable creatures” (*Works*, 2.884).

Edwards answers some of the most difficult questions about hell ever posed by a rational mind:

Why do people not repent in hell? It would seem, once they get to such a horrible place, that the damned would want to leave. No so, reasoned Edwards. For how can a place devoid of God’s mercy accomplish what no efforts of his grace could accomplish on earth, namely, effect a change of the heart and disposition of wicked people? If hell could reform wicked sinners, then they would be saved without Christ, who is the sole means of salvation (ibid., 2.520). Suffering has no tendency to soften a hard heart; it hardens it more. Edwards might find that the high rate of recidivism and hardened criminality in modern prisons confirms his point.

Why are temporal sins due eternal punishment? God’s justice demands eternal punishment for sins because “the heinousness of any crime must be gauged according to the worth or dignity of the person it is committed against” (Davidson, 50). Thus, a murder of a President or pope is more heinous than that of a terrorist or Mafia boss. Sin against an infinite God is an infinite sin, worthy of infinite punishment (*Works*, 2.83).

Why cannot hell have redeeming value? Hell both satisfies God’s justice and glorifies it by showing how great and fearful a standard it is. “The vindicative justice of God will appear strict, exact, awful, and terrible, and therefore glorious” (ibid., 2.87). The more horrible and fearful the judgment, the brighter the sheen on the sword of God’s justice.

Awe-inspiring punishment fits the nature of an awe-inspiring God. By a majestic display of God's wrath, God gets back the majesty he has been refused. An awful display of punishment in the afterlife will bring to God what human beings refused to give him in this life. Those who give God no glory by choice during this life will be forced to give him glory in the afterlife.

All are either actively or passively useful to God. In heaven believers will be actively useful in praising his mercy. In hell unbelievers will be passively useful in bringing majesty to his justice. Just as a barren tree is useful only for firewood, so disobedient men are only fuel for an eternal fire (ibid., 2.126). Since unbelievers prefer to keep at a distance from God in time, why should we not expect this to be their chosen state in eternity?

Would a merciful God permit suffering in hell? To suppose that God's mercy does not permit suffering in hell is contrary to fact. God allows plenty of suffering in this world. It is an empirical fact that God and creature-pain are not incompatible (Gerstner, "Outline of the Apologetics," 80). If God's mercy cannot bear eternal misery, then neither can it bear lesser amounts (*Works* , 2.84).

Further, Edwards contended that God's mercy is not a passion or emotion that overcomes his justice. Mercy so construed would constitute a defect in God. It would make him weak and inconsistent, not a fit judge.

Finally, our attitudes and feelings will be transformed and correspond more to God's. Hence, we will love only what God loves and hate what he hates. Since God is not miserable at the thought or sight of hell, neither will we be—even in the case of people we loved in this life. Edwards devoted a whole sermon to this: "The End of the Wicked Contemplated by the Righteous." In Gerstner's digest of it, "it will seem in no way cruel in God to inflict such extreme suffering on such extremely wicked creatures" (Gerstner, "Outline of the Apologetics," 90).

Evaluation. It is possible only to touch on the implications for apologetics found in Edwards' work.

Positive Evaluation. Jonathan Edwards was a noted American revivalist and a great intellectual—a rare combination. His defense of the Faith was in the tradition of the classical apologists.

Whatever one may think of Edwards' answers to the difficult questions about hell, he attempted to confront the most difficult theological problems. He believed that God's truth is in harmony with right reason. His defense of Christianity began with one of the most rational and powerful arguments for God's existence ever offered by a theist.

Despite his stress on reasoning, Edwards was not a rationalist. He argued for the need of special revelation. He believed that reason was insufficient to bring people to Christ.

Nothing short of the supernatural work of divine illumination of the human heart could do that (*see* HOLY SPIRIT, ROLE IN APOLOGETICS).

Edwards saw clearly the need to give a rational defense of the existence of God before he attempted a historical defense of Christianity. However, he also perceived that the truth of Christianity cannot be justified without an appeal to external evidence. There is a factual, as well as a rational, test for the truth of Christianity.

Negative Criticism. Some justified and some unjustified criticisms have been made of Edwards. Criticisms common to Reformed theology are covered elsewhere (*see* FREE WILL). For an accurate understanding of his thought, however, two charges should be answered: that his Platonic (*see* PLATO) idealism leads him into pantheism, and that his God lacks mercy.

The charge that Edwards is a pantheist (*see* PANTHEISM) because he identified God with all Being is carefully answered in Gerstner, "An Outline of the Apologetics of Jonathan Edwards," pt. 2, 99–107. Edwards' God is only "all Being" in the sense that all being is either of his essence or flows from it. He makes clear distinctions between God and creation, Necessary Being, and contingent being. And his emphasis on individuals being eternally elect or eternally damned is incompatible with a pantheistic worldview (ibid., 104).

One of Edwards' arguments for hell is that God has no obligation to be merciful to all. Mercy, he insists, is a choice and not a duty. God only has to bestow his mercy on those he chose to do so. This argument seems to negate what Edwards says he believes: God is an all perfect being which would include omnibenevolence. But if God is all-good, then something in God obligates him to help sinners in need. Certainly, we would not think a person completely good who did not attempt to save everyone he could from a sinking ship or a burning building.

According to Edwards, no one is moved to act unless God acts upon him. Free choice is doing what one desires, but it is God alone who gives the desire to it. When applied to Lucifer's choice to rebel against God, this would mean that God gave him the desire to sin. But God cannot sin (Hab. 1:13), nor can he give free agents the desire to sin (James 1:13–14). Hence, Edwards' (and the closely connected strong Calvinist) concept of free choice would seem to be rationally incoherent.

Enlightenment. The period of modern history known as the *Enlightenment* began in the late seventeenth century and dominated the eighteenth and much of the nineteenth centuries in Europe. It was rooted in Dutch and German rationalism, particularly Benedict Spinoza’s rationalistic and antisupernatural work, *Tractatus Theologico-politicus, Tractatus Politicus* (1670). Christian Wolfe (1679–1754) set the tone for the period when he sought the way to truth through “pure reason.” Immanuel Kant later defined it in his *Religion within the Bounds of Reason Alone* (1793) as “man’s emergence from a self-inflicted state of minority. A minor is one who is incapable of making use of his understanding without guidance from someone else. . . . Have the courage to make use of your understanding, is therefore the watchword of the Enlightenment” (Douglas, 345; *see* RATIONALISM).

Other writers who contributed to the Enlightenment include David Hume , especially in his *Inquiry Concerning Human Understanding* (1748 and *Dialogue Concerning Natural Religion* (1779); Hermann S. Reimarus (1694–1768), and the deists (*see* DEISM) John Toland (1670–1722), Matthew Tindal (1656–1733), Thomas Paine (1737–1809), and Francois-Marie Voltaire (1694–1778). Gottfried Lessing’s work, *Nathan the Wise* (1779) argued for religious toleration, since truth was not exclusive to Christianity, but was found in many religions.

The Enlightenment stressed both reason and independence and elicited a pronounced distrust of authority. Truth is to be obtained through reason, observation, and experiment. It came to be dominated by antisupernaturalism (*see* MIRACLES, ARGUMENTS AGAINST). Religious pluralism was the result (*see* PLURALISM, RELIGIOUS). Out of this context came deism, biblical criticism, and rejection of divine revelation (*see* BIBLE CRITICISM ; BIBLE, EVIDENCE FOR). Natural religion was emphasized. Its more radical forms encouraged agnosticism, skepticism, and atheism. This radicalized form lives on in

secular humanism. Karl Barth characterized the Enlightenment as “a system founded upon the omnipotence of human ability” (cited in “Enlightenment”).

Einstein, Albert. Albert Einstein was born in Ulm, Germany, in 1879. He graduated from engineering school in Zurich in 1901. In 1905 he wrote his first paper on the theory of relativity, which gained him a Ph.D. from the University of Zurich. He later gained world fame overnight in 1919 when the British Royal Society announced that his new theory of gravity had toppled the 300-year-old theory of Isaac Newton. In 1921 he won the Nobel Prize for Physics for his work in the field of theoretic physics. Rising antisemitism in Europe prompted Einstein to move to the United States in 1933 where he taught at Princeton University until his death in 1955.

Einstein embraced pacifism, liberalism, and Zionism. His life-long quest was to find a unified field theory to unite all the basic forces of nature—a goal that eluded him throughout his life. His first publication was titled “A New Determination of Molecular Dimensions” (1905). His next article, “On a Heuristic Viewpoint Concerning the Production and Transformation of Light,” postulated that light is composed of quanta (later called photons) that, in addition to wave-like behavior, demonstrate certain properties unique to particles. In “On the Electrodynamics of Moving Bodies” he postulated that both time and motion are relative to the observer. His next paper, “Does the Inertia of a Body Depend upon Its Energy Content?” postulated his famous $E = MC^2$ (Energy = mass times the speed of light squared). In 1916 he wrote “The Foundation of the General Theory of Relativity,” in which he contended that gravity is not a force but a curved field in the space-time continuum created by the presence of mass.

View of God and Religion. Despite his support for the Zionist movement, Einstein was not a practicing Jew. His relation to Judaism was more ethnic than religious. Judaism played little part in his life, but he insisted that a Jew can shed his faith and still be a Jew. In a war-time letter to physicist Paul Ehrenfest, Einstein expressed a sense of bitterness toward God in the face of the European holocaust: “The ancient Jehovah is still abroad. Alas, he slays the innocent along with the guilty, whom he strikes so fearsomely blind that they can feel no sense of guilt” (ibid., 156; *see* CANAANITES, SLAUGHTER OF).

As to the interaction of religion and science, Einstein believed that “To the Sphere of religion belongs the faith that the regulations valid for the world of existence are rational, that it is comprehensible to reason. I cannot conceive of a genuine scientist without that

profound faith. The situation may be expressed by an image: science without religion is lame, religion without science is blind" (Frank, 286; *see* FAITH AND REASON).

The Order of the Universe. For Einstein the universe was a marvel of mathematical order:

> The more a man is imbued with the ordered regularity of all events, the firmer becomes his conviction that there is no room left by the side of this ordered regularity for causes of a different nature [than a Creator]. For him neither the rule of human nor the rule of divine will exists as an independent cause of natural events. To be sure the doctrine of a personal God interfering with natural events could never be refuted, in any real sense, by science, for this doctrine can always take refuge in those domains in which scientific knowledge has not yet been established. [ibid.; *see* TELEOLOGICAL ARGUMENT]

A biographer explained that Einstein believed that "from a mathematical standpoint the system of physical laws is very complex, and that to understand it very great mathematical capacities are required. Nevertheless, he has hope that nature actually obeys a system of mathematical laws" (cited in Herbert, 177).

The Nature of God. In a 1929 reply to a cabled inquiry from Rabbi Goldstein of New York, Einstein described his belief in a pantheistic (*see* PANTHEISM) concept of God: "I believe in Spinoza's God who reveals himself in the harmony of all that exists, not in a God who concerns himself with the fate and actions of men" (Clark, 38; *see* SPINOZA, BENEDICT). He added elsewhere, "The main source of the present-day conflicts between the spheres of religion and of science lies in the concept of a personal God" (Frank, 285). Thus, he rejected theism in favor of pantheism.

Accordingly, he denied that there would be any day of reward or punishment after death. "What I cannot understand is how there could possibly be a God who would reward or punish his subjects or who could induce us to develop our will in our daily life" (Bucky, 85). He said, "I do not believe that a man should be restrained in his daily actions by being afraid of punishment after death or that he should do things only because in this way he will be rewarded after he dies. . . . Religion should have nothing to do with a fear of living or a fear of death, but should instead be a striving after rational knowledge" (ibid., 86).

God and Miracles. With the caveat that the existence of miracles could never be disproved, Einstein joined Spinoza in denying that they could occur: "The natural laws of science have not only been worked out theoretically but have been proven also in practice. I cannot then believe in this concept of an anthropomorphic God who has the powers of interfering with these natural laws. . . . If there is any such concept as a God, it is a subtle spirit, not an image of a man that so many have fixed in their minds. In essence, my religion consists of a humble admiration for this illimitable superior spirit that reveals itself in the slight details that we are able to perceive with our frail and feeble minds" (ibid.; *see* MIRACLES, ARGUMENTS AGAINST).

The Origin of the Universe. There is a strange irony about Einstein's view of God. His reluctant acceptance of the big bang origin of the universe should have led him away from his pantheism to a more theistic position. For Einstein failed to find an explanation of his general relativity equation that would not require a beginning or a Beginner for the universe. Even the late twentieth-century physicist and antitheist Stephen Hawking raises the question of who put "fire into the equations" and ignited the universe (Hawking, 99).

Einstein first opposed the mounting evidence for a big bang origin, perhaps realizing its theistic implications. In order to avoid this conclusion, Einstein added a "fudge factor" in his equations, only to be embarrassed later when his maneuver was noticed. To his credit, he eventually admitted his error and concluded that the universe was created. Thus, he wrote of his desire to know how God created this world. He said, "I am not interested in this or that phenomenon, in the spectrum of this or that element. I want to know His thought, the rest are details" (see Herbert, 177).

Evaluation. Logically, after reviewing the evidence that the cosmos had a beginning, Einstein should have concluded with the British physicist Edmund Whittaker: "It is simpler to postulate creation *ex nihilo* —divine will constituting nature from nothingness" (Jastrow, "Scientist Caught," 111; *see* CREATION, VIEWS OF). Even Robert Jastrow, a confirmed agnostic, said, "that there are what I or anyone would call supernatural forces at work is now, I think, a scientifically proven fact" (*God and the Astronomers,* 15, 18). Jastrow observes that "astronomers now find that they have painted themselves into a corner because they have proven, by their own methods, that the world began abruptly in an act of creation. . . . And they have found that all this happened as a product of forces they cannot hope to discover" (ibid., 15). Unfortunately, we lack evidence that Einstein drew the conclusion that his scientific breakthroughs support (*see* ANTHROPIC PRINCIPLE ; EVOLUTION, COSMIC ; KALAM COSMOLOGICAL ARGUMENT ; THERMODYNAMICS, LAWS OF).

If it is a scientific fact that the universe exploded into being by supernatural forces, Einstein should have accepted miracles. This was the biggest miracle of all.

Epistemology. *Epistemology* is the discipline that deals with theory of knowledge. The term can be broken down into *epistem-ology* (Gk. *episteme,* "to know; *logos* , "study"). It is the study of how we know.

The various epistemologies include rationalism (*see* SPINOZA, BENEDICT), empiricism (*see* HUME, DAVID), agnosticism (*see* KANT, IMMANUEL), idealism (*see* PLATO), positivism (*see* Comte, Auguste), existentialism (*see* SOREN KIERKEGAARD), phenomenology (*see* * HEGEL, W. F. G. ; HEIDEGGER, MARTIN), and mysticism (*see* PLOTINUS).

Epistemology considers whether ideas are innate or whether we are born a *tabula rasa* , that is, a blank slate. It also deals with tests for truth (*see* TRUTH, ABSOLUTE NATURE OF) and whether true ideas merely cohere (*see* COHERENTISM) or need an ultimate foundation (*see* FOUNDATIONALISM) in self-evident first principles.

Epistemology also treats certainty (*see* CERTAINTY/CERTITUDE) and doubt (*see* SKEPTICISM). Agnosticism claims we cannot know reality, whereas realism asserts that we can know reality. The degree of our certainty in what we know ranges from low probability (*see* INDUCTIVISM) to rational necessity (*see* FIRST PRINCIPLES ; LOGIC ; TAUTOLOGIES).

Eschatological Verification. *See* VERIFICATION STRATEGIES .

Essenes and Jesus. *Essenes* were a break-away Jewish sect who established a community near the Dead Sea (*see* DEAD SEA SCROLLS). Their name may derive from *Hasidim* ("loyal [or, pious] ones"). This may reflect their belief that they lived in the end times of apostasy. The evil reign of Antiochus IV Epiphanes in the second century B.C . may have been the impetus for founding such a sect. Their community lasted until the second century A.D . According to Josephus (*Jewish War,* 2.8.2), the Essenes, Pharisees, and Sadducees were the primary sects of Judaism. The elder Pliny linked them with Qumran. Their life was marked by asceticism, communism, and the rejection of animal sacrifice. In New Testament times they numbered about 4000 (Cross, 471).

Jesus and the Essenes. Some scholars, such as I. Ewing (*The Essene Christ*) have claimed that Jesus was the Essene "Teacher of Righteousness" mentioned in the Dead Sea Scrolls.

CT *Christianity Today*

It is reasoned that John the Baptist and even Jesus were members of the Essene community. During his recorded ministry in the Gospels Jesus only opposed the Pharisees and Sadducees. Never was he critical of the Essenes. Jesus certainly thought of himself as a teacher of righteousness. When he was baptized he said, "Let it be so now: it is proper for us to do this to fulfill all righteousness." Then John consented (Matt. 3:15). Jesus was a priest. According to the New Testament, Jesus was a priest forever after the order of Melchizedek (Heb. 7:17). He fulfilled the typology of the Aaronic priesthood. Likewise, "the Teacher of Righteousness" of the Essene community was a priest. Jesus spent time in the wilderness near the Essenes. He also had a similar anti-establishment emphasis, as did the Essenes.

Evaluation. There are numerous flaws in the Essene theory. The three basic arguments in favor of the Essence view will be treated in order.

That Jesus did not criticize the Essenes is a fallacious argument from silence. He is recorded to have said nothing about them at all. Essenes were not part of official Judaism, which opposed Christ. The *Talmud* did not oppose the Essenes, either, yet it was not an Essene book. This is also an instance of the "black-and-white" fallacy. It overlooks the fact that Jesus could have been a member of no group at all. And it overlooks crucial differences between the teaching of Jesus and Essene doctrines. Jesus

- opposed ceremonial purity which they radicalized.
- opposed legalism, and they were decidedly Mosaic Law legalists.
- stressed the kingdom of God. They did not.
- preached love. They did not.
- claimed to be sinless Messiah. They placed a heavy burden of sin on each person.
- opened salvation to the Gentiles. They were Jewish nationalists.
- taught that there was one Messiah; they looked for two.
- taught the resurrection of the body; they stressed the immortality of the soul, but not the body.

In general, Jesus' ethical teachings far more closely approximated rabbinical Judaism than Qumran austerity.

While Jesus taught righteousness, it does not follow that he was the Essene "teacher of righteousness." Such an identification overlooks crucial differences. The Essene leader

- was a priest, while Jesus was a Prophet, Priest, and King.

- was a sinner needing purification, but Jesus was sinless (*see* CHRIST, DEITY OF).
- thought of himself as a creature, not a Creator.
- atoned for no one at his death.
- was not resurrected from the dead as was Jesus.
- was not worshiped as God.
- lived long before Jesus.

There is no real evidence that Jesus ever visited the Essene community, but casual affiliation with Essenes is irrelevant, anyway. His identity remained with no one except God. In many regards, Jesus was an iconoclast of established Judaism. Though he came to fulfill, not destroy, the law (Matt. 5:17–18), he opposed official Judaism for different reasons than did the Essenes. The Jewish hierarchy rejected him as the Messiah, the Son of God. This was not true of the Essenes. Further, Jesus was not an ascetic. He was even criticized for eating with sinners (see Christ, Deity of).

Conclusion. There is no evidence that Jesus ever had contact with the Essene community. But if he did, it does not make him an Essene or disprove his unique claims. His teachings differed in important respects. Jesus alone claimed to be the Jewish Messiah (*see* PROPHECY AS PROOF OF THE BIBLE), and Son of God (*see* CHRIST, DEITY OF).

Essentialism, Divine. *Essentialism* (Lat. *esse* , "to be"), as it relates to moral principles and God's will, is the view that ethical principles are rooted ultimately in the unchangeable divine essence (*see* GOD, NATURE OF), not simply in God's changeable will. It is opposed to divine *voluntarism* which asserts that something is good because

God wills it. Essentialism, on the contrary, holds that God wills something because it is good.

There are two basic kinds of essentialism: platonic and theistic. Plato believed that God, the *Demiurgos* , wills all things in accordance with the Good (the *Agathos*), which is outside God and to which he is subject.

Theists (*see* THEISM), on the other hand, believe that God wills things in accordance with his own unchangeably good nature (*see* GOD, NATURE OF). So the ultimate good is not outside God but inside him, his own unchanging nature. This is called divine essentialism.

Arguments for Essentialism. Christian essentialists offer three basic lines of argument in favor of their view: philosophical, biblical, and practical.

Philosophical Arguments for Essentialism. Traditional theists argue that God is unchangeable in his nature. Thomas Aquinas offered three basic arguments for God's immutability (*see* GOD, NATURE OF).

The argument from God's pure actuality. The first argument is based on the fact that a God of pure Actuality ("I Am-ness") has no potentiality. For everything which changes has potentiality. But there can be no potentiality in God (he is pure Actuality). Therefore, God cannot change (Exod. 3:14). For whatever changes has the potential to change. But as pure Actuality God has no potential to actualize through change.

The argument from God's perfection. The second argument for God's unchangeability argues from his absolute perfection. Whatever changes acquires something new. But God cannot acquire anything new, since he is absolutely perfect; he could not be better. Therefore, God cannot change. God is by his very nature an absolutely perfect being. If he lacked any perfection, he would not be God. However, to change one must gain something new. But to gain a new perfection is to have lacked it. A God lacking in some perfection would not be the absolutely perfect God who is.

The argument from God's simplicity. The third argument for God's immutability follows from his simplicity. Everything which changes is composed of what changes and what does not change. But there can be no composition in God (he is an absolutely simple being). Hence, God cannot change.

If everything about a being changed, it would no longer be the same being. In fact, that would not be change at all but annihilation of one thing and a recreation of something entirely new. If in every change something remains the same and something does not, the thing that changes must be composed of these two elements. Since an absolutely simple being, such as God, cannot have two elements, it follows that God cannot change.

Biblical Arguments for Divine Essentialism. Scriptures that support theistic essentialism are those that declare God to be unchangeable in his nature.

Old Testament evidence of immutability. The Old Testament psalmist declared: "In the beginning you [LORD] laid the foundations of the earth, and the heavens are the work of your hands. They will perish, but you remain; they will all wear out like a garment. Like clothing you will change them and they will be discarded. But you remain the same, and your years will never end" (Ps. 102:25–27). First Samuel 15:29 affirms that "He who is the Glory of Israel does not lie or change his mind; for he is not a man, that he should change his mind." The prophet added, "I the L ORD do not change. So you, O descendants of Jacob, are not destroyed" (Mal. 3:6).

New Testament evidence of immutability. The New Testament is equally strong about God's unchangeable nature. Hebrews 1:10–12 quotes Psalm 102 with approval. A few chapters later the author of Hebrews asserts, "God did this so that, by two unchangeable things in which it is impossible for God to lie" (Heb. 6:18a). The apostle Paul adds in Titus 1:2 , "God, who does not lie, promised before the beginning of time." James 1:17 points out that "Every good and perfect gift is from above, coming down from the Father of the heavenly lights, who does not change like shifting shadows."

Now if God is unchangeable in his nature, then his will is subject to his unchangeable nature. Thus, whatever God wills must be good in accordance with this nature. God cannot will contrary to his nature. He cannot lie (Heb. 6:18). He cannot be unloving, nor unjust. Divine essentialism must be correct.

Practical Arguments for God's Moral Immutability. Two practical arguments are offered in favor of divine essentialism, the need for moral stability and moral repugnance. These are supported by what we experience of God's trustworthiness and the scriptural testimony that God can be trusted not to change.

The Argument from the Need for Moral Stability. If all moral principles were based on God' changing will, then there would be no moral security. How could one be committed to a life of love, mercy, or justice only to find out that the rules had changed about whether these were the right things to do? Indeed, how could we serve God as supreme if he could will that our ultimate good was not to love him but hate him?

The Argument from Moral Repugnance. Divine essentialists insist that it is morally repugnant to assume, as voluntarists do, that God could change his will on whether love is essentially good and will instead that hate be a universal moral obligation. Likewise, it is difficult to conceive how a morally perfect being could will that rape, cruelty, and genocide would be morally good. Since it is morally repugnant for creatures made in God's image to imagine such a change in God's will, how much more must it be for the God in whose image we are made.

The Argument from God's Trustworthiness. The Bible presents God as eminently trustworthy. When he makes an unconditional promise he never fails to keep it (cf. Gen.

12:1–3 ; Heb. 6:16–18). Indeed, the gifts and callings of God are without change of mind on his part (Rom. 11:29). God is not a man that he should repent (1 Sam. 15:29). He can always be counted on to keep his word (Isa. 55:11). But this ultimate trustworthiness of God would not be possible if he could change his will at any time about anything. The only thing that makes God morally bound to keep his word is his unchangeable nature. Otherwise, he could decide at any moment to send all believers to hell. He could reward the wicked for murder and cruelty. Such a God would not be trustworthy. The God of the Bible is unchangeably good.

Objections to Essentialism. *Objection from God's Supremacy.* Voluntarists, such as, William of Ockham, object to essentialism. One argument is from the supremacy of God, which can be stated:

1. Either God wills it because it is right, or else it is right because God wills it.

2. But if he wills it because it is right, then God is not supreme because there is something outside him to which he is subject.

3. Hence, it is right because God wills it.

Essentialists note two problems with this argument. Premise 1 presents a false dilemma. It need not be an either/or; it could be a both/and. That is, perhaps moral principles flow from the will of God as rooted in the nature of God. If so, then a voluntaristic conclusion does not follow. Also, premise 2 wrongly assumes that the supreme ethical standard to which God's will must be subject is "outside" of God. But if it is "inside God," namely, his own supreme moral nature, then the dilemma vanishes.

Objection from the Nature of Morality. Those opposed to essentialism argue that moral principles by their very nature flow from the will of God, not from his nature. For a moral law is a prescription, and prescriptions come only from prescribers. It is an ethical command, and commands come only from commanders. Hence, it is of the very nature of moral law that it come from a Moral Lawgiver. They insist that to claim (as essentialists do) that moral laws flow from God's essence, not his will, is to misunderstand the nature of a moral principle.

However, essentialists respond that voluntarists again wrongly assume that it is either/or, rather than both/and. The problem is resolved if one posits (as essentialism does) that moral principles flow from the will of God as rooted in the unchangeable nature of God. That is, God wills what is right in accordance with the unchangeably good character of his moral nature (*see* MORALITY, ABSOLUTE NATURE OF).

Objection from God's Sovereignty. The argument from God's sovereign will is based more on a specific interpretation of certain Scriptures than on philosophical reasoning. Did not Job declare to God: "I know that you can do all things; no plan of yours can be thwarted" (Job 42:2)? And did not the apostle Paul affirm of God: " 'I will have mercy on whom I have mercy, and I will have compassion on whom I have compassion.' It does

not, therefore, depend on man's desire or effort, but on God's mercy" (Rom. 9:15–16). Does not God do everything "in accordance with his pleasure and will" (Eph. 1:5)?

One need not reject the sovereignty of God to see the fallacy of this argument. These passages are not speaking of the ultimate basis of moral principles but of God's election. Even biblical texts that speak of God's will as the ultimate source of what is morally right do not prove voluntarism. Moral principles could come ultimately from God's will *as rooted in his unchangeable nature* . This is, in fact, exactly what the Bible declares of God's unchangeable character.

Objection That God Has Changed His Will. According to essentialists, there are examples in Scripture where God changed his will. Did he not "repent" of making mankind in the days of Noah (Genesis 6)? Did God not "repent" or change his mind about the destruction of Nineveh (Jonah 3)? Did not God change his mind about destroying Israel after Moses prayed (Numbers 14)?

Divine essentialists point out that God did not *actually* change in any of these cases. Human beings changed in relation to God and, hence, it only *appeared* from a human standpoint that God changed. The wind appears to change when we turn from pedaling a bike into it and ride with it at our back. A water fall has not changed its flow, simply because we right a downward-turned cup and suddenly find that it is full. As Thomas Aquinas noted, when the person moves from one side of the pillar to the other, the pillar does not move in relation to the person. Rather, the person moves in relation to the pillar.

Conclusion. Divine essentialism is rooted in good arguments philosophically, biblically, and practically. The objections against it fail to make their points stick. Hence, while ethical principles do flow from God's will, nevertheless, they are rooted in his unchangeable nature. Thus, God cannot will anything that is contrary to his essentially good moral nature.

Eusebius. Eusebius (ca. 260–340) was bishop of Caesarea and the "father of church history." His *Ecclesiastical History* is the principal source of information from the apostolic period to the fourth century. It contains an immense amount of material on the Eastern church, though little about the West. Eusebius also wrote *The Martyrs of*

Palestine , an account of the Diocletian persecutions (303–310). He also wrote a biography of the emperor Constantine.

The apologetic and polemic writings of Eusebius were extensive. They include: *Against Hierocles* (answering anti-Christian rhetoric of a pagan governor of Bithynia), *The Preparation for the Gospel* (why Christians accept the Hebrew tradition and reject the Greek), and *Demonstration of the Gospel* (arguments for Christ from the Old Testament). Eusebius also wrote a work on the incarnation, *The Theophany* . *Against Marcellus, Bishop of Ancyra* is a collection of Old Testament passages foretelling the coming of Christ. To the latter he added a theological *Refutation of Mar cellus* . Eusebius wrote *The Defense of Origen* on Origen 's views of the Trinity and incarnation (see Schaff, 2d series, 1.36). He wrote a book on *Problems of the Gospels* , *On Easter* , *On the Theology of the Church* , and *On the Names and Places in the Holy Scriptures* .

Eusebius is a crucial historical link between the apostles and the Middle Ages. After the apostles and earliest apologists, he is a prime example of the form taken by early Christian apologists. Further, he played a key role in the transmission of Scripture (see Geisler and Nix, 278–82) by preparing fifty copies of the Bible only 25 years after Diocletian had ordered its extinction in 302.

Other early witnesses are covered in the article NEW TESTAMENT, NON-CHRISTIAN SOURCES .

Evil, Problem of. If God is absolutely good, then why is there evil (*see* GOD, NATURE OF)? The problem of evil is a serious challenge to the defense of Christianity. Actually there are many problems relating to evil, for example, the problems about its origin, nature, purpose, and avoidability. The problems of evil can be divided among moral, metaphysical (*see* METAPHYSICS), and physical.

Worldviews and Evil. Although every worldview has to deal with the problem of evil, it is an especially acute problem for theism. Of the three major worldviews, Atheism affirms the reality of evil and denies the reality of God. Pantheism affirms the reality of God but denies the reality of evil . Theism affirms the reality of both God and evil.

Herein is the problem; how can an absolutely good Being (God) be compatible with evil, the opposite of good?

As compared with the other worldviews that affirm both God and evil, theism would seem to be in a more disadvantageous position. Finite godism, for example, can claim that God desires to destroy evil but is unable to because he is limited in power. Deism , likewise, can distance God from evil by stressing that God is not immanent in the world, at least not supernaturally. We are on our own. And for panentheism evil is a necessary part of the ongoing progress of the interaction of God and the world (his body).

The problem for theism is that it not only believes God is all-powerful and could destroy evil, but he is all-loving and should destroy it. Further, the theistic God is all-knowing and created this world fully aware of what would happen. What is more, God created the world freely (*see* CREATION, VIEWS OF), so that he could have done otherwise.

It is in the context of this kind of theistic God that we approach problems of evil.

The Origin of Evil. Where did evil come from? An absolutely good God cannot create evil. Nor, would it seem, can a perfect creature give rise to imperfection. Whence, then, evil? The problem can be summarized:

1. God is absolutely perfect.
2. God cannot create anything imperfect.
3. But perfect creatures cannot do evil.
4. Therefore, neither God nor his perfect creatures can produce evil.

However, in a theistic universe these are the only two sources for moral evil. Therefore, there seems to be no solution for the origin of evil in a theistic universe.

The basic elements in the theistic response to this problem are found in Augustine and Thomas Aquinas. Theists since then have followed the contours of their thought. Both agreed on the response that can be stated as follows:

1. God is absolutely perfect.
2. God created only perfect creatures.
3. One of the perfections God gave some of his creatures was the power of free choice.
4. Some of these creatures freely chose to do evil.

5. Therefore, a perfect creature caused evil.

God is good, and he created good creatures with a good power called free will. Unfortunately, they used this good power to bring evil into the universe by rebelling against their Creator. So evil did arise from good, not directly but indirectly, by the abuse of a good power called freedom. Freedom in itself is not evil. It is good to be free. But with freedom comes the possibility of evil. So God is responsible for making evil possible, but free creatures are responsible for making it actual.

Of course, other questions attach to this free choice solution to the origin of evil. One is, what caused the first creature to choose evil?

Theists distinguish between the primary cause of a free action (God) and the secondary cause (a human being). God gave the power of choice. However, God is not responsible for the exercise of that free choice to do evil. God does not *perform* the free action for us. Human free choice is not a mere instrumental cause through which God works. Human beings are the efficient, albeit secondary, cause of their own free actions. God produces the *fact* of free choice, but each human performs the *act* of free choice. God then is responsible for the *possibility* of evil, but we must bear the responsibility for the *actuality* of it. God neither wills evil to be done, nor wills it not to be done. He wills to permit evil to be done, and this is good.

But if God cannot will evil, then what is the cause of it? No action can be uncaused, since this violates the first principle of causality (*see* CAUSALITY, PRINCIPLE OF) that demands that every event has a cause.

To respond to this question it is necessary to unpack the nature of free choice. There are three basic views of the nature of free choice: In determinism, a free act is caused by another; in indeterminism, it is uncaused, and in self-determinism it is caused by oneself. Determinism would eliminate human responsibility, since another caused the action, not ourselves. Indeterminism is irrational, since a fundamental rule of reason is that every action has a cause. It follows, then, that every free choice must be self caused.

Of course, a person uses the *power* of free choice to make free choices. However, the person is not free choice. He simply *has* free choice. It is wrong to say I *am* free choice; I simply *have* free choice. So, I am the efficient cause of my own free actions, but the power of free choice is the means by which I freely act.

The Nature of Evil. There is another dimension to this difficulty. What is the *nature* of evil? That is, what is the essence or identity of evil? This too, is a particularly pesky problem for a classical theist (*see* CLASSICAL APOLOGETICS). For God alone is eternal, and everything he created was good. What, then, is evil?

Theists reject dualism . Evil is not a coeternal principle outside of God. For not all opposites like good and evil are first principles. This wrongly assumes that just because something can be essentially good (God), something can be essentially bad. But once

dualism is rejected, one has great difficulty explaining the reality of evil. If evil is not something outside of God, and it cannot be anything inside of God, then what is it? The problem can be summarized this way.

1. God is the Author of everything.

2. Evil is something.

3. Therefore, God is the Author of evil.

Rejecting the first premise leads to dualism. Likewise, denying the second leads to illusionism which denies the reality of evil (*see* PANTHEISM). Neither is acceptable to a theist. What, then, is the solution? To agree that God did not create all things is to deny his sovereignty. To say evil is nothing denies reality. However, to admit that God caused all things and evil is something is to acknowledge that God caused evil—a conclusion rejected by Aquinas. But this conclusion seems to follow logically from these premises. Unless one rejects the truth of one of the premises, he must accept the truth of the conclusion.

The theist responds that evil is not a *thing* or substance. Rather it is a *lack* or privation of a good thing that God made. Evil is a deprivation of some particular good. The essence of this position is summarized:

1. God created every substance.

2. Evil is not a substance (but a privation in a substance).

3. Therefore, God did not create evil.

Evil is not a substance but a corruption of the good substances God made. Evil is like rust to a car or rot to a tree. It is a *lack* in good things, but it is not a thing in itself. Evil is like a wound in an arm or moth-holes in a garment. It exists only in another but not in itself.

It is important to note that a privation is not the same as mere *absence* . Sight is absent in a stone as well as in a blind person. But the absence of sight in the stone is not a privation. Absence of something that *ought to be there* . Since the stone by nature ought not to see, it is not deprived of sight, as is the blind man. Evil, then is a deprivation of some good that ought to be there. It is not a mere negation.

To say that evil is not a thing, but a lack in things, is not to claim that it is not *real* . Evil is a real lack in good things, as the blind person knows only so well. Evil is not a real substance, but it is a real privation in good substances. It is not an actual entity but a real corruption in an actual entity.

Evil as privation comes in different kinds. There are physical privations, such as mutilations and there are moral privations, such as a sexual perversity. Privation can be in substance (*what* something is) or in relationships (*how* it relates to others). There are not only bad *things* but there are bad relations between things. A relationship of love is a good one; hate is an evil one. Likewise, when a creature worships its Creator, it relates well; blaspheming the Creator is an evil relationship.

From this perspective, it follows that there is no such thing as something that is totally evil. If it were totally deprived of all good, it would be nothing. A totally rusty car is no car at all. And a totally moth-eaten garment is only a hanger in a closet. Evil, like a wound, can only exist in something else. A totally wounded arm means the person is maimed.

In view of this, something cannot be totally private, at least not in a metaphysical sense. A totally corrupted being would not exist at all. And a totally incapacitated will could not make any moral actions. One must take care not to carry human depravity so far that one destroys the ability to sin. There cannot be a supreme evil, for although evil lessens good; it can never totally destroy it. Nothing can be complete, unmitigated evil. For if all good were entirely destroyed—and this would be required for evil to be complete—evil itself would vanish since its subject, namely good, would no longer be there.

The fact that evil cannot be total in a metaphysical sense by no means implies that it cannot be total in a moral sense. A being can be *totally* (or, *radically*) depraved morally in the sense that evil has invaded every part of being. But the moral total depravity can only be extensive, not intensive. It can extend to every part of a person's being, but it cannot destroy personal being. If it destroyed one's person, there would no longer be a person to do evil. Total evil in this sense would destroy a person's ability to do evil.

Classical theists described things in terms of their four causes: (1) efficient; (2) final; (3) formal, and (4) material. A human being has God as the *efficient cause* , God's glory and their good; as *final cause* , a soul as *formal cause* and a body as the *material cause* . However, since evil is not a substance, it has no formal cause, and its material cause is a good substance.

Efficient Cause—Free choice

Final Cause—None. Evil is the lack of order.

Formal Cause—None. Evil is the privation of form.

Material Cause—A good substance

The efficient cause of moral evil is free choice, not directly but indirectly. There is no purpose (final cause) of evil. It is lack of proper order to the good end. Evil has no formal cause of its own. Rather, it is the destruction of form in another. Its material cause is a good but not its own. It exists only in a good thing as the corruption of it.

The Persistence of Evil. There is another aspect of the problem of evil. Why does God allow it? Even if he did not produce it, he does permit it. Yet he is all-powerful and could destroy it. So why doesn't he do so?

The classical way to state the problem of the persistence of evil is this:

1. If God is all good, he would destroy evil.

2. If God is all powerful, he could destroy evil.

3. But evil is not destroyed.

4. Therefore, there is no such God.

Put this way, the argument leaves open the possibility of a finite god, but theists reject such a concept. For every finite or limited being has a cause (*see* COSMOLOGICAL ARGUMENT). So a finite god is only a creature that needs an infinite Creator. And since God is powerful, then he must be infinitely powerful. Likewise, since he is good, he must be infinitely good. So, a finite god is not an option for a theist. God has both the desire and ability needed to do anything possible.

Is it possible to destroy evil? The theist responds as follows:

1. God cannot do what is actually impossible.

2. It is actually impossible to destroy evil without destroying free choice.

3. But free choice is necessary to a moral universe.

4. Therefore, God cannot destroy evil without destroying this good moral universe.

It is impossible for God to do what is contradictory. He cannot make an affirmation to be true and false at the same time. He can do nothing which involve such an impossibility, such as, making a square circle or a stone so heavy he cannot lift it.

Even an omnipotent being cannot do anything. It can only do what is possible. But it is not possible to force people to freely choose the good. Forced freedom is a contradiction. Therefore, God cannot literally destroy all evil without annihilating free choice. The only way to destroy evil is to destroy the good of free choice. But when there is no moral free choice, then there is no possibility of moral good. Unless hate is possible, love is not possible. Where no creature can blaspheme, no creatures can worship either. Therefore, if God were to destroy all evil, he would have to destroy all good too.

However, theism holds that even though God could not *destroy* (annihilate) all evil without destroying all good, nevertheless, he can and will *defeat* (overcome) all evil without destroying free choice. The argument can be summarized as follows:

1. God is all good and desires to defeat evil.

2. God is all powerful and is able to defeat evil.

3. Evil is not *yet* defeated.

4. Therefore, it will one day be defeated.

The infinite power and perfection of God guarantee the eventual defeat of evil. The fact that it is not yet accomplished in no way diminishes the certainty that it will be defeated. Even though evil cannot be destroyed without destroying free choice, nonetheless, it can be *overcome* .

An all-powerful God could, for example, *separate* good persons from evil ones according to what persons freely choose. Those who love God will be separated from those who do not. Those who desire the good but are hindered by evil will no longer have their good purposes frustrated. And those who do evil and are hampered by good influences will no longer be nagged by the proddings of good. Each, whether in heaven* or hell, will have it according to their free choice. In this way God's victory over evil would not violate free choice.

Not only *can* a theistic God defeat evil, but he *will* do it. We know this because he is all good and would want to defeat evil. And because he is all-powerful and is able to defeat evil. Therefore, he will do it. The guarantee that evil will be overcome is the nature of the theistic God.

The Purpose of Evil. No evil is good, but some evil has a good purpose. Warning pains for example are painful, but there painfulness has a good purpose. Of course, not all evil seems to be of this type. What, then, of evil which seems to have no good purpose? The problem can be summarized as follows:

1. An all-good God must have a good purpose for everything.

2. There is no good purpose for some suffering.

3. Therefore, there cannot be an all-good God.

It seems evident that there is useless suffering in the world. Some people get better through suffering, but others get bitter. Broken bones are stronger when they heal, but some never heal. Many die. What about all the purposeless evil in the world?

The theistic answer to apparently purposeless evil is fourfold. First, God has a good purpose for everything. Second, we do know a good purpose for much evil. Third, some evil is a byproduct of good. Fourth, God is able to bring good out of evil.

God Has a Good Purpose for Everything. The antitheist overlooks an important distinction: God knows a good purpose for all evil, even if we do not. Simply because finite minds cannot conceive of a good purpose for some evil does not mean that there is none. Since God is omniscient, he knows everything. And since he is omnibenevolent, he has a good purpose for everything. Hence, God does know a good purpose for all evil, even if we do not know it:

1. An omnibenevolent God has a good purpose for everything.

2. There is some evil for which we see no good purpose.

3. Therefore, there is a good purpose for all evil, even if we do not see it.

The fact that finite beings don't see the purpose for some evil does not mean there is none. This inability to see the purpose for evil does not disprove God's benevolence; it merely reveals our ignorance.

The purpose for much evil is known by us. In spite of the fact that we do not know everything, we do know something. And what we do know is that there is a good purpose for much evil. Warning pains have a good purpose. In fact, the ability to have pain has a good purpose. For if we had no nervous system we could destroy ourselves without even feeling any pain. Also, physical pain can be a warning to save us from moral disaster. As C. S. Lewis noted, pain is God's megaphone to warn a morally deaf world. And if we as finite beings know a good purpose for much evil, then surely an infinite Mind can know a good purpose for the rest.

Evil sometimes is a byproduct of a good purpose. Not every specific evil needs a good purpose. Some evil can simply be a necessary byproduct of a good purpose. The early bird gets the worm, but the early worm gets eaten. What is life for higher forms is death for lower forms. Plants and animals die so that man may have food to live. Thus, evil results indirectly from good because it is the consequence of a good purpose. Hence, the response may be put this way:

1. God has a good purpose for everything he does.

2. Some good purposes have evil byproducts.

3. Therefore, some evil is a byproduct of a good purpose.

Not every *specific* event in the world needs to have a good purpose; only the *general* purpose needs to be good. The blacksmith has a good purpose for hammering the molten iron into a horseshoe. However, not every spark that flies has a purpose for its destiny. Some sparks may ignite unintended fires. Likewise, God had a good purpose for creating water (to sustain life), but drowning is one of the evil byproducts. Thus, not every specific drowning needs to have a good purpose, even though making the water in which they drown did. So many good things would be missed if God did not permit evil to exist.

Fire does not burn unless air is consumed. Neither just retribution is inflicted nor patience is achieved, but for the evil of tribulation.

God can bring good out of evil. Of course, God is all-powerful and he is able to redeem good even from evils. A drowning person may inspire acts of bravery. Although sawdust is an unintended byproduct of making lumber, it can be salvaged to make paper. Likewise, God in his providence is able to redeem much (if not all) good out of the evil byproducts in the world. God would in no wise permit evil to exist in his works unless he were so almighty and so good as to produce good even from evil.

That does not mean that this present world is the best of all possible worlds. It means that God has made it the best possible way to attain his ultimate goal of the greater good. God may not always redeem good out of every evil byproduct in a fallen world. This could be true in both the physical and the moral realm. Like radioactive waste, some evil byproducts may resist reprocessing. Indeed, in view of the second law of thermodynamics, the physical world is decaying. But God has the power to recreate it (cf. 2 Peter 3:13). Human death can be overcome by resurrection (cf. Romans 8 ; 1 Corinthians 15). Neither of these is any problem for an omnipotent God.

The Problem of Physical Evil. The above solution to the problem of evil do not appear to solve the problem of natural disasters. Why tornadoes, hurricanes, and earthquakes? It does not suffice to say that the free will of creatures caused all these. Further, many innocent people are killed in them. How, then, can natural evil be explained. In logical form:

1. Moral evil is explained by free choice.
2. But some natural evil does not result from free choice.
3. Natural evil cannot be explained by free choice of creatures.
4. Hence, God must be responsible for natural evil.
5. But natural evils cause innocent suffering and death.
6. Therefore, God is responsible for innocent suffering and death.

Theists question several premises of this argument. One response to premise 5, for example, is that in this fallen world no one is innocent. We sinned in Adam (Rom. 5:12) and as a consequence deserve death (Rom. 6:23). Natural disaster is a direct result of the curse on creation because of the fall of humankind (Genesis 3 ; Romans 8). It will not be removed until Christ returns (Revelation 21–22).

Likewise, proposition 6 is mistaken, since it implies God is morally culpable for taking the life of a creature. This is a category mistake, since it wrongly assumes that, since it is wrong for a creature to take innocent life, it is also wrong for the Creator to do

so. But God gave life and alone has the right to take it (cf. Deut. 32:39 ; Job 1:21). We did not give life, and we do not have the right to take it.

Premise 3 is definitely untrue. For theism can explain all natural evil by reference to free choice. In biblical language, the free choice of Adam and Eve brought natural disaster on this world. In addition the free choice of evil angels accounts for the rest of human suffering. But even putting this possibility aside, which could in itself explain all natural evil, physical suffering can be explained in reference to human free choice.

1. Some suffering is brought on directly by our own free choice. The choice to abuse my body can result in sickness.

2. Some suffering is brought on indirectly by free choice. The choice to be lazy can result in poverty.

3. Some physical evil to others can result from our free choice, as in the case of spouse or child abuse.

4. Others suffer indirectly because of our free choice. Alcoholism can lead to poverty of one's children.

5. Some physical evil may be a necessary byproduct of a good process. Rain, hot air, and cool air are all necessary for food and life, but a byproduct of these forces is a tornado.

6. Some physical evil may be a necessary condition for attaining a greater moral good. God uses pain to get our attention. Many have come to God through suffering.

7. Some physical suffering may be a necessary condition of a greater moral good. Just as diamonds are formed under pressure, even so is character.

8. Some physical evil is a necessary concomitant of a morally good physical world. For instance, it is good to have water to swim and boat in, but a necessary concomitant is that we can also drown in it. It is good to have sex for procreation and enjoyment, even though it makes rape possible. It is good to have food to eat, but this also makes dying of food poisoning possible.

At this point the critic could always ask why a physical world is necessary. Why did not God make spirits, who could not hurt their bodies or die. The answer is: God did; they are called angels. The problem is that, while no angel can die of food poisoning, neither can they enjoy a prime rib. While no angel has ever drowned, neither has any angel ever gone for a swim or went water skiing. No angel has ever been raped, but neither has any angel ever enjoyed sex or the blessing of having children (Matt. 22:30). In this kind of physical world, we simply must take the concomitant evil along with the good.

Eventually, of course, Christian theists believe God will redeem us from all physical evil too, giving us immortal and incorruptible bodies. But if we had those before we were morally ready for them, we would not have made the necessary moral progress toward being suited to them.

The Avoidability of Evil. If God knew evil would occur, why did he create it? God was free to create or not to create. Why did he choose to create a world he knew would fall? Theists believed God is all-knowing, all-good, and free. As all-knowing, God foresaw evil. As free, he could have avoided creating the world. But this conflicts with God as all-good, for such a God must have had a good purpose for creating a world he knew would fall. Why then did he create it?

There were other better alternatives open to God. He could have not created at all. He could have created a nonmoral world where no sin could occur. He could have created a free world where no one would have chosen to sin. He could have created a world where sin occurred but where everyone was ultimately saved. Any one of these worlds would have been better than the world conceived by the orthodox Christian theist, where evil occurs and where not everyone will be saved in the end (*see* HELL ; ANNIHILATIONISM ; UNIVERSALISM). The problem takes this form:

1. God could have chosen a better alternative by: (a) not creating at all; (b) not creating a free world; (c) creating a free world that would not sin; (d) creating a world that sinned but would all be saved.

2. But God did not choose one of these better alternatives.

3. Therefore God did not do his best.

4. But to do less than his best is an evil for God.

5. Therefore, no all-perfect God exists.

Some theists challenge the fourth premise, arguing that God does not have to do his best; he merely has to do good. And what he did in creating this world was good, even if there could have been something better. But assuming, for the argument, that God must do his best, is any other alternative really better than this world? Theists say No.

A nonworld is not better than some world. Nothing is not better than something. This is a classic category mistake. Something and nothing have nothing in common, so they cannot be compared. It is not even like comparing apples and oranges, since they both are fruit. It is like comparing apples and nonapples, insisting that nonapples taste better.

A nonfree world is not morally better than a free world. A nonfree world is a nonmoral world, since free will is necessary for morality. A nonmoral world cannot be morally better than a moral world. Since a nonfree world is not a moral world, there is no moral basis for comparison. This too is a category mistake.

A free world where no one sins or even a free world where everyone sins and then gets saved is *conceivable* but it may not be *achievable* . As long as everyone is really free, it is always possible that someone will refuse to do the good. Of course, God could force everyone to do good, but then they would not be free. Forced freedom is not freedom at all. Since God is love, he cannot force himself on anyone against their will. Forced love is not love; it is rape. And God is not a divine rapist. Love must work persuasively but not coercively. Hence, in every conceivable free world someone would choose to do evil, so a perfect evil-free world may not be possible.

A world where sin never materializes is *conceivable* but it may not be the *most desirable* morally. If evil is not permitted, then it can not be defeated. Like automobiles, a tested world is better than an untested one. Or, to put it another way, no boxer can beat an opponent without getting into the ring. God may have permitted evil in order to defeat it. If evil is not allowed, then the higher virtues cannot be attained. No pain, no gain. Tribulation works patience. There is no way to experience the joy of forgiveness without allowing the fall into sin. So, a world where evil is not defeated and the higher goods attained would not be the best world achievable. Therefore, while a world where sin does not occur is *theoretically conceivable,* it would be *morally inferior* .

Conclusion. No one has demonstrated that any alternative world is morally better than the one we have. Hence, no antitheist can show that God did not create the best world, even given the privation of good. This, of course, does not mean that the theist is committed to the belief that this present world is the best world that can be achieved. God is not finished yet, and Scripture promises that something better will be achieved. The theist’s assumption is that this world is the best way *to* the best world achievable.

Evolution. Evolution covers three basic areas: the origin of the universe; the origin of first life, and the origin of new life forms. Respectively, these are called cosmic evolution, chemical evolution, and biological evolution (*see* EVOLUTION, BIOLOGICAL ; EVOLUTION, CHEMICAL ; EVOLUTION, COSMIC). Because differing implications and arguments set apart the apologetics relating to each of these evolutionary highways, they will be discussed in separate articles.

In the broad sense, *evolution* means development, but more specifically it has come to mean the theory of common ancestry. It is the belief that all living things evolved by natural processes from earlier and more simple forms of life. Theistic evolution posits a God who got the process going (by creating matter and/or first life) and/or has guided it. Naturalistic evolution believes the entire process is natural including the origin of the universe and first life by spontaneous generation.

For other discussions relating to a critique of evolution science, see ADAM, HISTORICITY OF ; ANTHROPIC PRINCIPLE ; BIG BANG THEORY ; CREATION, VIEWS OF ; DARWIN, CHARLES ; MISSING LINKS ; ORIGINS, SCIENCE OF , and TELEOLOGICAL ARGUMENT .

Evolution, Biological. Some ancient Greeks believed in evolution. However, before Charles Darwin (1809–1882), theories of evolution tended to arise out of a pantheistic worldview (*see* PANTHEISM) and lacked scientific credibility. Darwin theorized a mechanism, called "natural selection," to make evolution work. This placed evolution in the naturalistic framework that has been its stronghold ever since. Much of what Darwin taught has been rejected and surpassed, but his doctrine of natural selection has been maintained.

Biological evolution is divided into micro-evolution (small scale) and macro-evolution (large scale). Opponents of macro-evolution generally accept micro-evolution, since this process simply describes the ability of various forms of life to adapt to their environment. For example, there are several hundred kinds of dogs, but they are all canines. Their differences in breed "evolved" (developed) through both natural and artificial selection. Macro-evolution embraces evolution on the large scale, from microbe to man, from the first one-cell animal to human beings as the highest animal so far developed in the chain.

Most macro-evolutionists believe that life first began as a result of chemical reactions in what Darwin called a "warm little pool." Research has shown that it is possible to generate the essential proteins necessary for life using only a few basic gases and water. This has encouraged the view that life arose from nonliving matter (*see* EVOLUTION, CHEMICAL). New life forms are said to have evolved through mutations and natural selection. As conditions on earth changed, animals adapted new characteristics to meet the challenges. Those who adapted survived and those that did not passed into extinction. The great variety of extinct animals represented among fossils, and their similarities to living species are used to confirm this thesis.

Scientific Basis. Evolution, like other approaches to past events, is a *speculative* , rather than an *empirical* , science. Speculative science deals with past singularities for which there are no recurring patterns of events by which they can be tested. Theories of evolution and creation also are called theories of *origin science* (*see* ORIGINS, SCIENCE OF), rather than *operation science* . Operation science is empirical science; it deals with the way things operate now. It studies regular and repeated phenomena. Its answers can be tested by repeating the observation or experiment. Its basic principles are *observability* and *repeatability* . Micro-evolution is a legitimate study of operation science, especially as it relates to genetics.

Since origin science deals with past singularities it is more of a *forensic* science. Past events of origin were not observed and cannot be repeated. They must be reconstructed by viewing the evidence that remains. Just as a forensic scientist attempts to reconstruct how the homicide occurred from physical evidence, so the origin scientist tries to reconstruct the origin of the universe, first life, and new life forms from the evidence.

The Principles of Origin Science. Instead of observation and repetition, the origin scientist uses principles of causality and analogy. The principle of *causality* (*see* CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES), which is at the root of modern science and all rational thought, states that every event has an adequate cause. In science, the principle of *analogy* (or uniformity) states that the present is the key to the past. Or, more precisely, the kinds of causes that produced certain kinds of effects in the present are the kinds of causes that produce similar events in the past.

Two Kinds of Causes. Causality comes in two basic varieties: *natural* and *intelligent* . Intelligent causes are sometimes called *primary causes* and natural causes are called *secondary causes* . Most sciences seek natural causes in the laws of physics or chemistry.

Others, however, deal with intelligent causes. Archaeology, for example, seeks an intelligent cause for the cultural remains of the past. Astronomers in the SETI (Search for Extra Terrestrial Intelligence) Program have tuned their radio telescopes into outer space, searching for a message from intelligent beings. Both of these sciences believe they can tell when they have found an effect that demands an intelligent cause by the special marks a mind leaves on what it produces. For example, there is an obvious difference between alphabet cereal spilled on the table and the arranged series of letters: "Tom, take out the garbage. Mom." Those who believe there is an intelligent cause for the origin of the universe, first life, and/or new life forms are called "creationists." Those who believe these can be explained by purely natural, nonintelligent causes are called "evolutionists." "Theistic evolutionists" try to synthesize the two views.

Three basic areas of dispute separate creationists and evolutionists on the question of *origins:* (1) the origin of the universe (*see* EVOLUTION, COSMIC), (2) the origin of first life (*see* EVOLUTION, CHEMICAL), and (3) the origin of human life. Historically, these areas have been called "cosmogony, biogony, and anthropogony" (*see* MISSING LINKS), in distinction to the operation sciences cosmology, biology, and anthropology.

Origin of New Life Forms. *Naturalistic Explanation of Origins.* New life forms have come either from natural or supernatural (intelligent) causes. Darwin made one of his greatest contributions to the theory of evolution with his analogy of selection by breeders to selection in nature. This principle of natural selection became the hallmark of evolution because it provided a system by which new developments of life forms could be explained without recourse to a supernatural cause.

Darwin was aware that there were serious flaws with the analogy between breeders and nature, but he hoped that what humans could do in a few generations could be done by nature in several hundred generations. However, time is not the only factor which weakens the analogy. E. S. Russell wrote:

> It is unfortunate that Darwin ever introduced the term "natural selection," for it has given rise to much confusion of thought. He did so, of course, because he arrived at his theory through studying the effects of selection as practiced by man in the breeding of domesticated animals and cultivated plants. Here the use of the word is entirely legitimate. But the *action of man in selective breeding is not analogous to the action of "natural selection,"* but *almost its direct opposite* . . . . Man has an aim or an end in view; "natural selection" can have none. Man picks out the individuals he wishes to cross, choosing them by the characteristics he seeks to perpetuate or enhance. He protects them and their issue by all means in his power, guarding them thus from the operation of natural selection, which would speedily eliminate many freaks; he continues his active and purposeful selection from generation to generation until he reaches, if possible, his goal. Nothing of this kind happens, or can happen, through the blind process of differential elimination and differential survival which we miscall "natural selection." [cited in Moore, 124]

Evidence of the Fossil Record. It is seldom fully appreciated that the only real evidence for or against evolution is in the fossil record. Every other argument for evolution is based on *what could have been* . Only the fossil record records examples of *what actually did happen* . Darwin recognized this as a problem as well and wrote in *On the Origin of Species,* "Why then is not every geological formation and every stratum full of such intermediate links? Geology assuredly does not reveal any such finely graduated organic chain, and this, perhaps, is the most obvious and gravest objection which can be urged against my theory" (Darwin, 280).

In the century and a half since Darwin wrote, the situation has only become worse for his theory. Noted Harvard paleontologist Stephen Jay Gould has written, "The extreme rarity of transitional forms in the fossil record persists as the trade secret of paleontology. The evolutionary trees that adorn our textbooks have data only at the tips and nodes of their branches; the rest is inference, however reasonable, not the evidence of fossils" (Gould, 14). Eldredge and Tattersall agree, saying, "Expectation colored perception to such an extent that the *most obvious single fact about biological evolution—non-change—* has seldom, if ever, been incorporated into anyone's scientific notions of how life actually evolves. If ever there was a myth, it is that evolution is a process of constant change" (Eldredge, 8).

What does the fossil record suggest? Evolutionists such as Gould now agree with what creationists from Louis Agassiz to Duane Gish have said all along, that the fossil record includes two features particularly inconsistent with gradualism:

Stasis. Most species appear in the fossil record looking much the same as when they disappear; morphological change is limited and directionless.

Sudden appearance. In any area, a species does not arise gradually. It appears all at once and fully formed (Gould, ibid., 13–14).

There is no real indication that one form of life transforms into a completely different form. While these two features seem to invalidate classical evolution, they are somewhat problematic to creationists also.

Some creationists say that the fossil record reflects the debris of the great flood, either because some animals were better able to escape the waters or by hydrodynamic sorting as the remains settled. These scientists are concerned with preserving evidence of a young earth because they believe creation was in seven literal twenty-four-hour-periods and that there are no large gaps in the early genealogies of Genesis.

Others, known as "old-earth creationists," hold that the earth need not be only thousands of years old. This group understands the fossil record to show that creation was accomplished in a series of stages, each new appearance in the geological strata pointing to a new moment of direct creation. Invertebrates appeared first, followed by a long period of nature balancing itself before the next burst of creation. Fish appeared next and then amphibians, until man was created. The latter view does agree with the fossil record, but there is no consensus among creationists about the age of the earth. This is a hotly

debated issue, but both sides agree that the fossil evidence supports creation better than evolution.

Some evolutionists have attempted to deal with the fossil evidence by introducing the idea of punctuated equilibrium. These scientists say that the jumps in the fossil record reflect real catastrophes which induced sudden major changes in the existing species. Hence, evolution is not gradual, but punctuated by sudden leaps from one stage to the next. The theory has been criticized because no evidence has been shown for a mechanism of secondary causes needed to make these sudden advances possible. Their theory appears to be based solely on the absence of transitional fossils. This view breaks with Darwin, who understood evidence of suddenness to be evidence in favor of creation. To accept the idea of punc tuation as a result of a primary cause comes dangerously close to a creationist view.

The Evidence of Vestigial Organs. Evolutionists have used the presence of “vestigial organs” in humans as a support. They argue that, since the human body has organs for which there is no known use, they are left over from an earlier animal stage in which they were useful. The fact that vestigials can be removed with no apparent harm to the body indicates that they are useless. The appendix, ear muscles, and the third eyelid are placed into this category.

However, just because functions for these organs are not known does not mean that none exist. Since scientific knowledge is finite and progressive, there may be functions of which science is not yet aware. That they can be removed without apparent harm to the body is meaningless. Other organs may compensate for their loss. Also, a loss may exist that is not readily detectable. Some organs, such as tonsils, may be more important at an earlier stage in the person’s development as, for example, during early childhood to help fight off diseases. And organs such as a kidney or a lung can be removed without serious loss, yet they have a function.

It is significant that the list of vestigial organs has shrunk from around 100 when the idea was first proposed to about a half dozen today. There are hints about purposes for some of those. The appendix may aid in digestion and may be helpful in fighting off disease. Rabbits have a large appendix, and complete vegetarians may get more benefit from theirs. The muscle of the outer ear helps protect against freezing in colder climates. The “third eyelid” or *nictitating membranae* is used in humans to collect foreign material that gets in the eye. The “tail” or coccyx is necessary for sitting with comfort. The endocrine glands, once thought to be vestigial, are now known to be of great importance in the production of hormones. The thymus has been found to be involved in protecting the body against disease.

Even if some organs are truly leftovers from an earlier period in human development, this would not prove evolution. They may be left over from an earlier stage of the human race, rather than from prehuman species. One might even say that an organ has lost its function would not demonstrate that we are evolving, but devolving—losing some organs and abilities. This is the opposite of evolution.

The Evidence of the Genetic Code. Creationists reason that there are real limitations to evolutionary change that are built into the genetic code of every living being. Changes within this structure indicates design for each major category of life form. Each new life form came into being by an act of intelligent intervention that arranged genetic information to fit functions. Just as letter sequences vary to form different words, DNA patterns vary to produce different species. If it requires intelligence to create *King Lear* from a selection of the words found in a dictionary, then it also requires intelligence to select and sort genetic information to produce the variety of species which work together as a system in nature.

The sudden appearance of these life forms strengthens the case that a supernatural intelligence was at work to accomplish this organization. In accordance with the principle of uniformity, this is the most plausible solution to the problem. So, the greatest problem for evolutionists is not "missing links," but an explanation for the origin of complex new systems of genetic information.

The Evidence from Specified Complexity. Not only was the first living cell exceedingly complex, but higher forms of life are even more complex. If the genetic information in a one-cell animal exceeds that in a volume of the *Encyclopedia Britannica,* the information in the human brain is greater than that in the Library of Congress. If it takes an intelligent cause to produce the simple first life form, no less is needed for human life.

Complexity has always been a major problem for evolution. It amounts to the same problem encountered in examining the origin of first life (*see* EVOLUTION, CHEMICAL). The breeding analogy used to illustrate how natural processes did it all contains a great deal of intelligent intervention that is overlooked in the theory. Breeders manipulate according to an intelligent plan for encouraging specific developments. Informationally speaking, this is going from a state of complexity in the DNA code to a higher, or at least more specific, state of complexity. It is like changing the sentence,

> "She had brown hair."

to the more complex statement,

> "Her auburn tresses shone in the sun."

This increase in information encoded into the DNA strand requires intelligence just as surely as did the original coding to produce life. Indeed, if Darwin's analogy proves anything, it shows the need for intelligent intervention to produce new life forms. The principle of uniformity leads unhesitatingly to this conclusion once it is realized that we are working within origin science, not operation science.

The Evidence from Systemic Change. Macro-evolutionary changes demand large-scale changes from one type of organism to another. Evolutionists argue that this occurred gradually over a long period. One serious objection to this view is that all

functional changes from one system to another must be simultaneous (see Denton, 11). For example, one can make small changes in a car gradually over a period of time without changing its basic type. One can change the shape of the fenders, it color, and its trim gradually. But if a change is in the size of the piston, this will involve simultaneous changes in the cam shaft, block, and cooling system. Otherwise the new engine will not function.

Likewise, changing from a fish to a reptile or a reptile to a bird calls for major changes throughout the system of the animal. All these changes must occur simultaneously or blood oxygenation will not go with lung development, will not match nasal passage and throat changes, autonomic breathing reflexes in the brain, thoracic musculature, and membranes. Gradual evolution cannot account for this.

To make this same point in terms of the genetic code, one cannot go from small gradual changes in a simple genetic code to a more complex DNA molecule without major simultaneous changes, particularly not by random mutations. Small, random changes to “Mary had a little lamb. . .” will never produce *King Lear,* even if all the letters of the alphabet and punctuation are present. The first small random change might read, “Mary sad a little lamb.” The next, “Mary sad a litter lamb.” And the next, “Mary sad a litter lgmb.” With each single change the message gets more garbled. It is a long way from *King Lear* and going in the wrong direction. Only an intelligent being can reform the same letters of the English language into *King Lear*— by simultaneous and systematic redevelopment.

The English alphabet has twenty-six letters; the genetic alphabet has only four, but the method of communicating by sequence of letters is the same. Information scientist Hubert P. Yockey insists, “It is important to understand that we are not reasoning by analogy. The sequence hypothesis applies directly to the protein and the genetic text as well as to written language and therefore the treatment is mathematically identical” (Yockey, 16). It turns out that a single strand of DNA carries the same amount of information as one volume of an encyclopedia.

Each new form of life has its own, unique code that, although it is similar in the letters used, differs vastly in the message conveyed. One can use the very same words and convey an entirely different message. Hence, the evolutionist argument from the high similarity of the words in an ape and a human being do not prove common ancestry. The two sentences “You do love me” and “Do you love me?” have the same words but convey a totally different message. With ingenuity one could construct a paragraph (or even a whole book) in which exactly the same sentences which conveyed a completely different message. A very rudimentary example might go something like this:

> John came before Mary. Mary came after John [= later than]. So John and Mary came together [= at the same place].

Compare this with the same sentences in a different order which convey a different meaning:

> Mary came after [= pursued] John. John came before Mary [= in her presence]. So John and Mary came together [= in a personal relationship].

A high degree of similarity of genetic information in an ape and a human means absolutely nothing. It is the way the pieces are put together that makes a world of difference. Hear this evolutionist's testimony: "When we get down to the business of trying to establish an evolutionary series of sequences, we cannot find the linear, primitive-to-advanced arrangement we had expected." In fact, "instead of a progression of increasing divergence, each vertebrate sequence is equally isolated [e.g.] from the cytochrome sequence for the dogfish." Thus, "in this and countless other comparisons, it has proved impossible to arrange protein sequences in a macro-evolutionary series corresponding to the expected transitions from fish > amphibian > reptile > mammal" (Thaxton, 139–40).

Conclusion. Now that we have new evidence about the nature of the universe, the information stored in DNA molecules, and further fossil confirmation, the words of Agassiz resound even more loudly than they did when first written in 1860:

> [Darwin] has lost sight of the most striking of the features, and the one which pervades the whole, namely, that there runs throughout Nature unmistakable evidence of thought, corresponding to the mental operations of our own mind, and therefore intelligible to us as thinking beings, and unaccountable on any other basis than that they own their existence to the working of intelligence; and no theory that overlooks this element can be true to nature. [Agassiz, 13]

There are two views of the origins of new life forms. One says that everything came about by natural causes; the other looks to a supernatural (intelligent) cause. The overwhelming evidence support is in favor of the latter.

Evolution, Chemical. Chemical evolutionists claim that purely natural laws can explain the origin of first life by spontaneous generation. Creationists insist that an intelligent cause is necessary to construct the basic building blocks of life. Contrary to widespread opinion, the positive evidence for an intelligent cause is not based on the statistical improbability of life arising by chance. Rather, it is because science is not based on chance; it is based on observation and repetition (*see* ORIGINS, SCIENCE OF).

In spite of the well-established fact, based on the work of Louis Pasteur (1822–1895), that life does not begin spontaneously from nonlife, all naturalistic scientists believe that it did at the beginning. The scientific basis for this conclusion is the experiments of Harold Urey and Stanley Miller. They showed that the basic building blocks of life (amino acids) can be obtained from purely chemical elements (hydrogen, nitrogen, ammonia, and carbon dioxide gases) by natural laws without any intelligent intervention. By passing an electrical discharge through these cases they produced these fundamental elements of life. Supposing lightening passing through similar cases in a primal atmosphere, first life may have arisen by a purely natural process on earth or somewhere else.

The theory is that shortly after the earth was cooled enough to allow it, the combination of hydrogen, nitrogen, ammonia, and carbon dioxide reacted to form elementary amino acids, which in time developed into the DNA chains and finally into cells. This process is said to have taken several billion years and the extra energy of the sun, volcanic activity, lightning, and cosmic rays was needed to keep the process going.

The Problems. That life could arise by purely natural causes is subject to serious objections.

It is contrary to the universal scientific experience that life never arises from nonlife. The premodern, fallacious belief that it could was based on ignorance of microscopic bacteria. Once Pasteur sterilized the container, killing the bacteria, no life emerged. The same inability is recognized by principles of causation. A fundamental causal concept demands that an effect cannot be greater than its cause (*see* CAUSALITY, PRINCIPLE OF). Just as nonbeing cannot produce being, nonlife cannot produce life. Water does not rise higher than its source on its own.

The origin-of-life experiments involve illegitimate investigator interference. For example, intelligent intervention is manifest at several levels. Why are certain gases (such as hydrogen) included and others (such as Oxygen) excluded? Is this not an intelligent choice, based on a knowledge of what will and will not work? Further, who constructed the apparatus for the experiment? Why does it not have a different design? Why did they choose to inject an electrical discharge? Obviously, intelligent choices were being made at several levels.

There is an unwarranted assumption that primal conditions on earth (or elsewhere) were similar to those in the experiment. Two crucial conditions are now known to have been different. Since the experiment will not work with oxygen present, it was assumed that the earth's early atmosphere had no oxygen. But this is now known to be false. That fact in itself is sufficient to falsify the experiment and the chemical evolution theory. Further, as even many chemical evolutionists admit, chemicals in the concentration used in the experiment are not found anywhere on earth. The whole primal soup scenario is a myth (see Thaxton, chap. 4).

The analogy between the Miller experiment and known conditions on the early earth is invalid, since it overlooks the presence of destructive forces. Oxygen would destroy the process. The energy needed from the sun and cosmic radiation damage the very substances produced. Under the conditions required for life to have arisen spontaneously, it is more likely that the elements would be destroyed faster than they could be produced. Nature is filled with destructive forces that tear down and bring disorder. This is part of the second law of thermodynamics (*see* THERMODYNAMICS, LAWS OF).

Even if the right chemicals could be produced, no satisfactory answer has been given for how they could have been arranged properly and enclosed in a cell wall. This would require another set of conditions altogether.

Further, evolutionists have never shown any mechanism that can harness the energy to do the work of selecting amino acids and sorting out which will build each gene to develop a living organism. It doesn't do any good to have a drawer full of batteries if there is no flashlight—a mechanism for harnessing energy—to contain them. The DNA molecule is very complex. See a description of this complexity in EVOLUTION, BIOLOGICAL .

Granting that there may have been enough energy available to do the work, the only systems that can harness the energy to do this kind of work are either living or intelligent.

It is easy to pump a lot of energy into a system at random to make it hot, but to organize it and create information requires intelligence.

Finally, even with all the intelligent interferences in the Miller experiments, which invalidate the results for a purely natural processes, the result has not been a single living cell. An amino acid is only a chemical. However biologically interesting it may be, it is not alive. One crucial missing ingredient—the code of life or DNA—is positive evidence for a creative intelligence.

Other Naturalistic Theories. Other theories have been advanced to explain the origins of first life on earth. One is that natural laws were involved that have not yet been discovered, but scientists can only point out the need when the laws they do know about militated against creation of life. Others suggest that life may have come to earth from somewhere else in the universe, either on a meteorite or on an ancient spaceship, but both of these solutions just push the question back one step: Where did that life come from? Thermal vents in the sea floor and clay deposits are being studied as possible breeding grounds for life's beginnings, but this does not account for a way to harness energy to make specified complexity possible. The most probable cause, and the only one that the evidence supports, is an intelligent cause. The only significant debate is between pantheist and theist, both of whom insist there must be a Mind behind the specified complexity in living things, differing only on whether it is beyond the universe or only in it.

Evidence of Intelligence. Evidence is lacking for a natural cause of origin, but is there positive evidence pointing to an intelligent cause of first life?

The key to knowing which kind of cause is involved in questions of origin is the principle of analogy (uniformity). This is one of the fundamental principles in any scientific understanding of the past. Archaeology uses it to posit an intelligent cause for artifacts that might have originated with past civilizations. The SETI program sorts through radio waves from the cosmos in its search for extraterrestrial life, looking for something that breaks with uniformity.

The Principle of Analogy (Uniformity). By observing over and over what kinds of effects are produced by causes, we can determine which kind of cause is needed to produce life. We know that round stones are regularly caused by natural laws involved in the motion of water and rubbing one another. Flint and obsidian will not turn into a spear or arrow point that way. The only question, then, is whether a living cell is more like a round stone or a projectile point. Anyone viewing the faces on Mount Rushmore knows these stone shapes were formed by an intelligent cause. It is not just that natural causes never produce the kind of specified information shown on Mount Rushmore. It is also known by repeated observation that intelligent causes do produce this kind of specificity.

Specified Complexity Points to an Intelligent Cause. The kind of evidence that indicates an intelligent cause of life is called specified complexity. Carl Sagan said that a single message from outer space would confirm his belief that there is extraterrestrial life.

Such communication would be *specified complexity*. Or, to be more precise, since we know that complex messages always result from an intelligent cause, it remains only to see whether a living cell contains a complex message. With the discovery of the DNA code of life, the answer is clear. In all of nature, only living cells have complex messages known as specified complexity. A chunk of quartz has specificity but no complexity. The message in a crystal is repetitive, like the message: starstarstarstar. A chain of random polymers (called a polypeptide) is complex, but it does not give a specific message. It looks more like this: *fqpizgenyatkpvno*. Only a living cell has both specificity and complexity that is not repetitious and communicates a message or a clear function, such as: *This sentence has meaning.* Hence, a living cell calls for an intelligent cause. Science speaks of simple life and complex life. Even the simplest one-celled organism has enough information that if spelled out in English would fill a volume of the *Encyclopedia Britannica*.

A clear and distinct message—a complex design with a specified function—was caused by some form of intelligence that intervened to impose limits on the natural matter that it would not take by itself. Some natural phenomena are orderly and awe inspiring, but clearly caused by natural forces. The Grand Canyon and Niagara Falls required only the blind forces of wind and water to shape them. The same cannot be said for Mount Rushmore or a hydroelectric plant. These required intelligent intervention.

The Confirmation of Information Theory. Studies in Information Theory confirm that one can determine an intelligent cause simply by the letter frequencies. In a series of letters that carry a message (even if we do not know what the message is) there is a certain letter frequency. This is what makes unknown codes decipherable and makes it possible to remove background noise from a tape and clarify the message.

What could explain the sudden appearance of life and also provide for the informational organization of living matter? If we apply the principle of uniformity (analogy) to the question, the only cause that we know routinely does this kind of work is intelligence. The reasonable assumption is that it also required intelligence to do it in the past. Uniform experience proves this to us, and, as David Hume said, “as a uniform experience amounts to a proof, there is here a direct and full *proof,* from the nature of the fact” (Hume, 122–23). Since it is not possible that we are speaking of human intelligence or even living be ings in the natural sphere, it had to be a supernatural intelligence. This does create a disjunction in the course of nature, which irritates most scientists; however, once it is admitted that there is a radical disjunction from nothing to something at the beginning of the universe, there can be little objection to the idea of one more intervention when the evidence clearly points to it.

The Confirmation from Molecular Biology. Michael Behe’s book, *Darwin’s Black Box,* provides strong evidence from the nature of a living cell that it could not have originated or evolved by anything but intelligent design. The cell represents, in many cases, irreducible complexity that cannot be accounted for by small incremental changes called for by evolution.

Darwin admitted: “If it could be demonstrated that any complex organ existed which could not possibly have been formed by numerous, successive, slight modifications, my theory would absolutely break down” (*Origin of Species* , 154). Even evolutionists, such as Richard Dawkins, agree:

> Evolution is very possibly not, in actual fact, always gradual. But it must be gradual when it is being used to explain the coming into existence of complicated, apparently designed objects, like eyes. For if it is not gradual in these cases, it ceases to have any explanatory power. Without gradualness in these cases, we are back to miracle, which is a synonym for the total absence of [naturalistic] explanation. [83]

Behe provides numerous examples of irreducible complexity that cannot evolve in small steps. He concludes,

> No one at Harvard University, no one at the National Institutes of Health, no member of the National Academy of Sciences, no Nobel Prize winner—no one at all can give a detailed account of how the cilium, or vision, or blood clotting, or any complex biochemical process might have developed in a Darwinian fashion. But we are here. All these things got here somehow; if not in a Darwinian fashion, then how? [187]

Other examples of irreducible complexity that Behe points out include aspects of DNA reduplication, electron transport, telomere synthesis, photosynthesis, and transcription regulation (ibid., 160). “Life on earth at its most fundamental level, in its most critical components, is the product of intelligent activity” (ibid., 193). Behe adds, “The conclusion of intelligent design flows naturally from the data itself—not from sacred books or sectarian beliefs. Inferring that biochemical systems were designed by an intelligent agent is a humdrum process that requires no new principles of logic or science” (ibid.). Thus, “the result of these cumulative efforts to investigate the cell—to investigate life at the molecular level—is a loud, clear, piercing cry of ‘design!’ The result is so unambiguous and so significant that it must be ranked as one of the greatest achievements in the history of science. The discovery rivals those of Newton and Einstein” (ibid., 232–33).

Conclusion. As Hume showed, in the empirical world we posit causal connections only because we see certain events conjoined over and over. And since the present is the key to the past, the same applies to causes of origin. Hence, it is unscientific to posit anything but an intelligent cause for the first living cell, since repeated experience tells that the only kind of cause known to be able to produce specified complexity, as life has, is an intelligent cause. Chemical evolution, then, fails the scientific test. And it is beside the point to speculate that a natural cause is still possible, since science is based on evidence which points clearly in the direction of an intelligent cause by constant conjunction which David Hume called a “proof.”

Evolution, Cosmic. Either the universe had a beginning or it did not. If it did have a beginning, then it was either caused or uncaused. If it was caused, then what kind of cause could be responsible for bringing all things into being?

An Eternal Universe. Traditionally, cosmic evolutionary scientists have believed that the universe, in some form, always existed. Matter is eternal. The main scientific support is the first law of thermodynamics (*see* THERMODYNAMICS, LAWS OF) that "energy can neither be created nor destroyed."

Creationists respond that this is a misunderstanding of the first law which should be stated: "The actual amount of energy in the universe remains constant." Unlike the misstated version of the first law, this is based on scientific observation about what occurs and is not a dogmatic philosophical assertion about what can or cannot happen. There is no scientific evidence that the universe is eternal.

Fred Hoyle proposed his steady-state theory to avoid this conclusion. It affirms that hydrogen atoms are coming into existence to keep the universe from running down. This also calls for the universe to be constantly generating hydrogen atoms from nothing. This hypothesis has fatal flaws. There is no scientific evidence that such an event ever occurred. And such an occurrence would be contrary to the principle of causality (*see* CAUSALITY, PRINCIPLE OF), which affirms that there must be an adequate cause for every event. Creationists quickly note that only a Creator would be an adequate cause for the creation of new hydrogen atoms out of nothing (*see* CREATION, VIEWS OF).

Holding to such beliefs as the steady-state theory or the eternality of matter theory has a high cost for the scientist, for both violate a fundamental law of science: the principle of causality. Both views require that the scientist believe in events happening without a cause. Even the great skeptic David Hume said, "I never asserted so absurd a proposition as that anything might arise without a cause" (Hume, 1:187). Yet this absurd proposition is accepted by scientists who make their living by the law of causality. If the whole universe is uncaused, why should we believe that the parts are caused? If the parts are all

caused, then what evidence could suggest that the whole is uncaused? Nothing in the principle of causality supports this conclusion.

Some cosmic evolutionists argue for some kind of rebound theory, whereby the universe collapses and rebounds forever. But there is no evidence that enough matter exists to stop and pull back by gravitational forces the expanding universe even once. What is more, this hypothesis runs contrary to the second law of thermodynamics, which dictates that, even if the universe rebounded, it would, like a bouncing ball, eventually peter out (*see* BIG BANG THEORY).

Universe with a Beginning. Creationists can offer evidence that the universe is not eternal but had a cause. Though he is not himself a theist, Robert Jastrow, founder and former director of NASA's Goddard Institute for Space Studies, has summarized the evidence in his book *God and the Astronomers* . Jastrow points out three lines of evidence—the motions of the galaxies, the laws of thermodynamics, and the life story of the stars—indicate that the universe had a beginning (Jastrow, 111). Now if we are speaking of a movement from no matter to matter, we are clearly in the realm of unrepeatable events covered by origin science.

The Second Law of Thermodynamics. Perhaps the most significant piece of evidence is the second law of thermodynamics. According to this law, "The amount of usable energy in the universe is decreasing." Or, stated another way, "In a closed isolated system, the amount of usable energy is decreasing." Or, "Left to themselves, things tend to disorder." No matter which way it is stated, this law shows that an eternal universe would have run out of usable energy or reached a state of total disorder. Since it has not, it must have had a beginning.

The first law of thermodynamics says that the actual amount of energy in the universe remains constant—it doesn't change. The second law of thermodynamics says that the amount of *usable* energy in any closed system (which the whole universe is) is decreasing. Everything is tending toward disorder and the universe is running down. Now if the overall amount of energy stays the same, but we are running out of usable energy, then what we started with was not an infinite amount. You can't run out of an infinite amount. This means that the universe is and always has been finite. It could not have existed forever in the past. So it must have had a beginning. And, if it had a beginning, then it must have been caused, since every event has an adequate cause (*see* CAUSALITY, PRINCIPLE OF).

The Motion of the Galaxies. Scientists argue that the universe is not simply in a holding pattern, maintaining its movement from everlasting to everlasting. It now appears that all of the galaxies are moving outward, as if from a central point of origin, and that all things were expanding faster in the past than they are now. Looking out into space, we are also looking back in time. We are seeing things as they were when the light was given off by those stars many years ago. The light from a star 7 million light-years away tells us what it was like and where it was 7 million years ago. Using a 200-inch telescope, Allan Sandage compiled information on forty-two galaxies, as far as 6 billion light years away.

His measurements indicate that the universe was expanding more rapidly in the past than it is today. This result lends further support to the belief that the universe exploded into being (Jastrow, *God and the Astronomers* , 95).

The Radiation Echo. A third line of evidence that the universe began is the radiation "echo" which seems to come from everything. It was first thought to be a malfunction or static on the instruments. But research has discovered that the static was coming from everywhere—the universe itself has a low-level radiation from some past catastrophe that looks like a giant fireball. Says Jastrow,

> No explanation other than the big bang has been found for the fireball radiation. The clincher, which has convinced almost the last doubting Thomas, is that the radiation discovered by Penzias and Wilson has exactly the pattern of wavelengths expected for the light and heat produced in a great explosion. Supporters of the Steady State theory have tried desperately to find an alternative explanation, but they have failed. [ibid., 5]

The Discovery of a Great Mass of Matter. Since Jastrow first recorded the three lines of evidence for the beginning of the universe a fourth has been discovered. According to the big-bang theory there should have been a great mass of matter associated with the original explosion of the universe into being, but none was known until 1992. By means of the Hubble space telescope, astronomers found the very mass of matter predicted by big-bang cosmology. Thus the combined evidence provides an overwhelming case for the fact that the universe had a beginning.

Cause of the Cosmos. If the universe is not eternal but came into existence, the law of causality tells us that it must have had a cause. For whatever comes to be is caused. Hence, the universe was caused.

Logically, if we are looking for a cause which existed before the universe (nature) began, we are looking for a supernatural cause. Even Jastrow, a confirmed agnostic, has said as much: "That there are what I or anyone would call supernatural forces at work is now, I think, a scientifically proven fact" (ibid., 15, 18). Since he is speaking from the viewpoint of operation science, he probably means that there is no secondary cause which can explain the origin of the universe. But with the recognition of origin science, we can posit a supernatural primary cause that seems to be the most plausible answer to the question.

Conclusion. Jastrow sums up the cosmic evolutionists enigma well. He concludes his book:

> For the scientist who has lived by his faith in the power of reason, the story ends like a bad dream. He has scaled the mountains of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries. [ibid., 105–6]

After being embarrassed by the evidence that the cosmos had a beginning, Albert Einstein declared his desire “to know how god created this world. I am not interested in this or that phenomenon, in the spectrum of this of that element. I want to know his thought, the rest are details” (cited in Herbert, 177).

Evolution, Human. ***See*** **DARROW, CLARENCE ; DARWIN, CHARLES ; DEWEY, JOHN ; EVOLUTION, BIOLOGICAL ; MISSING LINKS .**

Evolution, Theistic. *Definition.* Broadly speaking, theistic evolution is the belief that God used evolution as his means of producing the various forms of physical life on this planet, including human life. However, there are several kinds of evolution in which God is said to be involved. Indeed, there are various conceptions of God connected to evolution.

Kinds of Evolution Involving God. Not all forms of evolution involving God are technically forms of theistic evolution, since many of them do not involve a theistic concept of God. The following typology is intended as suggestive, not exhaustive.

Theistic Evolution. By “theistic” evolution is meant the belief that a theistic God used an evolutionary process he had created to produce all living species of life. In addition, “theistic” means that God performed at least one miracle after his original creation of the universe *ex nihilo* (*see* CREATION, THREE VIEWS). Otherwise, there is no difference between theism and deism on the matter of origins. Of course, a theistic evolutionist (who does not deny more than two supernatural acts of creation) could still believe in other miracles in the Bible after creation, such as the Virgin Birth or resurrection .

Minimal Theistic Evolution. The minimal theistic evolutionist believes that God performed two supernatural acts of creation: (1) the creation of matter out of nothing, and (2) the creation of first life. After that every other living thing, including human beings, emerged by natural processes that God had ordained from the beginning.

Maximal Theistic Evolution. The maximal theistic evolutionist holds that God performed at least three supernatural acts of creation: matter, first life, and the human soul. After the initial creation of matter and life, all animal organisms, including the human body, evolved by natural laws God established from the very beginning. This is the traditional Roman Catholic view, at least for the last century.

The belief in any more supernatural acts of creation would probably be better called a minimal form of creationism (though this is an arbitrary line), since it would hold that God supernaturally intervened at least four times in creation. Most scholars who hold this, also believe that God supernaturally intervened many more times than this. They often refer to themselves as Progressive Creationists. Bernard Ramm and Hugh Ross (*The Fingerprints of God*) fit into this category.

Deistic Evolution . Deism does not believe in any supernatural acts or miracles after the initial act of creating the material universe out of nothing. As far as the evolutionary process and the production of life forms, including human beings, there is no real difference between deistic evolution and naturalistic evolution, which includes atheism and agnosticism .

Pantheistic Evolution. Another form of evolution involving a belief in God is called pantheistic evolution. Pantheism , unlike theism and deism, believes that God is all and all is God. God is the universe or Nature. Benedict Spinoza and Albert Einstein held this kind of belief. Former atheist Sir Fred Hoyle adopted this view in his book *Evolution from Space* (1981). According to this view, God created first life and then many basic forms of life at various times after that, as is indicated by the great gaps in the fossil record. However, the God who intelligently intervened to form these various kinds of life did so from within the universe, not from outside it. For God is the Mind of the universe. God is Nature.

Panentheistic Evolution. Unlike pantheism, which believes God is All, panentheism holds that God is in all. Panentheism is distinguished by its belief that God is the Vital Force within the universe and within the evolutionary force. Henri Bergson expressed this view in his book *Creative Evolution* in 1907. This seems also to be the position of the Roman Catholic evolutionist, Teilhard de Chardin. According to this position, evolution is a continuous process that moves forward, sometimes even “leaps” forward, by virtue of the immanent divine Force within the universe.

Evaluation. Since the essence of all these views are critiqued elsewhere under deism, pantheism, and panentheism, it is not necessary to do so here. It remains only to point out that its view of evolution of living organisms assumes the antisupernaturalistic

presuppositions of atheism and agnosticism. Only theism truly believes in supernatural acts from a God who is beyond the universe and who occasionally intervenes in it.

Many of the same arguments used against naturalistic or materialistic evolution apply also to these other forms of evolution involving God. For it makes no difference whether the natural processes were created by a theistic God or not. The evidence shows that nonintelligent natural laws do not have the ability to bring life or new life forms into existence, to say nothing of human beings (*see* DARWIN, CHARLES ; MISSING LINKS).

Existentialism. As an atheistic movement, *existentialism* flowered in the mid-twentieth century, yet its effects lingered. Existentialism has had a negative effect on evangelical Christianity.

Theological Influence. Several theological movements, broadly known as neo-orthodox, have been influenced by existentialism? Karl Barth stressed personal encounter with God, stressing that the Bible is a fallible human record of God's Word. Emil Brunner emphasized that revelation is personal, not propositional. Rudolph Bultmann developed the demythological method of stripping the Bible of its outdated supernatural worldview to get at the existential core (*see* MYTHOLOGY AND THE NEW TESTAMENT).

Major Proponents of Existentialism. An eclectic group of philosophers and theologians contributed to what became modern existentialism. They include Lutheran

theist Soren Kierkegaard (1813–1855), German atheist Friedrich Nietzsche (1844–1900), French atheists Jean-Paul Sartre (1905–1980) and Albert Camus (1913–1960), German Jewish theist Martin Buber (1878–1865), German non-theist Martin Heidegger (1832–1970), French Roman Catholic Gabriel Marcel (1889–1964), and German Eastern Orthodox layman Karl Jaspers (1883–1969).

Emphases and Contrasts of Existentialism. Existentialism emphasizes living over knowing, willing over thinking, the concrete over the abstract, and the dynamic over the static, love over law, the personal over the propositional, the individual over society, the subjective over the objective, the non-rational over the rational, and freedom over necessity.

At the heart of existentialism is the belief that existence has precedence over essence. All existentialists hold this view in some form. They differ in other respects, but most existentialists, especially atheists, tend to accept certain other propositions:

Humans are primarily animals who have learned to choose. They are not seen as rational, political, or mechanical beings.

Humanity as an object is not free, but individuals as a subject are free.

"I" am not "myself." The "self" can be studied and described as an "it." But the "I" behind the it transcends description; it is utterly free.

Objectivity lacks being. Only the subjective really exists.

Meaning and value are found in being, living, willing, and acting. Form, essence, and structure are irrelevant and valueless.

Meaning and values are created, not discovered. Theistic existentialists such as Kierkegaard would demur at this point.

Getting from Essence to Existence. All this sounds more philosophical than practical, and existentialists struggle with the movement from the abstract to the concrete. Different existentialists describe this move in different ways. The Christian existentialist Kierkegaard depicted it as a of faith" (*see* FIDEISM) in which one has a personal encounter with God. The atheist Sartre called it an attempt to move from being for itself to being in itself. He believed that to do this is, in the end, impossible, and that life is absurd. Atheistic existentialists, with Sartre and Camus, have insisted that no authentic existential experience is possible. The best one can do is to recognize one's own inauthenticity. Theistic existentialists believe that a genuine existential experience is possible but not without a personal encounter with God. Whether this is done alone as an individual (Kierkegaard), or in community (Marcel) is moot. At least it is possible. For the Jewish existentialist Martin Buber, it was a movement from I-it to I-thou relationships. Gabriel Marcel believed one can have a true existential experience only in the move from "me" (the individual) or "they" (the crowd) to "we" (the community).

Evaluation. Existentialists are so diverse that general comments inevitably fall short of accurately portraying one or more groups under the heading. There are a few generalities that can be made of the movement.

Positive Contributions. Existentialism's stress on love over legalism fits the teaching of Jesus (Mark 2:27) and is something of a corrective to the ever-present legalism within some spheres of Christian life. Emphasis on the practical as opposed to the purely theoretical fits with the Christian emphasis on a living faith (cf. James). The New Testament avoids the abstract in teaching that good works follow from true faith (Eph. 2:8–10 ; James 2). All evangelicals believe in human freedom, though some groups disagree about nuances of what that means (*see* DETERMINISM ; FREE WILL).

In the root sense that "existence is prior to essence," Thomas Aquinas can be classed as an existentialist. He portrayed God as Pure Existence. God who is prior in order and significance to every other being is pure Actuality with no potentiality whatsoever. God is pure "Is-ness." This is the ultimate in Christian existentialism from the perspective of realism.

Errors and Dangers. But existentialism does not adequately address the essence of existence. If existence is prior to essence then the essence of existence cannot be known. Existentialists, however, do attempt to explain, describe, and know it. They write books about it. To be consistent, the moment they acknowledge that there is an essence to existence, they cease to be existentialists in the accepted meaning of the term. Existentialism sets up a radical disjunction between essence and existence. But we never encounter pure " of existence in life without some "whatness" of essence. We never know *that* something is without knowing a little of *what* something is.

Existentialism is so subjective that it tends toward the mystical (*see* MYSTICISM). Without some objective criteria, there is no way to differentiate an encounter with the real from an illusion. For theistic existentialists, there is no way to know one has encountered the true God rather than the subconscious—or even Satan (2 Cor. 11:14).

In our knowledge of other persons and God, the personal cannot be totally split from the propositional. We can say something about persons through propositions or declarations about them. Pen pals who have never met can still become intimately acquainted. Likewise, the Bible is a propositional revelation about the personal God (*see* BIBLE, EVIDENCE FOR).

The freedom espoused by atheistic existentialists is impossible. We do not have absolute freedom. And if there is a God, all other wills are subordinate to his absolute will.

Irrationality does not correspond with what life is like. God and ultimate reality are not contradictory. God is Father of all reason. Logic flows from his nature (*see* FAITH AND REASON). Existentialists do not practice irrationality. They are quite rational when

expounding and defending their system. They inevitably try to make rational sense of their view of existence. The very attempt is self-defeating.

Experiential Apologetics. Experiential apologetics is the form of defending the Christian faith that appeals to Christian experience as evidence for the truth of Christianity. In its appeal to internal, as opposed to external, evidence, it contrasts sharply with other apologetic systems (*see* APOLOGETICS, TYPES OF).

Proponents of Experiential Apologetics. Many Christian thinkers have stressed experience, some mystical and some not. Meister Eckart in the medieval period is considered heretical in theology, but he wrote cogently on the implications of Christian mysticism. In the modern period, existentialism (*see* KIERKEGAARD, SOREN) and neoorthodoxy (*see* BARTH, KARL) place high value on religious experience and its proofs of Christianity. Classic liberals and modernists reject objective Christian truth, so a general experiential religion is virtually the only possible foundation on which to build a Christian apologetic (*see* MIRACLES, MYTH AND ; SCHLEIERMACHER, FRIEDRICH). Among evangelicals, Elton Trueblood has defended experientialism. While usually remaining outside apologetics discussions, experiential apologetics characterizes Pentecostal, charismatic, and the third-wave movement.

Types of Experiential Apologetics. Experiential Christian apologists fall into several categories. Some appeal to religious experience in general, though this is not often used to prove the unique claims of Christianity so much as the existence of teachings common to several religions. This might include the existence of a transcendent God or immortality of the soul.

Other Christian experientialists appeal to special religious experiences. Within this category are those who focus on mystical experiences and those who look to supernatural Christian conversions. Jonathan Edwards ' classic description of the nature of conversion, *A Treatise Concerning Religious Affections* argues for God from conversion experience, though Edwards generally emphasized reason.

General Religious Experience. The value of religious experience in general is limited in drawing uniquely Christian claims. Logically it is difficult to see how this argument can be used to support even a distinctively theistic God. At best it establishes some credibility for a supreme being of some kind. Proofs from religious experience have been offered by Christians and others, however.

The value of general religious experiences is that they are available to all. Even the atheist Sigmund Freud admitted having a sort of "feeling of absolute dependence" like that described by Friedrich Schleiermacher . Paul *Tillich called this an experience of "ultimate commitment." The humanist John Dewey believed everyone experiences a religious experience in their pursuit of goals in spite of obstacles.

Special Religious Experience. Special, in contrast to general, religious experience is not so widely shared. For those who do have such experiences, they can be a powerful demonstration of the proof of Christianity. These come in mystical and existential varieties.

Christian mystical experience. Christian mystics (*see* MYSTICISM) claim a special experience of God. Mystical experiences differ from general experiences in another way: They claim direct, unmediated contact with God. Proving such a claim is impossible, but Christian mystics often claim such evidences are unnecessary. The experience is self-evidently true, as basic to reality as the sensory experience of seeing color. For them at least, nothing needs verification.

Existential experiences. Although existential encounters with God are not mystical, their proponents claim they too are self-authenticating. There are occasions when one is grasped by God in a nonrational, direct encounter that is more basic and real than a sense experience. Although not all would consider such experiences as evidence, they do serve to vindicate the authenticity of faith for the one who experiences them. Properly speaking, those who appeal to such experiences reject apologetic approaches in their traditional sense. They spurn appeal to rational, factual evidence in favor of what they believe to be a self-verifying experience.

It should be noted that not all who experience special encounters with God regard these moments as apologetic proofs for Christianity to themselves or others. Those who focus on those experiences as a primary component of their Christian belief system, however, tend to view them as verifications of their beliefs.

Evaluating Experiential Apologetics. While some Christians seem to base their beliefs largely on experience, others totally debunk the apologetic value of such subjective arguments. However, properly seen, experience has a significant role in religion.

Positive Aspects. All religious truth should be experienced. Religious truth, in contrast to other forms of truth, is preeminently a truth to be experienced. As William James noted, at the very heart of religious experience is the aim to have a satisfying, transcendent relationship. Religious truth, Kierkegaard said, is personal, rather than merely propositional. It is an experience that provides a living relationship with the living God. In this sense, religious truth is far more than what we know; it is what we live. It is not simply truth for believers to grasp; it grasps them.

All truth is experienced. In the most general sense, all truth must be experienced. At its root, experience means awareness—consciousness of the Ultimate. This extends from awareness of God to awareness of a mathematical truth. If it is not experienced, than one does not "know" it. So experience in this sense is not only important to religious faith; it is essential.

Conceptual truth is empty without experience. A corollary to the necessity of experiencing truth is that sterile concepts are empty because they have not been rooted in experience (*see* TAUTOLOGIES). While there are different levels and objects of experience, there is no truth about reality that is totally disjointed from experience. Unless one has an awareness of an object through experience, one cannot know it directly. Hence, experience is indispensable to knowing truth of any kind, including religious truth.

Negative Aspects. While all truth, even religious truth, should be experienced in the broad sense of an awareness of it, no religious truth claim should be based in uncritical, untestable, experience (*see* TRUTH, NATURE OF).

Experientialism confuses categories. It is a confusion of categories to speak of experiential religious truth. There are true religious *experiences* (experiences of God), but these are different from *expressions* (statements) about those experiences. Truth is found in expression about the object of our experiences, not in the experiences themselves. So, technically there are no true or false religious experiences. There are true or false statements about whether one was really experiencing God and about the God experienced. But experience itself, in its primary sense, is neither true nor false.

Reason is needed. If reason is taken in the secondary sense of reflection on our primary experience (particularly rational reflection), then it is crucial to knowing the truth

about our primary experience. Primary experience, as defined by many who stress it, is unreflective and uncritical. There is allegedly no use of logic or reason. It is preconceptual. This kind of experience, if indeed it is possible, is dangerous and has no definitive function in determining truth in religion. It is "bare" experience with no way in or of itself to know whether it puts the experience in touch with divine reality. Unless so-called "secondary experience" using reason can evaluate and make judgments about this raw experience, it has no truth value. As Jonathan Edwards would say, God wants to reach the heart, but he never bypasses the head along the way.

Contrary to the claim of some, there are no self-evident religious experiences that can demonstrate the truth of Christianity. There are significant differences between a sense experience and a special religious experience. First, one is a general experience and the other is special. Second, one is continuous experience and the other only occasional. Third, one is public and the other private. Fourth, one is sensible and objective, while the other is spiritual and subjective. No comparison between the two is valid.

This leaves unsettled the claim of John Calvin and others that all men have an innate knowledge of God. If they do, it is certainly not specific enough to establish any more than the existence of God (and perhaps immortality) but not the unique truths of Christianity, such as the deity of Christ (*see* CHRIST, DEITY OF), the Trinity , and Christ as the only way to God (*see* CHRIST, UNIQUENESS OF ; "HEATHEN," SALVATION OF ; PLURALISM ; WORLD RELIGIONS, CHRISTIANITY AND).

A "source of" truth is not a "support of" truth. Those who use experience in its root sense to demonstrate the truth of Christianity engage in a basic misunderstanding. Religious experience is certainly a *source* of truth about God, but it cannot be used as a *test* for that truth. Such an apologetic use of religious experience begs the question, since it appeals to the experience to prove the truth of the experience.

Religious experiences are not self-interpreting. No religious experience, certainly none of the special (mystical) variety, is self-labeled. Other interpretations are possible, which are readily given by Ludwig Feuerbach , William James, and Freud. The fact that the religious person experienced it with a certain label on it does not mean this is the only interpretation or the proper interpretation. Hallucinations, illusions, and mental projections have occurred throughout religious experience. One needs more than a subjective experience to demonstrate objective truth.

Religious experiences lack objective value. Some objective, demonstrable criteria for determining the truth of religious experiences are needed. This is obvious from the facts that similar experiences can be interpreted in differing ways and that religious experiences conflict with one another. This is why the Bible warns against false prophets (Matt. 7:15) and teachings (1 Tim. 4:1f ; 1 John 4:1f .). Indeed, it even provides objective criteria by which falsehood can be known (cf. Deut. 18:9–22).

Indescribable experiences have no truth value. Mystics often claim to have ineffable experiences. Whatever subjective value these may have to the one experiencing them,

they can lay no valid truth claim on others. Subjective states are binding, if at all, only on those having them. By their very nature they are experienced by only one person. Second, an indescribable experience cannot be tested because it is not even known. One would have to know it before he could test it. If it is not rationally understood, then it cannot be rationally tested.

Conclusion. General religious experience is not specific enough to support the unique claims of Christianity. At best it can only support some vague claims about a transcendent "other," but not the unique claims of a trinitarian God who has revealed himself in Scripture. Nor are special religious experiences objective or verifiable. They afford no critical, rational scrutiny. Objective criteria are needed for all subjective experiences to be meaningful to anyone other than the person who has them. Objective testing is certainly needed before they can be used to establish a truth claim. The mind must understand and scrutinize what the heart is feeling. Otherwise, we cannot know whether it corresponds to reality (*see* TRUTH, ABSOLUTE NATURE OF).

Faith and Reason. The relation of faith to reason is of utmost importance for the thinking believer. The problem of how to combine these aspects of personhood has existed from the earliest apologists. Justin Martyr , Clement of Alexandria, and Tertullian all struggled. Augustine made the first serious attempt to relate the two, but the most comprehensive treatment came at the end of the medieval period when Christian intellectualism flowered in the work of Thomas Aquinas.

Relation of Faith to Reason. Aquinas held that faith and reason intertwine. Faith uses reason, and reason cannot succeed in finding truth without faith.

Reason Cannot Produce Faith. Reason accompanies, but does not cause, faith. Faith is *consent without inquiry* in that faith's assent is not caused by investigation. Rather, it is produced by God. Commenting on Ephesians 2:8–9 , Aquinas contended that "free will is inadequate for the act of faith since the contents of faith are above reason. . . . That a man should believe, therefore, cannot occur from himself unless God gives it" (Aquinas, *Ephesians,* 96; unless noted, all citations in this article are from works by Thomas Aquinas). Faith is a gift of God, and no one can believe without it.

Nonetheless, "this does not prevent the understanding of one who believes from having some discursive thought of comparison about those things which he believes" (*On Truth,* 14.A1.2). Such discursive thought, or reasoning from premises to conclusions, is not the *cause* of the assent of faith, but it can and should accompany it (ibid., 14.A1.6). Faith and reason are parallel. One does not cause the other because "faith involves *will* (freedom) and reason doesn't coerce the will" (ibid.). A person is free to dissent, even though there may be convincing reasons to believe.

As a matter of tactical approach in apologetics, if the authority of Scripture is accepted (faith), appeal can be made to it (reason). "Thus, against the Jews we are able to argue by means of the Old Testament, while against heretics we are able to argue by means of the New Testament. But Mohammedans [*see* ISLAM] and the pagans accept neither the one nor the other. . . . We must, therefore, have recourse to the natural reason, to which all men are forced to give their assent" (*Summa Theologica* , 1a.2.2).

However, some Christian truths are attainable by human reason, for example, that God exists and is one. "Such truths about God have been proved demonstratively by the philosophers, guided by the light of the natural reason" (ibid., 1a.3.2)

Three Uses of Reason. Reason or philosophy can be used in three ways, Aquinas says:

1. It demonstrates the "preambles of faith" (that God exists, that we are his creatures . . .; *see* COSMOLOGICAL ARGUMENT ; GOD, EVIDENCE FOR).

2. It analyzes teachings of philosophers in order to reveal corresponding concepts in Christian faith. Aquinas gives the example of Augustine's *On the Trinity* , which draws on philosophy to help explain the Trinity.

3. It opposes attacks against faith from logic (*Gentiles,* 1.9).

Reason can be used to prove natural theology, which studies the existence and nature of one God. It can be used to *illustrate* supernatural theological concepts, such as the Trinity and the Incarnation (*see* CHRIST, DEITY OF). And it can be used to refute false theologies (*De Trinitate,* 2.3). The apologist directs the person to accept two kinds of truth about divine things and to destroy what is contrary to truth. The person is directed to the truths of natural theology by the investigation of the reason and to the truths of supernatural theology by faith.

So to make the first kind of divine truth known, we must proceed through demonstrative arguments. However,

> since such arguments are not available for the second kind of divine truth, our intention should not be to convince our adversary by ar guments: It should be to answer his arguments against the truth; for, as we have shown, the natural reason cannot be contrary to the truth of faith. The sole way to overcome an adversary of divine truth is from the authority of Scripture—an authority divinely confirmed by miracles. For that which is above the human reason we believe only because God has revealed it. Nevertheless, there are certainly likely [probable] arguments that should be brought forth in order to make divine truth known. [*Gentiles* , 1.9; *see* MIRACLES, APOLOGETIC VALUE OF]

God's existence is self-evident absolutely (in itself) but not relatively (to us) (ibid., 1.10–11; *see* FIRST PRINCIPLES). Hence, in the final analysis, one must receive *by faith* those things that can be known by reason, as well as those things that lie above reason. Intellectual assent that lacks faith cannot have certitude, for human reason is notoriously suspect when it comes to spiritual matters. Consequently, "it was necessary for divine truth to be delivered by way of faith, being told to them as it were, by God Himself Who cannot lie" (*Summa Theologica,* 2a2ae.1, 5.4).

Divine Authority. Aquinas did not believe that reason provides the basis for believing in God. It can prove *that* God exists, but it cannot convince an unbeliever to believe *in* God.

Reason Prior to Faith. We may believe (assent without reservation) in something that is neither self-evident nor deduced from it by a movement of the will. However, this does not mean that reason plays no prior role to belief. We judge a revelation to be worthy of belief "on the basis of evident signs or something of the sort" (ibid., 2a2ae.1, 4. ad 2).

Reason inquires about what is to be believed before it believes in it. "Faith does not involve a search by natural reason to prove what is believed. But it does involve a form of inquiry unto things by which a person is led to belief, e.g. whether they are spoken by God and confirmed by miracles" (ibid., 2a2ae.2, 1, reply). Demons are not willingly convinced by the evidence that God exists but are intellectually forced by confirming signs to the fact that what the faithful believe is true. Yet they cannot truly be said to *believe* (*On Truth,* 14.9. ad 4).

The Testimony of the Spirit. In order to believe in God one must have the inner testimony of the Holy Spirit (*see* HOLY SPIRIT, ROLE IN APOLOGETICS). For "one who believes does have a sufficient motive for believing, namely the authority of God's teaching, confirmed by miracles, and—what is greater—the inner inspiration [*instinctus*] of God inviting him to believe" (*Summa Theologica,* 2a2ae.6.1). The Holy Spirit uses two causes to stimulate voluntary faith. The persuasion may be from without, for example, a miracle that is witnessed. Or persuasion may be from within. The first cause is never enough for one inwardly to assent to the things of faith. The assent of faith is caused by God as he moves the believer inwardly through grace. Belief is a matter of the will, but the will needs to be prepared by God "to be lifted up to what surpasses nature" (ibid., 2a2ae.2, 9. ad 3).

Reason in Support of Faith. Commenting on the use of *reason* in 1 Peter 3:15 , Aquinas argued that "human reasoning in support of what we believe may stand in a two-fold relation to the will of the believer." First, the unbeliever may not have the will to believe unless moved by human reason. Second, the person with a will ready to believe loves the truth, thinks it out, and takes to heart its evidence. The first, unbelieving will may come to a faith of sorts, but there will be no merit in it, because belief does not extend far beyond sight. The second person also studies the human reasoning, but it is a meritorious work of faith (ibid., 2a2ae.2, 10).

Positive Evidence. Faith is supported by, though not based on, probable evidence. "Those who place their faith in this truth, however, 'for which the human reason offers no experimental evidence,' do not believe foolishly, as though 'following artificial fables' " (2 Peter 1:16). Rather, "It reveals its own presence, as well as the truth of its teaching and inspiration, by fitting arguments; and in order to confirm those truths that exceed natural knowledge, it gives visible manifestations to works that surpass the ability of all nature." The kind of positive evidence that Aquinas used included such things as raising the dead, miracles, and the conversion of the pagan world to Christianity (*On Truth,* 14.A1).

Negative Evidence. The negative evidence encompasses arguments against false religions, including things like their fleshly appeal to carnal pleasures, their teachings that contradict their promises, their many fables and falsities, the lack of miracles to witness to divine inspiration of their holy book (like the *Qur'an*), use of warfare (arms) to spread their message, the fact that wise men did not believe Muhammad, only ignorant, desert wanderers, the fact that there were

no prophets to witness to him, and Muslim perversions of Old and New Testament stories (*Gentiles,* 1.6).

Faith and Fallible Testimony. How can we be sure when the support of our faith rests on many intermediary (fallible) testimonies? Aquinas responds that the intermediaries are above suspicion if they were confirmed by miracles (for example, Mark 16:20). "We believe the successors of the apostles and prophets only in so far as they tell us those things which the apostles and prophets have left in their writings" (*On Truth,* 14.10, ad 11). The Bible alone is the final and in fallible authority for our faith (*see* BIBLE, EVIDENCE FOR).

Faith and Demonstrative Arguments. Aquinas distinguished between two kinds of rational arguments: demonstrative and persuasive. "Demonstrative, cogent, and intellectually convincing argument cannot lay hold of the truths of faith, though it may neutralize destructive criticism that would render faith untenable." On the other hand, "persuasive reasoning drawn from probabilities . . . does not weaken the merit of faith, for it implies no attempt to convert faith into sight by resolving what is believed into evident first principles" (*De Trinitate,* 2.1, ad 5).

Distinguishing Faith and Reason. Though faith is not separated from reason, Aquinas does formally distinguish between them. He believed they are related, but the relationship does not coerce a person to believe.

Faith in Relation to Reason. Human reason does not force faith. If it did, then faith would not be a free act. What happens is that "the mind of the one believing settles upon the one side of a question not in virtue of his reason but in virtue of his will. Therefore assent is understood in the definition [of faith] as an act of the mind in so far as the mind is brought to its decision by the will" (ibid., 2a2ae. 2, 1, ad 3).

Faith is not unreasonable. Faith is reason with assent. For "to ponder with assent is, then, distinctive of the believer: this is how his act of belief is set off from all other acts of the mind concerned with the true and the false" (*Summa Theologica,* 2a2ae.2, 1, reply). Faith, then, is defined as *"that habit of mind whereby eternal life begins in us and which brings the mind to assent to things that appear not."* Faith differs from science in that the object of faith is unseen. It also differs from doubt, suspicion and opinion in that there is evidence to support faith.

Faith is a free act. Aquinas quotes Augustine with approval that "Faith is a virtue by which things not seen are believed" (ibid., 2a2ae.4, 1, reply). He declares that

> to believe is an act of mind assenting to the divine truth by virtue of the command of the will as this is moved by God through grace; in this the act stands under control of free will and is directed toward God. The act of faith is, therefore, meritorious. That is, one is rewarded for believing in what he does not see. There is no merit (reward) in believing what can be seen, since there is no faith involved; it can be seen. The scientist [i.e., philosopher] is impelled to assent by force of a conclusive proof. Thus the assent is not meritorious. [ibid., 2a2ae. 2, 9]

Faith is an act of mind and will. Since belief is an act of the intellect under the impetus of the will, it issues from both mind and will, and both are perfectible by action. “If an act of faith is to be completely good, then, habits must necessarily be present in both mind and will” (ibid., 2a2ae. 4, 2, reply). That is, one cannot be saved without a willingness to do something with faith. Saving faith will produce good works.

Meritorious Nature of Faith. Faith is meritorious, not because one has to work for it, but because it involves the will to believe. It “depends on the will according to its very nature (ibid., ad 5). “For in science and opinion [probable arguments] there is no inclination because of the will, but only because of reason” (ibid., 14.3, reply). But “no act can be meritorious unless it is voluntary, as has been said” (ibid., 14.5, reply).

Aquinas believed that Hebrews 11:1 is a good definition of faith, for it describes not merely what faith *does* but what it *is* . He saw in it the three essentials:

1. It mentions the will and the object that moves the will as principles on which the nature of faith is based.

2. In it we can distinguish faith from those things which appear not, as opposed to science and understanding.

3. The whole definition reduces to the essential phrase, “the substance of things hoped for.” (ibid., 14.2)

The formal difference between faith and reason is that one cannot both know and believe the same thing at the same time. For “Whatever things we know with scientific knowledge properly so called we know by reducing them to first principles which are naturally present to the understanding.”

Faith and Knowledge about the Same Object. Scientific knowledge culminates in sight of the thing believed, so there is no room for faith. One cannot have faith and scientific knowledge about the same thing (ibid., 14.9, reply). The object of true faith is above senses and understanding. “Consequently, the object of faith is that which is absent from our understanding.” As Augustine said, “we believe that which is absent, but we see that which is present” (ibid., 14.9, reply).

This does not mean, of course, that everyone will necessarily believe what I can see without faith (*Summa Theologica,* 2a2ae.1, 5). It does mean that the same person cannot have both faith and proof of the same object. One who sees it, does not believe it by faith on the testimony of others. One who believes it on the testimony of another does not see (know) it personally.

Probable Knowledge and Faith. Likewise, one cannot have “opinion” (probable knowledge) and “science” (certain knowledge) about the same object. As Aquinas notes, “opinion includes a fear that the other part [of the contradiction] is true, and scientific knowledge excludes such fear. However, this fear that the opposite may be true does not apply to matters of faith. For faith brings with it a greater certitude than what can be known by reason” (*On Truth,* 14.9, ad 6).

Creedal Knowledge and Faith. If the existence of God can be proved by reason, and if what is known by reason cannot also be a matter of faith, then why is belief in God proposed in the Creed? Aquinas responds that not all are capable of demonstrating God's existence. "We do not say that the proposition, God is one, in so far as it is proved by demonstration, is an article of faith, but something presupposed before the articles. For the knowledge of faith presupposes natural knowledge, just as grace presupposes nature" (ibid., 14.9, ad 8).

Perfected by Love, Produced by Grace. Reason can go only so far. Faith goes beyond reason and completes it. "Faith does not destroy reason, but goes beyond it and perfects it" (ibid., 14.10, reply, ad 7). "Love is the perfection of faith. Since charity is a perfection of the will, faith is formed by charity" (ibid., ad 1). "It is called form in so far as faith acquires some perfection from charity" (ibid., ad 7). But "the act of faith which precedes charity is an imperfect act awaiting completion from charity" (ibid., 14.A5, reply). So love perfects faith. Since believing depends on the understanding and the will, "such an act cannot be perfect unless the will is made perfect by charity and the understanding by faith. Thus formless faith cannot be a virtue" (ibid., ad 1).

However, "that which faith receives from charity is accidental to faith in its natural constitution, but essential to it with reference to its morality" (ibid., 14.6, reply).

Not only is love necessary to perfect faith, but grace is necessary to produce it. "Now, grace is the first [that is, remote] perfection of the virtues, but charity is their proximate perfection" (ibid., 14.A5, ad 6).

The Limitations of Reason. Aquinas did not believe that human reason was without limitations. In fact he offered many arguments as to why reason is insufficient and revelation is needed.

Five Reasons for Revelation. Following Jewish philosopher Moses Maimonides, Aquinas set forth five reasons why we must first believe what we may later be able to provide good evidence for (Maimonides, 1.34):

1. The object of spiritual understanding is deep and subtle, far removed from sense perception.

2. Human understanding is weak as it fights through these issues.

3. A number of things are needed for conclusive spiritual proof. It takes time to discern them.

4. Some people are disinclined to rigorous philosophical investigation.

5. It is necessary to engage in other occupations besides philosophy and science to provide the necessities of life (*On Truth,* 14.10, reply).

Aquinas said it is clear that, "if it were necessary to use a strict demonstration as the only way to reach a knowledge of the things which we must know about God, very few could ever construct

such a demonstration and even these could do it only after a long time.” Elsewhere, Aquinas lists only three basic reasons divine revelation is needed.

1. Few possess the knowledge of God, some do not have the disposition for philosophical study, and others do not have the time or are indolent.

2. Time is required to find the truth. This truth is very profound, and there are many things that must be presupposed. During youth the soul is distracted by “the various movements of the passions.”

3. It is difficult to sort out what is false in the intellect. Our judgment is weak in sorting true from false concepts. Even in demonstrated propositions there is a mingling of false.

“That is why it was necessary that the unshakable certitude and pure truth concerning divine things should be presented to men by way of faith” (*Gentiles,* 1.4, 2–5).

The Noetic Effects of Sin. Clearly, the mind falls far short when it comes to the things of God. As examples of weakness Aquinas looked at the philosophers and their errors and contradictions. “To the end, therefore, that a knowledge of God, undoubted and secure, might be present among men, it was necessary that divine things be taught by way of faith, spoken as it were by the Word of God who cannot lie” (ibid., 2a2ae. 2, 4). For “the searching of natural reason does not fill mankind’s need to know even those divine realities which reason could prove”(ibid., 2a2ae.2, 4, reply).

As a result of the noetic effects of sin, grace is needed. Aquinas concluded that “If for something to be in our power means that we can do it without the help of grace, then we are bound to many things that are not within our power without healing grace—for example to love God or neighbor.” The same is true of belief. But with the help of grace we do have this power (ibid., 2a2ae.2, 6, ad 1).

However, Aquinas did not believe that sin destroyed human rational ability. “Sin cannot destroy man’s rationality altogether, for then he would no longer be capable of sin” (ibid., 1a2ae.85, 2).

Things above Reason. Not only is faith necessary because of human depravity, but also because some things simply go beyond the power of reason. That does not mean they are contrary to reason, but that they are not fully comprehensible. “Faith, however, is said to surpass reason, not because there is no act of reason in faith, but because reasoning about faith cannot lead to the sight of those things which are matters of faith” (ibid., 14.A2, ad 9). If one could base faith fully on reason, faith would not be a free act; it would be consent caused by the mind.

At two levels a matter of faith may be “above reason.” At its highest level it can be above reason absolutely—if it exceeds the intellectual capacity of the human mind (e.g., the Trinity). It is impossible to have scientific knowledge of this. Believers assent to it only on the testimony of God.” Or, it may not absolutely exceed the intellect capacity of all, but is exceedingly difficult to comprehend, and is above the intellectual capacity of some (for example, that God exists without

body). “These we may have scientific proofs of and, if not, we may believe them” (*On Truth,* 14.9, reply).

We must have faith when the light of grace is stronger than the light of nature. For “although the divinely infused light is more powerful than natural light, in our present state we do not share it perfectly, but imperfectly.” Therefore, “because of this defective participation, through that infused light itself we are not brought to the vision of those things for the knowledge of which it was given us. But we will have it in heaven when we share that light perfectly and in the light of God we will see light” (*Gentiles* , 14.8, ad 2).

Faith, then, surpasses reason. For “some truths about God exceed all the ability of the human reason. Such is the truth that God is triune” (ibid., 1.3). The ineffable essence of God cannot be known by human reason. The reason for this is that the mind depends on the senses. “Now, sensible things cannot lead the human intellect to the point of seeing in them the nature of the divine substance; for sensible things are effects that fall short of the power of their cause” (ibid., 1.3, 3).

Just because we have no reasons for things that go beyond reason does not mean they are not rational. Every belief that is not self-evident can be defended as necessary. We may not know the argument, but it exists. It at least is known to God “and to the blessed who have vision and not faith about these things” (*De Trinitate,* 1.1.4; *On Truth,* 14.9, ad 1). While human reason cannot attain to the things of faith, it is the preface to them. While “philosophical truths cannot be opposed to truths of faith, they fall short indeed, yet they also admit common analogies; and some moreover are foreshadowing, for nature is the preface of grace” (*De Trinitate,* 2.3).

“Although the truth of the Christian faith which we have discussed surpasses the capacity of the reason, nevertheless that truth that the human reason is naturally endowed to know cannot be opposed to the truth of the Christian faith” (*Gentiles,* 1.7, [1]).

Summary. Aquinas’s view of the relation of faith and reason blends positive elements of presuppositionalism and evidentialism, of rationalism (*see* DESCARTES, RENE ; LEIBNIZ , GOTTFRIED) and fideism. Aquinas stresses the need for reason before, during, and after beliefs are acquired. Even the mysteries of faith are not irrational.

On the other hand, Aquinas does not believe that reason alone can bring anyone to faith. Salvation is accomplished only by the grace of God. Faith can never be *based on* reason. At best it can only be *supported by* reason. Thus, reason and evidence never coerce faith. There is always room for unbelievers not to believe *in* God, even though a believer can construct a valid proof *that* God exists. Reason can be used to demonstrate that God exists, but it can never in itself persuade someone to believe in God. Only God can do this, working in and through their free choice.

These distinctions of Aquinas are eminently relevant to the discussion between rationalists and fideists or between evidentialists and presuppositionalists. With regard to belief that God exists, Aquinas sides with the rationalists and evidentialists. But with respect to belief in God, he

agrees with fideists (*see* FIDEISM) and presuppositionalists (*see* APOLOGETICS, PRESUPPOSITIONAL).

Feuerbach, Ludwig. German atheist Ludwig Feuerbach (1804–1872) was born in Landshut, Bavaria, and educated in Heidelberg and in Berlin under G. W. F. Hegel . He received his doctorate at Erlangen in 1828 (White, 190). In 1830 he published an anonymous work, *Gedanken uber Tod und Unsterblichkeit* , that interpreted Christianity as an egoistic and inhumane religion. When its authorship was discovered, he was dismissed from the faculty.

Feuerbach was influenced by, and wrote a biography on, Pierre Bayle (1838). His most influential work was *The Essence of Christianity* (1841), though he also penned *The Philosophy of the Future* (1843) and *The Essence of Religion* (1851) and *Theogonie* (1857).

The Nature of Religion. Feuerbach was influenced by Hegel's dialectic, and he influenced Karl Marx as well as Sigmund Freud . Feuerbach's materialism reacted to Hegel's idealism. In reli gion Feuerbach was influenced by David Strauss ' view that religion tells us more about the inner life of individuals than about the object of worship (White, 191).

His chief aim: "To change the friends of God into friends of man, believers into thinkers, worshipers into workers, candidates for the other world into students of this world, Christians, who on their own confession are half animal and half angel, into men—whole men" (*Essence of Christianity,* xi).

Basis of Religion: Self-Consciousness. According to Feuerbach, only a human being (not animals) has self-consciousness. Religion is an expression of that consciousness, under the guise of consciousness of God. "In the object which he contemplates, therefore, man becomes acquainted with himself"(*Essence of Christianity,* 5). But consciousness, as such, is unlimited,

so, humankind must be unlimited. And consciousness is objectification. Hence, God is nothing but an objectification of the human species.

God a Projection of Human Imagination. Feuerbach believed that religion is only the dream of the human mind. He offered several arguments supporting his hypothesis that God is nothing more than a self-projection of human consciousness.

Argument from human personality. The first is from the basic elements of human personality: reason, will, and affection. Reason, will, and affection each exists for its own sake. For "to will, to love, to think, are the highest powers, are the absolute nature of man as man, and the basis of his existence" (*Essence of Christianity,* 3). But whatever exists for its own sake is God. Thus, by very nature, the person is God.

Argument from the nature of understanding. One cannot understand something without having its nature, since only like knows like. For "the measure of the nature is also the measure of the understanding." That is, it takes one to know one. But humans understand the divine. Therefore, humanity must be the divine. In Feuerbach's words, "so far as nature reaches, so far reaches thy unlimited self-consciousness, so far art thou God" (*Essence of Christianity,* 8).

Argument from the limits of one's nature. A human being can go no farther than his or her nature; one cannot get outside of self. But a person can feel (be aware of) the infinite. For, "every being is in and by itself infinite—has its God, its highest conceivable being, in itself" (*Essence of Christianity,* 7). If this is so, then human beings are infinite by nature. The infinite you feel is the infinity of yourself.

Argument from the history of religion. Feuerbach believed that historically attributes were given to God because in human reasoning those attributes were thought to be divine. They were not considered to be divine because they were given to God. This being the case, it follows that what we call "the divine" or "God" is nothing more than human characteristics that have been attributed to God.

"The object of any subject is nothing else than the subject's own nature taken objectively. Such are man's thoughts and dispositions, such is his God." Hence, "Consciousness of God is self-consciousness, knowledge of God is self-knowledge. By his God thou knowest the man, and by the man his God; the two are identical" (*Essence of Christianity,* 12).

Necessity of Religion. In spite of his pessimistic conclusions, Feuerbach believed religion to be essential. The reason is that human beings, by their very nature, must objectify; they cannot avoid doing so. And God, Feuerbach affirmed, is that objectification. However, ignorance of the fact that the object of one's objectification is really oneself is essential to religion. The child must first see herself under the form of another (the father) before she can come to see herself as herself. If this were not true in religious projections, it would be idolatry, viz., the worship of oneself. So, it is necessary to believe this projection of one's own nature is really God, even though it is not.

Progress in human understanding would not be possible without this projection. The human being grows in self-understanding as former deities become idols. Hence, the ideal course of religion is for individuals to learn to attribute more to themselves and less to God.

The attributes of God are really what people believe about themselves. God's aseity or self-existence is a desire to avoid temporality by positing an absolute beginning. The perfection of God is the human moral nature taken for absolute being. The personality of God is the effort to show that personality is the highest form of being. The providence of God is really the desire for importance. Prayer expresses the desire for self-communication. The result of a belief in miracles is the desire for immediate satisfaction of wishes without tiresome waiting.

The Irony of Religion. There is a basic irony in this process which may be seen in comparing beliefs to the body's circulatory system. Religion is a *systole action* , like the arteries, wherein people project their best on God. Goodness is transported away from the personhood like oxygen-rich blood from the heart. Without this feeling of goodness, the individual is left sinful. That sets up the diastole action, like the veins, whereby goodness is carried back to the heart in the form of grace. We send all our human goodness "upstairs" and call it God. Then feeling depraved, we call upon the God we create to send back our goodness as grace.

Feuerbach concludes, therefore, that:

1. Religion is a projection of human imagina tion in the act of self-consciousness.

2. God is the best that one unwittingly sees in oneself.

3. Religion is a necessary dialectic of development for human progress.

4. Religion enables indirect and involuntary self-discovery.

Feuerbach's Influence. The influence of Feuerbach on modern thought has been considerable. There was a direct and immediate impact on Karl Marx, and through him on the world communism movement. Marx and Friedrich Engels incorporated Feuerbach's arguments against God and religion into their dialectical materialism, criticizing Feuerbach for his lack of political involvement. Engels boasted that with one blow to pulverize religion, communism would place materialism back on the throne (Marx, 224).

Feuerbach also had a considerable impact on the formation of modern a-theistic existentialism through Martin Heidegger and Jean-Paul Sartre . The father of neoorthodox theology, Karl Barth, pays tribute to Feuerbach (*see* BARTH, KARL). All in all, Feuerbach is one of the most significant and engaging atheists of modern times, anticipating even the work of Sigmund Freud.

Evaluation. Atheism as a worldview is evaluated in other articles, but a few comments are in order on Feuerbach's unique analysis of religion.

Some Positive Contributions. Even atheists have insights into the nature of reality. Among Feuerbach's:

He saw the centrality of the question of God. Although his love affair with the divine was an unhappy one, Feuerbach identified God as the central question: "All my writings have had, strictly speaking, one purpose, one intention, one theme. This is nothing less than religion and theology and whatever is connected with them" (*Essence of Christianity,* x).

He exposed human-centered religion. Barth pointed out in the "Introductory Essay" to a reprint of *Essence of Christianity* that Feuerbach correctly analyzed any humanity-centered form of religion, including those springing from the father of modern liberalism, Friedrich Schleiermacher. Barth observed, "Can we deny that Feuerbach himself, like a not very cunning, but slightly keen-eyed spy, lets out the esoteric secret of this whole priesthood. . . . Theology has long since become anthropology" (Barth, xxi). Once modern theology gave up the starting point of divine revelation, then human beings created God in their own image. Modern liberal theology became anthropology.

He called negative religious language useless. Feuerbach rightly said, "Only where man loses his taste for religion, and thus religion itself becomes insipid existence—does the existence of God become an insipid existence—an existence without qualities" (*Essence of Christianity,* 15). Purely negative religious language—where we can only know what God is not—is useless and inadequate. We cannot know God is not "that" unless we know what the "that" is (*see* ANALOGY, PRINCIPLE OF).

He correctly critiqued other-worldly religions. Feuerbach's condemnation of religious other-worldliness is more often accurate than most religious people admit. Some forms of Christianity tend to be more heavenly minded than earthly good. It is possible to get so caught up in the sweet-by-and-by that one forgets the wretched here-and-now. Not all believers are thinkers (*Essence of Christianity,* xi).

He exposed narcissism in much of religious experience. Feuerbach's thesis is not wrong; it is simply overextended. Many religions do make their god in human image, creating a god who is tame and harmless—one they can handle. Such a god may be whatever they demand, but such a god is not the infinite, sovereign God of the Bible (*see* GOD, NATURE OF).

Problems with Feuerbach's View. Its central thesis is self-defeating. The basic premise of Feuerbach's view is self-defeating. He contends that "God is nothing but a projection of human imagination." But all "nothing-but" statements presuppose "more-than" knowledge. How could he know that God was "nothing but" unless he knew "more than" that himself. In short, the central statement of Feuerbach's system self-destructs because it implies more knowledge than it allows.

Maybe atheism is a projection. Feuerbach does not seriously consider that his own view may be a projection of his own imagination. Maybe Feuerbach is simply imagining that there is no God. Perhaps, as Freud, Feuerbach is engaged in creating a view of God in his own image. His atheism could just as easily be an illusion—something that results from his own wishes—as the

theism he rejects. Self-projection explains atheism as well, if not better, than it does theism. So, maybe we didn't create the Father; maybe atheism killed him.

He never proves infinite consciousness. Many arguments Feuerbach offers for atheism beg the question; they presuppose what is to be proven. He never really proves that human consciousness is infinite; he simply assumes it. Of course, if our consciousness is really infinite, then we are God. But this is clearly not the case, since our consciousness is changing and limited, while God is unchanging and unlimited.

One does not have to be one to know one. Another fallacious assumption is that one has to be identical to any object that is known. But he never proves this premise, and it is not the case. Like can know like. Knowledge can be by analogy (*see* ANALOGY, PRINCIPLE OF). We do not have to be a tree to know a tree, but only to take on its like ness in our mind. Likewise, we do not have to be God to know God. We simply have to be like God. Similarity is enough for knowledge; identity of subject and object is not necessary.

Such a belief would destroy human progress. Feuerbach held that positing a God who does not really exist is essential to human self-development. But one who accepts Feuerbach's analysis no longer believes self-projections are God. Then, according to Feuerbach's argument, human progress will stop. If ignorance of the fact that we are God is essential to human progress, then once one becomes a Feuerbachian, the gig is up and progress is impossible.

Feuerbach's materialism was inconsistent. Although Feuerbach loathed his mentor Hegel, he never overcame the hangover of idealism. Nor did he rid himself of the nagging question of God. For someone who believes in basic materialism, this stress on consciousness is eminently unfitting. Engels noted that Feuerbach "stopped halfway; the lower half of him was materialist, the upper half idealist" (cited in White, 192).

This analysis of religious experience is shallow. Barth identified Feuerbach's problem as "shallowness." He wrote, "Feuerbach was a 'true child of his century,' a 'non-knower of death,' and a 'mis-knower of evil.' In fact, anyone who knew that we men are evil from head to foot and anyone who reflects that we must die, would recognize it to be the most illusory or all illusions to suppose that the essence of God is the essence of man" (Barth, xxviii).

Fideism. Religious fideism argues matters of faith and religious belief are not supported by reason. Religion is a matter of faith and cannot be argued by reason. One must simply believe. Faith, not reason, is what God requires (Heb. 11:6). Fideists are skeptical with regard to the nature of evidence as applied to belief. They believe no evidence or argument applies to belief in God. God is not reached by reason, but only by faith. Soren Kierkegaard and Karl Barth are examples of fideists.

In epistemology, fideists are generally coherentists. They definitely reject classical foundationalism or any belief in self-evident first principles. Some presuppositionalists (*see* APOLOGETICS, PRESUPPOSITIONAL) are classed as fideists, though many believe in some form of argument to support their belief in God.

Response to Fideism. Even from a biblical point of view, God calls us to use reason (Isa. 1:18 ; Matt. 22:36–37 ; 1 Peter 3:15). God is a rational being and created us as rational beings. God would not insult the reason he gave us by asking us to ignore it in such important matters as our beliefs about him.

Fideism also is self-defeating, using reason to say we should not use reason in matters of religion. If one has no reason for not using reason, then the position is indefensible. There is no reason why one should accept fideism.

To claim reason is just optional for a fideist will not suffice. For either the fideist offers some criteria for when we should be reasonable and when we should not, or else the decision is simply arbitrary. If there are rational criteria for when we should be rational, there is a rational basis for using reason, and fideism is falsified. Reason is not the kind of thing in which a rational creature chooses to participate. By virtue of being rational by nature, one must be part of rational discourse. And rational discourse demands that one follow the laws of reason (*see* FIRST PRINCIPLES ; LOGIC). One such principle is that one should have a sufficient reason for beliefs. But if one must have sufficient reason, then fideism is wrong, since it claims that one need not have a sufficient reason for belief (*see* FAITH AND REASON).

Fideists often confuse belief *in* with belief *that* . While what they claim about faith appropriately applies to belief *in* God, it does not apply to belief *that* God exists. One must have evidence *that* there is a floor in an elevator. Otherwise it is foolish to leap into it in the dark. Likewise, it is foolish to leap in the dark with an act of faith in God, unless we have evidence that he is there.

There are good reasons for belief that God exists, such as the cosmological argument, the teleological argument, and the moral argument. Further, there is good evidence to believe that miracles have occurred, including Christ's death and victory over death for us (*see* RESURRECTION, EVIDENCE FOR).

Finite Godism. Theism believes an infinite God is both beyond and in the world. Finite godism, by contrast, posits a god who is only finite. Polytheism claims there are many such gods, but finite godists believe there is only one God.

Ancient Greek versions of a limited God included Plato's (428–348 B.C .) philosophy (see Plato, 17–92). But in the modern Western world, most finite god views arise out of a theistic back ground. Generally speaking, many finite godists come to that conclusion because they cannot reconcile their theistic tradition with the pervasive presence of evil (*see* EVIL, PROBLEM OF).

Typology of Finite Godism. There are many different possibilities for a finite god position, not all of which have well-known representatives. Most finite godists hold that God is personal, though some, including Henry Wieman, posit an impersonal Being (Wieman, 6–8, 54–62). The limitations on this God could be internal, as John Stuart Mill believed, or external to the world, as Plato believed. The limitations could be in his goodness but not his power (a minority view), or in his power but not his goodness, as in Edgar Brightman (see Brightman) and Peter Bertocci. Or, God could be limited in both power and goodness (Mill's view).

A finite god can have either one or two poles. For coverage of bipolar finite godism, see the article PANENTHEISM . Monopolar examples are discussed here. Although many finite godists believe god to be transcendent (beyond the universe), some have a finite god who is immanent (within the universe). Henri Bergson, an example of the latter view, holds that God is the Vital Force that drives the process of evolution onward (see Bergson, chap. 3).

Tenets of Finite Godism. Finite godists tend to disagree among themselves about God and the world. While this article stresses points in common, some differences will be noted.

View of God. The most fundamental characteristic of the finite god view is that this god is limited in his very nature. Some say he is limited in power and not goodness; few, if any, claim he is limited in goodness. Some claim God is limited in both power and goodness. Almost all agree that God is not infinite in power.

Properly speaking, a finite-god view holds that God is intrinsically limited in his nature. Although Plato seemed to hold that God is not intrinsically limited in his nature, most believe that the eternal world (which God did not create) places limits on God's ability to act within it (*see* DUALISM). If God did not create the world and does not sustain its existence, then he is not able to do just anything with it; for example, he cannot destroy it.

View of Evil. In contrast to pantheists, finite godists affirm that evil is real. In fact, the presence and power of evil limits God. Evil is both physical and moral. Physical evil is not

always possible to avoid, but we can do something about moral evil. Cooperating with God's efforts for good, even going beyond them if necessary, is part of our moral duty in the world.

There are various explanations for the origin of evil. *Dualists* (*see* DUALISM) say it was always there in some form. Others attribute much of it to human free choices. But all agree there is no guarantee that evil will ever be totally destroyed. If God were all powerful, then he would destroy evil. But since evil is not destroyed, there must not be an all-powerful God. The argument goes like this:

1. If God were all powerful, he could destroy evil.

2. If God were all good, he would destroy evil.

3. But evil has not been destroyed.

4. Therefore, there cannot be an all-powerful, all-good God.

View of Creation. Finite godism has no uniform stand on creation. Those who come out of the dualistic Greek tradition, following Plato, hold to creation *ex materia* , that is, out of preexisting eternal matter (*see* CREATION, VIEWS OF). God did not bring the world into existence; he merely *shaped* the matter that was already there. In view of this, one limitation on God's power is external. Thus, there is something about the extent and nature of matter over which even God has no ultimate control. He simply has to work with the world and do the best he can under the limitations it places on his creative powers.

An alternative view is that God brought the universe into existence *ex nihilo* , out of nothing. In this case, God is limited by his own nature, not by something "out there" with which he has to cope and over which he has no final word.

All finite godists agree that creation was not *ex Deo* (out of God). This is not a pantheistic position, though God is limited in or by creation.

View of the World. Few statements regarding the world unite finite godists. All agree that the world exists and runs by natural laws. Beyond this there is no unanimity about whether it always existed and/or always will exist. The only other widely held view among finite godists is that the physical universe is not eternal or unlimited in energy. The universe is subject to the law of entropy (*see* THERMODYNAMICS, LAWS OF) and is running down.

View of Miracles. Most finite godists reject miracles. Some admit that supernatural interventions are possible in principle but deny they happen in practice. In this respect finite godism is similar to deism, which claims a supernatural Creator but disclaims any supernatural acts in the creation. However, deism is properly distinguished from finite godism in that the deistic God has no intrinsic limits on his power. Both views see miracles as a violation of natural law. And since they place a high emphasis on the regularity and uniformity of the world, they do not wish to concede that miracles interrupt it (*see* MIRACLE ; MIRACLES, ARGUMENTS AGAINST).

View of Human Beings. Ultimately humanity is created by God. However, since Darwin, finite godists have been convinced that God used a natural evolutionary process. As noted, some finite godists even equate God with the evolutionary force in nature.

Most finite godists admit humans have a soul, and some believe persons are immortal. All reject a purely materialistic (*see* MATERIALISM) view of humanity, but not all are sure there is life after death.

View of Ethics. Few finite godists believe in ethical absolutes. Since God is not unchangeable, it follows that no value based in him would be immutable either. Many, however, believe that values are objective and enduring. Some even hold certain values are unconditional. However, for the most part, since God has revealed any unequivocal ethical norms, persons are left to decide for themselves the right course of action in each situation. The general guidance in these decisions is provided in different ways by different views.

View of History. Regarding the movement of history and humanity, some are more optimistic than others. Some point to a steady evolutionary progress of the universe as the hope for final victory. Most are less assured that good will vanquish all evil. All admit it is possible there will be no final victory at all. It is even conceivable that evil may overcome good, though most finite godists find this possibility intuitively repugnant. Nevertheless, since God is limited and (at best) is struggling with evil himself, there is no assurance. The struggle may simply go on endlessly.

Evaluation. Finite godism contains significant insights into reality. However, as a system it has serious problems.

Positive Contributions. Evil is treated realistically. Unlike such worldviews as pantheism , finite godism cannot be blamed for attempting to avoid the reality of evil. It is in facing the problem squarely that most finite godists have come to their position.

The exercise of divine power is limited. Whatever can be said about the meaning of the word *omnipotent* , it cannot mean that God can literally do anything. Finite godists are right to point out that God is limited in his use of power. For example, God cannot use his power (limited or unlimited) to create and destroy the same thing at the same time. God cannot make square circles. God cannot give creatures free choice and at the same time force them to act contrary to their choices.

Likewise, finite godism points to a real problem in many theistic views of evil. The position recognizes that "the best possible world" may not actually be possible. Just because we can *conceive* of our present universe with less or no evil, does not mean that God can *achieve* such a universe. A world of free creatures, whether freely created by God or not, does place some limitations on the use of God's power (*see* EVIL, PROBLEM OF).

There is a need to struggle against evil. Another value that emerges from most forms of finite godism is an antidote for fatalism. The outcome of the struggle of good and evil does in a real sense depend on man. Our efforts can make a difference. Complete determinism is fatal to

the needed motivation to fight evil. Finite godists cannot be charged with a passive resignation to the inevitable. Their view calls for real involvement by persons to overcome evil.

Problems with the View. In spite of its many positive insights into the nature of things, finite godism as a system is fatally flawed.

Its view of God is inadequate. Philosophically, the concept of a finite god is contrary to the principle of causality, which affirms that every finite being needs a cause. A finite god is only a large creature, and all creatures need a Creator. A finite being is a contingent being, not a Necessary Being, which *cannot not* exist. A contingent being *can be nonexistent* . But whatever could not exist depends for its existence on what cannot not exist, a Necessary Being.

Further, those who believe God is limited in perfection as well as power do not identify what is really God, at least not God in an ultimate sense. For one could measure God's imperfection only by an ultimate standard (see Lewis, 45–46). But the ultimate standard of perfection is by definition God. So an imperfect finite god would be something less than the ultimate God. Actually, there seems to be no way to posit a finitely good god without having an infinitely good God as a standard by which to measure.

Anything incompletely good is not worthy of worship. Worship means to attribute ultimate worth to something or someone. But why should one attribute absolute worth to what is not absolutely worthy? Every finite thing is a creature, and worship of the creature, rather than the Creator, is idolatry. Or to borrow Paul *Tillich's terms, an ultimate commitment should not be given to anything less than an Ultimate. But a partially good being is not an ultimate Good. Why, then, should anyone worship a finite god?

I ts view of evil is inadequate. The problem of evil does not eliminate God. In fact, we cannot even know there are ultimate injustices in the world unless we have some ultimate standard of justice, God, beyond the world. Conversely, only an all-powerful God can defeat evil, and only an all-good God desires to defeat evil. Hence, if evil will ever be defeated, then there must be an all-powerful, all-good God. A finite god will not suffice for the task.

Furthermore, there is an alternative in the argument for a finite god. Remember that the argument goes:

1. If God were all-powerful, he could destroy evil.
2. If God were all-good, he would destroy evil.
3. But evil is not destroyed.
4. Therefore, there cannot be an all-powerful, all-good God.

A theistic worldview, need only change the third premise:

3. But evil is not *yet* destroyed.

The word *yet* immediately opens up the possibility that evil will yet be destroyed (i.e., defeated) in the future. And the finite godist who insists this will never happen is presuming to know more than a finite creature is able to know.

Some finite godists even admit this point. Bertocci, for example, said there is evil "whose destructive effect, *so far as we know,* is greater than any good which may come from it." But that is precisely the problem: How can a finite man know far enough into the future to say nothing will be done to ultimately defeat evil and bring in a greater good? However improbable it may seem, the future can bring good news.

Furthermore, if there is an all-powerful and all-good God, this automatically guarantees that evil *will* be defeated in the future. The reasoning is:

1. An all good God has the desire to defeat evil.

2. An all powerful God has the ability to defeat evil.

3. But evil is not yet defeated.

4. Therefore, evil will be defeated in the future.

Put in this form, the question would not be whether evil is compatible with an infinite God; it certainly seems to be. In fact, if an infinite God exists, then it is a guarantee that evil will be defeated, since such a God would have both the desire and the power to do it. Thus it appears that finite godism has not successfully eliminated an infinite God by way of evil.

Another problem for modern forms of finite godism is that, if God is not completely good, then what is the standard for measuring his goodness? We cannot measure him by the standard of his own nature, for that he measures up to perfectly. But if we measure God by some absolute moral law beyond God, then the Legislator of this absolute law would be God. For laws come from law-givers, and moral prescriptions come from moral prescribers (*see* MORAL ARGUMENT FOR GOD). If so, would not absolutely perfect moral laws come from an absolutely perfect Moral Law-giver? If a finite god falls short of an absolute standard of goodness, then he is not God. The absolute moral Being *beyond him* would be God.

Perhaps this is why most finite godists desire to limit only God's power and not his goodness. But to an outsider this looks like an arbitrary judgment and wishful thinking. Further, how can God be an infinitely good Being when he is only a finite being? How can one be more of anything than he has the capacity to be? How can the attributes of God be extended farther than his actual nature allows? Can one's knowledge, for example, be extended farther than the brain allows?

Finite godism claims God cannot destroy all evil. Some say this is because of an intrinsic limit in his nature. Others claim it is because of an extrinsic limitation on him. But the only extrinsic limitation which the Creator could not destroy would be an eternal uncreated and Necessary Being. For a created or contingent being could be destroyed by an uncreated or

Necessary Being. But if there is an eternal, uncreated, and Necessary Being beyond God, then it is the Creator, and the "finite god" turns out only to be a limited creation. If, on the other hand, the being outside God is only created and contingent, yet God is uncreated and necessary, God could destroy it. But if he can create and destroy anything, why not admit he is all powerful?

This is the dilemma: If God can destroy all else in the universe besides himself, then he is all-powerful. If there is some other indestructible being outside God, then he is not an all-powerful God; this other being can resist his power. But in either case the finite god view would seem to be wrong, for there would be an all-powerful Being who could destroy the finite god.

Finite godists admit there is no guarantee good will ultimately triumph over evil. If so, those who work for good may work for naught. Of course, in the everyday course of events our efforts are frustrated. However, a religious commitment is not an everyday commitment; it is an ultimate commitment. Can a finite god, who cannot guarantee victory, even if we put our all into it, really inspire an ultimate commitment? How many people will really make an ultimate commitment to work for what they have no assurance will ultimately win? We can be inspired to confess courageously "I would rather lose in a battle that is ultimately going to win, than to win in a battle that will ultimately lose."

Other Inadequate Views. In addition to their flawed views of God and evil, finite godists fail to adequately defend their views of annihilationism and antisupernaturalism (*see* MIRACLES, ARGUMENTS AGAINST).

First Principles. First principles are the foundation of knowledge. Without them nothing could be known (*see* FOUNDATIONALISM). Even coherentism uses the first principle of noncontradiction to test the coherence of its system. Realism affirms that first principles apply to the real world. First principles undeniably apply to reality. The very denial that first principles apply to reality uses first principles in the denial.

Principles of Reality. Without basic first principles of reality, nothing can be known. Everything we know about reality is known by them. Twelve basic first principles can be set forth.

1. Being Is (B is) = *The Principle of Existence* .

2. Being Is Being (B is B) = *The Principle of Identity* .

3. Being Is Not Nonbeing (B is Not Non-B) = *The Principle of Noncontradiction.*

4. Either Being or Nonbeing (Either B or Non-B) = *The Principle of the Excluded Middle.*

5. Nonbeing Cannot Cause Being (Non-B > B) = *The Principle of Causality.*

6. Contingent Being Cannot Cause Contingent Being (Bc > Bc) = *The Principle of Contingency* (or Dependency).

7. Only Necessary Being Can Cause a Contingent Being (Bn → Bc) = *The Positive Principle of Modality.*

8. Necessary Being Cannot Cause a Necessary Being (Bn > Bn) = *The Negative Principle of Modality.*

9. Every Contingent Being Is Caused by a Necessary Being (Bn → Bc) = *The Principle of Existential Causality.*

10. Necessary Being exists = *Principle of Existential Necessity* (Bn exists).

11. Contingent being exists = *Principle of Existential Contingency* (Bc exists).

12. Necessary Being is similar to similar contingent being(s) it causes = *Principle of Analogy* (Bn — similar → Bc).

For a realist, being is the basis of knowing. The rationalist Rene Descartes said, “I think, therefore, I am.” But for a realist such as Thomas Aquinas, “I am, therefore, I think.” For one could not think unless he existed. Existence is fundamental to everything. Being is the basis for everything. Everything is (or, has) being. Hence, there is no disjunction between the rational and the real. Thought cannot be separated from things or knowing from being.

Undeniability. First principles are undeniable or reducible to the undeniable. They are either self-evident or reducible to the self-evident. And self-evident principles are either true by their nature or undeniable because the predicate is reducible to the subject. That the predicate is reducible to the subject means that one cannot deny the principle without using it. For example, the principle of noncontradiction cannot be denied without using it in the very denial. The statement: "Opposites cannot be true" assumes that the opposite of that statement cannot be true.

Not all skeptics or agnostics (*see* AGNOSTICISM) are willing to grant that the principle of causality, which is crucial in all cosmological arguments for God, is an undeniable first principle. Indeed, not every skeptic is willing to admit that something exists (the principle of existence). Thus, it is necessary to comment on their undeniability.

1. *The principle of existence* . Something exists. For example, I exist. This is undeniable, for I would have to exist in order to deny my existence. In the very attempt to explicitly deny my existence I implicitly affirm it.

2. *The principle of identity* . A thing must be identical to itself. If it were not, then it would not be itself.

With these and other principles, it is important to note the difference between *unsayable* and *undeniable* . I can say or write the words, "I do not exist." However, when I said it I implicitly affirmed that I do exist. The affirmation that I do not exist is actually unaffirmable. I must actually exist in order to grammatically say I do not exist.

Some contemporary nominalists suggest that this is a quirk of language. They insist that such statements as "I cannot speak a word in English" are only self-defeating because one is speaking in English. One could use French and avoid the difficulty. They add that one can make a metastatement in even the same language that avoids this difficulty. That is, they posit a class of statements about statements (called metastatements) which they claim are not statements about the real world. These metastatements are supposedly exempt from being self-defeating. Thus, one who says, "No statements about God are descriptive," is supposedly not making a descriptive statement about God, but rather about the statements that can be made of God.

It is true that a statement in French saying that one cannot speak in English is not self-defeating. However, a statement in French affirming that one cannot speak a word in French is self-defeating.

The metastatement maneuver does not avoid the trap of self-destruction. For statements about statements that affirm something about reality are indirectly statements about reality. For example, if one says, "I am not making a statement about reality when I say that statements cannot be made about reality" he *is* making a statement about reality. It is the most radical kind of statement that can be made about reality, since it prohibits all other statements about reality. Thus, the statement "Something exists" cannot be denied without implicitly affirming that something does exist (e.g., the maker of that statement).

3. *The principle of noncontradiction*. Being cannot be nonbeing, for they are direct opposites. And opposites cannot be the same. For the one who affirms that "opposites can both be true" does not hold that the opposite of this statement is true.

4. *The principle of the excluded middle*. Since being and nonbeing are opposites (i.e., contradictory), and opposites cannot be the same, nothing can hide in the "cracks" between being and nonbeing. The only choices are being and nonbeing.

Any attempt to deny that all meaningful statements must be noncontradictory, by its very nature as a meaningful statement, must be noncontradictory. Likewise, any attempt to deny the law of noncontradiction applies to reality is itself a noncontradictory statement about reality—which is self-defeating. So, like other first principles, the law of noncontradiction is undeniable.

Two challenges to this conclusion have been offered, one philosophical and one scientific. The philosophical objection charges that this argument begs the question, using the law of noncontradiction to prove the law of noncontradiction. It says in effect that it is contradictory to deny the principle of noncontradiction. But the law of noncontradiction is not used as the *basis* of the argument. It is merely used in the *process* of giving an indirect argument for the validity of the law of noncontradiction. Just as the statement "I can speak a word in English" uses English in the *process* of demonstrating that I can speak a word in English, even so the law of noncontradiction is used in the process of showing the validity of the law of noncontradiction. But it is not the basis for the argument.

The direct basis for the law of noncontradiction is its self-evident nature, whereby the predicate is reducible to the subject. And the indirect proof is shown by the fact that any attempt to deny it implies it. That is, it is a necessary condition for all rational thought.

A second objection to the law of noncontradiction comes from science. Niels Bohr's principle of complementarity is used to show that subatomic reality is contradictory. For according to this principle there are contradictory ways to describe the same reality, such as, light is both particles and waves. However, this is a misunderstanding of the principle of complementarity. As Werner Heisenberg noted, these are "two complementary descriptions of the same reality . . . these descriptions can only be partially true: there must be limitations to the use of the particle concept as well as of the wave concept, else once could not avoid contradictions." Thus "if one takes into account those limitations which can be expressed by uncertainty relations, the contradictions disappear" (Heisenberg, 43).

The objection that Heisenberg's principle of uncertainty or unpredictability is contrary to the principle of causality is unfounded. At best, it does not show that events have no cause, but only that they are unpredictable as presently perceived with available technology. For a complete discussion see INDETERMINACY, PRINCIPLE OF.

5. *The principle of causality*. Only being can cause being. Nothing does not exist, and only what exists can cause existence, since the very concept of "cause" implies an existing thing that has the power to effect another. From absolutely nothing comes absolutely nothing.

The statement “Nonbeing cannot produce being” is undeniable. The very concept of “produce” or “cause” implies something exists to cause or produce the being produced. To deny that relationship of cause to effect is to say, “Nothing is something” and “Nonbeing is being,” which is nonsense.

This should be distinguished from David Hume ’s point that it is not absurd for nothing to be *followed by* something. Hume himself accepts, that something is always *caused by* something. And theists accept Hume’s point that, as a matter of sequence, there was no world and then there was a world, which is nothing followed by something. There is no inherent contradiction in saying nothing can be followed by something. That doesnchange the fact that nothing can cause absolutely nothing.

Another way to understand why nonbeing cannot cause being is by noting that everything that “comes to be” must have a cause. If it came to be it is not a Necessary Being, which by its nature must always be. So what comes to be is, by definition, a contingent being, a being that is capable of existing or not existing. For every contingent thing that comes to be there must be some efficient action that causes it to pass from a state of potentiality (potency) to a state of actuality (act). For, Aquinas noted, no potency for being can actualize itself. To actualize itself it must be in a state of actuality, and before it is actualized it must be in a state of potentiality. But it cannot be both at the same time (a violation of the principle of noncontradiction). Hence, one cannot deny the principle of causality without violating the principle of noncontradiction.

6. *The principle of contingency (or dependency)* **.** If something cannot be caused by nothing (5), neither can anything be caused by *what could be nothing* , namely, a contingent being. For what could be nothing does not account for its own existence. And what cannot account for even its own existence cannot account for the existence of another. Since it is contingent or dependent for its own being, it cannot be that on which something else depends for its being. Hence, one contingent being cannot cause another contingent being.

7. *The positive principle of modality* **.** Absolutely nothing cannot cause something (5). Neither can one contingent kind (mode) of being cause another contingent being (6). So, if anything comes to be, it must be caused by a Necessary Being.

8. *The negative principle of modality* **.** A Necessary Being is by definition a mode (kind) of being that cannot not be. That is, by its very mode (modality), it must be. It cannot come to be or cease to be. But to be caused means to come to be. Hence, a Necessary Being cannot be caused. For what comes to be is not necessary.

9. *The principle of existential causality* **.** All contingent beings need a cause. For a contingent being is something that is but could not be. But since it has the possibility not to exist, then it does not account for its own existence. That is, in itself there is no basis explaining why it exists rather than does not exist. It literally has nothing (nonbeing) to ground it. But nonbeing cannot ground or cause anything (5). Only something can produce something.

10. Necessary Being exists = *Principle of Existential Necessity* (Bn exists).

The Principle of Existential Necessity follows from two other Principles: the Principle of Existence (no. 1) and the Principle of Causality (no. 5).

Since something undeniably exists (no. 1), either it is (a) all contingent or (b) all necessary or (c) some is necessary and some is contingent. But both (b) and (c) acknowledge a Necessary Being, and (a) is logically impossible, being contrary to the self-evident principle no. 5. For if all being(s) is (are) contingent, then it is possible for all being(s) not to exist. That is, a state of total nothingness is possible. But something now undeniably exists (e.g., I do), as was demonstrated in premise no. 1. And nothing cannot cause something (no. 5). Therefore, it is not possible (i.e., it is impossible) for there to have been a state of total nothingness. But if it is impossible for nothing to exist (since something does exist), then something necessarily exists (i.e., a Necessary Being does exist).

To put it another way, if something exists and if nothing *cannot* cause something, then it follows that something *must* exist necessarily. For if something did not necessarily exist, then nothing would have caused the something that does exist. Since it is *impossible* for nothing to cause something, then it is *necessary* for something to always have been.

11. Contingent being exists = *Principle of Existential Contingency* (Bc exists).

Not everything that exists is necessary. For change is real, that is, at least some being(s) really change. And a Necessary Being cannot change in its being. (This does not mean there can be no change in external relations with another being. It simply means there can be no internal change in its being. When a person changes in relation to a pillar, the pillar does not change.) For its being is necessary, and what is necessary in its being cannot be other than it is in its being. And all change in being involves becoming something else in its being.

But it is evident that I change in my being. I change from not being to being. By "I" is meant the self-conscious individual being I call myself. (This is not to claim that all the parts or elements of my being are not eternal. There are good reasons to believe they are not because usable energy is running down and cannot be eternal [*see* THERMODYNAMICS, LAWS OF], but this is not the point here.) This "I" or unifying center of consciousness around which these elemental parts of matter come and go, is not eternal. This is clear for many reasons.

First, my consciousness changes. Even those who claim they are eternal and necessary (namely, that they are a Necessary Being, God) were not always conscious of being God. Somewhere along the line they change from not being conscious they were God to being conscious they were God. But a Necessary Being cannot change. Hence, I am not a Necessary Being. Rather, I am a contingent being. Therefore, at least one contingent being exists. Everything is not necessary.

Further, there are other ways to know one is contingent. The fact that we reason to conclusions reveals that our knowledge is not eternal and necessary. We come to know (i.e., change from a state of not knowing to a state of knowing). But no necessary being can come to know anything. It either eternally and necessarily knows everything it knows, or else it knows nothing. If it is a knowing kind of being, then it necessarily knows, since it is a necessary kind of

being. And a being can only know in accordance with the kind of being it is. A contingent or finite being must know contingently, and a Necessary Being must know necessarily. But I do not know all that I can know eternally and necessarily. Therefore, I am a contingent kind of being.

12. *The principle of analogy*. Since nonbeing cannot produce being (5), only being can produce being. But a contingent being cannot produce another contingent being (6). And a necessary being cannot produce another necessary being (8). So only Necessary Being can cause or produce only a contingent being. For to "cause" or "produce" being means to bring something into being. Something that comes into being, has being. A cause cannot bring nonbeing into being, since being is not nonbeing (4). The fact that Being produces being implies that there is an analogy (similarity) between the cause of being and the being it causes (8). But a contingent being is both similar and different from a Necessary Being. It is similar in that both have being. It is different in that one is necessary and the other is contingent. But whatever is both similar and different is analogous. Hence, there is an analogy between Necessary Being and the being it produces.

Two things, then, are entailed in the principle that Necessary Being causes being: First, the ef fect must resemble the cause, since both are being. The cause of being cannot produce what it does not possess. Second, while the effect must resemble its cause in its being (i.e., its actuality), it must also be different from it in its potentiality. For the cause (a Necessary Being), by its very nature, has no potential not to be. But the effect (a contingent being) by its very nature has the potential not to be. Hence, a contingent being must be different from its Cause. Since, the Cause of contingent beings must be both like and different from its effect, it is only similar. Hence, there is an analogical likeness between the Cause of a contingent being and the contingent being it causes to exist.

Demonstrating God's Existence. Given these principles of being, one can know many things about reality; they relate *thought* and *thing* . *Knowing* is based in *being* . By these principles, one can even prove the existence of God (*see* GOD, EVIDENCE FOR) as follows:

1. Something exists (e.g., I do) (no. 1).

2. I am a contingent being (no. 11).

3. Nothing cannot cause something (no. 5).

4. Only a Necessary Being can cause a contingent being (no. 7).

5. Therefore, I am caused to exist by a Necessary Being (follows from nos. 1–4).

6. But I am a personal, rational, and moral kind of being (since I engage in these kinds of activities).

7. Therefore, this Necessary Being must be a personal, rational, and moral kind of being, since I am similar to him by the Principle of Analogy (no. 12).

8. But a Necessary Being cannot be contingent (i.e., not-necessary) in its being which would be a contradiction (no. 3).

9. Therefore, this Necessary Being is personal, rational, and moral in a necessary way, not in a contingent way.

10. This Necessary Being is also eternal, uncaused, unchanging, unlimited, and one, since a Necessary Being cannot come to be, be caused by another, undergo change, be limited by any possibility of what it could be (a Necessary Being has no possibility to be other than it is), or to be more than one Being (since there cannot be two infinite beings).

11. Therefore, one necessary, eternal, uncaused, unlimited (= infinite), rational, personal, and moral being exists.

12. Such a Being is appropriately called "God" in the theistic sense, because he possesses all the essential characteristics of a theistic God.

13. Therefore, the theistic God exists.

Conclusion. First principles are indispensable to all knowledge. And first principles of being are a necessary prerequisite for all knowledge of being. These first principles are undeniable or reducible to the undeniable. For the very attempt to deny them affirms them. By them not only is reality known, but the existence of God can be demonstrated.

Flavius Josephus. Josephus (ca. A.D . 37–ca. 100) was a Pharisee of the priestly line and a Jewish historian. In addition to his autobiography he wrote two major works, *Jewish Wars* (77–78) and *Antiquities of the Jews* (ca. 94). He also wrote a minor work, *Against Apion* .

Josephus confirmed in general outline, and often in great detail, the historicity of the Old Testament and some of the New Testament (*see* NEW TESTAMENT, NON-CHRISTIAN SOURCES). Although Josephus's work is slanted so as not to offend the Romans, it has great apologetic

value for Christianity—a religion also not in Roman favor. Josephus was highly appreciated and greatly used by the early church fathers in support of Christianity.

Testimony to the Canon. Josephus supports the Protestant view of the canon of the Old Testament against the Roman Catholic view, which venerates the Old Testament Apocrypha (*see* APOCRYPHA, OLD AND NEW TESTAMENTS). He even lists the names of the books, which are identical with the thirty-nine books of the Protestant Old Testament. He groups the thirty-nine into twenty-two volumes to correspond with the number of letters in the Hebrew alphabet:

> For we have not an innumerable multitude of books among us, disagreeing from and contradicting one another [as the Greeks have], but only twenty-two books, which contain the records of all the past times; which are justly believed to be divine; and of them, five belong to Moses, which contain his laws. . . . The prophets, who were after Moses, wrote down what was done in their times in thirteen books. The remaining four books contain hymns to God, and precepts for the conduct of human life. [*Against Apion* 1.8]

Another point of apologetic interest is Josephus's reference to Daniel the prophet as a sixth-century B.C . writer (*Antiquities* , 10–12). This confirms the supernatural nature of Daniel's amazing predictions about the course of history after his time (*see* PROPHECY AS PROOF OF THE BIBLE). Unlike the later Talmud, Josephus obvi ously lists Daniel among the prophets, since it is not in Moses or the "hymns to God" section, which would include Psalms, Proverbs, Ecclesiastes, and Song of Solomon. This helps confirm the early date of Daniel.

Testimony to the New Testament. Josephus referred to Jesus as the brother of James who was martyred. He wrote: "Festus was now dead, and Albius was but upon the raid; so he assembled the Sanhedrin of the judges, and brought before them the brother of Jesus, who was called Christ, whose name was James, and some others, [or some of his companions], and when he had formed an accusation against them as breakers of the law, he delivered them to be stoned" (*Antiquities* 20.9.1). This passage both verifies the existence of Christ by a non-Christian first-century writer and to what the central claim about him was by his immediate followers—that he was the Messiah.

Josephus also confirmed the existence and martyrdom of John the Baptist, the herald of Jesus: "Now, some of the Jews thought that the destruction of Herod's army came from God, and very justly, as a punishment of what he did against John, who was called the Baptist; for Herod slew him, who was a good man, and commanded the Jews to exercise virtue, both as to righteousness towards one another, and piety towards God, and so to come to baptism" (*Antiquities* 18.5.2). This reference confirms the existence, name, mission, and martyrdom of John the Baptist, just as the New Testament presents him.

In a disputed text, Josephus gives a brief description of Jesus and his mission:

> Now there was about this time, Jesus, a wise man, if it be lawful to call him a man, for he was a doer of wonderful works,—a teacher of such men as receive the truth with pleasure. He drew over to him both many of the Jews and many of the Gentiles. He was

> [the] Christ; and when Pilate, at the suggestion of the principal men amongst us, had condemned him to the cross, those that loved him at the first did not forsake him. For he appeared to them alive again the third day, as the divine prophets had foretold these and ten thousand other wonderful things concerning him; and the tribe of Christians, so named from him, are not extinct to this day. [*Antiquities* 18.3.3]

This passage was cited by Eusebius in its present form (*Ecclesiastical History* 1.11) and the manuscript evidence favors it. Yet it is widely considered to be an interpolation, since it is unlikely that Josephus, a Jew, would affirm that Jesus was the Messiah and had been proven so by fulfilled prophecy, miraculous deeds, and the resurrection from the dead. Even "Origin says that Josephus did not believe Jesus to be the Messiah, nor proclaim him as such" (*Contra Celsus* 2.47; 2.13; Bruce, 108). F. F. Bruce suggests that the phrase "if indeed we should call him a man" may indicate that the text is authentic but that Josephus is writing with tongue in cheek in sarcastic reference to Christian belief that Jesus is the Son of God (Bruce, 109).

Other scholars have suggested amending the text in ways that preserve its authenticity without the implication that Josephus personally accepted that Christ was the Messiah (see Bruce, 110–11). It may be that a tenth-century Arabic text (see McDowell, 85) reflects the original intent:

> At this time there was a wise man who was called Jesus. And his conduct was good and [he] was known to be virtuous. Many people from among the Jews and other nations became his disciples. Pilate condemned him to be crucified and to die. And those who had become his disciples did not abandon his discipleship. They reported that he had appeared to them three days after his crucifixion and that he was alive; accordingly, he was perhaps the messiah concerning whom the prophets have recounted wonders.

In this form it does not affirm that Josephus believed in the resurrection but only that his disciples "reported" it. This would at least reflect an honest report of what his immediate disciples believed. Bruce observes that there is good reason for believing that Josephus did refer to Jesus, bearing witness to his date, reputation, family connections to James, crucifixion under Pilate at the instigation of the Jewish leaders, messianic claim, founding of the church, and the conviction among his followers of the resurrection.

Flew, Antony. Antony Flew (b. 1923) is a prominent British atheist who lectured in philosophy at major British Universities and was professor of philosophy at the University of Keele. He has written or edited numerous books and scholarly journal articles and is well known for his works in philosophical theology. Among his most forceful work is the article "Miracles" in the *Encyclopedia of Philosophy* and his books *New Essays in Philosophical Theology* and *The Resurrection Debate* .

The Falsifiability of God. Unless some criteria exists by which one could know if something is false, asserts Flew, one cannot know it is true. If the theistic utterance, "God exists" is an assertion, "it will necessarily be equivalent to a denial of the negative of that assertion."However, "if there is nothing which a putative assertion denies then there is nothing which it asserts either; and so it is not really an assertion" (*New Essays* , 98). As this argument applies to God, Flew is saying that, unless a theist can specify conditions by which it could be proven that God does not exist, there are no conditions by which to prove that God does exist. Some event or series of events would have to be conceived which could prove that there is no God.

Other than accepting Flew's premise and admitting that no religious claim is falsifiable (*see* ACOGNOSTICISM ; FIDEISM), there are two broad responses to Flew. First, one can reject the principle of falsifiability. Second, one can take up Flew's challenge and state conditions by which the existence of God could be falsified (*see* AYER, A. J .).

Rejecting Flew's Principle of Falsification. The principle of falsifiability is itself not falsifiable. There are no conditions under which one could know that this principle is false. Also, other things besides the existence of God are not falsifiable. For example, one's personal immortality can be verified if there is consciousness after death. But it cannot be falsified, since if we are annihilated at death we will not be able to falsify the claim of immortality .

Accepting Flew's Principle of Falsification. The other response is to take Flew's bull by the horns and point out that falsification is possible in one of three ways, one past, one present, and one future.

Historical falsification. The resurrection of Jesus Christ on the third day can be falsified (*see* RESURRECTION, EVIDENCE FOR). All that ever needed to happen was to produce the body of Jesus or proof of a conspiracy to dispose of the body. Or one could find eyewitness testimony that Jesus remained in the grave longer than three days. The apostle Paul recognized this when he said, "if Christ has not been raised, our preaching is useless and so is your faith. More than that, we are then found to be false witnesses about God that he raised Christ from the dead. . . . And if Christ has not been raised, your faith is futile; you are still in your sins. Then those also

who have fallen asleep in Christ are lost" (1 Cor. 15:14–18). If the resurrection can be disproven, Christianity—and Christianity's God—are false.

Falsification now. Since the apologetic evidence for the truth of Christianity is based on past events, there is no direct way to test them in the present. One can only use evidence from the past that remains in the present to argue for or against the truth of past events. Since Christianity depends on the truth of the premise "God exists (now)," this is a falsifiable premise. A theist might be willing to give up belief in God if the nontheist can present a valid disproof for the existence of God. Such disproofs have been tried, and all fail (*see* GOD, ALLEGED DISPROOFS OF). That means that falsification did not succeed, not that could not succeed in principle, if in fact no God existed.

Eschatological falsification. Eschatological falsification of some things, such as immortality, is impossible. However, many religious beliefs could be falsified. The statement "I will go to a place of bliss at death" is falsified if one remains conscious after death and goes to a place of suffering. Likewise, reincarnation can be falsified, if one dies with "bad karma" but is not reincarnated. It is more difficult to falsify the existence of God, even if one lives forever. God could choose to hide forever from view, but this is unlikely.

However it is approached, Flew's principle of falsification is far from a convincing blow to the truth of theism or of Christianity. The theist can offer many ways in which core beliefs can be falsified in principle, if not in practice.

Divine Omnipotence, Freedom, and Evil. Flew posed a difficult dilemma for theism in his article on "Divine Omnipotence and Human Freedom" (Flew, *New Essays,* chapter 8). He acknowledges the theists claim that even an omnipotent Being cannot do what is contradictory. But he challenges the view of many theists that it is contradictory to create a world where no free creature will ever do evil.

Flew insists that "omnipotence might have, could without contradiction be said to have, created people who would always as a matter of fact freely have chosen to do the right thing" (p. 152). And in response to the theist's claim that God could not have created higher-order goods without allowing lower-order goods, Flew argues that "Omnipotence could have created creatures who he could have been sure *would* respond to the appropriate challenge by a willing exercise of fortitude; without these creatures having to acquire this character by any actual exercise of fortitude" (p. 155).

Flew's arguments evoked the famous "free-will" response of Alvin Plantinga who argued that as long as one free creature chooses evil God cannot stop it without fettering their freedom—in which case they are not really free. Others note that what is logically possible is not necessarily actually achievable (*see* EVIL, PROBLEM OF). So while it is logically possible that no one would ever do evil, it is not actually achievable as long as someone freely chooses to do evil.

Miracles and Christian Apologetics. Flew alleges the unhistoricity of miracles (*see* MIRACLE ; MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE), as well as their incredibility and their unidentifiability.

Flew's argument that miracles are unhistorical rests on the assumption that miracles are unrepeatable. Therefore they fail the test of credibility. Flew's argument follows the form developed by David Hume. As Flew sees Hume's argument it runs something like this:

1. Every miracle is a violation of a law of nature.

2. The evidence against any violation of nature is the strongest possible evidence.

3. Therefore, the evidence against miracles is the strongest possible evidence.

Flew says that Hume was primarily concerned with the question of evidence. The problem was how the occurrence of a miracle could be proved, rather than whether such events ever occurred. However, "our sole ground for characterizing the reported occurrence as miraculous is at the same time a sufficient reason for calling it physically impossible." But why is this so? Flew responds that the critical historian, confronted with a story of a miracle, dismisses it. That is begging the question. On what grounds are miracles dismissed? "To justify his procedure he will have to appeal to precisely the principle which Hume advanced: the 'absolute impossibility or miraculous nature' of the events attested." This must be done to the satisfaction of reasonable people. So Flew believes that, even though miracles are not logically impossible, they are scientifically impossible. "It is only and precisely by presuming that the laws that hold today held in the past . . . that we can rationally interpret the detritus (fragments) of the past as evidence and from it construct our account of what actually happened ("Miracles").

To the charge that this uniformitarianism is irrationally dogmatic, Flew answers with what is at the heart of his amplification of Hume's argument. As Hume insisted, "the possibility of miracles is a matter of evidence and not of dogmatism. Further, reports of alleged occurrences of the miraculous are necessarily singular, particular, and in the past tense." Propositions of this sort cannot be tested directly. Repeatable propositions, therefore, have greater logical credibility (ibid.). This argument may be stated:

1. Miracles, by nature, are particular and unrepeatable.

2. Natural events are by nature general and repeatable.

3. In practice, the evidence for the general and repeatable is always greater than that for the particular and unrepeatable.

4. Therefore, in practice, the evidence will always be greater against miracles than for them.

From this statement it is clear that Flew regards generality and repeatability to be establishing factors for credibility.

Repeatability and Falsifiability. Most modern naturalists, such as Flew, accept some unrepeatable singularities, for example, at the formation of the universe (*see* BIG BANG THEORY). And nearly all scientists believe that the process of the origin of life has never been repeated. If

Flew's argument is applied consistently, it is wrong for scientists to believe in any such singularity. Flew's argument would eliminate some basic naturalist's beliefs.

Flew's view also is subject to the very criticism Flew makes of theists, for it is not an unfalsifiable position (see above). No matter what state of affairs occurs, even a resurrection, Flew (contrary even to Hume's claims) would be obliged to deny that it was a miracle. And no event in the world would falsify naturalism. For the deck is stacked, so that the evidence always weighs more heavily for antisupernaturalism than against it. Neither would it help for Flew to claim that naturalism is falsifiable in principle, if never in practice. Then, to be fair, he would have to allow theists the same prerogative. If supernaturalism can never be established in practice, neither can naturalism. It is always possible for the theist to claim of every alleged natural event that "God is the ultimate cause." The theist may insist that all "natural" events (i.e., naturally repeatable ones) are the way God normally operates and that "miraculous" events are the way he works on occasion. By Flew's own grounds, there is no way, in practice, to falsify theistic belief.

One may object to Flew's assumption that the repeatable always evidentially outweighs the unrepeatable. If this were so, then, as Richard Whately pointed out, one could not believe in the historicity of any singular events from the past. If repeatability in practice is the true test of superior evidence, one should not believe that observed births or deaths occurred, for neither is repeatable in practice. The science of geology should be eliminated.

Scientists do not reject singularities out of hand, observes physicist professor Stanley Jaki. "Luckily for science, scientists relatively rarely brush aside reports about a really *new* case with the remark: 'It cannot be really different from the thousand other cases we have already investigated.' The brave reply of the young assistant, 'But, Sir, what if this is the thousand and first case?' which . . . is precisely the rejoinder that is to be offered in connection with facts that fall under suspicion because of their miraculous character" (Jaki, 100). So, if the naturalist pushes arguments far enough to eliminate miracles, the grounds for many other beliefs are eliminated by implication. Qualifications to include natural and scientific data reopen the door to miracles.

Identifiability. Flew's second argument is not ontological but epistemological. Miracles are not rejected because they are known not to have occurred. They are rejected because they are not or cannot be known to have occurred. Flew's argument goes beyond mere identifiability. If successful it would show that miracles have no apologetic value.

Flew claims to be willing to allow for the possibility of miracles in principle (*see* SPINOZA, BENEDICT). In practice, he argues, there is a serious, even insurmountable, problem in being unable to identify miracles. The argument may be summarized:

1. A miracle must be identifiable or distinguishable before it can be known to have occurred.

2. Miracles may only be identified in terms of nature or in terms of the supernatural.

3. To identify it by reference to the supernatural (as an act of God) begs the question.

4. To identify it in reference to natural terms takes away the necessary supernatural dimension.

5. Therefore, miracles cannot be known to have occurred, since they cannot be identified.

Flew insists against Augustine (*City of God* 21.8), that if a miracle is merely "a portent [which] is not contrary to nature, but contrary to our knowledge of nature," then it really has no value as proof of the supernatural. It merely shows the relative knowledge of a generation. Whereas Augustine's notion of a miracle would assure the dependence of creation on God, it would do so only at the cost of subverting the apologetic value of all miracles (Flew, 348). If a miracle is not beyond the power of nature, but only beyond our *knowledge* of nature, then a miracle is nothing but a natural event. We could not know that a miracle really occurred; only that it seemed to. To truly be miraculous, a miracle must be independent of nature, but a miracle cannot be identified except as it relates to nature. There is no natural way to identify a miracle, unless it is known to be a miracle on some independent grounds. It must be considered simply an odd or inconsistent event that a broader scientific law could explain.

From this, Flew argues that no alleged miraculous event can be used to prove a religious system is true. We cannot argue that God exists because an event is an act of God. Unless there is already a God who acts, there cannot be an act of God. To argue from act of God to supernatural system begs the question. We must identify the event as supernatural from a strictly naturalistic perspective. But this is impossible, since an unusual event in the natural realm is, from a naturalistic perspective, strictly a natural perspective.

Miracles, therefore, have no apologetic value.

The heart of Flew's argument is now in focus (ibid., 348–49). Miracles are not identifiable because there is no way to define them without begging the question:

1. A miracle must be identifiable before it can be identified.

2. A miracle is identified in one of two ways (a.) an unusual event in nature, or (b.) an exception to nature.

3. An unusual event in nature is simply a natural event, not a miracle.

4. An exception to nature cannot be known from within nature alone.

5. Therefore, a miracle is not identifiable and cannot be used to prove anything.

It would seem that Flew has made a penetrating point. His first premise is solid. We must know what we are looking for before we can know we have found it. We cannot discover what cannot be defined. But to define miracles in terms of natural events is to reduce them to natural

events. To define them in terms of a supernatural cause is to suppose that God exists, a circular argument.

Presupposing God's Existence. One way to reply to Flew is to claim that naturalists as well as supernaturalists are arguing in a circle. Antisupernatural arguments presuppose naturalism. Thus, some theists simply claim that it is necessary to argue in a circle. All reason is circular (Van Til, 118), for all thought ultimately is grounded in faith (*see* FIDEISM).

If a supernaturalist chooses this route the grounds (or lack of grounds) seem just as good as those of the antisupernaturalist. Naturalists who attempt to rule out miracles on the basis of a faith commitment to naturalism are in no position to forbid theists from simply believing that God exists and, hence, that miracles are identifiable. Once naturalists are granted the privilege of a mere belief basis for naturalism, with no rational or scientific proof, alternate worldviews must be allowed the same opportunity.

Evidence for God's Existence. Another avenue of approach is open, however: Theists may offer rational justification for belief in God. If successful, then they can define (show the identifiability of) miracles in terms of the supernatural realm they have *reason* to think exists. This is precisely what the cosmological argument and the teleological argument do. To the extent that one can give a rational argument for God's existence, Flew's criticism is circumvented.

Summary. Two themes of Flew are a serious threat to Christian apologetics: (1) His argument that belief in God is not falsifiable, and (2) his view that miracles are not identifiable. There are ways to meet the challenge of verifiability. Christianity can be verified from events in the past, present, and future. A more serious matter is the attack on miracles. Even though Flew does not claim that this argument eliminates the possibility of miracles, it would, if successful, seriously cripple Christian apologetics (*see* CLASSICAL APOLOGETICS ; HISTORICAL APOLOGETICS). If miracles cannot be identified as supernatural events, they have no apologetic value. A mere unusual event within nature has no evidential value to prove anything beyond the existence of nature.

However, as shown above, classical apologists can evade this problem by either presupposing the existence of a supernatural realm (i.e., God) or by offering evidence for his existence. As long as there is a God who can act, special acts of God (miracles) are possible and identifiable. The only way to disprove this possibility is to disprove the possibility of God's existence. Such efforts are doomed to failure and are usually self-refuting (*see* GOD, ALLEGED DISPROOFS OF).

Historical apologists do not have this option, since they believe that the whole case for Christianity, including the existence of God, can be made from historical evidence alone. Against this view, Flew makes a telling point.

Flood, Noah’s. The record of Noah’s flood in Genesis 6–9 has raised serious questions in the minds of Bible critics, among them:

How could this small ark hold hundreds of thousands of species?

How could a wooden ship stay afloat in such a violent storm?

How could Noah’s family and the animals survive so long in the ark?

Species Saved. The first problem deals with how such a small ark could hold all the animal species on earth. The consensus of ancient historians and archaeologists is that a cubit was about eighteen inches long. Translating the Bible’s dimensions according to an eighteen-inch cubit, Noah’s ark was only forty-five feet high, seventy-five feet wide, and four hundred and fifty feet long (Gen. 6:15). Noah was told to take two of every kind of unclean animal and seven of every kind of clean animal (6:19 ; 7:2). But scientists count between one-half billion and more than 1 billion animal species.

A Localized Disaster? One possible explanation is that the flood was local in geographic scope. Noah in that case would only have to repopulate the local area and have animals to eat and sacrifice.

As evidence that the flood was not universal, it is noted that the same “universal” language of Genesis 6 through 9 is used elsewhere when something less than the whole world is meant. The people on the Day of Pentecost were said to be “from every nation under heaven” (Acts 2:5) yet the nations listed are restricted to the Roman world. Paul said in Colossians 1:23 that “this is the gospel that you heard and that has been proclaimed to *every creature under heaven* .” Paul’s itinerary in Acts 13 to 28 shows that he went only to the Mediterranean area.

Also, the silt deposits a flood like Noah's would have left are found only in the Mesopotamian Valley, not over the entire world. There is not enough water in the world to cover the highest mountains (7:20). Some mountains are several miles high. Waters that high would have caused problems with the rotation of the earth. The mountains in the Mesopotamian area are not nearly so high.

Finally, the size of the ark would restrict the number of species. Those from a localized region would have been more manageably housed.

A Universal Flood? Other Old Testament scholars believe there is evidence of a universal flood. The language of Genesis is more intense than that of the references noted. God's commands to take animals of every kind would not have been required if only the life in a limited geographical area was to be destroyed. Animals could have migrated in to repopulate the region. And Genesis 10:32 declares that the whole world was populated after the flood from the eight who were saved. This would not have been true if those outside the local area had not drowned. Peter refers to the salvation of only eight (1 Peter 3:20).

The silt deposits in the Mesopotamian Valley were from a local flood(s), not the universal floods. The silt layers throughout the world are open to interpretation, including the possibility of a world catastrophe. There are also signs of dramatic changes in the position of earth's land masses. The mountains could have taken new, far higher, shapes because of the unparalleled forces at work during the flood.

The Ark Was Large Enough. But assuming the flood was universal, the question remains as to how Noah could get all those animals in the ark. Engineers, computer programmers, and wildlife experts have all taken a look at the problem, and their consensus is that the ark was sufficient to the task.

The ark was actually a huge structure—the size of a modern ocean liner, with three levels of deck (Gen. 6:13), which tripled its space to over 1.5 million cubic feet. This equals 569 railroad box cars.

Second, the modern concept of "species" is not the same as a "kind" in the Bible. But even if it were, there are probably only some 72,000 different kinds of land animals which the ark would have needed to contain. Since the average size of land animals is smaller than a cat, less than half of the ark would be needed to store 150,000 animals—more than there probably were. Insects take only a very small space. The sea animals stayed in the sea, and many species could have survived in egg form. There would have been plenty of room left over for eight people and food storage.

Third, Noah could have taken younger or smaller varieties of some larger animals. Given all these factors, there was plenty of room for all the animals, food for the trip, and the eight humans aboard.

Wooden Ship in a Violent Storm. The ark was made of wood and carried a heavy load of cargo. It is argued that the violent waves of a worldwide flood surely would have broken it into pieces (cf. Gen. 7:4 , 11).

The ark was made of a strong and flexible material (gopher wood). Gopher wood "gives" without breaking. The heavy load gave the ark stability. Also, naval architects report that a long box-shaped, floating boxcar, such as the ark, is the most stable kind of craft in turbulent waters. One former naval architect concluded: "Noah's Ark was extremely stable, more stable in fact, than modern shipping" (see Collins, 86). Indeed, modern ocean liners follow the same basic proportions. However, their stability is lessened by the need to slice through the water with as little drag as possible. There is no reason Noah's ark could not have survived a gigantic, even worldwide, flood. Modern stability tests have shown that such a vessel could take up to 200-foot-high waves and could tip as much as 90 degrees and still right itself.

Survival Inside the Ark. How could all these animals and humans last over one year cooped up in this ark?

There is some question as to just how long the flood lasted. Genesis 7:24 ; 8:3 speaks of the flood waters lasting for 150 days. But other verses seem to say it was only forty days (Gen. 7:4 , 12 , 17). And one verse indicates that it was over a year. These numbers refer to different things. Forty days is how long it *"rained"* (7:12), and 150 days speaks of how long the flood *"waters prevailed"* (8:3 ; cf. 7:24). After this it was not until the fifth month after the rain began that the ark rested on Mount Ararat (8:4). About eleven months after the rain began the waters dried up (8:13). And exactly one year and ten days after the flood began, Noah and his family emerged on dry ground (8:14).

Another answer is that living things can do almost anything they must to survive, as long as they have enough food and water. Many of the animals may have gone into hibernation or semihibernation. And Noah had plenty of room for food on the inside and abundant water on the outside to draw on.

For notes on how nonbiblical flood reports and legends from the ancient world relate to the Bible's account, see ARCHAEOLOGY, OLD TESTAMENT ; EBLA TABLETS .

Foundationalism. *Foundationalism* is the theory of knowledge (*see* EPISTEMOLOGY) that affirms the need for certain foundational principles (*see* FIRST PRINCIPLES) as the basis of all thought. By contrast, Coherentism claims that no such principles are needed but that ideas simply need to cohere like a web in a consistent way, without any ultimate foundational principles.

Argument for Foundationalism. Foundationalists argue that no knowledge, not even about ideas that cohere, would be possible unless there were first principles such as the law of noncontradiction. These principles make it possible to know if ideas are consistent and noncontradictory. They point out that no web hangs in mid air; it must be anchored somewhere. C. S. Lewis observed,

> As such, these first principles of Practical Reason are fundamental to all knowledge and argument. To deny them is to deny knowledge itself; it is no use trying to see through first principles. If you see through everything, then everything is transparent. But a wholly transparent world is an invisible world. To "see through" all things is the same as not to see. [Lewis, 87]

The basic foundationalist argument is that there must be a basis for all truth claims and that an infinite regress never (*see* INFINITE SERIES) provides a foundation; it only delays providing one forever. Hence, ultimately there must be some first principles on which all knowledge rests. Everything not evident in itself must be made evident in terms of something that is. So, ultimately there must be some self-evident principles in terms of which everything else can be made evident.

It is unreasonable to try to get behind them. Hence, one cannot have an "open mind" about whether they are true. One cannot even have a mind without them.

Foundational Principles. Classical foundationalists generally agree that the basic laws of logic are foundational principles. These include the law of noncontradiction—that a proposition cannot be both true and false at the same time and in the same sense. Likewise, the kindred principles of the excluded middle (either something is true or false, but not both) and identity (what is true is true and what is false is false) are foundational principles.

In metaphysics traditional foundationalists offer principles, such as: "Being is being"; "Nonbeing is not being," and "Something either is being or nonbeing."

Ethical first principles include: "Good should be sought," "Evil should be avoided," and "Either a thing is good or evil."

Criticisms. The most significant criticisms of foundationalism are:

There Is No Agreement on First Principles. Not everyone agrees on which principles are to be included in the foundational principles. In response, foundationalists point out that failure to get universal agreement on the number of foundational principles does not mean there are none, any more than failure to agree on how many ethical principles there are means there is no ultimate basis for right and wrong (*see* MORALITY, ABSOLUTE NATURE OF), or that failure to agree on how many scientific laws there are means there are none.

There Is No Basis for First Principles. But if everything needs a basis, why not seek a basis for the so-called foundational principles. What is the foundation of foundationalism?

Foundationalists do not argue that every statement needs a basis. They believe that only statements that are not self-evident need a foundation. They hold that statements that are not evident in themselves must be evident in terms of something else that is self-evident. Once one arrives at the self-evident, it need not be evident in terms of anything else (*see* REALISM).

What Is Self-evident? Some object that there is no sure way to know what is self-evident. Not everything said to be self-evident to foundationalists is self-evident to others.

To this criticism foundationalists point out that a self-evident truth is one whose predicate is reducible to its subject, either directly or indirectly. Hence, all one needs to do is analyze it clearly to find out if this is so. For example, it is self-evident that "Being exists," since whatever "exists" has "being." Likewise, it is self-evident that "Every effect has a cause," since an "effect" means that which is "caused." Further, simply because some things are not evident to everyone does not mean they are not self-evident in themselves. The reason a self-evident truth may not be evident to someone could be because the person has not analyzed it carefully. But their failure in no way invalidates the self-evident nature of the first principle.

Frazer, James. James Frazer (1854–1941) was born in Glasgow and educated at Larchfield Academy, Helensburg; Glasgow University, and Cambridge University. From 1907 to 1919 he was professor of social anthropology at the University of Liverpool. Frazer was instrumental in

starting *The Cambridge Review* (1879). He delivered the first of his Gifford Lectures in 1911 on "Belief in Immortality and the Worship of the Dead." Between 1890 and 1912 he produced his monumental work, *The Golden Bough* . This and the three-volume *Folk-Lore in the Old Testament* (1918) were produced in abridged editions in 1922 and 1923, respectively. Frazer also wrote *The Worship of Nature* (1926) and *The Fear of the Dead in Primitive Religion* (1933–34).

The Golden Bough gives an evolutionary twist to the history of religions. Frazer proposed that religions evolved from magic through animism and polytheism to henotheism and finally to monotheism . He alleged that Christianity copied pagan myths. In spite of its selective and anecdotal use of sources that were outdated by subsequent research, the ideas of the book are still widely believed.

Evaluation. Frazer's evolution of religion thesis is without foundation for reasons discussed in detail elsewhere. See the articles MIRACLES, MYTH AND ; MITHRAISM ; MYTHOLOGY AND THE NEW TESTAMENT ; and RESURRECTION CLAIMS IN NON-CHRISTIAN RELIGIONS . Key reasons include:

Pagan myths most frequently cited as the models for the birth, death, and resurrection of Christ actually appeared later than did the Gospels (see Yamauchi). Therefore, the Christian writers could not have copied these stories.

There are significant differences in pagan and Christian versions. For example, pagans did not believe in the resurrection (*see* RESURRECTION, PHYSICAL NATURE OF) of the physical body that died, but in reincarnation of the soul into another body. Pagan stories were all about polytheistic (*see* POLYTHEISM) gods, not about a monotheistic (*see* THEISM) deity.

There is good evidence that monotheism was the primitive religion of the earliest known peoples, particularly in the Fertile Crescent, not animism and polytheism (*see* MONOTHEISM, PRIMITIVE). The oldest records from both Ebla (*see* EBLA TABLETS) and the Old Testament books about the earliest times, Genesis and Job, speak of monotheism. Anthropologist W. Schmidt proposes an interpretation of the data that monotheism is the most primitive view of God. Animism, polytheism, and henotheism are seen as later corruption (*Origin and Growth* ; *Primitive Revelation*). William F. Albright comments, "There can no longer be any doubt that Fr. Schmidt has successfully disproved the simple evolutionary progression . . . fetishism—polytheism—monotheism, or Tylor's animism—polytheism—monotheism. . . . The simple fact is that religious phenomena are so complex in origin and so fluid in nature that over-simplification is more misleading in the field of religion than perhaps anywhere else" (Albright, 171).

Even in the existing so-called "primitive religions" there is a widespread concept of a high god or sky god whom scholars believe closely connects with primitive monotheism. John Mbiti has described 300 traditional religions. Yet "in all these societies, without a single exception, people have a notion of God as the Supreme Being (see Mbiti, *African Religions and Philosophy*). Albright likewise acknowledges that the "high gods may be all-powerful and they may be credited with creation of the world; they are generally cosmic deities who often, perhaps usually,

reside in heaven” (Albright, 170). This clearly runs counter to the animistic and polytheistic conceptions of deity.

Study of Frazer and his critics shows fairly conclusively that Frazer’s thesis was not motivated by the facts, but by his evolutionary view of religion (*see* DARWIN, CHARLES). This he simply presupposed. His contribution was an ingenious presentation of existing knowledge within a particular framework.

The evolutionary view of religion was itself late, only gaining popularity in the wake of the biological evolution (*see* EVOLUTION, BIOLOGICAL ; MISSING LINKS) theory popularized by Charles Darwin in *On the Origin of Species* (1859) and *Descent of Man* (1871). Frazer’s evolutionary idea is based on several unproved assumptions. It assumes biological evolution to be fact, though it lacks support. It also assumes biological evolution describes events at the social and religious levels, which does not follow in any case.

Even Theodore Gaster’s revision of Frazer’s book states: “[The revision] eliminates, for example, Frazer’s lengthy discussion of the relation between magic and Religion, because the view which is there expressed that the two things stand in genealogical succession . . . has now been shown to be a mere product of late nineteenth-century evolutionism, without adequate basis” (Frazer, *The New Golden Bough,* 1959, xv–xvi).

Frazer’s theory also is based on an unsubstantiated antisupernaturalism (*see* MIRACLES, ARGUMENTS AGAINST). The Bible teaches that God revealed himself specifically to certain people and generally to all humankind through creation and the moral order (cf. Psalm 19 ; Rom. 1:18–20 ; 2:14–15). The evolutionary view makes monotheism a product of human development. God was first seen as something in nature and then as something beyond nature. He does not reveal himself to people.

In addition to these factors, it has been shown that pagan myths post-date the Christian record of the birth, death, and resurrection. Ronald Nash observes that the chronology is all wrong if pagan religions influenced Christian myth-makers. All of the sources that tell about these pagan myths are very late (Nash, 193). Christians could hardly have been the ones influenced. If anything, pagan religions borrowed from Christianity (*see* DIVINE BIRTH STORIES ; MITHRAISM ; MYTHOLOGY AND THE NEW TESTAMENT ; RESURRECTION CLAIMS IN NON-CHRISTIAN RELIGIONS).

Significant differences between pagan and Christian versions also preclude a Christian dependence. Nash lists six differences between the death of Jesus and pagan god-death accounts: (1) No pagan deities died in the place of someone else, as did Jesus. (2) Only Jesus died to pay for sins. (3) Jesus died once for all, while Pagan deities died and came to life with the annual cycles of nature. (4) The death of Jesus was an event attested to in history; the pagan deities’ stories were only mythical. (5) Jesus died voluntarily. (6) The death of Jesus was a triumph, not a defeat (Nash, 171–72). Likewise, the resurrection, the Christian concepts of new birth and redemption, and the sacraments all differ significantly from pagan religious beliefs and practices (Nash).

Free Will. Conceptions of the nature of human choice fall within three categories: determinism, indeterminism (*see* INDETERMINACY, PRINCIPLE OF), and self-determinism. A determinist looks to actions caused by another, an indeterminist to uncaused actions, and a self-determinist to self-caused actions.

Determinism. For a full discussion and the arguments for and against this viewpoint, see DETERMINISM . There are two basic kinds of deter minism: naturalistic and theistic. Naturalistic determinism is most readily identified with behavioral psychologist B. F. Skinner. Skinner held that all human behavior is determined by genetic and behavioral factors. Humans simply act according to what has been programmed into them.

All who accept strong forms of Calvinistic theology hold to some degree of theistic determinism. Jonathan Edwards related all actions ultimately to God as First Cause. “Free choice” for Edwards is doing what one desires, and God is the Author of the heart’s desires. God is sovereign, in control of all and so ultimately the cause of all. Fallen humanity is totally without

---

CT *Christianity Today*

freedom of the affections, so they can do whatever they want, but what they want will forever be in the control of their corrupt, world-directed heart. God's grace controls actions as God controls desires and their attendant thoughts and actions.

Response to Determinism. Nondeterminists respond that a self-caused action is not impossible, and all actions need not be attributed to the First Cause (God). Some actions can be caused by human beings to whom God gave free moral agency. Free choice is not, as Edwards contends, doing what one *desires* (with God giving the desires). Rather, it is doing what one *decides,* which is not always the same thing. One need not reject God's sovereign control to deny determinism. God can control by omniscience as well as by causal power.

Two forms of determinism may be distinguished, hard and soft. A *hard determinist* believes all acts are caused by God, that God is the only efficient Cause. A *soft determinist* holds that God as the Primary Cause is compatible with human free choice as the secondary Cause.

Indeterminism. According to the indeterminist, few if any human actions are caused. Events and action are contingent and spontaneous. Charles Pierce and William James were indeterminists.

Arguments for Indeterminism. The arguments for indeterminism follow the nature of free actions. Since they follow no determinate pattern, it is concluded that they are indeterminate. Some contemporary indeterminists appeal to Werner Heisenberg's principle of indeterminacy (*see* INDETERMINACY, PRINCIPLE OF) to support their position (*see* FIRST PRINCIPLES). According to this principle, events in the subatomic realm (like the specific course of a given particle) are completely unpredictable.

According to the argument from the unpredictability of free acts, an act must be predictable in order to be determinate. But free acts are not predictable. Hence, they are indeterminate.

Critique of Indeterminacy. All forms of indeterminism fall shipwreck on the principle of causality, which asserts that all events have a cause (*see* CAUSALITY, PRINCIPLE OF). But indeterminacy asserts that free choices are uncaused events.

Indeterminism makes the world irrational and science impossible. It is contrary to reason to affirm that things happen willy nilly without a cause. Hence, indeterminacy reduces to irrationalism. Both operation and origin sciences are dependent on the principle of causality. Simply because a free act is not caused by another does not mean that it is uncaused. It could be self-caused.

Use of Heisenberg's principle is misapplied, since it does not deal with the *causality* of an event but with *unpredictability.*

Indeterminism robs humans of their moral responsibility, since they are not the cause of these actions. If they are not, why should they be blamed for evil actions? Indeterminism, at least on a cosmic scale, is unacceptable from a biblical perspective, since God is causally related to the world as both originator (Genesis 1) and sustainer of all things (Col. 1:15–16).

Self-Determinism. According to this view, a person's moral acts are not caused by another or uncaused, but are caused by oneself. It is important to know at the outset precisely what is meant by self-determinism or free choice. Negatively, it means that a moral action is not uncaused or caused by another. It is neither indeterminate nor determined by another. Positively, it is morally self-determined, an act freely chosen, without compulsion, in which one could have done otherwise. Several arguments support this position.

Arguments for Self-determinism. Either moral actions are uncaused, caused by another, or caused by oneself. However, no action can be uncaused, since this violates the fundamental rational principle that every event has a cause. Neither can a person's actions be caused by others, for in that case they would not be *personal* actions. Further, if one's acts are caused by another, then how can he or she be held responsible for them? Both Augustine (in *On Free Will* and *On Grace and Free Will*) and Thomas Aquinas were self-determinists, as are moderate Calvinists and Arminians.

The denial that some actions can be free is self-defeating. A complete determinist insists that both determinists and nondeterminists are determined to believe what they believe. However, determinists believe self-determinists are wrong and ought to change their view. But "ought to change" implies freedom to change, which is contrary to determinism. If God is the cause of all human actions, then human beings are not morally responsible. And it makes no sense to praise human beings for doing good, nor to blame them for doing evil.

A dimension of this controversy has to do with how the "self" is viewed. By "self" the self-determinist believes there is an "I" (subject) that is more than the object. That is, my subjectivity transcends my objectivity. I cannot put all that I am under a microscope to analyze as an object. There is more to "me" than objectivity. This "I" that transcends being objectified is free. The scientist who attempts to study personal self always transcends the experiment. The scientist is always on the outside looking in. In fact, "I" am free to reject "me." It is not determined by objectivity, not subject to being locked into scientific analysis. As such, the "I" is free.

Objections to Self-determinism. Free will rules out sovereignty. If human beings are free, are they outside God's sovereignty? Either God determines all, or else he is not sovereign. And if he determines all, then there are no self-determined acts.

It is sufficient to note that God sovereignly delegated free choice to some of his creatures. There was no necessity for him to do so; he exercised his free will. So human freedom is a sovereignly given power to make moral choices. Only absolute freedom would be contrary to God's absolute sovereignty. But human freedom is a limited freedom. Humans are not free to become God themselves. A contingent being cannot become a Necessary Being. For a Necessary Being cannot come to be. It must always be what it is.

Free will is contrary to grace . It is objected that either free, good acts spring from God's grace, or else from our own initiative. But if the latter, they are not the result of God's grace (Eph. 2:8–9). However, this does not necessarily follow. Free will itself is a gracious gift. Further, special grace is not forced coercively onto the person. Rather, grace works persuasively. The hard determinist's position confuses the nature of faith. The ability of a person to receive

God’s gracious gift of salvation is not the same as working for it. To think so is to give credit for the gift to the receiver, rather than to the Giver.

A self-caused act is logically impossible. It is objected that self-determinism means to cause oneself, which is impossible. Someone cannot be prior to oneself, which is what a self-caused act entails. This objection misunderstands determinism, which does not mean that one *causes himself to exist* , but rather *causes something else to happen* . A self-determined act is one determined by oneself, not another.

Self-determinism is contrary to causality. If all acts need a cause, then so do acts of the will, which are not caused by the self but by something else. If everything needs a cause, so do the persons performing the actions (*see* CAUSALITY, PRINCIPLE OF).

There is no violation of the actual principle of causality in the exercise of free actions. The principle does not claim that every *thing* (being) needs a cause. Finite things need a cause. God is uncaused (*see* GOD, NATURE OF). The person performing free actions is caused by God. The *power* of freedom is caused by God, but the *exercise* of freedom is caused by the person. The self is the first-cause of personal actions. The principle of causality is not violated because every finite thing and every action has a cause.

Self-determinism is contrary to predestination. Others object that self-determinism is contrary to God’s predestination. But self-determinists respond that God can predetermine in several ways. He can determine (1) contrary to free choice (forcing the person to do what he or she does not choose to do); (2) based on free choices already made (waiting to see what the person will do); and (3) knowing omnisciently what the person will do “in accordance with his foreknowledge” (1 Peter 1:2). “Those God foreknew he also predestined to be conformed to the likeness of his Son” (Rom. 8:29). Either positions 2 or 3 are consistent with self-determinism. Both insist that God can determine the future by free choice, since he omnisciently knows *for sure* how they will *freely* act. So, it is *determined* from the standpoint of God’s infallible knowledge but *free* from the vantage point of human choice.

Connected with the argument from strong determinism is that, while Adam had free choice (Rom. 5:12), fallen human beings are in bondage to sin and not free to respond to God. But this view is contrary to both God’s consistent call on people to repent (Luke 13:3 ; Acts 2:38) and believe (e.g., John 3:16 ; 3:36 ; Acts 16:31), as well as to direct statements that even unbelievers have the ability to respond to God’s grace (Matt. 23:37 ; John 7:17 ; Rom. 7:18 ; 1 Cor. 9:17 ; Philem. 14 ; 1 Peter 5:2).

This argument continues that if humans have the ability to respond, then salvation is not of grace (Eph. 2:8–9) but by human effort. However, this is a confusion about the nature of faith. The ability of a person to receive God’s gracious *gift* of salvation is not the same as *working* for it. To think so is to give credit for the gift to the receiver rather than to the Giver who graciously gave it.

Freud, Sigmund. Sigmund Freud (1856–1939), father of psychoanalysis, was one of the most influential atheists (*see* ATHEISM) of modern times. His views on religion have provided a widely accepted rationale for disbelief in God. As such, they bear careful scrutiny by Christian apologists.

Freud was born in 1856 in Freiberg, Moravia. When he was three years old his family moved to Vienna where he later attended university and studied medicine. He married Martha Bernays, who bore him six children.

In addition to his works on psychology, Freud was preoccupied with religion. He wrote *Totem and Taboo* and *Moses and Monotheism* , but his most influential in undermining belief in God was the 1927 work, *The Future of an Illusion* .

View of Religion. Although an atheist, Freud found some positive features in religion. He acknowledged that (1) there is definitely some truth in religion; (2) in fact, some religion may all be true, and it cannot be definitely disproved. (3) It would be of greatest significance if it were true. (4) There is a feeling of dependence from which religion arose that is shared by all. (5) Religion has provided great comfort for people, and (6) such goals of religion as brotherhood and easing suffering are good and right. (7) Historically, it has been the most important and influential part of culture. Freud even admitted that his position against religion might be entirely unjustified, but he held it strongly, nonetheless.

Despite these benefits, Freud believed that religion must be rejected as authoritarian in form, unnecessary, and inadequate. He suspected that it was founded in an illusory desire for wish-fulfillment. Religion is something we wish to be true but have no basis for trust beyond our wish. In psychoanalytic terms, God is a childhood neurosis we never outgrew, the result of a desire for a kind of heavenly security blanket. That we wish for a pot of gold at the end of a rainbow does not mean there is one. The desire for a Father to comfort us through the woes of life is just as illusory.

Freud believed religion to be harmful because:

1. It arises from the desire or wish for a Cosmic Comforter.

2. It originated during a primitive (ignorant) period of human development.

3. It drains energy from the drive to solve the world's problems.

4. It is selfish and impatient, wanting immediate, immortal reward upon death.

5. It may contribute to the passionate, irrational nature, because of early religion indoctrination and repression of sexual development.

6. It keeps people in a perpetual state of childhood and immaturity.

7. Its adherents are closed-minded; they do not willingly give it up under any circumstances.

8. It is not needed; humanity now has science to control the world and, with resignation, can live with the rest.

9. It has not brought personal and social satisfaction in thousands of years of effort.

10. It has a specious and inauthentic basis: It is alleged to be true since: (a) our primal ancestors believed it; (b) miraculous proofs have been handed down from antiquity, and it is impious to question their authenticity.

Inadequate Justifications for Religion. If one purified religion of all its contradictions, it should still be rejected because it is a wish-fulfillment. Why should we believe this one absurdity and not others? One should not simply behave "as if it were true," contrary to our sense of reality.

Spiritism and trances do not justify religion. These experiences prove only subjective mental states of the persons who have them. Religion should not be accepted by virtue of it being an ancestral belief. Our ancestor were ignorant of many things.

Nor should one accept religion by virtue of the feeling of dependence that lies inside all human beings (*see* SCHLEIERMACHER, FRIEDRICH). To dwell on this feeling alone is irreligious;

it is what is done in response to this feeling of dependence that constitutes religion. Religion should not be accepted as a necessary moral restraint. A rational basis is better and is applicable to all people, not just to the religious.

Holding God to be indefinable and indescribable is inadequate. This unknowable God is of no interest to human beings.

Response to Objections. To the objection that "reason and science are too slow in providing needed comfort and answers," Freud replied that reason persists and is better in the long run. Freud admitted that there is no guarantee of reward in reason and science. Such a guarantee is sought by selfishness. Reason is less selfish than religion. He also admitted that his own view might be an illusion. He responded that the weakness of his view does not prove religion is right. If faith in reason is also intolerant and dogmatic, at least reason can be given up and no penalty for disbelief. Religion cannot.

To the charge that rejection is dangerous to the institution and work of religion, Freud comments that the truly religious person will not be moved by his view.

Are human beings too passionate to be ruled by reason? How does society know whether they are, for it has never been tried? "Moral chaos will result without religion." Not so, Freud claims. For reason is a better basis for morals. It also is untrue that we are helpless without religion, for we have science and the ability to resign ourselves to the handling of our own problems.

In general the argument to which Freud responded was that, truth or not, human beings cannot do without religious consolation. Not surprisingly, Freud insists that eventually, people must grow up.

Evaluation. It is noteworthy that Freud is not against religion, but against dogmatic, authoritarian religiosity. He admits that even the dogmatic type may be true and he may be wrong; he tends to relate most to the sort of dependence that Schleiermacher calls religion. Freud agrees with Schleiermacher that religion may be true and necessary.

These admissions make Freud's blanket rejection of religion seem prejudiced, unreasonable, and even cruel. In effect, he feigns not to care that religious tenets may be true, have altruistic goals, give comfort, and are the most significant and influential part of human culture.

The Dynamics of Religion. The assumption that the desire for satisfaction is wrong is as clearly unfounded as to say that the desire for food and water would be wrong. Freud assumes that all religion involves is a desire for comfort. But some religious obligations are not comfortable. One does them out of a sense of duty to God and others. Certainly, those who are persecuted and martyred do not find comfort.

The cultural ignorance of our ancestors does not automatically disqualify their religious judgment, any more than the lack of formal training means someone cannot have wisdom. In

fact, the opposite may be true if education has a hidden agenda of instilling prejudice. One can be educated by secularist culture away from a thoughtful consideration of religious matters.

Rather than draining energy from caring about the world, religion historically has stimulated the highest help to it. Another great psychologist, William James , showed that saints are strong, not weak. His classic *Varieties of Religious Experiences* found that those who are in touch with a higher world often have greater motivation to change this world. On the other hand, it is not selfish to desire justice or to receive a reward. What is wrong with desiring what is right? If the right is not done in this life, why not desire it in the next, assuming there is a rational hope that the next world exists? By the same token, why not reward good and punish evil? Experience teaches that this is a valuable way to learn what is worthwhile.

Regarding human passions, experience shows that true religion does not contribute to uncontrolled passion, except when religious passions are manipulated to serve an inappropriate national or racial purpose. Otherwise, religion represses and controls the human passions. Religion is a fire that motivates morality, a catalyst for commitment to values. It is the driving force behind the control of passion.

Since humans never outgrow their dependence on the Universe or All, why reject it as invalid? It is not a weakness to say that we are always dependent beings. It means we are constituted so as creatures who need to receive from the hand of the Creator. To assume that admitting a real need is a sign of psychological weakness is like saying hunger and thirst are neuroses. Everyone also has a basic need for commitment, or what Paul *Tillich called an "ultimate commitment." Freud admitted that his commitment was to the god, Reason (Logos). The question isn't whether one has an ultimate commitment but whether what he is committed to is really ultimate. Contrary to Freud, religion is needed. Human beings will never be able to control everything nor be content alone. Augustine was right when he said the soul is restless until it finds its rest in God. Even the modern existential atheists (*see* CAMUS, ALBERT ; SARTRE, JEAN-PAUL) acknowledged their need for God (*see* GOD, NEED FOR).

The failure of many to use religion properly does not invalidate it, any more than committing adultery disproves the value of marriage. The value of religion is seen better by those who accept it than those who reject it. This is seen in Freud's rejection of the Bible as unhistorical without checking the authenticity of the biblical documents. Freud's rejection of it was neither based on reason nor evidence. To borrow his own argument, Freud rejected the Bible based on his own wish, without rational evidence. Freud gives no attention to the rational or experiential arguments for the existence of God (*see* GOD, EVIDENCE FOR). He simply wishes them away.

A brief response is in order to what Freud claimed were inadequate justifications of religion. Freud is correct that wish-fulfillment, belief in the face of absurdity, belief contrary to reality, subjective mental states, and ancestral beliefs are inadequate bases for belief. Religion should not be accepted simply because it is consistent, and certainly not because it is absurd. A completely indefinable God is of little interest to man.

Freud defines religion differently than does Schleiermacher and so his rejection of absolute dependence is poorly argued. Morality need not be based solely on reason or on religious authority; it may be based on the reasonable acceptance of an ultimate authority.

Will Reason Replace Religion? Freud affirms that he is unwilling to give up science, yet he claims this is no illusion. If so, then a believer's unwillingness to give up God should not be considered an illusion either. Contrary to Freud's claim, if atheism is true then it is both dangerous and destructive of religion. For belief in God is absolutely foundational to most forms of religion. Further, Freud has an unrealistic view of human nature. Another unbeliever, Thomas Hobbes, is closer to the truth. Neither science nor resignation adequately replaces religion, as is evidenced by the existential despair of people without God. And reason is an incomplete basis for morality. We need a God to explain why there are universal reasons for doing certain things. Likewise, individual maturity and cosmic dependence are not incompatible. One can have a strong character and yet be totally dependent on God. Compare Moses, Elijah, Joan of Arc, and Oliver Cromwell.

A Response to Freud's Claim That Religion Is an Illusion. It is difficult to put Freud's position into any kind of argument that has premises to challenge. Perhaps the following is what is meant:

1. An illusion is something based only in wish, not in reality.

2. The belief in God has the characteristics of an illusion.

3. Therefore, belief in God is a wish not based in reality.

Of course, in this form the minor premise can be challenged easily. Not all who believe in God do so simply because they wish for a Cosmic Comforter. Some find God because they thirst for reality. Many find God because they are interested in truth, not simply because they are concerned about feeling good.

Further, there are many discomforting dimensions to the Christian belief in God. God is not only a Father who provides; he is also a Judge who punishes. Christians believe in hell, and yet no one really wishes this to be true.

Freud may have it backwards. Maybe our images of earthly fathers are patterned after God, rather than the reverse. Maybe this is because God has created us in his image, rather than the reverse. Perhaps the Christian's belief in God is not based on the desire to *create* a Father. Rather, maybe the atheist's belief that there is no God is based on the desire to *kill* the Father. After all, the Bible declares that rebellious human desires repress the truth about God (Rom. 1:18) because people choose to live a lifestyle contrary to his character (cf. Psalm 14).

The mere human desire for God is not the only basis for believing that God exists. There are good reasons for believing that God exists (*see* GOD, EVIDENCE FOR). Freud's argument would, at best, only apply to those who had no other basis than their own wish that God exists. What is more, God may exist even if many (or all) people have the wrong reason for believing/wishing

that he does. Just because one wishes to win the lottery does not mean that will happen. Some do win it. Just because many wish for a better way of life does not mean it is unobtainable. Many do obtain it.

Further, Freud confuses *wish* and *need*. What if, as even many atheists admit, there is a *real need* for God in the human heart. Children want candy, but they need food. If the desire for God is a need, not merely a want, then Freud's analysis of religious experience is inadequate.

It may be that Freud's belief that there is no God is itself an illusion. If one does not wish to obey God, it is much easier to believe that no God exists. Indeed, for one living in sin and rebellion against God, it is very comforting to believe that neither he nor hell exists (Ps. 14:1 ; Rom. 1:18f .).

Genealogies, Open or Closed. From an apologetic standpoint, the problem of "open" or "closed" genealogies is this: If they are open (have gaps), then why do they appear closed, especially in Genesis 5 and 11 where exact ages at which the children were born are mentioned? If they are closed, then the creation of mankind is placed somewhere around 4000 B.C ., which flies in the face of all the historical and scientific evidence for a minimum date for humanity (*see* GENESIS, DAYS OF). Since they must be either open or closed, there is an apologetic problem either way with regard to the authenticity of the Genesis record.

Solutions to the Problem. *Closed Chronology View.* According to the closed chronology view, there are no gaps in the list in Genesis 5 and 11 . They are both complete and provide all the numbers necessary for determining the age of the human race.

Arguments. In favor of the closed chronology view, different arguments have been offered. The strongest is the *prima facie* argument. The genealogies appear to be closed. For not only is the age given at which the son is born, and his son, and so on, but the total age of the father after he had the son is given. For example, the text says, "When Adam had lived 130 years, he had a son . . . and he named him Seth. . . . Altogether, Adam lived 930 years, and then he died. When Seth had lived 105 years, he became the father of Enos . . ." (Gen. 5:3–6). This wording appears to leave no room for gaps.

With one exception, no lists in the Bible supply missing links in this genealogy. There are only two other lists of this early period covered by Genesis 5 and 11 and both have the same names in them

Genesis 5 , 11	**1 Chronicles 1:1–28**	**Luke 3:34–38**
Adam	Adam	Adam
Seth	Seth	Seth
Enosh	Enosh	Enosh
Kenan	Kenan	Kenan
Mahalalel	Mahalalel	Mahalalel
Jared	Jared	Jared

Enoch	Enoch	Enoch
Methuselah	Methuselah	Methuselah
Lamech	Lamech	Lamech
Noah	Noah	Noah
Shem	Shem	Shem
Arphaxad	Arphaxad	Arphaxad
———	———	Cainan
Shelah/Salah	Shelah/Salah	Shelah/Salah
Eber	Eber	Eber
Peleg	Peleg	Peleg
Reu	Reu	Reu
Serug	Serug	Serug
Nahor	Nahor	Nahor
Terah	Terah	Terah
Abram	Abram /Abraham	Abraham

The one exception is Cainan (in the Luke 3 list). Otherwise, disregarding the alternate spelling of Salah/Shelah and Abram's changed name to Abraham, the lists are identical and reveal no gaps. The same names appear in both, with no missing generations apparent.

It is argued that there is no solid evidence for human civilization that goes back farther than about 4000 B.C . So-called fossil "humans" are not descendants of Adam. They have been explained variously as (1) a pre-Adamic race that was wiped out between Genesis 1:1 and 1:2 (the gap theory); (2) prehuman creatures that had human-like forms but were not really human; (3) frauds (Piltdown Man) or misinterpretations (like "Nebraska Man," which turned out to be based on an extinct pig's tooth).

Finally, closed chronology proponents attempt to explain the one gap in the lists (Cainan, Luke 3:36) as either a textual problem, such as a copyist mistake, or the listing of another son of Arphaxad in addition to Salah. According to this view, Salah and Cainan would be brothers. Hence, Cainan's name in Luke 3 would not represent a gap in the Genesis and Chronicles complete chronologies.

Objections to the Closed Chronology View. The implausible explanation of Luke 3:36 . The attempt to explain away Luke 3:36 as no gap seems highly implausible. There is no real manuscript authority for omitting Cainan from Luke 3:36 . That sequence is in all major, and virtually all minor, manuscripts. There is absolutely no indication in the text that Cainan should be listed as a brother of Salah. The grammatical construction is the same for all the other names in the list who were sons. Although the Greek reads "of" or "from" without the word *son* , the translators rightly supply *son* since it is what is implied in every other case in the list. Making

this one an exception, when it has the same construction, is begging the question. There is no precedent in any of the genealogical lists for listing Cainan as anything but the father of Salah.

The only other explanation is that both Genesis 11 and 1 Chronicles are outlines that hit the significant points in the family tree. They have at least one known gap in their genealogies.

Other known gaps. The genealogy of Christ in Matthew 1 has at least one serious known gap, even though the text reads that Jehoram was the father of Uzziah (vs. 8), it is known from 1 Chronicles 3 that three missing generations separate Joram and Uzziah:

Matthew 1:8	**1 Chronicles 3:11–12**
Jehoram	Jehoram
———	Ahaziah
———	Joash
———	Amaziah
Uzziah	Azariah (more commonly Uzziah)

Now since there are known gaps in the genealogies, even from a strictly biblical point of view the genealogies cannot be considered closed.

Scientific and historical evidence. Even if one takes the most conservative interpretation of what constitutes a human remain of "modern man," the evidence is still strong that there were human beings around well before 4000 B.C . Peoples appear to have wandered North America since 10,000 B.C . Even if all fossil finds before Cro-Magnon and Neanderthal peoples were not human, there are numerous complete skeletons of these groups dated before 10,000 B.C . Even if one discounts all prehistoric precivilization fossils and speaks only of "civilized" humankind, the time extends several thousand years earlier than 4000 B.C . There was a civilization in Egypt well before this time. Scientific and historical evidence would seem to rule out a closed genealogy.

Open Genealogies. The scientific evidence. Open genealogies are a better solution to the problem.

As already discussed, even discounting the exaggerated claims of supposedly fossil human beings millions of years or even hundreds of thousands of years old, there is strong evidence for the existence for "modern" humans well beyond 4000 B.C ., which a closed genealogy demands.

The biblical evidence. The biblical evidence for an open genealogy with an unknown number of missing generations is supported. First, there are those three missing generations in Matthew 1:8 , even though the Greek *gennao* ("begat" KJV ; "was the father of" NIV) is used. In biblical Hebrew culture being a *father* was thought in the same light as being a *forefather* or *ancestor* . *Begat* can mean "was the ancestor of." The word *son (ben)* can mean descendant. Jesus was the

kjv King James Version
niv New International Version

“son of David,” though at least thirty-one generations separated David from the Christ (the twenty-eight named in Matt. 1:17 plus the three missing from verse 8 that are found in 1 Chron. 3:11–12).

In another example, a comparison of 1 Chronicles 6:3–14 with Ezra 7:2 reveals that Ezra omits six generations between Seraiah and Ezra:

1 Chronicles 6:6–14	**Ezra 7:2**
Zerahiah	Zerahiah
Meraioth	Meraioth
Amariah	———
Ahitub	———
Zadok	———
Ahimaaz	———
Azariah	———
Johnanan	———
Azariah	Azariah
Amariah	Amariah

There is at least one generation missing even in the Genesis 5 and 11 genealogy which *appears* to be closed. This demonstrates that whatever the text *seems* to say, chronology must be interpreted through an open genealogy.

If there are no gaps in the Genesis 5 and 11 genealogies, implausible examples emerge. For by adding up the numbers one can determine the following dates of birth and death A.A. (after Adam’s creation):

Adam (1–930 A.A.)

Seth (130–1042 A.A.)

Enosh (235–1140)

Kenan (325–1236)

Mahalalel (395–1290)

Jared (460–1422)

Enoch (622–987)

Methuselah (687–1656)

Lamech (874–1651)

Noah (1056–2006)

Shem (1558–2158)

Arphaxad (1658–2096)

Salah (1693–2126)

Eber (1723–2187)

Peleg (1757–1996)

Reu (1787–2026)

Serug (1819–2049)

Nahor (1849–1997)

Terah (1878–2083)

Abraham (2008–2183)

Isaac (2108–2228)

Jacob (2168–2315)

First, Adam, the first man (*see* ADAM, HISTORICITY OF), would have been a contemporary of Noah's father. For Adam died in the year 930 A.A. (after Adam's creation). Lamech, Noah's father, was born in 874 A.A. This means they were contemporaries for fifty-six years. Likewise, Abraham only missed being a contemporary of Noah by two years. But there is no indication that this is the case.

It is more implausible to assume that Nahor, the grandfather of Abraham, died before his great, great, great, great, great, great, grandfather Noah. For Noah died 2006 A.A. and Nahor died in 1997 A.A.

Isaac would have been born fifty years before Noah's son Shem died.

In Genesis 10:4 a man (Javan) is said to bring forth peoples, not individuals (e.g., Kittim and Dodanim). The *im* on the end of their names is plural, indicating a plurality of people—a tribe or nation.

If there are no gaps then significant population improbabilities emerge. Numbers 3:19 , 27–28 says that the four sons of Kohath gave rise to the families of the Amramites, Isharites,

Hebronites, and Uzzielites, of which the males alone numbered 8600 only one year after the Exodus. Thus, the grandfather of Moses had in the lifetime of Moses 8600 male descendants alone, 2750 of whom were between the ages of thirty and fifty (Num. 4:36). This would be a very prolific family indeed.

Levi's son Kohath was born before Jacob's descent into Egypt (Gen. 46:11) where Israel stayed for 430 years (Exod. 12:40 , 41). Since Moses was 80 years old at the time of the Exodus (Exod. 7:7) he must have been born more than 350 years after Kohath. Yet Kohath was Moses' grandfather (1 Chron. 6:1–3). This would make the generation between Kohath and Moses (viz., Amram) 350 years long when the life span of Moses' period had already diminished to 120. Well before Moses' time, Abraham died at 175, Isaac at 120, Jacob at 147, and Joseph at 110.

Nowhere does the Bible even suggest a summation of the numbers listed in Genesis 5 and 11 . No chronological statement is deduced from these numbers either in Genesis 5 and 11 or anywhere else in Scripture. There is no total given anywhere in the biblical text of the time that elapsed between creation and Abraham, as there is for the time in Egypt (Exod. 12:40) and the time from the Exodus to Solomon (1 Kings 6:1).

The symmetry of the text argues against it being complete. Scholars have noted that their symmetrical arrangement of Genesis 5 and 11 into groups of ten argues for their compression. Noah is the tenth name from Adam and Terah the tenth from Noah. Each ends with a father who had three sons. This is certainly the case in Matthew 1 where there are three series of fourteen (double-seven, the number of completeness and perfection), for we know three generations are left out in Matthew 1:8 (cf. 1 Chron. 3:11–12).

Objection to the Open Genealogy View. Of objections to the open genealogy view not yet discussed, the most important one is based on the alleged implausible interpretation of the language of Genesis 5 and 11 . It is objected that not only does it seem stretched to find gaps in Genesis 5 or 11 , given the language of the text, but it seems like isogesis (reading into the text) rather than exegesis (reading out of the text). After all, the name of the father and son are given as well as their age when they had this son who became the father of the next son at a certain age. Listing the father's age at the time of the son's birth is without meaning unless he is the immediate son, and there are no gaps.

In response, some important matters must be kept in mind.

First, the Bible comes out of another culture and linguistic setting. Metaphorical imagery can mislead the reader into thinking the Bible is saying something, when it means something different. In Hebrew, as in English, one can speak of the four "corners" of the earth (Isa. 41:9 ; cf. Ezek. 7:2). Is the Bible saying that the world is square? Some critics say so. Yet the earth is also described as a circle or globe (Isa. 40:22). Is it possible that corners is metaphorical language that may mean the geography covered by the four "quarters" of the compass, just as it means when we say it?

Second, as noted in the implausible dates above, even within the Bible there is strong evidence of gaps in the genealogies.

Third, there are ways to understand the text of Genesis 11 that do allow for gaps. The formula phrase “and X lived so many years and begat Y” can mean “and X lived so many years and became the ancestor of Y.” This is not speculation, for in Matthew 1:8 (“Jehoram begat Uzziah”) it means precisely this. “Begat” must mean “became the ancestor of,” since 1 Chronicles 3:11–12 fills in three missing generations between Jehoram and Uzziah. This would not have been an oversight by Matthew, for the genealogy of the line of David was known by every Jewish man.

Allusions to each father’s age at the time of the son’s birth is not necessarily without meaning. Just because we do not know why God included something in the text does not mean there was no purpose for doing so. It is a bit presumptuous to tell God what he should or should not have put in his inspired Word. B. B. Warfield suggests that this information should “make a vivid impression on us of the vigor and grandeur of humanity in those old days of the world’s prime” (Warfield). This detail lends credibility to the fact that people lived to enormously long ages before the flood (*see* SCIENCE AND THE BIBLE). It makes sense to know that men who lived that long did not have children at age sixteen, like men who live only three score and ten. Even discounting Noah’s late age for having children (500), the average age for childbearing in Genesis 5 is over 100 years of age. This is certainly fitting for someone who lives as long as eight hundred or nine hundred years.

Conclusion. The evidence supports the view that the Bible does not give us in Genesis 5 and 11 a closed chronology but an outline genealogy. This is supported by both internal biblical evidence of missing generation(s), even in Genesis 11 , but also by external evidence that humankind dates to long before 4000 B.C . This being the case, there is no real conflict on this matter between the Bible and science nor between the Bible and itself. Open genealogy provides an accurate line of descent for lineage purposes, but it does not satisfy our curiosity about the date of human creation.

Genesis, Days of. The problem posed by modern science to defenders of the "literal" interpretation of Genesis 1 is legendary: How can there be six literal days of creation when scientific dating has demonstrated that life emerged gradually over many millions of years?

Six Twenty-four-Hour Days. Apologists are quick to note that this problem is acute only for those who hold to six successive, twenty-four hours (= 144 hours) of creation. It does not apply to other twenty-four-hour views nor to the view that interprets "days" to mean long periods of time.

Arguments for Solar Days. The problem is deepened by the fact that there is *prima facie* evidence to indicate that the days of Genesis 1 are indeed twenty-four-hour periods. Consider the following arguments:

The normal meaning of yom. The usual meaning of the Hebrew word *yom* ("day") is twenty-four hours unless the context indicates otherwise. But the context does not indicate anything but a twenty-four-hour day in Genesis 1 .

The numbers are in series. When numbers are used in a series (1, 2, 3 . . .) in connection with days it refers to twenty-four-hour days. There is no exception to this elsewhere in the Old Testament.

"Evening and morning" is used. The phrase "and there was evening and there was morning" denotes each period. Since the literal twenty-four-hour day on the Jewish Calendar began at sunset and ended before sunset the next day, Genesis 1 must refer to literal days.

The days are compared to a work week. According to the Law of Moses (Exod. 20:11) the Jewish work week of Sunday through Friday was to be followed by rest on Saturday, just as God had done in his six-day week of creation. But we know that the Jewish work week refers to six, successive, twenty-four-hour days.

Life cannot exist without light. According to Genesis 1 , the sun and stars were not made until the fourth day (1:14), but there was life on the third day (1:11–13). However, life cannot exist for long without light. Hence, the "days" must not be long periods of time.

Plants cannot live without animals. Plants were created on the third day (1:11–13) and animals were not created until the fifth day (1:20–23). But there is a symbiotic relation between plants and animals, one depending on the other for its life. For example, plants give off oxygen and take in carbon dioxide and animals do the reverse. Hence, plants and animals must have been created together, not separated by long periods of time.

A Response to the Arguments. In spite of these arguments, the case is less than definitive. Those who reject the six-solar-day view reply:

Day (yom) can mean a long period. Most often the Hebrew word *yom* means twenty-four hours. However, the meaning in Genesis 1 is determined by context, not majority vote. Even in this passage in Genesis 1–2 , *yom* is used of the whole of creation. Genesis 2:4 refers to "the day

(*yom*)" when they were created. The Hebrew word appears elsewhere for long periods, as in Psalm 90:4 (cited in 2 Peter 3:8): "For a thousand years in your sight are like a day (*yom*) that has just gone by, or like a watch in the night."

Numbered days need not be solar. Neither is there a rule of the Hebrew language demanding that all numbered days in a series refer to twenty-four-hour days. Even if there were no exceptions in the Old Testament, it would not mean that "day" in Genesis 1 could not refer to more than one twenty-four-hour period. But there is another example in the Old Testament. Hosea 6:1–2 reads: "Come, let us return to the LORD . He has torn us to pieces but he will heal us; he has injured us but he will bind up our wounds. After two days he will revive us; on the third day he will restore us, that we may live in his presence." Clearly the prophet is not speaking of solar "days" but of longer periods in the future. Yet he numbers the days in series.

There was a beginning and an end. That this phrase is *often* used in connection with twenty-four-hour days does not mean it is *always* used in this way. Genesis 1 is a good candidate to be an exception. Further, if one is going to take everything in Genesis 1 in a strictly literal way, then the phrase "evening and morning" does not encompass a twenty-four-hour day, but only the late afternoon and early morning. This is considerably less than twenty-four hours. Technically the text does not say the day was composed of "evening and morning" (thus making a twenty-four-hour Jewish day). Rather, it simply says "And there was evening, and there was morning—the first day" (1:5). The phrase may be a figure of speech indicating a beginning and end of a definite period of time, just as we refer to "the dawn of world history" or the "sunset years of one's life."

Finally, if every day in this series of seven is to be taken as twenty-four hours, then why is the phrase "evening and morning" not used of the seventh day? In fact, as we shall see, the seventh day is not twenty-four hours, and thus there is no necessity to take the other days as twenty-four hours either, since all of them alike use the same word *yom* and have a series of numbers with them.

The six periods are comparable to a work week. It is true that the creation week is compared with a work week (Exod. 20:11). However, it is not uncommon in the Old Testament to make unit-for-unit rather than minute-for-minute comparisons. For example, God appointed forty years of wandering for forty days of disobedience (Num. 14:34). And in Daniel 9:24–27 , 490 days equal 490 years.

We know the seventh day is more than twenty-four hours, since, according to Hebrew 4 , the seventh day is still going on. For Genesis says "on the seventh day he [God] rested" (2:2), but Hebrews 4:5–10 informs us that God is still in that Sabbath rest into which he entered after he created.

When did light appear? Light was not created on the fourth day, as defenders of the solar day argue. Rather, it was made on the very first day, when God said, "Let there be light" (Gen. 1:3). As to why there was light on the first day and the sun did not appear until the fourth day, there are two possibilities. Some scholars have noted a parallelism between the first three days (light, water, and land—all empty) and the second three days (light, water, and land—all filled with

bodies). This may indicated a parallelism in which the first and fourth days cover the same period of time. In that case we are dealing with three periods of time, not six, and the sun existed from the beginning. Others have argued that, while the sun was created on the first day, it did not *appear* visually until the fourth day. Perhaps, this was due to a vapor cloud that allowed light through but not the distinct shape of the heavenly bodies emanating the light.

Not all plants, animals are interdependent. If Genesis 1 is a parallel outline for creation, covering three days as suggested above, then the problem of plants and animals being created separately disappears. Also, some plants and animals are interdependent, but not all. Genesis does not mention all the plants and animals but only some.

If the days are six successive periods, then those forms of plant and animal life that need each other could have been created together. In fact, the basic order of events is the order of dependence. For example, many plants and animals can exist without humans (and they were created first), but humans (who are created on the last day) cannot exist without plants and animals.

"Days" as Time Periods. Other orthodox Christians believe the days of Genesis 1 can involve long periods of time. They offer biblical and scientific evidence for this view.

The Biblical Evidence for Long Days. There are many indications in the text of Scripture to support the belief that the creation "days" were longer than twenty-four hours. The following are those most often given in support of this position.

Day (yom) often means time. Returning to word meanings, it should be noted how *yom* is used in the Bible. The word sometimes means a *prophetic day* , a significant future time as in "the day of the LORD " (Joel 2:31 ; cf. 2 Peter 3:10). As noted above, "A day is as a thousand years" in Psalm 90:4 and 2 Peter 3:8 . And in Genesis 2:4 the word summarizes the entire creation. This indicates a broad meaning of the word *yom* in the Bible that parallels the range of meaning for the English *day* .

As also noted above, Hebrews 4:3–5 teaches that God is still in that seventh-day cessation from creating described as a day in Genesis 2:2–3 . This day, then, is at least 6000 years long, even on the shortest chronologies.

The third day is longer. On the third "day" God not only created vegetation but it also grew to maturity. For the text says "The land *produced vegetation:* plants bearing seed according to their kinds and trees bearing fruit with seed in it according to their kinds. And God saw that it was good" (Gen. 1:12 , emphasis added). But to grow from seeds to maturity and produce more seeds is a process that takes months or years.

The sixth day is longer. It would also appear that the sixth day was considerably longer than a solar day. Consider everything that happened during this period of time (*see* Newman, Appendix III):

God created all the many thousands of the land animals (Gen. 1:24–25).

God formed man from dust (Gen. 2:7) as a potter (cf. Jer. 18:2f .).

God planted a Garden (Gen. 2:8), suggesting activity involving time.

Adam observed and named all these thousands of animals (Gen. 2:19).

God promised "I will make him a helpmeet" (Gen. 2:18), denoting a subsequent time.

Adam searched for a help mate for himself, apparently among the creatures God had made "But for Adam no suitable helper *was found* [implying a time of searching]" (Gen. 2:20 , emphasis added).

God put Adam to sleep for a time and operated on him, taking out one of his ribs and healing the flesh (Gen. 2:21).

Adam indicated he had anticipated Eve for some time (Gen. 2:23).

Eve was brought to Adam who observed her, accepted her, and was joined to her (Gen. 2:22–25).

It seems highly unlikely that all of these events, especially the second, were compressed within a twenty-four-hour period.

The Scientific Evidence for Long Days. Most scientific evidence sets the age of the world at billions of years. The age of the universe is based on the speed of light and the distance of the stars as well as the rate of expansion of the universe. Early rocks have been dated in terms of radioactivity and set at billions of years old. Simply given the rate that salt runs into the sea and the amount of salt there would suggest multimillions of years (*see* ORIGINS, SCIENCE OF).

Views of the Genesis Days. If, of course, the days of Genesis are long periods of time, then there is no conflict with modern science on the age of the earth. But even if the days of Genesis are twenty-four hours there are still ways to reconcile long periods of time with Genesis 1 –.

Revelatory Day View. Some conservative scholars have suggested that the "days" of Genesis may be days of *revelation,* not really days of *creation* (Wiseman). That is, it took God a literal solar week (of 144 hours) to reveal to Adam (or Moses) what he had done in the ages before humans were created. Even the Exodus passages (20:11) which speak of the heavens and earth being " *made" (asah)* in six days can mean "revealed."

Just as a prophet can get revelation from God looking forward to a future series of events (cf. Daniel 2 , 7 , 9 ; Revelation 6–19), even so God can reveal a past series of events to one of his servants. Indeed, Moses was on the holy mountain for forty days (Exod. 24:18). God could have taken six of these days to reveal the past creation events to him. Or after God created Adam, he could have taken six literal days to reveal to him what he had done before Adam arrived on the scene. Some scholars believe this material could have been memorized and passed

on as the first “history of the heavens and the earth” (Gen. 2:4), just as the other “histories” (lit., “genealogies”) were apparently recorded and passed on (for example, Gen. 5:1 ; 6:9 ; 10:1).

Alternate Day-Age View. Other evangelical scholars have suggested that the “days” of Genesis are twenty-four-hour periods of time in which God created the things mentioned, but that they are separated by long periods in between. This would account for both the indications of great lengths of time in Genesis 1 and indications that there were twenty-four-hour days involved.

Gap Theories. C. I. Scofield made popular the view that there could be a great gap of time between the first two verses of the Bible into which all of the geological ages fit. In this way the days could be twenty-four hours each and yet the world could be many millions of years old or more.

Others believe that there may be a “gap” or, better, a lapse of time before the six, twenty-four-hour days of Genesis begin. In this case, the first verse of the Bible would not necessarily refer to the original *ex nihilo* creation of God (*see* CREATION, VIEWS OF) but more recent acts of God in forming a world he had previously created (see Waltke).

So there are ways to accommodate long periods of time and still accept a basically literal understanding of Genesis 1–2 . There is no necessary conflict between Genesis and the belief that the universe is millions or even billions of years old.

How Old Is the Earth? There seems to be no way to prove how old the universe really is, either from science or from the Bible. There are known and possible gaps in the biblical genealogies. And there are unprovable presuppositions in all the scientific arguments for an old earth, that is, an earth of millions or billions of years old.

Gaps in the Biblical Record. Bishop James Ussher (1581–1656), whose chronology was used in the old Scofield Bible, argued that Adam was created 4004 B.C . However, his calculations are based on the assumption that there are no gaps in the genealogical tables of Genesis 5 and 11 . But we know this is false (*see* GENEALOGIES, OPEN OR CLOSED). For the Bible says “Arphaxad . . . became the father of Salah” (Gen. 11:12), but in Jesus’ genealogy in Luke 3:36 “Cainan” is listed between Arphaxad and Salah (Shelah). If there is one gap there may be more. Indeed, we know there are more. For example, Matthew 1:8 says “Joram the father of Uzziah,” but the parallel listing in 1 Chronicles 3:11–14 illustrates missing generations between Joram and Uzziah (Azariah), namely, Ahaziah, Joash, and Amaziah. Just how many gaps there are in biblical genealogies and how long a time gap this represents is not known. But gaps there are and, hence, complete chronologies cannot be made, only accurate genealogies (lines of descent) are given.

Presuppositions in the Scientific Arguments. There are many scientific arguments for an old universe, some of which are persuasive. However, none of these arguments is foolproof, and all of them could be wrong. A few examples will illustrate the point of why we should not be dogmatic.

The speed of light may change. In spite of the fact that Einstein considered it absolute, and modern science has held it to be unchanging, it cannot be proven that the speed of light has never changed. Yet the speed of light (ca. 186,000 miles a second) is assumed for many proofs of an old earth. However, *if* the speed of light is constant and *if* God did not also create the light rays when he created the stars, then it would appear that the universe is billions of years old. For it has apparently taken millions of years for that light to get to us. But these are big *"ifs"* that have not been proven. Indeed, they would appear to be unprovable. So, while the argument from the speed of light to an old universe may seem plausible, it is not a demonstrable proof.

Radioactive dating makes assumptions. It is well known that U235 and U238 give off lead isotopes at a known rate. By measuring the amount of their deposit one can calculate when the decay began. Many early rocks in the earth's crust have been dated in the billions of years by this method. But again, as plausible as this may be, it is not proven. For one must assume at least two things to come to the conclusion that the world is billions of years old. First, it must be assumed that there were no lead deposits at the beginning. Second, one must assume that the rate of decay has been unchanged throughout its entire history. Neither can be proven. Hence, there is no way to prove by radioactive dating that the world is billions of years old.

There is no conflict. The same is apparently true of all arguments for an old earth.

For example, the oceans have a known amount of salt and minerals in them and these go into the ocean at a fixed rate every year. By simple mathematics it can be determined how many years this has been going on. However, here too it must be assumed that there were no salts and minerals in the ocean at the start and that the rate has not changed. A worldwide flood, such as the Bible describes, would certainly have changed the rate of deposits during that period.

All of this is not to say that the universe is not billions of years old. It may be. However, the arguments in favor of great age all possess presuppositions that cannot be proven. With this in view, the following conclusions are appropriate: There is no demonstrated conflict between Genesis 1–2 and scientific fact. The real conflict is not between God's *revelation* in the Bible and scientific *fact*; it is between some Christian *interpretations* of the Bible and many scientists' *theories* about the age of the world.

Indeed, since the Bible does not say exactly how old the universe is, the age of the earth is not a test for orthodoxy. In fact, many orthodox, evangelical scholars hold the universe is millions or billions of years old, including Augustine, B. B. Warfield, John Walvoord, Francis Schaeffer, Gleason Archer, Hugh Ross, and most leaders of the movement that produced the famous "Chicago Statement" on the inerrancy of the Bible (1978).

Gnostic Gospels. ***See*** **GNOSTICISM ; GOSPEL OF THOMAS ; NAG HAMMADI GOSPELS .**

Gnosticism. The Gnostics followed a variety of religious movements that stressed *gnosis* or knowledge, especially of one's origins. Cosmological dualism was also a feature of the system—opposed spiritual worlds of good and evil. The material world was aligned with the dark world of evil.

No one is certain of the origins of Gnosticism. Some believe it was rooted in a heretical group within Judaism. Supporters of this theory cite *The Apocalypse of Adam* and *The Paraphrase of Shem* as early Gnostic documents revealing Jewish origins. Others give it a Christian context. An incipient form may have infiltrated the church in Colosse. Or it may have had a totally pagan root. During the second through the fourth centuries it was addressed as a major threat by such church fathers as Augustine , Justin Martyr , *Irenaeus, Clement of Alexandria, Tertullian , and Origen .

Early Sources. Irenaeus's book *Against Heresies* provides extensive treatment of what Gnostics believed. Three Coptic Gnostic codices were published. Two were discovered in Nag Hammadi, Egypt in 1945. Codex Askewianus contains *Pistis Sophia* and Codex Brucianus contains *The Book of Jeu.* Best known among the Nag Hammadi documents is the *Gospel of Thomas* . A third work from this period, Codex Berolinensis, was found elsewhere and published in 1955. It contains a *Gospel of Mary* [Magdalene], a *Sophia of Jesus* , *Acts of Peter* , and an *Apocryphon of John* . The first translation of a tractate, *The Gospel of Truth* , appeared in 1956, and a translation of fifty-one treatises, including *Gospel of Thomas* , appeared in 1977.

Leaders. The early fathers of the church held that Gnosticism had first-century roots and that Simon the Sorcerer of Samaria (Acts 8) was the first Gnostic. According to church fathers, Simon practiced magic, claimed to be divine, and taught that his companion, a former prostitute, was reincarnated Helen of Troy. Hippolytus (d. 236) attributed the *Apophasis Megale* to Simon. Simon's disciple, a former Samaritan named Menander, who taught in Syrian Antioch near the

end of the first century, taught that those who believed in him would not die. That claim was nullified when he died.

At the beginning of the second century, Saturninus (Satornilos) asserted that the incorporeal Christ was the redeemer, denying that Christ was really incarnated in human flesh. This belief is shared with docetism . In this period Cerinthus of Asia Minor was teaching adoptionism, the heresy that Jesus was merely a man upon whom Christ descended at his baptism. Since Christ could not die, he departed from Jesus before his crucifixion. Basilides of Egypt was called both a dualist by Irenaeus and a monist by Hippolytus.

One of the more controversial, though atypical, Gnostics was *Marcion of Pontus. He believed that the God of the Old Testament was different from the God of the New Testament and that the canon of Scripture included only a truncated version of Luke and ten of Paul's Epistles (all but the pastoral Epistles). His views were severely attacked by Tertullian (ca. 160s–ca. 215). Marcion became a stimulus for the early church to officially define the limits of the canon (*see* APOCRYPHA, OLD AND NEW TESTAMENTS ; BIBLE, CANONICITY OF).

Valentinus of Alexandria was another prominent Gnostic. He came to Rome in 140 and taught that there were a series of divine emanations. He divided humanity into three classes: (1) Hylics or unbelievers, who were immersed in material and fleshly nature; (2) psychics or common Christians, who lived by faith and pneumatics; and (3) spiritual Gnostics. His followers included Ptolemaeus, Heracleon, Theodotus, and Marcus. Heracleon's interpretation of John is the first known New Testament commentary.

Gnostic-like beliefs persisted into the fourth century. Among the late manifestations was Manichaeism, a dualistic cult that trapped Augustine in his pre-Christian life. Against it he wrote many treatises, which are collected in *The Anti-Manichaean Writings* in the *Ante-Nicene Fathers* .

Teachings. Since Gnosticism lacked a common authority, it encompassed a variety of beliefs. Central to many, if not most, were:

1. a cosmic dualism between spirit and matter, good and evil;

2. a distinction between a finite Old Testament God, *Yahweh* , who was equated with Plato's Demiurge or Craftsman, and the transcendent God of the New Testament;

3. view of creation as resulting from the fall of Sophia (Wisdom);

4. identification of matter as evil;

5. belief that most people are ignorant of their origins and condition;

6. identification of sparks of divinity that are encapsulated in certain spiritual individuals;

7. faith in a docetic Redeemer, who was not truly human and did not die on the cross. This Redeemer brought salvation in the form of a secret *gnosis* or knowledge that was communicated by Christ after his resurrection.

8. a goal of escaping the prison of the body, traversing the planetary spheres of hostile demons, and being reunited with God;

9. a salvation based not on faith or works, but upon special knowledge or *gnosis* of one's true condition;

10. a mixed view of morality. Carpocrates urged his followers to engage in deliberate promiscuity. Epiphanes, his son, taught that licentiousness was God's law. Most Gnostics, however, took a strongly ascetic view of sexual intercourse and marriage, contending that the creation of woman was the source of evil and procreation of children simply multiplied the number of persons in bondage to the evil material world. Salvation of women depended on their one day becoming men and returning to the conditions of Eden before Eve was created. Oddly enough, women were prominent in many Gnostic sects.

11. interpretation of baptism and the Lord's supper as spiritual symbols of the *gnosis* ;

12. view of the resurrection as spiritual, not physical (*see* RESURRECTION, PHYSICAL NATURE OF). In the Nag Hammadi codices *De Resurrectione* affirms that

> The Saviour swallowed up death. . . . For he laid aside the world that perishes. He changed himself into an incorruptible aeon and raised himself up, after he had swallowed up the visible by the invisible, and he gave us the way to immortality. . . . But if we are made manifest in this world wearing him, we are his beams and we are encompassed by him until our setting, which is our death in this life. We are drawn upward by him like beams by the sun, without being held back by anything. This is the spiritual resurrection which swallows up the psychic together with the fleshly. [Malinine, 45]

Gnosticism as an organized movement acknowledging its source all but died. The sole surviving remnant is in southwestern Iran. However, many Gnostic teachings live on among new agers, existentialists, and Bible critics. The revival of interest in the Gospel of Thomas by the Jesus Seminar is a case in point. There is also a tendency, even among some evangelical scholars (see Geisler), to deny the physical nature of the resurrection. However, Gnosticism lives today in the New Age Movement in an extensive way (Jones).

Evaluation. Gnosticism was thoroughly critiqued by the early church fathers, especially Irenaeus, Tertullian, Augustine, and Origin, though Origin bought into some of their views. Marcion's view of the canon is critiqued in the articles Apocrypha, New Testament, and BIBLE, CANONICITY OF . For more on Gnosticism see the articles CHRIST, DEATH OF ; DOCETISM , and DUALISM .

God, Alleged Disproofs of. Many theists offer proofs for God. Likewise, devout atheists (*see* ATHEISM) have offered what they consider to be disproofs of God corresponding to the ontological argument, the cosmological argument, the teleological argument, and the moral argument. Specific arguments by nontheists against the apologetic arguments are covered in GOD, OBJECTIONS TO PROOFS FOR .

An Ontological Disproof of God. One atheist argued as follows (see Findlay, 111f.):

1. God is by definition a necessary existence.

2. But necessity cannot apply to existence.

3. Therefore, God cannot exist.

In support of the crucial second premise he noted that necessity is a logical term, not an ontological one. That is, necessity applies to propositions, not to being or reality.

Theists point out that the second premise is self-defeating. It is a necessary statement about existence that claims that no necessary statements can be made about existence. Who said

necessity cannot apply to existence? This legislates meaning rather than listens to it. In fact, the very criterion by which one concludes that necessity cannot apply to existence is arbitrary. There is no necessity to accept it.

A Cosmological Disproof of God. This argument against God can be stated:

1. God is a self-caused being (see Sartre, 758, 762).

2. But it is impossible to cause one's own being, for a cause is prior to its effect, and one can't be prior to oneself.

3. Therefore, God cannot exist.

This argument commits the straw-man fallacy in the first premise. Theists do not hold that God is a *self-* caused being. This is a contradictory concept. Rather, theists define God as an *un* caused being, which is not contradictory. Even atheists believe that the universe is uncaused, having always existed. But if God is not defined as a self-caused being, then the disproof fails.

A Teleological Disproof of God. A teleological argument against God's existence can be stated (see Hume, Part 8):

1. The universe was either designed or else it happened by chance.

2. But chance is an adequate cause of the universe.

3. Therefore, the universe was not designed.

In support of the second premise, two lines of argument have been offered. First, in an infinite amount of time every combination will occur, no matter what the odds against it. Second, no matter what the odds against something happening, it can still happen and sometimes does.

Theists note that this falls short of a disproof, since it is not logically necessary. Second, even as an argument (but not a disproof) it has serious problems. The evidence is much stronger that the universe had a beginning, since it is running out of usable energy (*see* THERMODYNAMICS, LAWS OF ; BIG BANG THEORY), and since an infinite number of moments before today could not have elapsed, no infinite series can be traversed (*see* KALAM COSMOLOGICAL ARGUMENT). Further, science is not based on chance but on observation and repetition. These principles inform us that anything as complex as life does not occur without an intelligent cause.

A Moral Disproof of God. The moral argument against God is by far the most popular (*see* EVIL, PROBLEM OF). A common version of this argument goes this way (see Bayle, 157f.):

1. An all-good God would destroy evil.

2. An all-powerful God could destroy evil.

3. But evil is not destroyed.

4. Therefore, as such God does not exist.

This argument also falls short of being a disproof because the first premise is ambiguous and the third premise fails to fully state the actual conditions. First of all, *destroy* is ambiguous. If it means "annihilate," then God cannot destroy all evil without destroying all freedom (*see* FREE WILL). But no atheist wants freedom to disbelieve in God taken away. Second, if destroy means "defeat," the third premise fails to add the important word *yet* : "Evil is not *yet* destroyed." Once this is stated, the argument does not follow, since God may yet defeat evil in the future. If the atheist (*see* ATHEISM) responds by claiming "Evil is not yet defeated *and never will be,* " there is no basis for the statement. Only God knows the future with certainty. So the atheist must be God in order to eliminate God by this kind of reasoning.

The Existential Disproof of God. Existentialist philosopher, Jean-Paul Sartre, argued:

1. If God exists, then all is determined.

2. But if all is determined, then I am not free.

3. But I am free.

4. Therefore, God does not exist.

My freedom is undeniable. For even the attempt to deny it, affirms it. But if freedom is undeniable, then God cannot exist. For an omniscient being (God) who exists knows everything that will come to pass. Thus, everything is determined, for if it did not come to pass as he knew it would, then God would have been wrong. But an omniscient being cannot be wrong. Therefore, if God exists, everything is determined. But all is not determined, because I am free. Hence, there is no God.

Theists challenge the second premise. There is no contradiction between determination and free choice. God can determine things in accordance with our free choice. They can be determined with respect to his (fore)knowledge and yet free with regard to our choice (*see* DETERMINISM). Just as every event in a video replay of a game is determined, yet it was free (*see* FREE WILL) when the game was played, every event in the world can be determined from God's perspective, yet free from ours.

God, Evidence for. The best known arguments for God's existence are the cosmological argument, the teleological argument, the moral argument , and the ontological argument. Respectively, these are the arguments from *creation* (Gk., *cosmos* , "universe, world"), *design* (Gk., *telos* , "end, purpose"), and the idea of a perfect *being* (Gk., *ontos* , "reality, being"). In addition to these the axiological argument, the anthropological argument, and the argument from religious experience are often used. The axiological argument (Gk., *axios,* "value, worth") is the argument from making value judgments. It is closely associated with the moral argument, the argument from a moral law to a Moral Law Giver.

The Cosmological Argument. There is a universe rather than none at all, which must have been caused by something beyond itself. The law of causality (*see* CAUSALITY, PRINCIPLE OF) says that every finite thing is caused by something other than itself.

There are two basic forms of this argument. The first says that the cosmos or universe needed a cause at its *beginning* , the second form argues that it needs a cause to *continue* existing.

A Cause at the Beginning. The argument that the universe had a beginning caused by something beyond the universe can be stated this way:

1. The universe had a beginning.

2. Anything that had a beginning must have been caused by something else.

3. Therefore the universe was caused by something else (a Creator).

Scientific evidence. Both scientific and philosophical evidence can be used to support this argument. According to the second law of thermodynamics, in a closed, isolated system, such as the universe is, the amount of usable energy is decreasing. The universe is running down, hence cannot be eternal. Otherwise, it would have run out of usable energy long ago. Things left to

themselves, without outside intelligent intervention, tend toward disorder. Since the universe has not reached a state of total disorder, this process has not been going on forever.

Another set of evidence comes from the widely accepted big bang cosmology. According to this view, the universe exploded into being some 15–20 billion years ago. Evidence offered for this includes the (1) "red shift" or Doppler effect noticed in the light from stars as they move away; (2) the radiation echo from space, which has the same wavelength that would be given off by a gigantic cosmic explosion; (3) discovery of a mass of energy such as was expected from an explosion.

Agnostic Robert Jastrow, founder-director of NASA's Goddard Institute of Space Studies, said, "A sound explanation may exist for the explosive birth of our Universe; but if it does, science cannot find out what the explanation is. The scientist's pursuit of the past ends in the moment of creation." But if the universe was created, then it is reasonable to conclude there was a Creator. For everything that has a beginning needs a Beginner.

Philosophical evidence. Time cannot go back into the past forever, for it is impossible to pass through an actual infinite number of moments. A theoretically infinite number of dimensionless points exists between my thumb and first finger, but I cannot get an infinite number of sheets of paper between them no matter how thin they are. Each moment that passes uses up real time that we can never again experience. Moving your finger across an infinite number of books in a library would never get to the last book. You can never finish an infinite series of real things.

If this is so, then time must have had a beginning. If the world never had a beginning, then we could not have reached now. But we have reached now, so time must have begun at a particular point and proceeded to today. Therefore the world is a finite event after all and needs a cause for its beginning. The argument can be summarized:

1. An infinite number of moments cannot be traversed.

2. If an infinite number of moments had to elapse before today, then today would never have come.

3. But today has come.

4. Therefore, an infinite number of moments have not elapsed before today (i.e., the universe had a beginning).

5. But whatever has a beginning is caused by something else.

6. Hence, there must be a Cause (Creator) of the universe.

A Cause Right Now. The previous version of the cosmological argument has been called the "horizontal argument," since it argues in a linear fashion back to a beginning. This argument is also known as the *kalam* cosmological argument. It was formulated by the Arab philosophers of the Middle Ages and employed by Bonaventure (1217–1274). The contemporary philosopher,

William Craig, has widely published on it. One problem with the argument is that it only argues that there was once a Creator at the beginning of the universe. It does not show the continuing need for a Creator. This is the point of the vertical form of the cosmological argument. The most famous proponent of this argument was Thomas Aquinas (1225–1274).

Something is keeping us in existence right now so we don't just disappear. Something not only caused the world to come into being (Gen. 1:1), but something causes it to continue to be (cf. Col. 1:17). The world needs both an originating cause and a conserving cause. This argument answers the basic question: "Why is there something (right now) rather than nothing?" Briefly, it can be put this way:

1. Every part of the universe is dependent.

2. If every part is dependent, then the whole universe must also be dependent.

3. Therefore, the whole universe is dependent for existence right now on some Independent Being.

Critics respond that the second premise is the fallacy of composition. Just because every piece of a mosaic is square does not mean the whole mosaic is square. Also, putting two triangles together does not necessarily make another triangle; it may make a square. The whole may (and sometimes does) have a characteristic not possessed by the parts. Defenders answer that sometimes there is a necessary connection between the parts and the whole. If every piece of a floor is oak, then the whole floor is oak. And while putting two triangles together does not necessarily make another triangle, putting two triangles together will necessarily make another geometric figure. Being a geometric figure is part of a triangle's nature, just as being dependent is the nature of everything in the universe. One dependent being cannot sustain another dependent being.

Some critics argue that the whole is greater than the parts, so while the parts are dependent, the whole universe is not. However, this doesn't work in the case of the universe. If the contingent parts, which together compose the whole, vanish then the universe vanishes. Evidently the entire universe is dependent.

The Teleological Argument. There are many forms of the teleological argument, the most famous of which derives from William Paley 's watchmaker analogy. Since every watch has a watchmaker, and since the universe is exceedingly more complex in its operation than a watch, it follows that there must be a Maker of the universe. In brief, the teleological argument reasons from design to an intelligent Designer.

1. All designs imply a designer.

2. There is great design in the universe.

3. Therefore, there must be a Great Designer of the universe.

Any time we have seen a complex design, we know by previous experience that it came from the mind of a designer. Watches imply watchmakers; buildings imply architects; paintings imply artists; and coded messages imply an intelligent sender.

Also, the greater the design, the greater the designer. Beavers make log dams, but they have never constructed anything like the Golden Gate Bridge. A thousand monkeys sitting at typewriters for millions of years would never produce *Hamlet* by accident. Shakespeare did it on the first try. The more complex the design, the greater the intelligence required to produce it.

It is important to note that by "complex design" is meant *specified complexity* . A crystal, for example, has specificity but not complexity. It, like a snowflake, has the same basic patterns repeated over and over. Random polymers, on the other hand, has complexity but no specificity. A living cell, however, has both specificity and complexity. This kind of complexity is never produced by purely natural laws. It is always the result of an intelligent being. It is the same kind of complexity that is found in a human language. Letter sequence in the four-letter genetic alphabet is identical to that in a written language. And the amount of complex information in a simple one-cell animal is greater than that found in Webster's Unabridged Dictionary.

Agnostic astronomer, Carl Sagan , unwittingly provided an even greater example. He notes that the genetic information in the human brain expressed in bits is probably comparable to the total number of connections among neurons—about 100 trillion, 1014 bits. If written out in English, say, that information would fill some 20 million volumes, as many as are stored in the world's largest libraries. The equivalent of 20 million books is inside the heads of every one of us. "The brain is a very big place in a very small space," Sagan said. He went on to note that "the neurochemistry of the brain is astonishingly busy, the circuitry of a machine more wonderful than any devised by humans." But if this is so, then why does the human brain not need an intelligent Creator, as does even the simplest computer?

The Ontological Argument. The ontological argument moves from the conception of a Perfect or Necessary Being to the existence of such a Being. The first philosopher known to have developed the ontological argument (though not the first to call it this) was Anselm (1033–1109). In its simplest form it argues from the *idea* of God to the *existence* of God. There are two forms of the argument: one from the idea of a Perfect Being and the other from the idea of a Necessary Being.

The Perfect Being. According to this statement of the argument the mere concept of God as an absolutely perfect being demands that he exist. Briefly put:

1. God is by definition an absolutely perfect being.

2. But existence is a perfection.

3. Therefore, God must exist.

If God did not exist, then he would be lacking one perfection, namely, existence. But if God lacked any perfection, then he would not be absolutely perfect. But God is *by definition* an absolutely perfect being. Therefore, an absolutely perfect being (God) must exist.

Since the time of Immanuel Kant (1724–1804), it has been widely accepted that this form of the argument is invalid because existence is not a perfection. It is argued that existence adds nothing to the concept of a thing; it merely gives a concrete instance of it. The dollar in my mind can have exactly the same properties as the one in my wallet. There is, however, a second form of the ontological argument that is not subject to this criticism.

The Necessary Being. Anselm argued that the very concept of a Necessary Being demands its existence:

1. If God exists, we must conceive of him as a Necessary Being.

2. But by definition, a Necessary Being cannot not exist.

3. Therefore, if a Necessary Being can, then it must, exist.

Since there is no contradiction in the idea of a Necessary Being, it would seem to follow that one must exist. For the very idea of a Necessary Being demands that it must exist. For if it did not exist, then it would not be a necessary *existence* .

Critics to this argument point out a problem: This is like saying: *If* there are triangles, then they must have three sides. Of course, there may not be any triangles. But the argument never really gets past that initial "if." It never gets around to proving the big question that it claims to answer. It merely *assumes,* but does not prove, the existence of a Necessary Being. It only says that, if a Necessary Being exists—and that is the open question—it must exist necessarily, since that is the only way a Necessary Being can exist, if it exists at all.

The Ontological Argument cannot prove the existence of God, but it can prove certain things about his *nature* . For example, God must necessarily exist, if he exists at all. He cannot cease to exist or exist contingently.

The Argument from Moral Law. The roots of the moral argument for God are found in Romans 2:12–15 , in which humankind is said to stand unexcused since there is "a law written on their hearts." Since the time of Kant this argument has been stated in various ways. The most popular form emanates from C. S. Lewis in *Mere Christianity* . The heart of the argument follows this basic structure:

1. Moral laws imply a Moral Law Giver.

2. There is an objective moral law.

3. Therefore, there is a Moral Law Giver.

The first premise is self-evident. Moral laws are different from natural laws. Moral laws don't *describe what is,* they *prescribe what ought to be* . They can't be known by observing what people do. They are what all persons should do, whether or not they actually do.

The weight of the argument rests on the second premise—there is an objective moral law. That is, there is a moral law that is not just prescribed by us but also *for* us. Humans do prescribe proper behavior for other humans. The question is whether there is evidence that a universal, objective prescription binds all humans. The evidence for such a law is strong. It is implied in our judgments that "The world is getting better (or worse)." How could we know unless there were some standard beyond the world by which we could measure it. Such statements as "Hitler was wrong" have no force if this is merely an opinion or Hitler's moral judgments are right or wrong depending on the cultural norms. If he was objectively wrong, then there must be a moral law beyond all of us by which we are all bound. But if there is such a universal, objective moral law, then there must be a universal Moral Law Giver (God).

The Argument from Religious Need. Many people claim not to need God. Sigmund Freud even considered the desire to believe in God an illusion. Is the desire for God based in reality, or is it based in unfulfillable human wishes? Is the basis for belief in God purely psychological, or is it factual? Whether humans feel a need for him, there is good evidence of God's existence. But the desire for God does exist, not as a psychological wish, but from real existential need. This need, in itself, is an evidence for the existence of God.

In skeleton form, the argument from the alleged need for God to his existence goes:

1. Human beings really need God.

2. What humans really need, probably really exists.

3. Therefore, God really exists.

For this argument to have a chance of standing, the second premise must be distinguished from the claim that what one really needs will be found. One may really need water and die of dehydration. However, that is quite different from arguing that one really needs water, and there is no water anywhere.

It would seem irrational to believe that there are real needs in the universe that are unfulfillable. There are many unfulfillable wants, but to suppose that there are unfulfillable needs is to assume an irrational universe. Likewise, it would seem reasonable to assume that, if human beings really need God, there probably is a God, even if not everyone finds him. As with other unfulfilled needs in life, it may be that some look in the wrong place or in the wrong way (cf. Prov. 14:12).

This leads us to the crux of the argument: Do human beings have a real need for God, or is it only a felt need? If there is a real need, then why do not all experience it? For example, most atheists claim that there is no real need for God.

Even Atheists Need God. Religious literature is filled with testimonies from believers who confess that they really need God. The psalmist wrote, “As the deer pants for streams of water, so my soul pants for you, O God” (Ps. 42:1). Jeremiah 29:13 declares, “You will seek me and find me when you seek me with all your heart.” Jesus taught that “man does not live on bread alone, but on every word that comes from the mouth of God” (Matt. 4:4). Augustine summarized it well when he said the heart is restless until it finds its rest in God.

What is often not appreciated by unbelievers is the fact that the felt need for God is not limited to unthinking and uncritical religious people. Some of the greatest minds, including the founders of most areas of modern science, confessed their need. Not surprisingly this list includes theologians Augustine, Anselm, and Thomas Aquinas. But it also includes Galileo Galilei, Nicolaus Copernicus, William Kelvin, Isaac Newton, Francis Bacon, Blaise Pascal , Rene Descartes, Gottfried Leibniz , John Locke , and Soren Kierkegaard . One can hardly claim that intellectual deficiency led to their perceived need for God.

Dealing with the feelings. But if God is a need for everyone, why does everyone not reflect this need? Surprisingly, there is evidence that they do. Take, for example, the testimony of atheists and agnostics in their more candid moments. Julian Huxley , for example, frankly admitted a type of religious encounter:

> On Easter Sunday, early in the morning, I got up at daybreak, before anyone else was about, let myself out, ran across to a favourite copse, penetrated to where I knew the wild cherry grew, and there, in the spring dew, picked a great armful of the lovely stuff, which I brought back, with a sense of its being an acceptable offering, to the house. Three or four Easters running I remember doing this. I was fond of solitude and of nature, and had a passion for wild flowers: but this was only a general basis. . . . But when sanctity is in the air, as at Easter, then it can have free play. [70]

Friedrich Schleiermacher defined religion as a feeling of absolute dependence on the All (Schleiermacher, 39). And even though Freud did not wish to call this feeling religious, he admits to feeling such a dependence. Paul Tillich defined religion as an ultimate commitment (Tillich, 7–8, 30). In this sense of the word *religion* most humanists have a commitment to humanism. *Humanist Manifesto II* says, “commitment to all humankind is the highest commitment of which we are capable” (Kurtz, 23). This is, to borrow Tillich’s phrase, an “ultimate commitment.” John Dewey defined the religious as any ideal pursued with great conviction because of its general and enduring value. In this sense humanism certainly involves a religious experience.

Erich Fromm was even willing to use the word *God* of the feeling of ultimate commitment to all humankind. And while he wished to disassociate himself from what he called “authoritarian” beliefs, he did admit that his humanist beliefs were religious. He felt that his devotion to humanity as a whole was a religious devotion. The humanistic object of that devotion he called “God” (Fromm, 49, 54, 87). Jewish existentialist Martin Buber said that the word *God* is the most heavily laden in our vocabulary but insisted that, by loving other persons, one has fulfilled personal religious obligations (Buber, *I and Thou,* 55).

Even the atheistic humanists (*see* HUMANISM, SECULAR) who deny having any religious experience often admit that they once did. Jean-Paul Sartre tells of experiences as a child. He wrote, “Nevertheless, I believed. In my nightshirt, kneeling on the bed, with my hands together, I said my prayers every day, but I thought of God less and less often” (Sartre, 102). Bertrand Russell admitted to once believing in God; so did Friedrich Nietzsche .

The secular religion. Whether past or present experience of devotion to God, to the “All” or to humankind, many humanists admit to some sort of experience that would be called “religious.” And although *Humanist Manifesto I* calls for giving up the belief in any form of extraterrestrial being (see Kurtz, 14–16), many atheistic humanists do insist that they have not thereby forsaken religion. In fact, the religious urge is so great, even in humanists, that August Comte set up a humanist cult with himself as the high priest. In the sense in which the word *religious* is currently defined by dictionaries, philosophers, theologians, and humanists themselves, humanism is a religion.

Due to an interesting series of events the United States Supreme Court has come to recognize secular humanism as a religion. Their ruling in *United States v. Kauten* (1943) allowed exemption to the military draft on the basis of conscientious objection, even if the person did not believe in a deity. The Second Circuit Court stated: “[Conscientious objection] may justly be regarded as a response of the individual to an inward mentor, call it conscience or God, that is for many persons at the present time the equivalent of what has always been thought a religious impulse” (Whitehead, 10).

In 1965 the Supreme Court in *United States v. Seeger* ruled that any belief is valid if it is “sincere and meaningful [and it] occupies a place in the life of its possessor parallel to that filled by the orthodox belief in God” (ibid., 14). Having consulted the theologian Tillich, the Court defined religion to be belief “based upon a power or being or upon a faith, to which all else is subordinate or upon which all else is ultimately dependent” (ibid.).

In a very revealing article in *Humanist Magazine* (1964) the finger was placed on several weaknesses in this regard. In the article “What’s Wrong with Humanism?” the indictment is made that the movement is too intellectual and almost “clinically detached from life.” To reach the masses with their message, the writer suggests that an effort be undertaken to develop a humanist Bible, a humanist hymnal, ten commandments for humanists, and even confessional practices (testimonies)! In addition, “the use of hypnotic techniques—music and other psychological devices—during humanist services would give the audience that deep spiritual experience and they would emerge refreshed and inspired with their humanist faith” (cited in Kitwood, 49). Rarely do humanists speak so freely about the psychological inadequacies of their system and the need to borrow Christian practices to rectify them.

Weaknesses in the humanist religion. T. M. Kitwood has summarized the deficiencies when he observed that secular humanism “does not evoke a response from the whole person, intellect, will and emotion.” Further, humanists “lack originality when making positive statements about man’s life, and easily descend to the platitudinous” (Kitwood, 48).

Another weakness of humanism may be that it fails to reckon with human nature. Some humanists have reflected an incredible naivete about life. John Stuart Mill wrote that his father "felt as if all would be gained if the whole population were taught to read" (ibid., 50). Even Russell thought that "if we could learn to love our neighbor the world would quickly become a paradise for us all" (ibid.). Finally, Kitwood charges humanists with being "an aristocratic body, and as such insulated from some of the more terrible realities of life" (ibid., 51). One conclusion emerges clearly: Secular humanism does not measure up to the psychological realities of life. William James pointed out in his classic treatment on religious experience that those who set this world afire are themselves set aflame from another world. They are the saints not the secularists. They believed in a supernatural world, which secular humanism denies (James, 290).

Although secular humanists often confess to having religious, even mystical, experiences, they deny that these involve a personal God. But this is inadequate, first, because their experience is strangely personal for having no personal object. They speak of "loyalty," "devotion" and "love" as basic values. But these are terms that make proper sense only when they have a personal object. Who, for example, can fall in love with the Pythagorean theorem? Or who would be religiously moved by the exhortation: "Prepare to meet thy E = MC2?" As Elton Trueblood insightfully observed, "The joy and wonder which men feel in the search for truth, including the quality of feeling of those scientists who think of themselves as materialists is the *same kind of feeling we know best when there is real communication between two finite minds* " (Trueblood, 115).

Only a personal object can really satisfy personal devotion. Perhaps this is what accounts for the lack of a satisfying religious experience among humanists. Huxley said his religious experience became dimmer over the years. He wrote, "I had been used, ever since the age of fifteen or sixteen, to have such moments come to me naturally. . . . But now . . . they were vouchsafed in diminishing measure, and (although sometimes with great intensity) more fleetingly" (Huxley, 77). Sartre confessed that his religious experiences ceased when he dismissed God from his life. He said, "I had all the more difficulty of getting rid of Him in that he had installed himself at the back of my head. . . . I collared the Holy Ghost in the cellar and threw him out; atheism is a cruel and long-range affair; I think I've carried it through" (Sartre, 252–53). Sartre's confession of the difficulty and even cruelty of the life without God should not be surprising to anyone who truly understands the human person. Satisfaction originates in the personal. Human beings are fulfilled in what Buber called an "I-Thou" experience, not an "I-it" experience. That is, persons are satisfied best by persons (subjects), not by things (objects). Hence, it is not strange that a personal religious experience is not going to be fully satisfied in anything less than a personal object.

Tillich recognized that not every ultimate commitment was to something ultimate. In fact, he believed that to be ultimately committed to what is less than ultimate is idolatry (see Tillich, 57). Buber pointed out that idols can be mental as well as metal (Buber, *Eclipse of God,* 62). Combining these two insights from their own thinkers, we may note, that when humanists make some finite ideal or goal the object of their religious commitment, they are idolaters.

Humanists recognize human life to be mortal. The race may be annihilated or become extinct. Why then do humanists treat humankind as eternal? Why an unswerving commitment to

that which is changing and even perishing, the product of a blind evolutionary process? Is it not the height of humanistic arrogance for humanity to endow itself with divinity (see Geisler, chap. 15)? Such unlimited devotion humanists give to humanity is due only to the Infinite. The only thing worthy of an ultimate commitment is the Ultimate.

The confessed need of the atheist. One of the strongest indications that human beings need God is found in the very men who deny the need for God. The confessed needs of atheistic humanists is eloquent testimony to this point.

Nietzsche bemoaned his intolerable loneliness as compared to other poets who believed in God. He wrote,

> I hold up before myself the images of Dante and Spinoza , who were better at accepting the lot of solitude. . . . and in the end, for all those who somehow still had a 'God' for company. . . . My life now consists in the wish that it might be otherwise . . . and that somebody might make *my* 'truths' appear incredible to me. [Nietzsche, 441]

Sartre admitted his own personal need for religion, saying, "I needed God." He added, "I reached out for religion, I longed for it, it was the remedy. Had it been denied me, I would have invented it myself" (Sartre, 97, 102). The French atheist Albert Camus added, "Nothing can discourage the appetite for divinity in the heart of man" (*The Rebel,* 147). Freud undermined the reality basis for God but admitted that he too felt the Schleiermachean sense of absolute dependence. He admitted that he experienced "a sense of man's insignificance and impotence in the face of the universe" (Freud, 57). Freud further admitted that this sense of absolute dependence is inescapable and cannot be overcome by science.

The same need for the divine is dramatized in Samuel Beckett's *Waiting for Godot,* a play with a title reminiscent of Martin Heidegger's phrase "waiting for God." Franz Kafka's novels express the futility of lonely, persistent attempts to find some meaningful cosmic otherness. Walter Kaufmann reaches the point that he confesses, "Religion is rooted in man's aspiration to transcend himself. . . . Whether he worships idols or strives to perfect himself, man is the God-intoxicated ape" (Kaufmann, 354–55, 399).

Other such nonbelievers as Julian Huxley have likewise taken a positive attitude toward man's apparently incurably religious needs. Huxley spoke of "the possibility of enjoying experiences of transcendent rapture, physical or mystical, aesthetic or religious . . . of attaining inner harmony and peace, which puts a man above the cares and worries of daily life" (cited in Kitwood, 38). What is this but another description of reaching out for a God?

If the need for God is so eradicable, even in humanists, why do so many seem capable of living without God? Some have suggested that the unbeliever is *inconsistent* at this point. The atheistic philosophy (*see* ATHEISM) of John Cage drove him to suicide when he tried to live in a purely random way. Jackson Pollock, on the other hand, chose to be inconsistent and live. His hobby was mushrooms and he wisely decided not to approach the question as to which are poisonous in a random manner, as was his view of the world.

In a frank interview with the *Chicago Sun Times* Will Durant, admits that the common man will fall to pieces morally if he thinks there is no God. But “a man like me,” said Durant, “I survive morally because I retain the moral code that was taught me along with the religion, while I have discarded the religion, which was Roman Catholicism.” Durant continued,

> You and I are living on a shadow . . . because we are operating on the Christian ethical code which was given us, unfused with the Christian faith. . . . But what will happen to our children . . . ? We are not giving them an ethics warmed up with a religious faith. They are living on the shadow of a shadow. [Durant, 1B:8]

It is difficult to live on a shadow and more so to dwell on a shadow’s shadow. But this is precisely where humanists attempt to live without God.

Often ethics or aesthetics becomes a surrogate for God, but even this is satisfying only in so far as it rides piggyback on some belief in God. As Martin Marty noted, atheism “occurs and can occur only where belief is or has been. [This] explains why atheism . . . is itself a proof, by reason of its invariably polemical character” (Marty, 119–20). One who tries to overthrow everything—even the aesthetic and ethical shadows, finds with Camus that “for anyone who is alone, without God and without a master, the weight of days is dreadful” (Camus, *The Fall,* 133).

Sartre found atheism “cruel,” Camus “dreadful,” and Nietzsche “maddening.” Atheists who consistently try to live without God tend to commit suicide or go insane. Those who are inconsistent live on the ethical or aesthetic shadow of Christian truth while they deny the reality that made the shadow. But believers and unbelievers evidence a definite need for God. Viktor Frankl, in *The Unconscious God,* contends that “man has always stood in an intentional relation to transcendence, even if only on an unconscious level.” In this sense, he says, all men seek the “Unconscious God” (cited in Macdonald, 43).

The Argument from Joy. C. S. Lewis developed an argument from joy or the anticipation of heavenly bliss. This argument was stated by Lewis in *Mere Christianity* (12), *The Problem of Pain* (133), and *Surprised by Joy* (16–18).It was defended by Peter Kreeft in *Handbook of Christian Apologetics* and *The Heart’s Deepest Longing* .

The argument from joy goes like this: Creatures are not born with desires unless satisfaction for those desires exists. A baby feels hunger; food can satisfy. A duckling wants to swim; water fills its need. Men and women feel sexual desire; sexual intercourse fulfills that desire. If I find myself with a desire that no experience in this world can satisfy, I probably was made for another world. If no earthly pleasures satisfy the need, it does not mean the universe is a fraud. Probably earthly pleasures were never meant to satisfy it, but only to arouse it (Lewis, *Surprised by Joy* , 120).

The Logic of the Argument from Joy. The logic for the argument from joy goes like this:

1. Every natural innate desire has a real object that can fulfill it.

2. Human beings have a natural, innate desire for immortality .

3. Therefore, there must be an immortal life after death.

In defense of the first premise, it is argued that "If there is hunger, there is food; if thirst, drink; if eros, sex; if curiosity, knowledge; if loneliness, society" (Kreeft, *Handbook* , 250). Nature rushes to fill a vacuum. The second premise is supported by appeal to a mysterious longing that differs from all others in two ways: First, its object is indefinable and unobtainable in this life. Second, the mere presence of this desire in the soul is felt to be more precious and joyful than any other satisfaction. However inadequately we express it, what we long for is paradise, heaven, or eternity (ibid.). Even atheists experience this longing.

If these premises are true, then there is "more" than this life; there is a life to come. The fact that we complain about this world, pain, and death—but never about eternity—reveals a deep-seated desire for it. We may never attain it, but this no more disproves its existence than life-long singleness proves there is no marital bliss or starvation proves there is no such thing as food (ibid.).

Evaluation. This argument is not logically air-tight. Few if any of the arguments are. However, it has a certain existential force to it that cannot be denied. Even great unbelievers have admitted a longing for God. The famous unbeliever, Bertrand Russell, admitted in a letter to Lady Otto: "Even when one feels nearest to other people, something in one seems obstinately to belong to God, and to refuse to enter into any earthly communion—at least that is how I should express it if I thought there was a God. It is odd, isn't it? I care passionately for this world and many things and people in it, and yet . . . what is it all for? There must be something more important, one feels, though I don't believe there is" (*Autobiography* , 125–26).

Of course, it is possible that the universe is irrational, that it is mocking our most basic needs. But there is something in one that refuses to accept that. The desire for joy can be disbelieved, but it is harder to eradicate.

Conclusion. Few theists would rest their case for God on any one argument. Each argument seems to demonstrate a different attribute of God along with his existence. For example, the cosmological argument shows that God is infinitely powerful; the teleological argument reveals that he is intelligent; the moral argument demonstrates that he is moral and, if he exists, the ontological argument shows that he is a Necessary Being.

Some theists offer other arguments for the existence of God, such as the argument from religious need or the argument from religious experience (*see* EXPERIENTIAL APOLOGETICS). Most nontheists claim they do not need God, but their own writings and experiences betray their position. But if there is a real need for God, it is far more reasonable to believe that there is a real God who can really fill this real need.

God, Moral Argument for. ***See*** **MORAL ARGUMENT FOR GOD .**

God, Nature of. Natural theology deals with what can be known about the existence (*see* COSMOLOGICAL ARGUMENT ; KALAM COSMOLOGICAL ARGUMENT) and nature of God by natural reason (*see* REVELATION, GENERAL), apart from any supernatural revelation (*see* REVELATION, SPECIAL). According to classical Christian theists (*see* THEISM), such as Thomas Aquinas (1225–1274), all of the essential metaphysical attributes of God can be known by natural reason. This includes God's aseity, simplicity, immutability, eternality, simplicity, unity, infinity, and morality.

Aseity (Self-Existence). Most classical theists see God's Aseity or Pure Existence as a key attribute. The early Church Fathers, as well as Augustine (354–430), Anselm (1033–1109), and Aquinas , continually cite the Bible in support of this position. In defending God's self-existence (aseity) classical theists such as Aquinas are fond of citing Exodus 3:14 where God identifies himself to Moses as "I Am that I Am." This they understand to refer to God as Pure Being or Existence.

God is Pure Actuality, with no potentiality in his being whatsoever. Whatever has potentiality (potency) needs to be actualized or effected by another. And since God is the ultimate Cause, there is nothing beyond him to actualize any potential (i.e., ability) he may have. Nor can God actualize his own potential to exist, since this would mean he caused his own existence. But a self-caused being is impossible, since it cannot create itself. Something has to exist before it can do anything. Even God cannot lift himself into being by his own ontological bootstraps. Thus, God must be Pure Actuality in his Being.

Of course, God has the potential to create other things. But he cannot bring himself into being. He always was. And while God has the potential to *do* other things, he cannot *be* anything other than what he is. He has the power to *create* other things (active potency), but he does not have the power (passive potency) to *exist* in any other way than he does, namely, as an infinite, eternal, necessary, and simple Being.

God's aseity means that he *is* Being; everything else merely *has* being. God is Pure Actuality; all other things have both actuality and potentiality. Thus, God cannot not exist. All creatures can be nonexistent. That is, they have the potentiality for nonexistence. Only God is a Necessary Being. All other beings are contingent.

Simplicity (Indivisibility). Since God is not composed in his Being, but is Pure Existence, Pure Actuality with no potentiality; it follows that he is simple and indivisible. A Being that by nature is not composed cannot be decomposed. One that has no parts cannot be torn apart. Hence, God has absolute simplicity with no possibility of being divided. He is literally indivisible.

Likewise, a God of Pure Actuality with no potentiality cannot be divided. For if it were divisi ble, then it would have to have the potential to be divided. But Pure Actuality has no potentiality in its Being whatsoever. Hence, it must be absolutely simple or indivisible.

God's indivisibility follows also from his immutability (see below). For if God could be divided, he could change. But God is unchangeable by nature. Thus he cannot be divided. He must be absolutely simple in his nature.

Necessity (Noncontingency). God is by nature an absolutely necessary Being. That is, he cannot not exist. God is not a may-be but a must-be kind of Being. He is not contingent, since he does not have the possibility not to exist. If he has no potentiality not to exist, then he must exist.

This is not to say that the ontological argument is valid. Aquinas considered and rejected Anselm 's proof for God. If God (i.e., Pure Actuality) exists, then he must exist necessarily. But one cannot simply define him into existence. Aquinas offered his famous cosmological arguments for God's existence (*Summa Theologica* , 1.2.3). And once we know, from reason and revelation, that God exists, then we can be sure that he must exist necessarily. Such a Being has no potential not to exist.

Immutability (Unchangeability). In his epic *Summa Theologica* (1a.9.1), Aquinas offers three basic arguments in favor of God's unchangeability. The first argument is passed on the fact that a God of Pure Actuality ("I-Am-ness") has no potentiality. It follows, therefore, that God cannot change (Exod. 3:14). Whatever changes has to have the potential to change. But as pure Actuality, God has no potential, so he cannot change.

The second argument for God's immutability follows from his simplicity. Everything that changes is composed of what changes and what does not change. God cannot change because an absolutely simple being has no composition. If everything about a being changed, then it would be an entirely new being. In fact, it would not be change but annihilation of one thing and a

creation of something entirely new. Now if, in every change in a being something remains the same and something does not, then it must be composed of these two elements. So an absolutely simple Being with no composition cannot change.

The third argument for God's unchangeability argues from his absolute perfection. Whatever changes acquires something new. But God cannot acquire anything new, since he could not be better or more complete. Therefore, God cannot change. If he did, he would not be God for he would have lacked some perfection.

Aquinas also argues that God alone is immutable (*Summa Theologica* , 1a.9.2). All creatures exist only because of the will of the Creator. His power brought them into existence, and it is his power that keeps them in existence. Therefore, if he withdrew his power they would cease to exist. Whatever can cease to exist is not immutable. Therefore, God alone is immutable; everything else could cease to exist.

Impassability (without Passions). A long-recognized attribute of God that has recently come under attack is *impassability* . God is without passions. Passion implies desire for what one does not have. But God, as an absolutely perfect Being, lacks nothing. To lack something he would have to have a potentiality to have it. But God is Pure Actuality with no potentiality whatsoever. Therefore, God is completely and infinitely satisfied in his own perfection.

However, to say that God is impassable in the sense that he has no passions or cravings for fulfillment is not to say that he has no feelings. God feels anger at sin and rejoices in righteousness. But God's feelings are unchanging. He always, unchangingly, feels the same sense of anger at sin. He never ceases to rejoice in goodness and rightness. Thus, God has no changing passions, but he does have unchanging feelings.

Eternity (Nontemporality). God is not temporal (*Summa Theologica* , 1a. 10, 1). He is beyond time. Aquinas offers several arguments in support of this conclusion. The first argument goes:

1. Whatever exists in time can be computed according to its befores and afters.

2. Changeless being, as God is, has no befores or afters; it is always the same.

3. Consequently, God must be timeless.

Time is duration characterized by substantial and accidental changes. A substantial change is a change in what something *is* . Fire changes what a piece of wood is. An accidental change is a change in what something *has* . Growing knowledge is an accidental change in a being. Aquinas sees three levels of being in relation to time and eternity:

1. God in *eternity* is Pure Actuality, without essential or accidental change.

2. Angels and saints who dwell in the spiritual world of heaven live in *aeviternity* (or *aevum*).

3. Human beings, comprising soul and body, form and matter, live in *time* .

Eternity (God) endures without any potency. Aeviternity (angels) endure with completely actualized potency. Their changes are not essential but accidental. Spiritual beings in aeviternity do not change in their essence, though they do undergo accidental changes. Angels increase in knowledge by divine infusion, and they have changeableness with regard to choice, intelligence, affections and places (ibid., 1a.10.6). But with no substantial changes in aeviternity, angels are immutable in their level of grace and charity. What is true of the angels is also true of the elect in heaven.

Time (humanity) endures with progressive actualized potency.

The second argument for God's eternity similarly follows from immutability. It begins with the premise that whatever is immutable does not change in the state of its being. Whatever is in time goes through a succession of states. So whatever is immutable is not temporal. This argument stresses another aspect of time; whatever is temporal has successive states, one after the other. God does not, so he is not temporal.

Total immutability necessarily implies eternity (ibid., 1a.10.2). For whatever changes substantially is in time and can be computed according to before and after. Whatever does not change cannot be in time, since it has no different states by which before and after can be computed. It never changes. Whatever does not change is not temporal. Not only is God eternal, but he alone is eternal (ibid., 1a.10.3), for he alone is essentially immutable.

Aquinas distinguishes eternity from endless time (ibid., 1a.10.4). First, whatever is essentially whole (eternity) is essentially different from what has parts (time). Eternity is now forever; time includes past, present, and future, now and then. The implication of this is that God's eternity is not divided; it is all present to him in his eternal now. So it must be essentially different from time in successive moments.

Second, endless time is just more an elongation of time. But eternity differs qualitatively. It differs essentially, not merely accidentally. Eternity is an essential, changeless state of being that transcends moment-by-successive-moment reality. Time measures that reality, or rather the stage on which reality plays out.

Third, an eternal being cannot change, whereas time involves change. By change can the measurements of before and after be made. Whatever can be computed according to before and after is not eternal. Endless time can be computed according to before and after. Hence, endless time is not the same as eternity. The eternal is changeless, but what can be computed by its before and after has changed. It follows, then, that the eternal now cannot live in relation to endless befores and afters.

Obviously, Aquinas saw a crucial difference between the "now" of time and the "now" of eternity (ibid.). The now of time is movable. The now of eternity is not movable in any way. The eternal now is unchanging, but the now of time is ever changing. There is only an analogy

between time and eternity; they cannot be the same. God's now has no past or future; time's now does.

Some have mistakenly concluded that Aquinas did not believe in God's duration for eternity, because he rejected temporality in God. Aquinas argued that duration occurs as long as actuality exists. But eternity, aeviternity, and time endure in different ways.

It follows, therefore that the essential difference in the quality of the duration in time, aeviternity, and eternity comes from the condition of the actuality. God *is Pure Actuality* . Angels *have received total actuality* from God in their created spiritual forms. Human beings *progressively receive actuality* in both spiritual form and material body.

Since God endures without potentiality, he cannot endure progressively. He endures in a much higher way—as Pure Actuality.

Immensity. Along with eternity is the attribute of immensity (nonspatiality). God is not limited in time, nor is he limited in space. In God's immanence he fills space, but he is not spatial. Only material things exist in space and time, and God is not material. "God is spirit" (John 4:24). As spiritual, God is not material or spatial. It is part of God's transcendence that he is beyond both time and space.

Unity. Classical theists have offered three reasons for God's unity (ibid., 1a.11.3). The first argument is from the simplicity of God. An absolutely simple being cannot be more than one, since to be more than one there must be parts, but simple beings have no parts. Absolutely simple beings are not divisible. God is an absolutely simple being. Therefore, God cannot be more than one being.

God's perfection argues for his unity. If two or more gods existed, they would have to differ. In order to differ, one must have what the other lacks. But an absolutely perfect being cannot lack anything. Therefore, there can only be one absolutely perfect being. God's unity also can be inferred from the unity of the world. The world is composed of diverse things. Diverse things do not come together unless they are ordered. But the world has an ordered unity. Therefore, there must be one Orderer of the world.

Theists argue that essential unity is better explained by one Orderer than by many orderers. For one is the essential cause of oneness, but many is only the accidental cause of oneness. Therefore, it is reasonable to infer that there is only one cause of the world, not many.

Relatability (to the World). One criticism of classical theism is that an eternal, unchanging God could not relate to a changing world. Aquinas anticipated this objection and treated it extensively.

There are three kinds of relations: One where both terms are ideas; one where both terms are real; and one where one term is real and one is an idea (ibid., 1a.13.7).

Now since creatures are dependent on God but God is not dependent on them, they are related as real to an idea. That is, God *knows* about the relationship of dependence but he does not *have* it. When there is a change in the creature there is no change in God. Just as when the man changes his position from one side of the pillar to the other, the pillar does not change; only the man changes in relation to the pillar. So, while the relationship between God and creatures is real, God is in no sense dependent in that relationship.

Aquinas is only denying *dependent* relationships, not all real ones. God never changes as he relates to the world, but real changes do occur in that relation with the world. The man's relation to the pillar really changes when he moves, but the pillar does not change.

The real but unchanging relation of God to the world is made even more clear when Aquinas considers how the eternal God relates to a temporal world (ibid., 1a.13.7, ad 2). God condescends to relate to humans as if he shared time with them. He can create a temporal relation that in no way changes him. Eternity can move in time, though time cannot move in eternity. To have a relationship with the temporal world, God does not have to be temporal. It makes no more sense to say God has to be temporal in order to relate to a temporal world than to say he has to be a creature in order to create.

God is really related to creatures as their Creator. But creatures are really related to God only because he is their Creator. They are dependent on that Creator-creature bond; he is not. Therefore, the relation of God to creatures is real and not merely ideal. However, it is a real relationship of dependence on the part of the creatures but not a relation of dependence on the part of God (ibid., 1a.13.7, ad 5).

God's Knowledge. *God Knows Himself.* If God is absolutely simple, can he know himself? All knowledge involves both a knower and a known. But God has no such duality. Aquinas argues that in self-knowledge the knower and known are identical. Hence, God can only know himself through himself (ibid., 1a.14.2). Since God is simple, he knows himself simply.

God also knows himself perfectly. Something is known perfectly when its potential to be known is completely realized. And there is no unactualized potentiality to know himself. Therefore, God's self-knowledge is completely actualized (ibid., 1a.14.3).

God's knowledge is identical with his essence. For if God's acts of knowledge were really distinct from his essence, then they would be related as actuality to potentiality. But there can be no potentiality in God. Therefore, God's knowledge and essence are really identical (ibid., 1a.14.4). This does not mean that God cannot know things other than himself. For God is the efficient cause of all things.

God Knows and Does. Even though God knows other things than himself, nonetheless, he knows them through himself. For God does not know other things through himself either successively or inferentially but simultaneously and intuitively (ibid., 1a.14.7, ad 2). God's knowledge is more perfect because he does not have to know things discursively through their causes but knows them directly and intuitively (ibid., 1a.14.7 ad 3, 4). God not only knows all things in and through himself, but he also causes all things by his knowledge. God causes all

things by his being, but God's being and his knowledge are identical (ibid., 1a.14.8). This does not mean that creation is eternal because he is eternal. For God causes all things as they are in his knowledge. But that creation should be eternal was not in God's knowledge (ibid., 1a.14.8, ad 2).

An effect pre-exists in the mind of its efficient cause. Hence, whatever exists must pre-exist in God, who is its efficient cause. God knows all of the various kinds of perfection in himself, as well as those which can participate in his likeness. Therefore, God knows whatever exists perfectly, insofar as it pre-exists in him (ibid., 1a.14.5).

God Knows Every Creature Ideally. God knows his own essence perfectly. And knowing his essence perfectly entails knowing it according to every mode by which it can be known, namely, in itself and as participated in by creatures. But every creature has its own proper form, in which it is like God. It follows, therefore, that God knows the form or idea of every creature as it is modeled after him. Perfect knowledge involves the ability to distinguish one thing from another. That is, he knows not only what things have in common (*esse*) but how they differ (*essence*). Therefore, God knows all things in their individual essences. But all things pre-exist in God's knowledge. Therefore, all things pre-exist in God's knowledge, not only with regard to their existence but also with regard to their individual essences.

The basis for what God knows is his own essence, but the extent of what he knows is not limited to that one essence but reaches to all things like it (ibid., 1a.15.2). God's knowledge of all things in himself does not mean that he only knows other things in general but not in particular. For God's knowledge extends as far as does his causality. And God's causality extends to singular things, since he is the cause of every individual thing. Therefore, God knows singular things (ibid., 1a.14.11). God has a perfect knowledge of everything. And to know something only in general but not in particular is improper knowledge. So, God knows everything properly. That is, he does not know the radii of circles merely by knowing the center; he knows the radii as well as the center.

God Knows Evil. For perfect knowledge of things must include knowing all that can occur to them. Evil can occur as a corruption of good things. Hence, God can know evil (*see* EVIL, PROBLEM OF). But things are knowable in the way in which they exist. Evil is a privation in good things. Therefore, God knows evil as a privation in a good (ibid., 1a.14.10).

God Knows Changing Things. Since God is unchanging and his knowledge is identical with his essence, he knows past, present, and future in one eternal now. Therefore, when time changes, God's knowledge does not change, since he knew it in advance. God knows change, but not in the *way* we know it, in successive time frames. From eternity God knows the whole of before and after the temporal now of human history (ibid., 1a.14.15).

God knows the same things we do, but he does not know them the same way we know them. Our knowledge is discursive, moving from premises to conclusions. In human knowledge there is twofold discursiveness: One thing is known *after* another, and one thing is known *through* another. But God cannot know things sequentially, since he is timeless and knows all things eternally at once. Nor can God know things inferentially, for he is simple and knows all things through the oneness of himself. Therefore, God cannot know anything discursively (sequentially,

from topic to topic), inasmuch as discursive knowledge implies a limitation to consider one thing at a time on the part of the knower (ibid., 1a.14.7).

God Knows All Possibilities. By knowing himself perfectly God knows perfectly all the different ways his perfections can be shared by others. For there is within the essence of God all the knowledge of all possible kinds of things his will could actualize. Hence, God knows all the particular things that could ever be actualized (ibid., 1a.14.6).

God's Knowledge Allows Free Will. Pulling these strands of thought about God's knowledge together shows us how God's sovereignty works alongside human free will. God's knowledge is not simply of the actual; he also knows all possible sorts of potential. He knows what is and ever could-be. For God knows whatever is in any way it can be known. Now both the actual and the potential are real. Only the impossible has no reality. Thus, whatever is potential is real. It follows that God can know what is potential as well as what is actual (ibid., 1a.14.9).

This means that God can know future contingents, that is, things that are dependent on free choice. For the future is a potential that pre-exists in God. And God knows whatever exists in himself as the cause of those things (ibid., 1a.14.13). Since God is a timeless being, he knows all of time in one eternal now. But the future is part of time. Therefore, God knows the future, including the free acts to be performed in it. Of course, whatever God knows is known infallibly, since God cannot err in his knowledge. Future contingents are known infallibly. They are contingent with regard to their immediate cause (human free choice) but necessary with regard to God's knowledge. God can do this without eliminating free choice, for an omniscient being can know whatever is not impossible to know. And it is not impossible for a timeless being to know a necessary end caused by a contingent means. God can know a *must-be* through a *may-be* but not a *can't-be* .

Therefore, an omniscient Being knows future actions as necessarily true events. If an action will occur and God knows it, then that event must occur, for an omniscient Mind cannot be wrong about what it knows. Therefore the statement "Everything known by God must necessarily be" is true if it refers to the statement of the truth of God's knowledge, but it is false if it refers to the necessity of the contingent events (ibid., 1a.14.5).

God's Will. *Will* can be defined as a being's rational inclination toward its own good. Whatever has intellect also has will, for will follows upon intellect. Further, every nature inclines to its own proper end or good. When the end is rational then the inclination is a rational inclination. God has rational inclination toward the good of his own nature. Therefore, God has will (ibid., 1a.19.1).

Having will does not mean that God changes. For the object of God's will is his divine Goodness. And whatever is in oneself necessitates no movement outside oneself to attain. Hence, God does not have to move outside himself to attain his own proper end. And will is an inclination toward one's own end. So, there is will in God, inasmuch as he inclines toward his own good. Will also involves love and delight in what is possessed. God loves and delights in the possession of his own nature. Therefore, God has will in the sense of delight but not in the sense of desire (ibid.).

God's Will Causes Things to Be. Simply because God wills things only in himself does not mean that he wills only himself. For it is in accord with the nature of being to communicate its good to others. And God is being par excellence; he is the source of all being. Hence, it is in accord with the nature of God to will other beings than himself (ibid., 1a.19.2). So God wills things other than himself in and through himself. God is not other than himself, but he can will things other than himself in himself. For will implies a relationship. Hence, although God is not other than himself, yet he wills things other than himself (ibid., 1a.19.2, ad 1).

God is not moved by anything outside himself when he wills to create through himself (ibid., 1a.19.2, ad 2). But in willing things other than himself, God is not moved by any insufficiency in himself but by the sufficiency in himself, that is, by his own goodness. Therefore, willing other things through his own sufficiency denotes no insufficiency in God (ibid., 1a.19.2, ad 3). Just as God knows many things through the oneness of his essence, he can will many things through the oneness (good) of his will (ibid., 1a.19.2, ad 4).

God Must Will and Can Will. God wills things in two ways. Some things—his own goodness, for example—he must will. He cannot choose to will otherwise. These things he wills with *absolute* necessity. Other things God wills with *conditional* necessity—the goodness of creatures, for example. Whatever is willed by conditional necessity is not absolutely necessary. Creation is willed by conditional necessity.

Of course, God wills other things *because of* his own goodness but not as *necessitated by* it. For God can exist without willing other things. God need only will his own goodness necessarily and other things contingently. Therefore, these other things need not be willed with absolute necessity. Of course, it is necessary to God's will that he will his own nature necessarily. But God need not will anything other than himself. When God did will things other than himself, he must have willed these things voluntarily (ibid., 1a.19.3, ad 3).

It would seem that God must will things necessarily. As a Necessary Being he must know necessarily whatever he knows. It would seem then that he must will necessarily what he wills.

Aquinas responds that divine knowing is necessarily related to the created thing known, because the knowledge in the Knower is one with his essence. But divine willing is not necessarily related to the created thing willed. Willing relates to things as they exist in themselves, outside of the divine essence. God knows necessarily what he knows but does not will necessarily what he wills. Further, all things exist necessarily in God, but nothing exists necessarily outside him. But God need only will what is necessarily of his own nature. Therefore, God need only will other things as they exist in him but not as they exist in themselves outside of himself (ibid., 1a.19.3).

All Created Effects Pre-exist in God's Will. God's will is the cause of all things, so all created things pre-exist in God's knowledge. Will is the inclination to put into action what one knows. Therefore, all created effects flow from God's will (ibid., 1a.19.4). Of course, God must bestow good on all he chooses to create; God cannot create evil. But it is not necessary that God should will any other being or good than himself. Therefore, God need only bestow good on what he chooses to create (ibid., 1a.19.4, ad 1).

God's Will Is Uncaused. As to whether God's will is caused, Aquinas says that, rather, God's will *is* the cause of all things. What is the cause of all needs no cause. For in God the means and the end pre-exist in the cause as willed together. Human will looks to a desired end and what may be done to reach that goal. God's will causes both the end willed and the means to that end. And since all things pre-exist in the First Cause (God's will), there is no cause for God's will (ibid., 1a.19.5).

God's Will Can Never Fail. The will of God is the universal cause of all things. Therefore, the will of God is always fulfilled. What fails to accomplish God's will in one order does so in another order. For example, what falls from the order of his favor returns to the order of his justice. When particular causes fail, the universal cause does not fail. God cannot fail (ibid., 1a.19.6).

One may speak of an *antecedent* and *consequent* will of God. God wills antecedently that all should be saved (2 Peter 3:9). But God wills consequently that some will be lost, namely, those whom justice demands. But what is willed antecedently is not willed absolutely but conditionally. Only the consequent is willed absolutely in view of all the circumstances. Of course, God wills some things through secondary causes. And first causes are sometimes hindered through defects in secondary causes. The movement of the body is hindered by a bad leg. Likewise, God's antecedent will is sometimes hindered by a defect in a secondary cause. But his consequent will is never frustrated. For first universal causes cannot be hindered by defective secondary causes, any more than goodness, as such, can be hindered by evil. However, God is the universal first cause of being, and his will cannot be hindered in his causing of being (ibid., 1a.19.6, ad 2).

God Does Not Change His Mind. Neither can God's will be changed, for God's will is in perfect accord with his knowledge. He is omniscient, so what he knows will be will be. Therefore, God's will is unchangeable. This does not mean that God does not will that some things change. But God's will does not change, even though he does will that other things change (ibid., 1a.19.7). When the Bible speaks of God "repenting," it means that from where we stand it looks as if he has changed his mind. God knew from eternity how it would fall out. And God's will includes intermediate causes, such as human free will. So God knows what the intermediate causes will choose to do. And God's will is in accord with his unchangeable knowledge. Therefore, God's will never changes, since he wills what he knows will happen. What is willed by conditional necessity does not violate human freedom, since what is willed is conditioned on their freely choosing it. God wills the salvation of human beings conditionally. Therefore, God's will to salvation does not violate human free choice, but uses it.

God, Objections to Proofs for. Most of the traditional objections to arguments for God's existence developed out of issues first posed by David Hume and Immanuel Kant . Some of these are treated more fully under the specific apologetic framework to which they are related, such as the moral argument, the ontological argument, and the teleological argument. This overview lists arguments and objections to the existence of God. These are responses to points raised by Christian apologists. Arguments against the existence of God raised by nontheists themselves are discussed in God, Alleged Disproofs of.

Finite Causes for Finite Beings. The cosmological argument reasons from a finite effect to an infinite Cause (God). This conclusion is challenged by those who insist that all one needs to account for a finite effect is a finite cause. Positing an infinite Cause is metaphysical overkill.

However, *every* finite being or effect is limited, and *every* limited being is only adequately explained if it were caused by some Being that is not limited. The first Cause is the unlimited limiter of every limited thing. If this Cause were limited (i.e., caused), it would need a cause beyond itself by which to ground its limited existence. Inescapably, *every* limited being is caused. But Pure Actuality, or Existence as such, is unlimited. And the Actuality that provides the limits for everything else that is actualized must itself be unlimited in its existence. The first Cause must be uncaused, and an Uncaused Cause must be the unlimited or infinite Cause of everything else.

No Necessary Being. It is urged that such terms as *Necessary Being* and *Uncaused Cause* are meaningless, since nothing in our experience corresponds to them. This is not a valid objection. The very sentence, "A Necessary Being has no meaning," is meaningless unless the words *necessary being* can be defined. The claim is self-defeating.

There is nothing incoherent among such terms if they are not contradictory. We know what *contingent* means, and *necessary* is the opposite, namely, "noncontingent." The meanings of these terms are derived from their relationship to what is dependent upon them. And these meanings are twofold: First, the terms *necessary* and *infinite* are negative. *Necessary* means "not contingent." *Infinite* means "not finite." We know what these limitations mean from experience, and, by contrast, we know that God does not have any of them. A negative term does not denote a negative attribute. It is not the affirmation of nothing; rather, it is the negation of all contingency and limitation in the first Cause. The positive content of what God is derives from the causal principle. He is Actuality because he causes all actuality. He is Being since he is the Cause of all being. However, as Cause of all being his being cannot be caused. As the Ground of all contingent being, he must be a Necessary (noncontingent) Being.

Unprovable Causality. Since all forms of the cosmological argument depend on the principle of causality (*see* CAUSALITY, PRINCIPLE OF), it would fail without the principle. But can that

principle be proved? Normally we think it is obvious, based on experience. But experience may be illusion. Everything not based on experience is simply a tautology, that is, true only by definition and so not proof in itself.

This critique springs from Hume's epistemological atomism—that all empirical impressions are "entirely loose and separate." Hume believed necessary causal connection could not be established empirically from sensible experience. But causality is supported by metaphysical necessity. We need not rely solely on empirical observation. Hume himself never denied that things have a cause for their existence. He said, "I never asserted so absurd a proposition as that anything might arise without a cause" (Hume, 1:187).

It would be ontologically ill-advised to suppose that something could arise from nothing. The principle of causality used by Aquinas is that "every limited being has a cause for its existence." This principle is based in the fundamental reality that nonexistence cannot cause existence; nothing cannot produce something. It takes a producer to produce (*see* CAUSALITY, PRINCIPLE OF).

The need for a cause of existence is rooted in the nature of finite, changing beings as composed of *existence* (actuality or act) and *essence* (potentiality or potency). Existence as such is unlimited; all limited existence is being limited by something distinct from existence itself (this limiting factor will be called "essence"); whatever is being limited is being caused, for to be limited in being is to be caused to be in a certain finite way. A limited existence is a caused existence.

Rather, all limited beings are composed beings, composed of existence and essence. Their essence limits the kind of existence they can have. Likewise, an unlimited Being is an uncomposed Being (i.e., a Simple Being). Such a Being has no limiting essence as such. Its essence is identical to its unlimited existence. The need for causality, then, is derived from an analysis of what finite being is. Upon examination, finite being is seen to be caused being, and caused being must have a cause.

Contradictions from Causality. Many nontheists misunderstand the principle of causality. They assume the principle insists that "every *thing* has a cause." If this were true it would follow that one should never stop seeking a cause, even for God. However, the principle should not be stated: "Every *being* has a cause." Rather, it is "Every *finite* , *contingent being* has a cause." In this way there is no contradiction between a First Cause, which is not contingent, and the principle of causality, which holds that all finite beings need a cause. Once one arrives at an infinite and necessary being, there is no need to seek a further cause. A necessary being explains (grounds) its own existence. It exists because it must exist. It cannot not exist. Only what *can* not exist (namely, a contingent being) needs an explanation. To ask of a necessary being why it exists is like asking why necessity must be necessary, or why circles must be round.

An Infinite Series of Causes. One objection to the cosmological argument is that a First Cause is unneeded because an infinite series of causes is possible. Infinite series are common to mathematics.

The suggestion of an infinite series is only raised in the horizontal (kalam) form of the cosmological argument (*see* KALAM, COSMOLOGICAL ARGUMENT). In the vertical form of Thomas Aquinas, the very first cause outside of a finite, contingent, changing being must be infinite and uncaused (*see* GOD, EVIDENCE FOR). This is so, because *every* finite being needs a cause. Hence, one finite being cannot cause the existence of another. There cannot be even one intermediate link between the Creator and his creatures. The very first cause outside of beings whose existence is being actualized must be the Actualizer of being.

Mathematically infinite series are possible, but not actual ones. The former are abstract; the latter are concrete. It is possible to have an infinite number of points on one line on this page. But one cannot get an infinite number of letters on this line, no matter how small they are (*see* INFINITE SERIES). Points are abstract or theoretical entities; a series of causes of existence is comprised of actual entities. An infinite number of the former are possible, but not of the latter. The reason for this is simple: No matter how many dominos one has in a line, one more could be added. The number cannot be infinite.

Furthermore, an infinite series of simultaneous and existentially dependent causes is not possible. There must be a here-and-now ground for a simultaneous series of causes, none of which would otherwise have a ground for its existence. An ungrounded infinite regress is tantamount to affirming that the existence in the series arises from nonexistence, since no cause in the series has a real ground for its existence. Or, if one cause in the series grounds the existence of the others, then it must be a First Cause, but then the series is not infinite. Otherwise the cause causes its own existence, while it is causing the existence of everything else in the series. That is impossible.

The Invalid Ontological Argument. Kant believed that ontological sleight-of-hand imports a Necessary Being into every cosmological argument. Such a move invalidly argues from experience to necessity. This criticism is not applicable to the metaphysical form of the cosmological argument (*see* COSMOLOGICAL ARGUMENT ; THOMAS AQUINAS).

Since the cosmological argument begins with existence, not thought, it does not have to smuggle existence into the equation. The first premise is, “Something exists.” There is no beginning with “that from which nothing greater can be conceived,” by which Anselm began his ontological argument.

The cosmological argument proceeds with principles grounded in reality, not in thought. They are ontologically grounded principles, rather than rationally inescapable ideas. It is based on metaphysical truth that “Nothing cannot cause something,” rather than the rational assertion that “Everything must have a sufficient reason” (*see* SUFFICIENT REASON, PRINCIPLE OF). The argument concludes with “Pure Actuality is the cause of existence for all limited existence,” rather than with “a Being which logically cannot not be.”

The Concept of Necessity. One objection is that the principle of necessity applies only to logical constructs or ideas, not to real-life existence. In fact *necessary* is misapplied to the “Necessary Being” of the cosmological argument.

This argument fails because the objection is self-defeating. Either the statement "Necessity does not apply to real life" is itself a statement about existence, or else it is not. If it is a statement about existence, it is self-defeating, for it claims to be both necessary and about reality, while it is saying no necessary statements can be made about reality. If it is merely a metastatement, or statement about statements (and not really a statement about reality), then it is uninformative about what kind of statements may or may not be made about reality.

This criticism also begs the question. Critics claim to "know" that necessity does not apply to being because there is no Necessary Being. There is no valid way in advance, while looking at the argument for God's existence, to know if a Necessary Being exists. The concept is not contradictory. It simply means not-contingent, which is a coherent idea. But if there is no *a priori* way to know that a Necessary Being cannot exist, then it is possible that necessity truly *may apply* to being, namely, if a Necessary Being does, in fact, exist.

Metaphysical Contradictions. Kant offered several alleged contradictions or antinomies that he thought result from applying cosmological argumentation to reality. At least three of these antinomies apply to the cosmological argument.

The Antinomy about Time. If we assume that time applies to reality, a contradiction seems to result that the world is *both* temporal and eternal. *Thesis:* The world must have begun in time, or else an infinity of moments have elapsed before it began, and this is impossible (since an infinity of moments can never be completed). *Antithesis:* The world could not have begun in time, for that implies that there was a time before time began, and this is contradictory.

Kant's view of time is incorrect. Time is not a continuum of successive moments that exist without beginning or end. Thus, creation did not begin in time that was already there; creation *was* the beginning of time. The only thing "prior" to time is eternity, and eternity is prior in a causal, not a temporal, way.

Further, this argument overlooks the possibility of an eternal creation, which some theists, such as Aquinas, thought philosophically possible. In any event, Kant's objection, if valid, would charge only the horizontal (*kalam*) form of the cosmological argument (*see* KALAM COSMOLOGICAL ARGUMENT). It does not touch the vertical form of the argument based on a here-and-now cause of existence. This type of cosmological argument is not dependent on a specific view about the origin of creation, but only its present conservation in existence. The finite world demands a cause right now, regardless of whether it began in time or is eternal.

The Antinomy of Causality. Theists are charged with arguing that the world both has a First Cause and does not have a First Cause. *Thesis:* Not every cause has a cause or else a series of causes would not begin to cause as they in fact do. *Antithesis:* A series of causes cannot have a beginning, since everything demands a cause. Hence, the series must go on infinitely.

The antithesis of this alleged dilemma is incorrect in stating that *every* cause needs a cause. According to the principle of causality (*see* CAUSALITY, PRINCIPLE OF), only *finite* , contingent things need causes. Thus the Cause of finite being is not finite. Only finite causes need a cause; the first uncaused Cause needs no cause, because it is not finite.

The Antinomy of Contingency. Kant insists that everything must be both contingent and not be contingent, if we assume that these concepts apply to reality. *Thesis:* Not everything is contingent or else there would be no condition for contingency. The dependent must be depending on something that is not dependent. *Antithesis:* Everything must be contingent, for necessity applies only to concepts, not to things.

This objection fails because there is no way to deny that necessity can apply to reality without making a necessary statement about reality. Only an ontological disproof could establish Kant's point. And ontological disproofs (*see* GOD, ALLEGED DISPROOFS OF) are self-defeating. Further, the cosmological argument has already concluded that something necessarily exists. The validity of this argument is the refutation of Kant's contention that necessity does not apply to existence.

Cosmological God. The objection is made that the cosmological argument does not prove a theistic God. There are many other concepts of God besides theism (*see* WORLDVIEW). This First Cause may not be identified with a theistic God any more than with polytheistic gods, a pantheistic god, a panentheistic god, a deistic god, or even the material universe of *atheism* (*see* ATHEISM ; DEISM ; FINITE GODISM ; PANENTHEISM ; PANTHEISM ; POLYTHEISM).

God Is Not the Gods of Polytheism. There cannot be more than one unlimited existence as such. More than the Most is not possible. Such a Cause is pure Act or Actuality, an Act that is unlimited and unique. Only actuality as conjoined with potency is limited, such as is found in contingent beings. To differ, one being would have to lack some characteristic found in the other. But any being that lacked some characteristic of existence would not be an unlimited, perfect existence. In other words, two infinite beings cannot differ in their potentiality, since they have no potentiality; they are pure actuality. And they cannot differ in their actuality, since actuality as such does not differ from actuality as such. Hence, they must be identical. There can be only one unlimited Cause of all limited existence.

God Is Not the God of Pantheism. Pantheism affirms that an unlimited and necessary Being exists but denies the reality of limited and finite beings. But change is a fundamental fact of finite existence. Pantheism is contrary to our experience of change. If all change, including that in our minds and consciousness, is unreal, then no river moves, no tree grows, and no human ages. If there is any real change, there must really be changing beings distinct from God, for God is an unchanging Being.

God Is Not the God of Panentheism. Panentheism, also known as dipolar theism or process theology, asserts that God has two poles: an *actual pole* (which is identified with the changing temporal world) and a *potential pole* (which is eternal and unchanging). Such a conception of God must be rejected. The conclusion of the cosmological argument demonstrates the need for a God of pure Actuality with no potentiality (pole) at all. Further, God cannot be subject to limitations, composition, or spatiotemporality as an unlimited being. Moreover, the theistic God cannot have poles or aspects, since he is absolutely simple (i.e., uncomposed) with no duality at all (premise 5). A partly limited unlimited existence is a contradiction.

Nor can God be subject to change. For anything that changes must be composed of actuality and potentiality for change. Change is a passing from potentiality to actuality; from what can be to what has actually become. But since exis tence as such has no potentiality, it cannot change. Anything that changes proves thereby that it possessed some potentiality for the change it underwent. A pure and unlimited actuality cannot change.

Finally, the God of panentheism is a confusion of the world process with the God who grounds that process. God is in the process as the unchanging basis for change, but God is not of the process. God is the cause of all finite, changing existence, but he is beyond all finitude and change. God changes relationally (by entering changing relationships with the world), but he does not change essentially. When the person moves from one side of the pillar to the other, there is a real change in relationship, but there is no change in the pillar.

God Is Not the God of Deism. A deistic God is not the here-and-now cause of the universe, as is the theistic God. Since the universe is a dependent being, it needs something Independent on which to depend—at all times. The universe never ceases to be dependent or contingent. Once contingent, always contingent. A contingent being cannot become a Necessary Being, for a Necessary Being cannot come to be or cease to be. So, if the universe ever ceased being contingent, it would become a Necessary Being, which is impossible.

God Is Not the God of Finite Godism. An uncaused cause is not finite. For every finite being needs a cause, that is, it is caused. But this cause is uncaused. Hence, it cannot be finite or limited. Rather, it is the unlimited Limiter of every limited being. In short, everything limited is caused. Thus, this uncaused Being must be unlimited.

God Is Not the God of Atheism. The uncaused Cause cannot be identical with the material universe, as many atheists believe. As ordinarily conceived, the cosmos or material universe is a limited spatiotemporal system. It is, for example, subject to the second law of thermodynamics and is running down. But an Uncaused Cause is unlimited and not running down. Further, since space and time imply limitations to a here-and-now kind of existence and an uncaused Cause is not limited, then it cannot be identical to the space-time world. The theistic God is in the temporal world as its very ground of continuing existence, but he is not of the world in that it is limited and he is not.

If, in response, one claimed that the whole of the material universe is not temporal and limited, as are the parts, this would only demonstrate what theism claims. For his conclusion is that there exists, beyond the contingent world of the limited spatiotemporality, a “whole” reality that is eternal, unlimited, and necessary. In other words, it agrees with theism that there is a God beyond the limited, changing world of experience. It is a substitute for God which admits that there is a “whole” reality that is “more” than the experienced part of reality and that has all the essential metaphysical attributes of the theistic God.

Therefore, the conclusion of the cosmological argument must be the God of theism, namely, the one, indivisible, infinite, necessary, uncaused Cause of everything that exists, both when it came to exist and right now as it continues to exist.

No Here-and-Now Cause. But much of the above reasoning comes to naught if, as some critics argue, there could be a beginning cause without the need for one now. Either such a Cause has long since gone out of existence, or at least it is not necessary to sustain the universe.

A God who caused the universe and subsequently ceased to exist could not be the theistic God demonstrated by the cosmological argument. The theistic God is a Necessary Being, and a Necessary Being cannot cease to be. If it exists, it must, by its very nature, exist necessarily. A Necessary Being cannot exist in a contingent mode any more than a triangle can exist without three sides.

A necessary being must cause a contingent being at all times. For a contingent being must always be contingent as long as it exists, since it cannot become a Necessary Being. But if a contingent being is always contingent, then it always needs a Necessary Being on which it can depend for its existence. Since no contingent being holds itself in existence, it must be held in existence at all times by a Necessary Being.

For a complete discussion of this argument, see the "objections" section of COSMOLOGICAL ARGUMENT . As is explained in that article, existing is a moment-by-moment process. No thing receives all of its being at once, nor even the next instant of it. Existence comes one moment at a time. At each moment of dependent be-ing there must be some independent Being by whom the moment of being is given. God as Pure Actuality is actualizing everything that is actual.

Arbitrary Models. This objection states that it is only because we have modeled reality as contingent or composed of actuality and potentiality that we are, therefore, forced to conclude that there is a Necessary Being or Pure Actuality. This, they insist, is an arbitrary and loaded way to view reality.

Theists point out that the contingency/necessity model is not arbitrary but is logically exhaustive. Either there is only a Necessary Being, or else there is a contingent being(s) as well as a Necessary Being. But there cannot be merely a contingent being(s). For contingent beings do not account for their own existence, since they are but might not be.

Likewise, either everything is one undifferentiated Pure Actuality or pure potentiality or a combination of actuality and potentiality. No other possibility exists. But there cannot be two Pure Actualities, since actuality as such is unlimited and unique. There cannot be two ultimates or two infinite beings. So whatever else exists must be a com bination of actuality and potentiality. But since no potentiality can actualize itself, then beings composed of actuality and potentiality must be actualized by Pure Actuality.

Modal Fallacies. Modal logic is based on the distinction between the possible and the necessary. This form of reasoning has developed its own list of fallacies. Some modal logicians would argue that it is possible for all the parts of my car to break down at one time, but this does not mean that all the parts necessarily will break down at one time. Thus, though all contingent beings possibly do not exist, they do not necessarily not exist at one time and thus would need no universal cause of existence.

As far as modal logic is concerned, this objection is correct and would cast doubt on some forms of the argument from contingency. However, this objection does not apply to Aquinas's argument, since it is not concerned with showing that all things that could *not exist* needed a single cause to produce their existence, but that all things that *do exist* (though possibly could not exist) need a cause for their present existence, both individually and in toto.

A second possible charge of committing a modal fallacy is that it is illegitimate to infer from the fact that the world necessarily needs a being as First Cause that the world needs *a Necessary Being* as First Cause. Again, as it is stated, that charge would be correct, but the cosmological argument of Aquinas does not make that inference. God is not considered a Necessary Being because the argument necessarily demonstrates his being. He is called Necessary Being because ontologically he cannot not be. We learn of his Necessary Being, not from the rigor of our premises, but because the cause of all contingent being cannot be a contingent being, but must be a Necessary Being.

The mistake of many theists, especially since Gottfried Leibniz (1646–1716), is to cast the cosmological argument in a context of *logical necessity* based on the principle of *sufficient reason* . This ultimately leads to contradictions and an invalidated argument. In contrast, other theists (including Aquinas) used the principle of existential causality to infer the existence of unlimited Cause or Actualizer of all existence. This conclusion is not rationally inescapable, but it is actually undeniable. If any contingent being exists, then a Necessary Being exists; if any being with the potentiality not to exist does exist, then a Being with no potentiality not to exist must exist.

Imperfect World, Imperfect Cause. It is also objected that, if there is a cause of the universe, it need not be perfect, since the world is imperfect. If a cause resembles its effects, then it would seem that the world must be caused by an imperfect, finite, male and female group of gods. For this is what we know as the causes of like imperfect things in our experience.

The ultimate cause, however, cannot be imperfect, since the not perfect can only be known if there is ultimately a Perfect by which it is known not to be perfect. Nor must the cause be identical to its effect. The cause cannot be less than the effect, but it can be more. The cause of finite being cannot be imperfect, since it is Being itself or Pure Actuality. Only Pure Actuality can actualize a potency (potentiality). No potency can actualize itself. Hence, the Cause of being must be perfect in its Being, since it has no potency, limitations, or privation that can constitute an imperfection.

The Explanation of Chance. Why posit an intelligent cause (designer) of the world when chance can explain the apparent design? Given enough time, any "lucky" combination will result. The universe may be a "happy accident" (*see* CHANCE).

For one thing, there has not been enough time for chance to work. One former atheist, Fred Hoyle, calculated that, given the geological time span of billions of years, the chances are still only one to 1030,000 that so complex a form as even a one-celled animal would emerge by purely natural forces (Hoyle). The chances are virtually zero that chance was responsible.

Second, chance does not “cause” anything; only forces do. And it is known that natural forces do not produce specified complexity, such as that found in living things. Chance is only an abstraction that describes the intersection of two or more lines of causes.

Finally, it is unscientific and irrational to appeal to chance. As even the skeptic David Hume noted, science is based on observation about regularly recurring events. And the only kind of cause known to rational beings that can cause the specified complexity found in living things is an intelligent cause (*see* EVOLUTION, CHEMICAL).

A Possible Nonexistence. According to this objection, it is always possible to conceive of anything, including God, as not existing. Hence, nothing exists necessarily. Since God is said to be a Necessary Being, then even he must not exist necessarily; therefore God must not exist at all.

This is a valid objection to the ontological argument, but not against the cosmological and teleological arguments. It is possible that nothing would ever have existed, including God. So a total state of nothingness is not an impossible state of affairs. However, something does undeniably exist, and so this objection is irrelevant. For as long as something finite does exist there must be a Cause for its existence.

Only a Logical Existence. Some antitheists argue that it is logically necessary for a triangle to have three sides, but it is not necessary for any three-sided thing to exist. Even if it were logically necessary for God to exist, that does not mean he actually does exist.

At best, this is an objection only to the ontological argument. Theists need not, and most theists do not, conceive of God as a *logically* necessary being but as an *actually* necessary being.

It is logically possible that no triangle exists, but if it does exist, it actually necessarily has three sides. It is logically possible that there is no Necessary Being. But if a Necessary Being exists, then it is actually necessary for it to exist. For a Necessary Being must exist necessarily.

Inferring Cause from Experience. There is an unsurpassable gulf between the thing-to-me *(phenomena)* and the thing-in-itself (*noumena* or real), Kant said. We cannot know the noumena; we know things only as they appear to us, not as they really are. Therefore, we cannot validly infer a real cause from effects we experience.

This objection begs the question and is self-defeating. It begs the question by supposing that our senses do not provide us information about the real world. It wrongly assumes that we sense only sensation rather than sense reality. It mistakenly believes that we know only our ideas, rather than knowing reality through our ideas. Second, in claiming that one cannot know reality, one is making a statement about reality. The agnostic claims to know enough about reality to be sure that nothing can be known about reality. This is a self-defeating claim.

How can Kant know that reality causes our experiences unless there is a valid causal connection between the real (noumenal) world of the cause and the apparent (phenomenal) world of the experience? What is more, one could not even know his own ideas were the result of his

mind unless there were real connections between cause (mind) and effect (ideas). Nor would he write books, as agnostics do, assuming that readers would look at the phenomenal effects (words) and be able to know something about the noumenal (real) cause (mind).

The Cause of God. Bertrand Russell (1872–1970) argued that if everything needs a cause, then so does God. And if all things do not need a cause, then neither does the world. But in neither case do we need a First Cause.

The major premise is false. Theists do not claim that *everything* needs a cause. The principle of causality states only that everything that *begins* (or is finite) needs a cause. If something does not have a beginning, then it obviously does not need a Beginner. Nontheists such as Russell acknowledge that the universe does not need a cause—it is just "there." If the universe can just "be there" without a cause, why can't God?

Arbitrary or Not Ultimate. Russell believed that the moral law is either beyond God or else it results from his will. But if it is beyond God, then God is not ultimate, since he is subject to it (and hence, is not the Ultimate good). And if God decided what would be moral, then he is arbitrary and not essentially good, in which case he would not be worthy of our worship. So, in either case no God worthy of the name exists.

Theists respond in two ways. Voluntarists take the dilemma by the horn and agree that the moral law flows from God's will but deny that this is arbitrary. God is the source of all good. What he wills to be right, is right. And what he wills to be regarded as wrong, is wrong. God's will is the ultimate court of appeal.

Essentialists go through the horns of a dilemma, pointing out that there is a third alternative: God's will is subject to what is essentially good, but this Good is his own unchangeable nature. That is, something is not good simply because God wills it (voluntarism). Rather, God wills it because it is good. It is good because it is in accord with his unchangeably good nature. In this way God is neither arbitrary nor less than ultimate.

All-Powerful Existence. Theists claim God is all powerful. But many nontheists insist this is impossible. The logic of their argument is:

1. If God were all powerful, then he could do anything.

2. And if he could do anything, then God could make a rock so big that he can't move it.

3. But if God could not move this rock, then he could not do everything.

4. Hence, an all-powerful God that can do anything cannot exist.

Put in this form, the theist rejects the first premise as an improper definition of omnipotence. God cannot literally do anything. He can only do what is possible to do consistent with his being as God. He cannot do what is logically or actually impossible. God cannot do some things. He cannot cease being God. He cannot contradict his own nature (cf. Heb. 6:18). He cannot do what

is logically impossible, for example make a square circle. Likewise, God cannot make a rock so heavy that he cannot lift for the simple reason that anything he can make is finite. Anything that is finite he can move by his infinite power. If he can make it, he can move it.

Both Good and Evil, Being and Nonbeing. Nontheists say that, if God is infinite, then he is everything, including opposites. He is both good and evil. He is both perfect and imperfect. He is also both Being and nonbeing. But these are opposites, and God cannot be opposites. Further, the theist cannot admit that God is evil or nonexistent. Therefore, no theistic God exists.

The theist rejects the premise that God is everything; he is only what he is—an absolutely perfect Being. And God is not what he is not—an imperfect being. He is the Creator and not a crea ture. God is pure and necessary existence. So, he cannot be nonexistent. God cannot be opposite of what he is, any more than a triangle can be a square or a circle can be a rectangle.

When we say that God is unlimited or infinite, we do not mean that he is everything. It does not mean, for example, that God is limited and finite. The unlimited cannot be limited. The uncreated Creator cannot be a created creature. The standard for all good cannot be evil.

A Projection of Imagination. Ludwig Feuerbach (1804–1872) argued that humans made God in their image. God is only a projection of what we think of ourselves. Ideas of God come from our ideas of human beings. Hence, God is only a projection of these ideas. He does not exist beyond them.

This kind of argument makes a serious error: Who can know that God is "nothing but" a projection without "more than" knowledge? The essence of his argument can be stated this way:

1. God exists in human consciousness.

2. But humans cannot go beyond their own consciousness.

3. Therefore, God does not exist beyond our consciousness.

The problem with this argument is the second premise. Simply because we cannot go beyond our consciousness does not mean nothing exists beyond our consciousness. I cannot go beyond my mind, but I know there are other minds beyond mine with whom I converse. If we cannot go beyond our consciousness, then Feuerbach could not make the statement that no God is there. How does he know there is no God out there, unless his knowledge can go beyond his consciousness? To make "nothing-but" statements (such as, "God is nothing but a projection of our imagination") implies "more-than" knowledge.

Simply because we do not go beyond our own consciousness does not mean that our consciousness is not aware of things that are beyond us. We cannot *get* outside of ourselves, but we can *reach* outside of ourselves. This is precisely what knowledge does. Consciousness is not simply consciousness of itself. We are also conscious of others. When we read a book we are not simply conscious of our own ideas; we are conscious of another mind who wrote the words from

which we got those ideas. Consciousness does reach beyond itself. That is what the senses and mind enable us to do.

An Illusion. Sigmund Freud insisted that God is an illusion—something we wish to be true but have no basis for believing, beyond our wish. This argument is developed in the article, Freud, Sigmund. His apparent reasoning:

1. An illusion is something based only in wish but not in reality.

2. The belief in God has the characteristics of an illusion.

3. Therefore, belief in God is a wish not based in reality.

Of course, in this form the theist challenges the minor premise. Not all who believe in God do so simply because they wish for a Cosmic Comforter. Some find God because they thirst for reality; others because they are interested in truth, rather than feeling good. God is not only a comforting Father; he is also a Judge who punishes. Christians believe in hell, and yet no one really wishes this to be true. Freud, in fact, may have it backwards: perhaps our image of earthly fathers is patterned after God, rather than the reverse. Certainly the desire for God is not the only basis for believing that God exists (*see* GOD, EVIDENCE FOR). Freud's argument would, at best, apply only to those who had no other basis than their own wish that God exists.

What is more, the reality of God's existence is independent of the reasons people do or do not wish him to exist. Either God does not exist or he does. Desires cannot draw the truth an inch either way. Freud's disbelief might itself be an illusion, based on his own desire not to follow God and obey God (cf. Ps. 14:1 ; Rom. 1:18–32).

Chance and Origins. If chance can explain the origin of the universe (*see* EVOLUTION), there is no need for a cause. This objection to proofs for God's existence is subject to several criticisms.

An effect cannot be greater than its cause. The Cause of intelligent beings must be intelligent. It cannot give perfections it does not have to give (*see* FIRST PRINCIPLES ; TELEOLOGICAL ARGUMENT).

It is unscientific to speak of chance causing the incredibly complex and intelligent patterns found in the structure of life (*see* TELEOLOGICAL ARGUMENT) and the universe (*see* BIG BANG). Only intelligent intervention adequately explains the organization of DNA in the simplest organism.

Chance is only a statistical *description* of the likelihood of events. Only forces or powers can cause events. Chance merely describes the likelihood of a force (or forces) producing a given event.

Chance cannot be a cause in terms of the cosmological argument. Chance is not a power, and a nonpower cannot cause anything.

Even the critic who proposes chance explanation of the entire universe would not agree that the very words used to express his ideas were a product of chance.

The Possibility of Nothing. Some critics object to the cosmological argument on the ground that it is logically possible that nothing ever existed, including God. If it is logically possible that God never existed, then it is not logically necessary that he does exist.

The theist can readily admit that it is possible for a Necessary Being not to exist so long as nothing else ever existed either. However, *if* there is a Necessary Being then it is not possible that he does not exist. A *logically* Necessary Being need not necessarily actually exist. But an *actually* Necessary Being must necessarily actually exist. The atheists' objection to the concept of a necessary being applies only to a logically necessary being, not to an actually necessary being.

While it is *logically* possible that nothing ever existed, including God, it is not *actually* possible. Something does exist. As long as it is not actually possible for a total state of nothingness, then something must necessarily and eternally exist (e.g., God), since nothing cannot produce something. And if there were ever a total state of nothingness, then there would always be a total state of nothingness. For nothingness cannot produce anything.

A Necessary (Uncaused) Being. But perhaps the whole idea of an uncaused Being is meaningless. It is a coherent concept in the sense of being noncontradictory. A contingent being is one that *can* not exist. A necessary being is one which *cannot* not exist. Since the latter is logically (and actually) opposite of the other, then to reject the coherence of a necessary being would involve rejecting the coherence of a contingent being. But those are the only two kinds of being there can be. Hence, to reject the meaningfulness of the concept of a necessary being would be to reject the meaningfulness of all being. But to say "all being is meaningless" is to make a statement about being which purports to be meaningful. This is self-defeating.

Another way to show the meaningfulness of the concept of an uncaused Being is to point to the atheist's concept of an uncaused universe. Most atheists believe it is meaningful to speak of a universe which had no cause. But if the concept of an uncaused universe is meaningful, so is the concept of an uncaused God.

An Uncaused Universe. Meaningful though an uncaused universe may be, pulling one together in practical terms is something else. The universe is a collection of parts, each contingent and so needing a cause. Either the whole universe is *equal* to all its parts or else it is *more* than all its parts. If it is equal to them, then it too needs a cause. The sum of many dependent parts will never equal more than a dependent whole, no matter how big it is. Adding up *effects* never yields a cause; it produces only a big pile of effects. Only if the universe is *more* than all its effects can it be uncaused and necessary. But to claim that there is a something more, uncaused and necessary on which everything in the universe is dependent is to claim exactly what the theist means by a Necessary Being on which all contingent beings depend for their existence.

The whole issue can be clarified by asking the nontheist this question: If everything in the universe (i.e., every contingent being) suddenly ceased to exist, would there be anything left in existence? If not, then the universe as a whole is contingent too, since the existence of the whole is dependent on the parts. But if something remained after every contingent part of the universe suddenly ceased to exist, then there really is a transcendent necessary uncaused Something which is not dependent on the universe for its existence. But in either case, the atheists' claim fails.

Unconvincing Arguments. Some object that theistic arguments persuade only those who already believe, and who do not need them. Therefore, they are useless. But, whether anyone is convinced by an argument depends on several factors. For one thing, even if the argument is sound, persuasiveness will depend in part on whether the argument is understood.

Once the mind understands the argument, giving assent to it is a matter of the will. No one is ever forced to believe in God simply because the mind understands that there is a God. Personal factors may lead a person to remain uncommitted to belief. Theistic arguments do not automatically convert unbelievers. But persons of good will who understand the argument ought to accept it as true. If they do not, it does not prove that the argument is wrong; rather, it shows their reluctance to accept it.

Conclusion. Many objections have been proposed against the proofs for the existence of God. They are usually based on a misunderstanding of the proofs. None succeed in falsifying the arguments. If they did they would be a proof that you cannot have a proof. That is a self-defeating argument in itself.

Gospel of Thomas, The. *The Claim of the Critics.* Some radical critics of the New Testament claim that the Gnostic (*see* GNOSTICISM) Gospel of Thomas is equal or superior to the New Testament and that it does not support the resurrection of Christ. The so-called Jesus Seminar places the Gospel of Thomas in their otherwise severely truncated Bible. Both stances are serious challenges to the historic Christian faith.

The Gospel of Thomas was discovered in Nag Hammadi, Egypt, near Cairo in 1945 and was translated into English in 1977. While some have attempted to date parts of it earlier, the Gospel of Thomas is most reliably dated no earlier than A.D . 140–170. It contains 114 secret sayings of Jesus. Defenders of the Gospel of Thomas include Walter Baur, Frederick Wisse, A. Powell Davies, and Elaine Pagels.

An Evaluation of the Credibility of the Gospel of Thomas. The best way to evaluate the credibility of the Gospel of Thomas is by way of comparison to the New Testament Gospels, which often the same critics have grave doubts about (*see* NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT MANUSCRIPTS). When this comparison is made, the Gospel of Thomas comes up seriously short.

The Canonical Gospels Are Much Earlier. Assuming the widely accepted dates of the Synoptic Gospels (ca. A.D . 60–80), the Gospel of Thomas falls nearly a century short. Indeed, there is evidence of even earlier dates for some Gospels (*see* NEW TESTAMENT, DATING OF), as even some liberal scholars admit (see Robinson, John A., all). O. C. Edwards asserts of the Gospel of Thomas and the canonical Gospels that “As historical reconstructions there is no way the two can claim equal credentials” (27). And Joseph Fitzmyer adds, “Time and again, she is blind to the fact that she is ignoring a good century of Christian existence in which these ‘gnostic Christians’ were simply not around” (123).

The Gospel of Thomas Is Dependent on the Canonical Gospels. Even if the Gospel of Thomas could be shown to contain some authentic statements of Jesus, “no convincing case has been made that any given saying of Jesus in the Gospels *depends on* a saying in the Gospel of Thomas” (Boyd, 118). Rather, the reverse is true since the Gospel of Thomas presupposes truths found earlier in the canonical Gospels.

The Gospel of Thomas Portrays a Second-Century Gnosticism. The Gospel of Thomas is influenced by the kind of Gnosticism prevalent in the second century. For instance, it puts into

the mouth of Jesus these unlikely and demeaning words: "Every woman who will make herself male will enter the Kingdom of Heaven" (cited by Boyd, 118).

The Gospel of Thomas's Lack of Narrative Does Not Prove Jesus Did No Miracles. The fact that the author(s) of the Gospel of Thomas did not include narratives of Jesus does not mean they disbelieved in Jesus' miracles. The book seems to be a collection of Jesus' sayings rather than his deeds.

The Canonical Gospels Are More Historically Trustworthy. There are numerous reasons why the New Testament Gospels are more trustworthy than the Gnostic ones. First, the earliest Christians were meticulous in preserving Jesus' words and deeds. Second, the Gospel writers were close to the eyewitnesses and pursued the facts (Luke 1:1–4). Third, there is good evidence that the Gospel writers were honest reporters (*see* NEW TESTAMENT, HISTORICITY OF ; WITNESSES, HUME'S CRITERIA FOR). Fourth, the overall picture of Jesus presented in the Gospels is the same.

The Basic New Testament Canon Was Formed in the First Century. Contrary to claims of the critics, the basic New Testament canon was formed in the first century. The only books in dispute have no apologetic effect on the argument for the reliability of the historical material used to establish the deity of Christ.

The New Testament itself reveals that a collection of books existed in the first century. Peter speaks of having Paul's epistles (2 Peter 3:15–16). In fact, he considered them on a par with Old Testament "Scripture." Paul had access to Luke's Gospel, and quotes it in 1 Timothy 5:18 . The churches were instructed to send their epistle on to other churches (Col. 4:16).

Beyond the New Testament, there are extrabiblical canonical lists that support the existence of a New Testament canon (see Geisler and Nix, 294). Indeed, all the Gospels and Paul's basic epistles are represented on these lists. Even the heretical canon of the Gnostic *Marcion (ca. A.D . 140) had the Gospel of Luke and ten of Paul's epistles, including 1 Corinthians.

The Second-Century Fathers Support the Canonical Gospels. The second-century Fathers cited a common body of books. This includes all the crucial books that support the historicity of Christ and his resurrection, namely, the Gospels, Acts, and 1 Corinthians. Clement of Roman (A.D . 95) cited the Gospels (*Corinthians* , 13, 42, 46). Ignatius (ca. 110–115) cited Luke 24:39 (*Smyrnaeans* 3). Polycarp (ca. 115) cited all the Synoptic Gospels (Philippians 2 , 7). The *Didache* often cites the Synoptic Gospels (1, 3, 8, 9, 15–16). The Epistle of Barnabas (ca. 135) cites Matthew 22:14). Papias (ca. 125–140) in the *Oracles* speaks of Matthew, Mark (following Peter), and John (last) who wrote Gospels. He says three times that Mark made no errors. What is more, the Fathers considered the Gospels and Paul's epistles to be on a par with the inspired Old Testament.

Thus the Fathers vouched for the accuracy of the canonical Gospels in the early second cen tury, well before the Gospel of Thomas was even written.

The Resurrection Account. The Gospel of Thomas does acknowledge Jesus' resurrection. In fact, the living, resurrected Christ himself speaks in it (34:25–27; 45:1–16). True, it does not stress the resurrection, but this is to be expected since it is primarily a "sayings" source rather than historical narration. Furthermore, the Gnostic theological bias against matter would downplay the bodily resurrection.

Conclusion. The evidence for the authenticity of the Gospel of Thomas does not even compare with that for the New Testament. The New Testament dates from the first century; the Gospel of Thomas, the second. The New Testament is verified by many lines of evidence, including self-references, early canonical lists, thousands of citations by the early Fathers, and the well-established dates for the Synoptic Gospels.

Greenleaf, Simon. Simon Greenleaf (1783–1853) was one of the great minds in American legal history. He not only taught law at Harvard University and produced the standard three-volume study of legal evidence (*A Treatise on the Law of Evidences,* 1842–53) used to teach lawyers the rules of legal evidence and the means by which the authenticity of documents and witnesses can be tested.

When challenged to apply these rules to the New Testament documents, Greenleaf produced a volume *(The Testimony of the Evangelists)* which defends the authenticity of the New Testament. It defends an important link in the overall apologetic argument for Christianity—the trustworthiness of the New Testament witnesses.

An Authentic New Testament. Greenleaf's conclusions include strong points of evidence. The following quotations are from throughout his work:

"Every document, apparently ancient, coming from the proper repository or custody, and bearing on its face no evident marks of forgery, the law presumes to be genuine, and devolves on the opposing party the burden of proving it to be otherwise," Greenleaf wrote. According to this "Ancient Document Rule" the New Testament would qualify as authentic, since it bears no marks of forgery and has been in the proper custody of the church down through the centuries, as shown by manuscript evidence (*see* NEW TESTAMENT MANUSCRIPTS).

"In matters of public and general interest, all persons must be presumed to be conversant, on the principle that individuals are presumed to be conversant with their own affairs." Applied to the New Testament witnesses, this would mean that the books coming from them must be presumed authentic, since they were speaking of their own affairs, with which they were conversant.

"In trials of fact, by oral testimony, the proper inquiry is not whether it is possible that the testimony may be false, but whether there is sufficient probability that it is true." Since there is probable evidence that the New Testament witnesses told the truth (*see* NEW TESTAMENT, HISTORICITY OF), the possibility that they could have been lying does not outweigh the truth of their witness.

"A proposition of fact is proved, when its truth is established by competent and satisfactory evidence." There is competent and satisfactory evidence for the facticity of the New Testament record (*see* ARCHAEOLOGY, NEW TESTAMENT).

"In the absence of circumstances which generate suspicion, every witness is to be presumed credible, until the contrary is shown; the burden of impeaching his credibility lying on the objector." The New Testament, like other books, must be presumed innocent. This is just the opposite of the "presumed guilty until proven innocent" principle used by negative critics (*see* BIBLE CRITICISM).

"The credit due to the testimony of witnesses depends upon, firstly, their honesty; secondly, their ability; thirdly, their number and the consistency of their testimony; fourthly, the conformity of their testimony with experience; and fifthly, the coincidence of their testimony with collateral circumstances." In accordance with these principles the New Testament is an authentic record (*see* also RESURRECTION, EVIDENCE FOR ; WITNESSES, HUME'S CRITERIA FOR).

Moral Certainty. Of the nature of moral certainty, Greenleaf wrote (24):

> But the proof of matters of fact rests upon moral evidence alone; by which is meant not merely that species of evidence which we do not obtain either from our own senses, from intuition, or from demonstration. In the ordinary affairs of life we do not require nor expect demonstrative evidence, because it is inconsistent with the nature of matters of fact, and to insist on its production would be unreasonable and absurd.

On the whole, Greenleaf found himself persuaded of a high level of probability that the accounts are true:

> Thus the force of circumstantial evidence is found to depend on the number of particulars involved in the narrative; the difficulty of fabricating them all, if false, and the great facility of detection; the nature of the circumstances to be compared, and from which the dates and other facts are to be collected; the intricacy of the comparison; the number of the intermediate steps in the process of deduction; and the circuitry of the investigation.
>
> The narratives of the sacred dwellers, both Jewish and Christian, abound in examples of this kind of evidence, the value of which is hardly capable of being properly estimated. It does not, as has been already remarked, amount to mathematical demonstration; nor is this degree of proof justly demandable in any moral conduct. In all human transactions, the highest degree of assurance to which we can arrive, short of the evidence of our own senses, is that of probability. The most that can be asserted is, that the narrative is more likely to be true than false; and it may be in the highest degree more likely, but still be short of absolute mathematical certainty. [45]

Conclusion. Greenleaf's conclusion speaks for itself:

> The narratives of the evangelists are now submitted to the reader's perusal and examination, upon the principles and by the rules already stated. . . . His business is that of a lawyer, examining the testimony of witnesses by the rules of his profession, in order to ascertain whether, if they had thus testified on oath, in a court of justice, they would be entitled to credit; and whether their narratives, as we now have them, would be received as ancient documents, coming from the proper custody. If so, then it is believed that every honest and impartial man will act consistently with that result, by receiving their testimony in all the extent of its import.

Hadith, Alleged Miracles in. *See* MUHAMMAD, ALLEGED MIRACLES OF .

Healings, Psychosomatic. Healings occur in various religions. So they have no apologetic value. Furthermore, many events claimed to be supernatural are only psychosomatic. Whether something actually happens in the body, these fall into the category of false miracles (*see* MIRACLES, FALSE) and must be differentiated from true ones (*see* MIRACLES, DEFINITION OF). So it is in the interest of the apologetic enterprise to differentiate supernatural and psychological healings.

It has been demonstrated that the mind has an incredible influence on the body. Psychosomatic or "mind-body" sicknesses and cures do occur. Psychosomatic illnesses are not imaginary. Illnesses with no basis in the body are called conversion disorders or other forms of neurosis. An ulcer is a psychosomatic illness if it was caused at least in part by nervousness that disrupted the digestive process and induced overproduction of acids or other enzymes. Since they have an emotional basis, such sicknesses are prone to healing by the mind. This is used by some to argue that healings are always psycho-emotional phenomena.

Mind over Matter. People have become sick and even hospitalized simply because a group of friends (doing an experiment) have suggested to them they were ill. They have been "cured" the same way—when the friends later suggested that they looked better. This is an example of emotion-caused illness and "healing" that is only peripherally related to the body.

Physician and Christian apologist Paul Brand gives examples of the mind's power to heal the body. The mind can effectively control pain by stimulating production of endorphins, simple mental discipline, flooding the nervous system with other stimuli. Acupuncture is an example of adding sensations to disrupt pain.

In the placebo effect, faith in simple sugar pills stimulates the mind to control pain and even heal some disorders. In some experiments among those with terminal cancer, morphine was an effective painkiller in two-thirds of patients, but placebos were equally effective in half of those. The placebo tricks the mind into believing relief has come, and the body responds accordingly.

Through biofeedback, people can train themselves to direct bodily processes that previously were thought involuntary. They can control blood pressure, heart rate, brain waves, and body temperature.

Under hypnosis, 20 percent of patients can be induced to lose consciousness of pain so completely that they can undergo surgery without anesthetics. Some patients have even cured warts under hypnosis. The hypnotist suggests the idea, and the body performs a remarkable feat of skin renovation and construction, involving the cooperation of thousands of cells in a mental-directed process not otherwise attainable.

In a false pregnancy, a woman believes so strongly in her pregnant condition that her mind directs an extraordinary sequence of activities: It increases hormone flow, enlarges breasts, suspends menstruation, induces morning sickness, and even prompts labor contractions. All this without fertilization and a growing fetus (Brand, 19).

Dr. William Nolen explains that “the patient who suddenly discovers . . . that he can now move an am or leg that was previously paralyzed had that paralysis as a result of an emotional, not a physical disturbance.” It is known that “Neurotics and hysterics will frequently be relieved of their symptoms by the suggestions and ministrations of charismatic healers. It is in treating patients of this sort that healers claim their most dramatic triumphs” (Nolen, 287). “There is nothing miraculous about these cures. Psychiatrists, internists, G.P.’s and M.D.’s who do psychiatric therapy, relieve thousands of such patients of their symptoms every year” (ibid.).

Christian psychiatrist Paul Meyer, revealed that he healed a young woman of blindness by merely instructing her that when she awoke from sleep in another room, she would be able to see. The cure came just as the doctor ordered. Her sight was restored by the power of suggestion. Other doctors have recorded cures of chronic diarrhea by prescribing placebos. Severe skin disease and even lameness have been cured by such means.

It is commonly known that up to 80 percent of disease is stress related (Pelletier, 8). These emotionally induced diseases can often be reversed by psychological therapy or “faith healings” where the proper mental attitude occasions a healing effect.

None of these cures are supernatural. The effect of the mind on the body is a natural process. It involves no suspension of natural laws. One can learn to do it. When performed by a person who claims to be a channel for God, it is no less natural. Faith in various kinds of gods or just faith in another person (the doctor or healer) will do the same thing.

Christians should not be surprised that natural psychosomatic cures occur. God created the mind with wonderful abilities and the body’s curative powers. The Bible recognizes the effect of the mind on one’s health: “A cheerful heart is good medicine, but a crushed spirit dries up the bones” (Prov. 17:22). In his book, *Anatomy of an Illness* , Norman Cousins described in detail how he literally laughed himself well from cancer. One can actually get sick when saddened by tragedy or well upon hearing good news.

Since God has created us as mind-body unities, he should get the credit when this marvelous relationship of mind affecting body is used to bring healing. However, it is a serious overclaim to call these cures supernatural.

What the Mind Cannot Do. There are some conditions "faith" alone cannot cure. The power of positive thinking cannot avoid death, raise the dead, give sight to a body without eyes, grow amputated limbs, or heal quadriplegics. Dr. Nolen observes that no paralyzing spinal cord injury has been or ever will be cured through faith-healing (Nolen, 286). Joni Earickson Tada suffered such an injury in a swimming accident and was left a quadriplegic. In spite of fervent prayers, she remains unhealed by all the faith she could muster. Joni concludes "God certainly can, and sometimes does, heal people in a miraculous way today. But the Bible does not teach that He will always heal those who come to Him in faith. He sovereignly reserves the right to heal or not to heal as He sees fit" (Tada, 132).

Supernatural Intervention. Mrs. Tada recognizes that, if God heals her spinal cord, a different kind of healing would take place, one that suspends natural processes. Miracles, in contrast to natural healings, are the way God works on special occasions. The way God usually heals is slowly. But in a miracle he works immediately. When Jesus healed the man with leprosy, the cure was instantaneous—not the result of self-rejuvenation of skin tissues (Mark 1:42).

Many of Jesus' miracles involved a speeding up of a natural process. The farmer puts grain into the ground and it slowly multiplies into more grain by harvest time. Jesus, however, took bread (grain) and immediately multiplied it to feed 5000 (John 6:10–12).

We refer to the "miracles" of birth or life. God is the one who causes both. But it confuses the issue to speak of natural, gradual, and repeatable events as "miracles." They are simply the way God works regularly. They are marvelous but not miraculous (*see* MIRACLE).

A true miracle is not a natural activity but a direct supernatural act (*see* MIRACLES IN THE BIBLE). This is why one of the biblical words for miracle is "wonder." It attracts our attention. A bush burning is not unusual, but when it burns without being consumed and the voice of God speaks from it, it is not a natural event (Exod. 3:1–14).

From an apologetic standpoint, how do we distinguish a normal cure from a miraculous one? Can we tell a psychological cure from a supernatural one? Only the latter has apologetic value (*see* MIRACLES, APOLOGETIC VALUE OF).

Faith is an essential ingredient of a psychosomatic healing, but not for a supernatural healing, though it may accompany it. Someone can be healed who does not believe healing is possible. Thirty-five miracles of Jesus are recorded in the Gospels. Of these the faith of the recipient is only mentioned in ten: (1) the lame man (John 5:1–9); (2) a leper (Matt. 8:2–4); (3) a withered hand (Matt. 9:2–8); (4) the man born blind (John 9:1–7); (5) blind Bartimaeus (Matt. 20:29–34); (6) the hemorrhaging woman (Matt. 9:20–22 ; Mark 5:24–34 ; Luke 8:43–48); (7) the ten lepers (Luke 17:11–19); (8) Peter walking on water (Matt. 14:24–33); (9) first miraculous catch of fish (Luke 5:1–11); (10) the second miraculous catch of fish (John 21:1–11).

In most of these cases faith was not explicitly demanded as a precondition. In the few cases where faith was required, it was probably faith in Christ as Messiah that was needed, not faith that the person could be healed. So even in these cases faith may not be required in order to be healed.

In at least eighteen of Jesus' miracles, faith is not present explicitly or implicitly. In some cases the faith is a result of the miracle, not a condition of it. When Jesus turned water to wine, "He thus revealed his glory, and his disciples put their faith in him" (John 2:11).

Jesus' disciples did not believe he could feed the 5000 by multiplying loaves and fishes (Luke 9:13–14 ; cf. Matt. 14:17). Even after they had seen Jesus feed 5000, they disbelieved he could do it again for 4000 (Matt. 15:33). In the case of the paralytic, Jesus healed him when he saw the faith of the four who carried him to Jesus, not the faith of the man himself (Mark 2:5).

In seven miracles Jesus could not have required faith. This is certainly true of the three he raised from the dead. Yet Jesus raised Lazarus (John 11), the widow's son (Luke 7), and Jairus's daughter (Matthew 9). The same is true of the cursed fig tree (Matt. 21), the miracle of the tax money in the fish (Matt. 17:24–27), the two times Jesus multiplied loaves (Matt. 14:15), and his calming of the sea (Matt. 8:18–27).

Neither can it be shown that faith of the disciples was required. In most cases the disciples lacked faith. In the miracle of raising Lazarus, Jesus prayed that those present might believe that God has sent him (John 11:42). Just before Jesus rebuked the waves, he said to the disciples, "Where is your faith?" (Luke 8:25). After he calmed the waters he asked, "Do you still have no faith?" (Mark 4:40).

Sometimes Jesus performed miracles in spite of unbelief. The disciples lacked faith to cast the demon out of the boy (Matt. 17:14–21). Even the passage most often used to show that faith is necessary for miracles proves just the opposite. Matthew 13:58 tells us that "Jesus did not do many miracles there because of their lack of faith." However, in spite of the unbelief present, Jesus laid "his hands on a few sick people and healed them" (Mark 6:5).

Distinguishing Healings. There is a clear distinction between supernatural and psychological healing. A truly miraculous cure is distinguished from a mental one by several characteristics. Only religions manifesting these characteristics can use them as a confirmation of truth claims.

Miracles Do Not Require Faith. God is in sovereign control of the universe, and he can and does perform miracles with or without our faith. Miracles are "according to his will" (Heb. 2:4). Miraculous gifts were distributed to New Testament believers "according to his will" (1 Cor. 12:11). As shown, Jesus performed miracles even where there was unbelief.

On the other hand, psychological healings require faith. Those who suffer from psychosomatic illnesses must believe, whether in God, in a physician, or in an evangelist. Their faith makes the healing possible. But there is nothing supernatural about that kind of healing. It happens to Buddhists (*see* BUDDHISM), Hindus (*see* HINDUISM), Roman Catholics, Protestants,

and even atheists. Healers claiming supernatural powers can do it. So can psychologists and psychiatrists.

Miracles Do Not Require Personal Contact. Sometimes the apostle laid hands on those whom God miraculously healed (cf. Acts 8:18). However, it was not essential to the miracles. Jesus never touched many of those who were healed. Jesus raised the nobleman's son from the dead from a long distance (John 4:50–54). Jesus never touched Lazarus when he brought him back to life (John 11:43–44). The apostle laid hands on the Samaritan believers so that they could receive the Holy Spirit (Acts 8:18 ; 19:6). Yet the apostles themselves received the Spirit without anyone laying hands on them (Acts 2:1).

By contrast, faith healings depend on the laying on of hands or some other physical contact or personal influence. Some healers use prayer cloths. Others ask listeners to place their hands on the radio or TV as a point of contact. One evangelist asks people to stand on the Bible with their hands on the television. The personal contact or at least the psychological build up seem to be conditional to the healing itself.

Miracles Involve No Relapses. Biblical miracles last; there were no relapses. When Jesus healed a disease, it did not return. Of course, everyone eventually died, even those he raised from the dead. But this was a result of the natural process of mortality, not because the miracle was canceled. But when Jesus performed a miracle, it lasted. Whatever other eventual problems the body had, it was not because that miracle did not immediately and permanently repair that problem.

Psychological cures do not always last, whether induced by hypnotism, placebo pills, or faith healers. In fact, those "healed" and the healers eventually succumb to bad health. Radio preacher Chuck Smith relates that he knows some of the chief exponents of positive faith in the health and prosperity gospel who have spent time in the hospital for nervous exhaustion (Smith, 136–37).

Miracles Are Always Successful. Jesus never failed in a miracle he attempted. Since a miracle is an act of God, it is impossible for it to fail. It is true that Jesus did not always attempt to do a miracle. Sometimes he stated why (cf. Matt. 13:58). Since he was not in the entertainment business, Jesus did not always satisfy the fancy of his audience. God does miracles according to his will (Heb. 2:4) and purposes, not ours. But when God attempts a supernatural event, he does it.

Psychological attempts to heal are by no means all successful. As noted, some kinds of physical problems are not curable by faith. Psychological cures are most frequently successful on more suggestible personality types. Some studies show that the vast majority of people in the healing movement have these personality types.

Miracles Are on Organic Sicknesses, Not Just Functional Illness. Jesus healed people born blind (John 9), and lame (John 5). The apostles cured a man lame from birth (Acts 3:2). Jesus restored a withered hand immediately (Mark 3:1–5). Psychological healings do not take place on any of these kinds of organic healings or conditions of nature. They are usually effective only

on functional dis eases. Most often they only aid or speed recovery. Never do they instantaneously cure or restore the incurable.

Dr. Brand stated flatly that he has never heard an account of miraculous healing of pancreatic cancer, cystic fibrosis, a major birth defect, or amputation (interview, *Christianity Today,* 25 November 1983). George Bernard Shaw once caustically commented that the healings at Lourdes, France, left him unconvinced. He saw many crutches and wheel chairs on display "but not one glass eye, wooden leg, or toupee" (ibid.).

Miracles Are Always Immediate. As mentioned earlier, Jesus healed people "immediately" (Mark 1:42). When he spoke the sea was calmed "completely" (Matt. 18:26). When the apostle healed the man lame from birth, "instantly the man's feet and ankles became strong" (Acts 3:7). Even in the one case of a two stage miracle, each stage was accomplished immediately (Mark 8:22–25).

Summary. The mind can aid in the healing process. Positive mental attitude often hastens the natural curative process. When the sickness is psychologically caused, there can be a dramatic reversal when the person suddenly believes he can be healed. In this sense some psychosomatic cures can be immediate. But they cannot be done on all diseases, especially organic and incurable kinds. "Faith" cures of functional diseases are not supernatural. They lack the characteristics of a true miracle. It is these marks that give miracles apologetic value. Indeed, only the Judeo-Christian prophets have verified unique examples of these kinds of cures (*see* MIRACLES, AS CONFIRMATION OF TRUTH ; MUHAMMAD, ALLEGED MIRACLES OF).

"Heathen," Salvation of. The fate of those who have never heard the Gospel, traditionally called "heathen" by missiologists and apologists, poses a problem for the benevolence of God. If God is all-loving, then how can he send people to hell who have never heard about Jesus and how to be saved? Some estimate that at the end of the twentieth century about one-half of the

---

CT *Christianity Today*

more than 5 billion people alive had never heard the Gospel. Many more had technically “heard” the Gospel but not really been taught about Christ in any meaningful way.

Two answers to this problem have been offered. Some believe the heathen can be saved apart from the Gospel if they respond to the light of general revelation. Others believe that God provides the truth of the Gospel by special revelation to those who truly seek him.

Salvation in General Revelation. Those who believe a sinner can be saved apart from hearing that Jesus died for their sins and rose from the dead (1 Cor. 15:1–5) reason in the following manner:

The Love and Justice of God. The Bible affirms that God is just (Ps. 33:5). He is no respector of persons. For “God does not show favoritism” (Rom. 2:11). Abraham declared: “Will not the Judge of all the earth do right?” (Gen. 18:25). Further, God is all-loving. He loves the whole world and sent his only Son to die for it (John 3:16). For “The Lord is not slow in keeping his promise, as some understand slowness. He is patient with you, not wanting anyone to perish, but everyone to come to repentance” (2 Peter 3:9). Arguing from the attributes of love and justice, some Christian apologists insist that such a God would not condemn those who have never heard the Gospel of Christ. They offer some Scriptures in support for their belief:

Acts 10:35 . Peter told Cornelius, the Gentile who had never heard the Gospel, that God “accepts men from every nation who fear him and do what is right” (Acts 10:35). The text indicates that he had “feared God” (vs. 2) and was accepted by him, even though he had not yet heard the Christian message.

Acts 19:2–6 . Acts 19:2–6 tells of believers who were saved many years after the time of Christ, even though they had not yet received the Holy Spirit. Paul asked them, “Did you receive the Holy Spirit when you believed?” They answered, “No, we have not even heard that there is a Holy Spirit.” So Paul declared the truth to them and “On hearing this, they were baptized into the name of the Lord Jesus” (Acts 19:5). But they were called “disciples” (believers) even before Paul preached to them (vs. 1).

Romans 2:6–7 . Paul declared that “God ‘will give to each person according to what he has done.’ To those who by persistence in doing good seek glory, honor and immortality, he will give eternal life” (Rom. 2:6–7). This is in the context of “Gentiles who have not the law” (2:14), that is, heathen. But this would mean that heathen can receive “eternal life” apart from special revelation through God’s law.

Galatians 3:8 . According to Paul, “The Scripture foresaw that God would justify the Gentiles by faith, and announced the gospel in advance to Abraham: ‘All nations will be blessed through you’ ” (Gal. 3:8). But the “Gospel” Abraham heard did not have the explicit content that Christ, the Son of God, died and rose from the dead. For when Abraham believed, the text simply says that, “He took him outside and said, ‘Look up at the heavens and count the stars—if indeed you can count them.’ Then he said to him, ‘So shall your offspring be’ ” (Gen. 15:5).

Hebrews 11:6 . According to this verse, “anyone who comes to him must believe that he exists and that he rewards those who earnestly seek him” (Heb. 11:6). This would seem to include those who have never heard the Gospel as well.

Revelation 14:6 . John the apostle said: “Then I saw another angel flying in midair, and he had the *eternal gospel* to proclaim to those who live on the earth—to every nation, tribe, language and people” (Rev. 14:6). If the Gospel by which they were saved is eternal, then it was the same one proclaimed in the Old Testament. The next text indicates that this text did not have the same content as the New Testament Gospel (1 Cor. 15:1–5). Yet people were saved by believing the good news that God is gracious.

Jonah 3:1–5 . The Old Testament relates an explicit story as to how the heathen were saved—at least from physical destruction. The Jewish prophet Jonah was told to go to Nineveh (Assyria) and proclaim: “Forty more days and Nineveh will be overturned.” And “The Ninevites believed God. They declared a fast, and all of them, from the greatest to the least, put on sackcloth” (Jonah 3:4–5). And “When God saw what they did and how they turned from their evil ways, he had compassion and did not bring upon them the destruction he had threatened” (Jonah 3:10). Jonah later said of their conversion, “I knew that you are a gracious and compassionate God, slow to anger and abounding in love, a God who relents from sending calamity” (Jonah 4:2).

There is no indication whatsoever that the content they believed was any more than belief in a gracious God who forgives those who turn from their sins to him in faith.

Psalm 19:1–4 . The very heavens proclaim the Gospel, according to Psalm 19 : “The heavens declare the glory of God; the skies proclaim the work of his hands. Day after day they pour forth speech; night after night they display knowledge. There is no speech or language where their voice is not heard. Their voice goes out into all the earth, their words to the ends of the world.” This passage appears to teach that everyone everywhere has heard the “Gospel” of creation by which they can be saved. Interestingly, this is the very passage referred to by the apostle Paul when he says no one can hear without a preacher (Rom. 10:14 , 18).

An Important Distinction. All evangelicals believe it is necessary that Christ died and rose in order for anyone to be saved. Those who hold that salvation can be obtained through general revelation insist, however, that it is not necessary to *know* about this fact. They point out that one could receive a gift of new shoes from an unknown benefactor without knowing what animal died to provide the leather or who gave them the shoes. Hence, all verses that indicate Christ’s death and resurrection were necessary for salvation are taken to refer to the *fact* of Christ’s death, not to explicit *knowledge* of that fact.

Salvation through Christ. The standard orthodox position of Martin Luther and John Calvin and their disciples was that salvation is not possible apart from belief in the death and resurrection of Christ, at least not since the time of Christ.

Salvation by Knowledge of Christ. The standard orthodox position that salvation comes only through knowledge of Christ raises an even more serious problem about God’s justice and

benevolence with regard to the destiny of those who have never heard. Nonetheless, there are many Scriptures that point in this direction.

Acts 4:12 . The apostles in Acts 4:12 declared that "Salvation is found in no one else, for there is no other name under heaven given to men by which we must be saved." Since there is explicit reference to the "name" of Christ, it is difficult to believe that explicit knowledge of Christ is not demanded as a condition of salvation. It is not simply the *fact* of Christ but the *name* of Christ that is necessary for salvation.

Romans 10:9 . Paul insists that "if you confess with your mouth, 'Jesus is Lord,' and believe in your heart that God raised him from the dead, you will be saved." Romans 10:9 would seem to demand that confession of the very name of "Jesus" is necessary for salvation.

Romans 10:13–14 . The apostle follows up by adding in 10:13–14 : "Everyone who calls on the name of the Lord will be saved. How, then, can they call on the one they have not believed in? And how can they believe in the one of whom they have not heard? And how can they hear without someone preaching to them?" The emphasis on the fact that the unbeliever must "call" on Christ and that they must "hear" the Gospel by someone who is "preaching" to them would seem to eliminate the possibility that anyone can be saved today apart from hearing the Gospel of Christ.

John 3:18 . Jesus himself said emphatically in John 3:18 : "Whoever believes in him is not condemned, but whoever does not believe [in him] stands condemned already because he has not believed in the name of God's one and only Son." Explicit belief "in the name of Godone and only Son" is laid down as the condition of salvation.

John 3:36 . John 3:36 makes it clear that "Whoever believes in the Son has eternal life, but whoever rejects the Son will not see life, for God's wrath remains on him." This seems to point clearly to knowledge of the "Son" (Christ) as necessary for salvation.

John 10:9 , 11 , 14 . Jesus said in John 10:9–14 , "I am the gate; whoever enters through me will be saved. . . . I am the good shepherd. The good shepherd lays down his life for the sheep. . . . I know my sheep and my sheep know me." The fact that the sheep (believers) must "know" Christ and "enter" the gate indicates that an explicit knowledge of Christ is necessary for salvation.

1 John 5:10–13 . John repeats the same truth in 1 John 5:10b–13 : "Anyone who does not believe God has made him out to be a liar, because he has not believed the *testimony* God has given about his Son. And this is the *testimony* : God has given us eternal life, and this life is in his Son. He who has the Son has life; he who does not have the Son of God does not have life. I write these things to you who *believe in the name of the Son of God* so that you may know that you have eternal life." The emphasized words make clear that John is teaching that explicit knowledge of Christ is necessary for salvation.

A Response to General Revelationists. Proponents of salvation only through special revelation are well aware of proof texts used by those who believe salvation of the heathen is possible through general revelation alone.

Acts 10:35 . Two things are often mentioned about the case of Cornelius. First, Cornelius is a proof that those who seek God in view of the light they have will be given special revelation by which they can come to know Christ. After all, the whole point of the story is that God sent Peter with a special revelation and that Cornelius did not become a Christian until after he heard and believed this special revelation. Second, some point out that the book of Acts is a transitional period between the Old Testament and the New Testament, during which those who were saved on Old Testament grounds were provided with the light of Christ by which they could become Christians. Cornelius may fit this category.

Acts 19:2–6 . This passage is about disciples of John the Baptist who had not yet heard about the coming of the Holy Spirit. It has nothing to do with those who have never heard the Gospel. The episode illustrates the transitional nature of the time, during which those who had not yet heard the Christian message (or the full message) were saved on the grounds of the special revelation they had received.

Hebrews 11:6 . According to Hebrews 11:6 , "anyone who comes to him [God] must believe that he exists and that he rewards those who earnestly seek him." While the reference is to knowledge of God, not of Christ, one includes the other. Since the context is Old Testament saints, not New Testament believers, it is understandable why the broader statement about explicit knowledge of Christ was not included. This is a statement of the minimal requirement to be saved in any age. It does not exclude belief in Christ as an explicit requirement of salvation.

Galatians 3:8 . Proponents of special revelation respond in two ways to Galatians 3:8 . Some hold that even in Old Testament times believers did have an explicit knowledge of the coming Christ. Paul said the "seed" of Abraham was Christ (Gal. 3:16). Jesus said to the Jews, "Your father Abraham rejoiced at the thought of seeing my day; he saw it and was glad" (John 8:56). This may indicate that Abraham knew Christ personally (perhaps as the Angel of the Lord). Other proponents simply take Galatians 3:8 to describe the more minimal content (exclusive of explicit knowledge of Christ's death and resurrection) necessary for salvation in the Old Testament. The content of what Abraham believed was clearly spelled out in the Old Testament (Gen. 15:5–6) and it said nothing about Christ's death and resurrection, only that his offspring would be as numerous as the stars of the heavens.

Revelation 14:6 . John's reference to the *"eternal gospel,"* whatever it may mean, does not support the view that salvation of the "heathen" is based on only general revelation. This message came to them by special revelation. God sent an angel to preach it. Further, the content of this Gospel was about those who believed in the "lamb of God" who "redeemed" them by his blood (14:1 , 4). That the Gospel is everlasting may mean no more than that Christ was "the Lamb that was slain from the creation of the world" (Rev. 13:8). There is certainly no indication John is speaking about an eternal Gospel known only by general revelation.

Jonah 3:1–5 . Old Testament saints did not necessarily have the same content knowledge required for salvation in the New Testament. The doctrine of progressive revelation indicates that God progressively unfolded his plan on earth by giving more and more revelation until the full and final revelation in Christ (Heb. 1:1–2).

Psalm 19:1–2 . The psalmist is not speaking of God's special revelation but of general revelations through the "heavens" which are the "work of his [creative] hands." He is not speaking of the cross, which is the work of God's redemptive love (Rom. 10:14 , 18). According to Romans, general revelation informs us about God's "eternal power and Godhead" (Rom. 1:20). It is sufficient for condemnation, since it finds all men "without excuse" (ibid.) but not for salvation.

Romans 2:6–7 . This text does not affirm that heathen are saved by general revelation, but only those who "seek . . . for immortality." Later Paul said it is only Christ "who has destroyed death and has brought life and immortality to light through the gospel" (2 Tim 1:10). General revelation and other means are part of the "goodness of God that leads . . . to repentance" (vs. 4). Those who respond to the light of general revelation are given special revelation by which they can be saved.

A Vindication of God's Justice. But is it fair for God to send people to hell who have never heard the only Gospel by which they can be saved? This question is really several questions in one. They will be broken down and analyzed one by one.

Are The Heathen Lost? The biblical answer to this question is clear: All human beings are born in sin (Ps. 51:5 KJV) and are "by nature the children of wrath" (Eph. 2:3 KJV). For ". . . just as sin entered the world through one man, and death through sin, and in this way death came to all men, because all sinned [in Adam]" (Rom. 5:12). Addressing explicitly the heathen who have only general revelation, the apostle Paul declared "For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, *so that men are without excuse* " (Rom. 1:20). Likewise, he adds, "All who sin apart from the law will also perish apart from the law, and all who sin under the law will be judged by the law" (Rom. 2:12). Then, summing up his conclusion from the whole section, Paul pronounces that "There is no difference, for all have sinned and fall short of the glory of God" (Rom. 3:22–23). Yes, sinful rebels from God remain lost apart from knowing about Christ.

Is There Salvation Apart from Christ? All orthodox Christians agree that there is no salvation apart from Christ's redemptive work. Jesus said, "I am the way and the truth and the life. No one comes to the Father except through me" (John 14:6). The apostle Paul added "For there is one God and one mediator between God and men, the man Christ Jesus" (1 Tim. 2:5). Further, the writer of Hebrews agreed, affirming that "Christ . . . has appeared once for all at the end of the ages to do away with sin by the sacrifice of himself" (Heb. 9:26). And "this priest [Christ] had offered for all time one sacrifice for sins, he sat down at the right hand of God . . . because by one sacrifice he has made perfect forever those who are being made holy" (Heb. 10:12 , 14).

---

kjv King James Version

Literally, “Salvation is found in no one else, for there is no other name under heaven given to men by which we must be saved” (Acts 4:12).

Is It Fair to Condemn Those Who Have Not Heard? Yes, it is just to condemn those who have never received God’s special revelation. First, through general revelation they know about his “eternal power and Godhead” (Rom. 1:20). They are aware that he “made heaven and earth and sea and everything in them”(Acts 14:15). They are aware that God “has not left himself without testimony: He has shown kindness by giving you rain from heaven and crops in their seasons” (Acts 14:17). Although they do not have the Law of Moses, “All who sin apart from the law will also perish apart from the law. . . . Indeed, when Gentiles, who do not have the law, do by nature things required by the law, they are a law for themselves, even though they do not have the law [of Moses], since they show that the requirements of the law are written on their hearts” (Rom. 2:12–15).

Even though God has revealed himself to the heathen in creation and in conscience, fallen humanity has universally rejected that light. Hence, God is not obligated to give them any more light, since they have turned from the light they have. In fact, although they have the truth, “the wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness” (Rom. 1:18). Someone lost in the darkness of a dense jungle who sees one speck of light should go toward it. If that person turns away from the little light and becomes forever lost in darkness, there is only one person to blame. The Scriptures say, “This is the verdict: Light has come into the world, but men loved darkness instead of light because their deeds were evil” (John 3:19).

If any unbeliever truly sought God through the general revelation, God would provide the special revelation sufficient for salvation. After God led Peter to the Gentile Cornelius, Peter declared: “I now realize how true it is that God does not show favoritism but accepts men from every nation who fear him and do what is right” (Acts 10:35). The writer of Hebrews tells us that those who seek, find. “He rewards those who earnestly seek him” (Heb. 11:6).

God has many ways at his disposal through which he can get the truth of the Gospel to lost souls. The normative way is through preachers of the Gospel (Rom. 10:14–15), whether in person or on radio, TV, or some recording. On one occasion God will use an angel to preach the Gospel “to every nation, tribe, language and people” (Rev. 14:6). Many people have been given a Bible, read it, and been saved. Others have been saved through Gospel literature. We have no way of knowing whether God has conveyed special revelation through visions, dreams, and in other miraculous ways. The truth is that God is more willing that all be saved than we are. For “the Lord is not slow in keeping his promise, as some understand slowness. He is patient with you, not wanting anyone to perish, but everyone to come to repentance” (2 Peter 3:9). God’s justice demands that he condemns all sinners, but his love compels him to provide salvation for all who by his grace will believe. For “Everyone who calls on the name of the Lord will be saved” (Rom. 10:13).

One thing is important to keep in mind. To send people to hell who have never heard is not unjust. To think so is like claiming that it is not right for someone to die of a disease for which there is a cure of which he or she has not yet heard. The crucial question is how one got the

disease, not whether he or she has heard of a cure. What is more, if one desires neither to know there is a cure or to do what is necessary to get cured, then he or she is most certainly culpable.

Will There Be People Saved from Every Nation? Those who reject the view that special revelation is necessary for salvation generally point to those in non-Christian lands. What about China, India, Africa, and many formerly Communist countries? Surely it is not fair to have so many in heaven from Western countries and so few from Eastern lands.

There is no reason why the percentage of people saved must be the same from all countries. Who is saved will depend on who believes, and that will vary from place to place. Just as in farming and fishing, some areas are more fruitful than others. The Scriptures assure us that there will be "a great multitude that no one could count, from every nation, tribe, people and language, standing before the throne and in front of the Lamb" (Rev. 7:9a). Indeed, while the percentage may understandably vary, it would seem strange if there were no one from one country that desired to be saved (just as it would if everyone from another country wanted to be saved). People have free choice, and free choice is exercised freely. Some will believe and some will not.

There are ways by which people might go to heaven, even where the Gospel has not gone out. Perhaps all (or at least some) children who die in infancy are saved (*see* INFANTS, SALVATION OF). Others may come into contact with the Gospel through Christian radio, literature, or recordings. Perhaps God reveals himself in miraculous ways. A window might be opened for the Word. Countries with a large percentage of Christians were once pagan.

Is There a Second Chance? A few Christian apologists and many cults believe that God will give a second chance after death to those who never heard the Gospel. Orthodox Christians reject this. The Bible declares that "Just as man is destined to die once, and after that to face judgment" (Heb. 9:27). The urgency with which Scripture speaks of making one's decision now in this life (Prov. 29:1 ; John 8:24 ; Heb. 3:7–13 ; 2 Peter 3:9) is strong evidence that there is no second chance. The fact that people immediately go to either heaven or hell (Luke 16:19–31 ; 2 Cor. 5:8 ; Rev. 19:20) indicates that a decision must be made in this life. Since God has so many ways to reveal himself to unbelievers before death, it is unnecessary that he do so after they die. Belief in a second chance undermines the missionary mandate. Why have the Great Commission (Matt. 28:18–20), if people can be saved apart from receiving Christ in this life?

Interpretations of Scripture used to support second-chance salvation are, to say the least, highly disputed (for example, 1 Peter 3:18–19). Clear texts are unambiguous in teaching that hell awaits the unrepentant. There is no real evidence that God will give anyone a second chance to be saved after death. Jesus said, "I told you that you would die in your sins; if you do not believe that I am [the one I claim to be], you will indeed die in your sins" (John 8:24).

Hegel, Georg Wilhelm Friedrich. *Life and Works of Hegel.* Hegel (1770–1831) was born in Wurtenberg, Germany, to a Lutheran family. His father was a government official. Hegel was bored by dull teachers and often cut classes. He taught at the University of Jena, where he and F. W. J. Schelling fought against the tide of skepticism. Hegel was Lutheran and apparently attended church regularly.

His main writings include *Philosophy of History, Philosophy of Nature, Encyclopedia, Logic, Philosophy of Religion,* his major work, *Phenomena of Spirit,* and *Philosophy of Aesthetics.*

Influences on Hegel. Like most other great figures, Hegel stood on the shoulders of many who had come before him. To mention a few major ones, from Plato he learned that man's meaning is found in the state; that philosophy is the highest expression of reality, and that all determination is by negation. From Plotinus Hegel came to understand that the world and consciousness are a manifestation of the Absolute—a form of pantheism . From Benedict Spinoza he learned of the inseparability of God and nature and, hence, antisupernaturalism. From Immanuel Kant Hegel concluded that we must begin with the phenomena of experience and use the transcendental method to arrive at truth. Of course, his Judeo-Christian training provided him with a linear view of history.

Hegel's Epistemology. Hegel's theory of knowledge is not easy to spell out in a brief form. However, some aspects of it are clear.

Hegel's Dialectic. To begin, a word is necessary about what Hegel did not believe. Although he used the word "dialectic," he did not believe in a Marxist (*see* MARX, KARL) kind of dialecticalism of thesis–antithesis–synthesis. This triad does not appear once in the body of eight volumes of his published works (Mueller, 411). It appears once in the "Preface" of his

SE *Studia Evangelica*

Phenomenology of Mind where he claimed it came from Kant and rejected it calling it “a lifeless schema” (Mueller, 412). Hegelian expert Gustav Mueller asserted that “The most vexing and devastating Hegel legend is that everything is thought in ‘thesis, antithesis, and synthesis’ ” (Mueller, 411). The legend was spread by Karl Marx’s distorted understanding of Hegel.

The Law of Non-Contradiction. Hegel is not clear as to the status of the law of non-contradiction (*see* FIRST PRINCIPLES). At times he appears to deny it, claiming that “all things are themselves contradictory,” that “movement is existing contradiction itself,” and that “only insofar as something has contradiction in itself does it move, have impulse or activity (H. B. Acton, 443–44). Indeed, he does not even mention it as a separate category of thought in his *Science of Logic* . Some understand him as claiming only that there are contradictions on the finite level that are resolved in the Absolute. Others believe he is not using the term in its technical logical sense, but only in the practical sense in the outworking of the dialectic in history. Others take it to refer to a necessary disease of thought on its way to absolute truth. Hegel does claim that a “square circle” or a “many-sided circle” is contradictory (Acton, 444). Of course, if Hegel meant that the law of non-contradiction (see *First Principles*) did not apply to all truth-claims, then his view was self-refuting .

The Transcendental Argument. Following Kant, Hegel argued transcendentally, though he believed it yielded absolutes in content as well as the form of knowledge. He believed there were two options; realism and transcendentalism. That is, we can ignore Kant and return to naive realism or extend Kant and develop a transcendentalism (*see* TRANSCENDENTAL ARGUMENT). He chose the latter. Like Kant he held that a priori forms in the mind guarantee certainty. But unlike Kant, Hegel believed that even the content of our knowledge is absolute. He argued that partial (relative) knowledge is impossible because it presupposes knowledge of the whole (the absolute).

The transcendental process of knowing begins with knowledge as it appears to us (in the phenomena of our experience) and then proceeds to find the necessary conditions of it. The test for knowledge is consistency and coherence. But our knowledge cannot persist unless it is based on some higher form of knowledge. And the regress cannot be infinite (or else we would not know anything). Hence, we must eventually arrive at absolute knowledge, which is the underpinning of all other (lower knowledge).

Hegel’s View of God. *Proofs for God’s Existence.* Hegel believed he had overcome Kant ’s objections to the existence of God (*see* GOD, OBJECTIONS TO PROOF FOR HIS EXISTENCE). In a series of lectures, he defended the ontological argument for God’s existence (see Acton, 449).

Developmental Pantheism. Hegel’s metaphysics is a kind of developmental pantheism worked out in the historical process. It may also be viewed as a form of panentheism, since there is a bipolarity of God and the world. In any event, history is the “footprints” of God in the sands of time. Better, history is God’s self-unfolding in the temporal world. It is the progressive overcoming of the world by Absolute Spirit.

Dialectical Metaphysics. Hegel's metaphysics is an example of how his dialectic worked. First, he begins with logic, which posits the eternal idea. This is emptiest of all notions, devoid of all content. It represents God as he is in his eternal essence prior to the creation of finite spirit.

Next, there is the philosophy of nature. This is creation apart from God. Yet creation must stand in relation to God. How, then, can these two be reconciled?

Hegel's answer is in the philosophy of spirit wherein there is an overcoming duality. The two poles of duality are God and world. Hegel believed that God and world must be merged and thus give up their separate identities. This is a root idea of the later panentheism of Alfred North Whitehead . The point of contact is in man, who is the translator between nature and spirit. Thus, man has the spirituality of God and the materiality of the world.

This overcoming is in three stages: subjective spirit, objective spirit, and Absolute Spirit (God). In subjective spirit the subject–object duality is overcome. Hegel begins with man as conscious (the spiritual dimension). He then moves to man as corporeal (the material dimension). Finally, he turns to man as integrated, self-conscious being (the ethical dimension).

In objective spirit the subject–subject distinction is overcome. All are part of a greater unity—the human spirit. So in man as a whole the duality is overcome as the whole is over parts and unites them. In short, there is no God apart from nature. God is dependent on nature.

Hegel's View of Christianity. *The Incarnation.* Hegel viewed Christianity (Lutheranism) as the absolute religion, the highest manifestation of the Absolute to date. This is particularly manifest in the incarnation of God in Christ in which God appeared on earth in a particular man at a particular time. Here the Infinite is identified with the finite.

The core of religion is the incarnation. Absolute Spirit is where the God–man duality is overcome. This is done in three stages: art, religion, and philosophy. Art is only a limited manifestation (in images) of the Absolute. Religion realizes a higher manifestation of Absolute Spirit in true freedom revealed in symbols. So, the essence of religion is Christology—the God-man who died and rose. When he died both God and man died. But when he rose neither God nor man rose but Absolute Spirit unto which God and man merged.

Hegel believed that the highest manifestation of the Absolute is in philosophy. It is the eternal Idea, the epitome, the fullest and most complete of all concepts. This is only the highest "category" of all thought and existence, not the highest point of achievement. We can never "reach" Absolute Spirit, it always vanishes, leaving only the long road of argument leading to it. So, while God becomes man in religion, man becomes God in philosophy.

The Trinity. The final reconciliation of the Infinite and finite, of God and man, is found in the Trinity. For God existed before the world as Father, was manifested in his embodiment in the world as Son, and as reconciling both God and the world in the Holy Spirit. So while God cannot exist without negation and opposites, both are finally reconciled in the Trinity.

Hegel's View of the Bible. *Early Desupernaturalized Life of Christ.* In an early attempt at a life of Jesus, Hegel presented a desupernaturalized view of Jesus and formulated the teachings of Jesus in terms of a Kantian ethic, something he had learned from Kant's famous *Religion Within the Limits of Reason Alone* . Here Jesus is depicted by Hegel as narrow-minded and obscurantist as opposed to Socrates. Further, Jesus is not virgin-born (*see* VIRGIN BIRTH). All miracles mentioned are interpreted naturalistically. The prologue of John's Gospel is reinterpreted to state: "Pure Reason incapable of all limitations is the Deity itself."

Later, in *The Spirit of Christianity and Its Fate,* Hegel contrasted the Gospel ethic of love with the Jewish and Kantian ethics of law, but he never gave up either his antisupernaturalism or his moral-centered view of the Gospels. Hegel also reinterpreted the Gospel stories of the redemptive death and resurrection of Christ in terms of Greek tragedy.

In *The Positivity of the Christian Religion* Hegel affirms that in claiming to be the Messiah Jesus was merely using the language of his listener, a form of the accommodation theory. Instead of revering him for his teaching about virtue, they revered his teaching about virtue because of the miracles he is supposed to have performed. Here Hegel argues that Greek religion was overcome by Christianity because "The despotism of the Roman emperors had chased the human spirit from the earth and spread a misery which compelled men to seek and expect happiness in heaven." Thus, "robbed of freedom, their spirit, their eternal and absolute element, was forced to take flight to deity." In this way, God's objectivity is a counterpart to the corruption and slavery of man (*Early Theological Writings,* 162–63).

Hegel's Later Transcendentalism (Pantheism). Even later in his *Encyclopedia* , dominated by his transcendental idealism (i.e., developmental pantheism), Hegel was a radical revisionist of the literal, historical truth of the death and resurrection of Christ. The core of revealed religion is Christology: Jesus Christ is the God-man. As such, he died on the cross; thus both God and man died there. The resurrection was of neither God nor man. Rather, in the resurrection both God and man merge in Absolute Spirit. Thus, in Hegel's developmental pantheism is found the highest manifestation of Absolute Spirit.

Interpretation of Scripture. All Scripture must be understood in terms of Absolute Spirit which Hegel identifies as the Holy Spirit. In interpreting Scripture we must avoid both literalism and rationalism. True understanding is based on Spirit. Orthodox beliefs must be reinterpreted in the light of Hegel's (pantheistic) understanding of Spirit triumphing over all literalism. He quotes 2 Corinthians 3:6 : "The letter kills, but the spirit gives life." With this theology is converted into philosophy—Hegelian philosophy.

Hegel's Influence on Others. Hegel had an immense influence on others after him. This includes the atheism of Ludwig Feuerbach , who argued that "God" is man's self-understanding. Professor Winfried Corduan divides these into Left, Center, and Right. On the left are those who believe that Hegel's thought leads consistently to an impersonal atheism. On the right are those who understand Hegel's philosophy in a theological sense. In the center are those who believe core belief in Absolute Spirit allows room for religion. This includes Bruno Bauer, Ludwig Feuerbach, and Karl Marx (see Corduan).

Hegel's Influence on Atheism. Hegel had a significant influence on modern atheism. Several young left-wing Hegelians were his students, including Karl Marx with his *dialectical materialism derived from his misunderstanding of Hegel's "dialectic." Friedrich Nietzsche , Thomas Altizer , and the "Death of God" theologians were influenced by Hegel's assertion that God and man died in the death of Christ.

Hegel's Influence on Existentialism . Hegel influenced existentialists of various stripes: theistic, atheistic, pantheistic, and panentheistic. In spite of his obvious rejection of much of Hegel, Soren Kierkegaard 's theistic existentialism is dependent on Hegel's idea that the essence of consciousness is liberty; that truth is lived, not known (praxis); that existence is a concrete, dynamic process; and a realistic valuation of the individual's predicament in the process of history. Likewise, the atheistic existentialism of Jean-Paul Sartre is also dependent on Hegel's ideas that consciousness is negativity (absolute freedom); that the self is condemned never to know itself; and that man imposes meaning on things. Husserl's phenomenology is rooted in Hegel's phenomenological (descriptive) method of analyzing human experience. And Martin Heidegger's pantheistic existentialism is an offspring of Hegelianism.

Hegel's Influence on Modern Biblical Criticism. Of special interest to Christian apologetics is Hegel's significant influence on negative Bible criticism . For example, following Hegel, F. C. Baur and his Tubingen school claimed that the first-century tension between Peter's Judaistic form of Christianity opposed by Paul's anti-Judaistic form found its reconciliation in John's Gospel in the second century , thus insisting on a late date for John's Gospel (*see* NEW TESTAMENT, DATING OF). Also, David Strauss 's desupernaturalized version of the life of Christ springs from Hegel's idea that spiritual reality is higher than the historical. Thus, as Rudolph Bultmann was to later affirm: Christianity is myth (*see* MYTHOLOGY AND THE NEW TESTAMENT).

Hegel's Influence on Hermeneutics. Likewise, Martin Heidegger's mystical pantheism and hermeneutic developed by Bultmann and Gadamer are rooted in Hegel's stress on the spiritual interpretations of Scripture. This gave rise to the whole subjectivistic "new hermeneutic."

An Evaluation of Hegel's Thought. From an apologetic standpoint Hegel's system of thought has both positive and negative aspects. First, some of the positive elements will be briefly noted.

Positive Values. Without elaboration (which is done in the other articles noted), Hegel affirmed the value of metaphysics; of absolute truth (*see* TRUTH, NATURE OF); of a Christian linear view of history; of understanding humans in their concrete life situations; of human freedom (*see* FREE WILL); of an a priori dimension of knowledge (see *First Principles*); of a transcendental argument; and other things.

Negative Critique. Hegel's good points notwithstanding, his overall philosophy has had a very negative effect on orthodox Christianity. Some of these include his pantheism or panentheism , as the case may be; his denial of realism (*see*); his foundations for Bible criticism; his antisupernaturalism (*see* MIRACLES), which involves the denial of the physical resurrection (*see* RESURRECTION, EVIDENCE FOR); his idea that determination is by negation (

see ANALOGY, PRINCIPLE OF); his “spiritual” interpretation, which anticipates postmodernism and the deconstruction of Jacques Derrida and others (*see also* MYSTICISM); and his failure to ground knowledge in an unchanging God, thus undermining the absolute truth he claimed (*see* TRUTH, NATURE OF).

Hell. Hell has been called cruel, inhuman, and barbarous. Bertrand Russell said anyone who threatens people with eternal punishment, as Jesus did, is inhumane (Russell, 593–94). Unbelievers in general have questioned both the existence and justice of hell. Orthodox Christians, however, both Catholic and Protestant, have defended both the reality and equity of hell.

The Existence of Hell. The existence of hell has been defended by arguments both from Scripture and from human reason.

Jesus Taught the Existence of Hell. Scripture emphatically affirms the doctrine of hell. Some of the strongest assertions that there is a hell come from Jesus Christ, the Second Person of the Trinity . He had more to say about hell than concerning Heaven. Jesus warned, “Do not be afraid of those who kill the body but cannot kill the soul. Rather, be afraid of the One who can destroy both soul and body in hell” (Matt. 10:28). He added of those who reject him, “As the weeds are pulled up and burned in the fire, so it will be at the end of the age” (Matt. 13:40).

In the Olivet Discourse our Lord said that at the final judgment God will say “to those on his left, ‘Depart from me, you who are cursed, into the eternal fire prepared for the devil and his angels’ ” (Matt. 25:41b). Of the seriousness of the danger of hell, Jesus warned, “If your hand causes you to sin, cut it off. It is better for you to enter life maimed than with two hands to go into hell, where the fire never goes out” (Mark 9:43). The reality of hell is obvious from a vivid story told by Jesus in Luke 16 . This story is unlike a parable, since in it Jesus uses the actual name of a person (Lazarus). The story concerned the fate after death of a rich man and a beggar, Lazarus:

> The rich man also died and was buried. In hell, where he was in torment, he looked up and saw Abraham far away, with Lazarus by his side. So he called to him, “Father Abraham, have pity on me and send Lazarus to dip the tip of his finger in water and cool my tongue, because I am in agony in this fire.” But Abraham replied, “Son, remember that in your lifetime you received your good things, while Lazarus received bad things, but now he is comforted here and you are in agony. And besides all this, between us and you a great chasm has been fixed, so that those who want to go from here to you cannot, nor can anyone cross over from there to us.” He answered, “Then I beg you, father, send Lazarus to my father’s house, for I have five brothers. Let him warn them, so that they will not also come to this place of torment.” Abraham replied, “They have Moses and the Prophets; let them listen to them.” “No, father Abraham,” he said, “but if someone from the dead goes to them, they will repent.” He said to him, “If they do not listen to Moses and the Prophets, they will not be convinced even if someone rises from the dead.” [Luke 16:19–31]

The Bible Teaches That There Is a Hell. Other inspired writings of the New Testament affirm the existence of hell. Perhaps the most graphic is found in the Revelation of John:

> Then I saw a great white throne and him who was seated on it. Earth and sky fled from his presence, and there was no place for them. And I saw the dead, great and small, standing before the throne, and books were opened. Another book was opened, which is the book of life. The dead were judged according to what they had done as recorded in the books. The sea gave up the dead that were in it, and death and Hades gave up the dead that were in them, and each person was judged according to what he had done. Then death and Hades were thrown into the lake of fire. The lake of fire is the second death. If anyone’s name was not found written in the book of life, he was thrown into the lake of fire. [20:11–15]

The apostle Paul spoke of everlasting separation from God, saying: “This will happen when the Lord Jesus is revealed from heaven in blazing fire with his powerful angels. He will punish

those who do not know God and do not obey the gospel of our Lord Jesus. They will be punished with everlasting destruction and shut out from the presence of the Lord and from the majesty of his power” (2 Thess. 1:7b–9). The writer of Hebrews adds a note of finality: “Man is destined to die once, and after that to face judgment” (Heb. 9:27).

God’s Justice Demands a Hell. In addition to direct affirmations, Scripture offers reasons for the existence of hell. One is that justice demands the existence of hell, and God is just (Romans 2). He is so pure and untainted that he cannot even look upon sin (Hab. 1:13). God is no respecter of persons, “For God does not show favoritism” (Rom. 2:11). As Abraham declared, “Will not the Judge of all the earth do right?” (Gen. 18:25). Psalm 73 is representative of passages teaching that not all justice is accomplished in this life. The wicked seem to prosper (Ps. 73:3). Thus, the existence of a place of punishment for the wicked after this life is necessary to maintain the justice of God. Surely, there would be no real justice were there no place of punishment for the demented souls of Stalin and Hitler, who initiated the merciless slaughter of multimillions. God’s justice demands that there is a hell.

Jonathan Edwards argued that even one sin deserves hell, since the eternal, holy God cannot tolerate any sin. Each person commits a multitude of sins in thought, word, and deed. This is all compounded by the fact that we reject God’s immense mercy. And add to this man’s readiness to find fault with God’s justice and mercy, and we have abundant evidence of the need for hell. If we had a true spiritual awareness, we would not be amazed at hell’s severity but at our own depravity (Edwards, 1.109).

God’s Love Demands a Hell. The Bible asserts that “God is love” (1 John 4:16). But love cannot act coercively, only persuasively. A God of love cannot force people to love him. Paul spoke of things being done freely and not of compulsion (2 Cor. 9:7). Forced loved is not love; it is rape. A loving being always gives “space” to others. He does not force himself upon them against their will. As C. S. Lewis observed, “the Irresistible and the Indisputable are the two weapons which the very nature of his scheme forbids him to use. Merely to override a human will . . . would be for Him useless. He cannot ravish. He can only woo” (Lewis, *Screwtape Letters,* 38). Hence, those who do not choose to love God must be allowed not to love him. Those who do not wish to be with him must be allowed to be separated from him. Hell allows separation from God.

Human Dignity Demands a Hell. Since God cannot force people into heaven against their free will, human free choice demands a hell. Jesus cried out, “O Jerusalem, Jerusalem, you who kill the prophets and stone those sent to you, how often I have longed to gather your children together, as a hen gathers her chicks under her wings, but you were not willing” (Matt. 23:37). As Lewis said, “There are only two kinds of people in the end: those who say to God, ‘Thy will be done,’ and those to whom God says, in the end, ‘ *Thy* will be done’ ” (*Screwtape Letters,* 69).

God’s Sovereignty Demands a Hell. Unless there is a hell there is no final victory over evil (*see* EVIL, PROBLEM OF). For what frustrates good is evil. The wheat and tares cannot grow together forever. There must be an ultimate separation, or else good will not triumph over evil. As in society, punishment for evil is necessary that good might prevail. Even so, in eternity good must triumph over evil. If it does not, then God is not in ultimate control. God’s sovereignty

demands a hell, otherwise he would not be the ultimate victor over evil that the Bible declares him to be (cf. 1 Cor. 15:24–28 ; Revelation 20–22).

The Cross of Christ Implies Hell. At the center of Christianity is the cross (1 Cor. 1:17–18 ; 15:3). Without it there is no salvation (Rom. 4:25 ; Heb. 10:10–14). It is the very purpose for which Christ came into the world (Mark 10:45 ; Luke 19:10). Without the cross there is no salvation (John 10:1 , 9–10 ; Acts 4:12). Only through the cross can we be delivered from our sins (Rom. 3:21–26). Jesus suffered great agony and even separation from God on the cross (Heb. 2:10–18 ; 5:7–9). Anticipating the cross, Jesus "sweat as it were great drops of blood" (Luke 22:44). But why the cross and all this suffering unless there is a hell? Christ's death is robbed of its eternal significance unless there is an eternal separation from God from which people need to be delivered.

The Nature and Location of Hell. The Bible describes the reality of hell in forceful figures of speech. It is said to be a place of darkness (Matt. 8:12 ; 22:13), which is "outside" [the gate of the heavenly city] (Rev. 22:14–15). Hell is away from the "presence of the Lord" (Matt. 25:41 ; 2 Thess. 1:7–9). Of course, these are relational, not necessarily spatial, terms. God is "up" and hell is "down." God is "inside" and hell is "outside." Hell is the other direction from God.

The nature of hell is a horrifying reality. It is like being left outside in the dark forever (Matt. 8:12). It is like a wandering star (Jude 13), a waterless cloud (Jude 12), a perpetually burning dump (Mark 9:43–48), a bottomless pit (Rev. 20:1 , 3), a prison (1 Peter 3:19), and a place of anguish and regret (Luke 16:28).

To borrow the title of the book by Lewis, hell is the "great divorce"—an eternal separation from God (2 Thess. 1:7–9). There is, in biblical language, "a great gulf fixed" between hell and heaven (Luke 16:26) so that no one can pass from one side to the other.

Nowhere does the Bible describe it as a "torture chamber" where people are forced against their will to be tortured. This is a caricature created by unbelievers to justify their reaction that the God who sends people to hell is cruel. This does not mean that hell is not a place of torment. Jesus said it was (Luke 16:24). But unlike torture which is inflicted from without against one's will, torment is self-inflicted.

Even atheists (*see* SARTRE ; ATHEISM) have suggested that the door of hell is locked from the inside. We are condemned to our own freedom from God. Heaven's presence of the divine would be the torture to one who has irretrievably rejected him. Torment is living with the consequences of our own bad choices. It is the weeping and gnashing of teeth that results from the realization that we blew it and deserve the consequences. Just as a football player may pound on the ground in agony after missing a play that loses the Super Bowl, so those in hell know that the pain they suffer is self-induced.

Hell is also depicted as a place of eternal fire. This fire is *real* but not necessarily *physical* (as we know it), because people will have imperishable physical bodies (John 5:28–29 ; Rev. 20:13–15), so normal fire would not affect them. Further, the figures of speech that describe hell

are contradictory, if taken in a physical sense. It has *flames,* yet is outer *darkness* . It is a dump (with a *bottom*), yet a *bottomless* pit. While everything in the Bible is literally true, not everything is true literally.

The Duration of Hell. Many unbelievers would be willing to accept a temporary hell, but the Bible speaks of it as everlasting.

Hell Will Last as Long as Does God. The Bible declares that God will endure forever (Ps. 90:1–2). Indeed, he had no beginning and has no end (Rev. 1:8). He created all things (John 1:3 ; Col. 1:15–16), and he will abide after this world is destroyed (2 Peter 3:10–12). But God, by his very nature, cannot tolerate evil (Isaiah 6 ; Hab. 1:13). Hence, evil persons must be separated from God forever. As long as God is God and evil is evil, the latter must be separated from the former.

Hell Will Last as Long as Heaven Does. Heaven is described as "everlasting" in the Bible. But the same Greek word *(aionion),* used in the same context, also affirmed that hell is "everlasting" (Matt. 25:41 ; cf. vs. 46 ; 2 Thess. 1:9 ; Rev. 20:10). So, if heaven is forever, so is hell. There is absolutely no ground in Scripture for supposing that hell is temporal and heaven is eternal.

Nor is there a possibility of getting out of hell. A great gulf is fixed so no one can leave (Luke 16:26). Judgment begins immediately after death (John 8:21 ; Heb. 9:27). This is not unlike the fact that some decisions in life are irreversible. Suicide is a one-way street.

People are conscious after they die, whether they are in heaven (2 Cor. 5:8 ; Phil 1:23 ; Rev. 6:9) or in hell (Luke 16:23). The Beast was still conscious after a thousand years in hell (Rev. 19:20 ; 20:10). It makes no sense to resurrect unbelievers to everlasting judgment (Dan. 12:2 ; John 5:28–29) before the Great White Throne (Rev. 20:11–15) unless they are conscious.

Objections about Hell. Unbelievers have offered many objections to the doctrine of hell (see Lewis, *Problem of Pain,* chap. 8).

Hell Is Annihilation. The Bible clearly affirms that there is conscious suffering in hell, such as will cause "weeping and gnashing of teeth" (Matt. 8:12). Annihilated persons are not conscious of any suffering. The beast and false prophet in hell will be conscious after a thousand years of suffering (Rev. 19:20 ; 20:10 ; *see* ANNIHILATIONISM).

Annihilation would not be a punishment but a release from all punishment. Job appeared to prefer annihilation to suffering (Job 3), but God did not grant his desire. Jesus speaks of degrees of punishment (Matt. 5:22), but there can be no degrees of nonexistence.

Annihilation of the wicked is contrary to both the nature of God (*see* GOD, NATURE OF) and the nature of humans made in his image (*see* IMMORTALITY). It is not consistent with an all-loving God to snuff out those who do not do his wishes. Were God to annihilate human beings he would be attacking himself, for we are made in his image (Gen. 1:27), and God is immortal. The fact that these persons are suffering no more justifies annihilating them than it does for a

parent to kill a child who is suffering. Even some atheists have insisted that annihilation is not to be preferred to conscious freedom.

Hell Is Temporal, Not Eternal. Hell could not be just a long imprisonment. Hell must exist as long as a righteous God does against whom all hell is opposed.

While the word *forever* can mean a long time in some contexts, in this context it is used of heaven as well as hell (cf. Matthew 25). Sometimes the emphatic form of "forever and forever" is used. This phrase is used to describe heaven and God himself (Rev. 14:11 ; 20:10). And God cannot be temporal; he is eternal (Edwards, 2.85–86).

The suggestion that temporal suffering will lead to ultimate repentance is unrealistic. People in hell are gnashing their teeth which does not indicate a more godly and reformed disposition but a more rigid and stubborn rebellion. Hence, after the people have been in hell for some time there is more justification for God's punishment of them, not less. If hell had a reformational effect on people, then Jesus would not have pronounced woe on those who reject him and are headed for hell (Matt. 11:21–24). No sin would be unforgivable if people in hell were reformable (Matt. 12:31–32). Likewise, Jesus would never have said of Judas that it would have been better if he had never been born.

How can a place devoid of God's restraining grace accomplish what no efforts of his grace could accomplish on earth, namely, a change of the heart? If hell could reform wicked sinners, then they would be saved without Christ, who is the sole means of salvation (Edwards, 2.520). Suffering has no tendency to soften a hard heart; it hardens it more (*see* PHARAOH, HARDENING OF). The recidivism and hardened criminality in modern prisons confirms Edwards' point.

God's justice demands eternal punishment. "The heinousness of any crime must be gauged according to the worth or dignity of the person it is committed against" (Davidson, 50). Thus, a murder of a president or pope is deemed more heinous than that of a terrorist or Mafia boss. Sin against an infinite God is an infinite sin worthy of infinite punishment (Edwards, 2.83).

Why Not Reform People? Why eternal punishment? Why doesn't God try to reform sinners? The answer is that God does try to reform people; the time of *reformation* is called life. Peter declared that "The Lord is not slow in keeping his promise, as some understand slowness. He is patient with you, not wanting anyone to perish, but everyone to come to repentance" (2 Peter 3:9 ; cf. 1 Tim. 2:4). However, after the time of reformation comes the time of reckoning (Heb. 9:27). Hell is only for the unreformable and unrepentant, the reprobate (cf. 2 Peter 2:1–6). It is not for anyone who is reformable. If they were reformable, they would still be alive. For God in his wisdom and goodness would not allow anyone to go to hell whom he knew would go to heaven if he gave them more opportunity. As C. S. Lewis observed, the soul that seriously and constantly desires joy will never miss it. Those who seek find. To those who knock it is opened (Lewis, *Great Divorce,* 69).

God cannot force free creatures to be reformed. Forced reformation is worse than punishment; it is cruel and inhumane. At least punishment respects the freedom and dignity of the person. As Lewis insightfully notes, "To be 'cured' against one's will . . . is to be put on a

level with those who have not yet reached the age of reason or those who never will; to be classed with infants, imbeciles, and domestic animals” (Lewis, *God in the Dock,* 226). Humans are not objects to be manipulated; they are subjects to be respected because they are made in God’s image. Human beings should be punished when they do evil because they were free and knew better. They are *persons* to be punished, not *patients* to be cured.

Is Damnation for Temporal Sins Overkill? To punish a person eternally for what he did for a short time on earth seems at first like a gigantic case of overkill. However, on closer examination it turns out to be not only just but necessary. For one thing, only eternal punishment will suffice for sins against the eternal God (*see* GOD, NATURE OF). The sins may have been committed in time, but they were against the Eternal One. Furthermore, no sin can be tolerated as long as God exists, and he is eternal. Hence, punishment for sin must also be eternal.

What is more, the only alternative to eternal punishment is worse, namely, to rob human beings of freedom and dignity by forcing them into heaven against their free choice. That would be “hell” since they do not fit in a place where everyone is loving and praising the Person they want most to avoid. Or, God’s other choice is to annihilate his own image within his creatures. But this would be an attack of God on himself.

Further, without eternal separation, there could be no heaven. Evil is contagious (1 Cor. 5:6) and must be quarantined. Like a deadly plague, if it is not contained it will continue to contaminate and corrupt. If God did not eventually separate the tares from the wheat, the tares would choke out the wheat. The only way to preserve an eternal place of good is to eternally separate all evil from it. The only way to have an eternal heaven is to have an eternal hell.

Finally, if Christ’s temporal punishment is sufficient for our sins eternally, then there is no reason why eternal suffering cannot be appropriate for our temporal sins. It is not the *duration* of the action but the *object* that is important. Christ satisfied the eternal God by his temporal suffering, and unbelievers have offended the eternal God by their temporal sins. Hence, Christ’s temporal suffering for sins satisfies God eternally (1 John 2:1), and our temporal sins offend God eternally.

Hell Has No Redeeming Value. To the objection that there is no redemptive value in the damning of souls to hell, it can be pointed out that hell satisfies God’s justice and glorifies it by showing how great and fearful a standard it is. “The vindictive justice of God will appear strict, exact, awful, and terrible, and therefore glorious” (Edwards, 2.87). The more horrible and fearful the judgment, the brighter the sheen on the sword of God’s justice. Awful punishment fits the nature of an awe-inspiring God. By a majestic display of wrath, God gets back the majesty he has been refused. Those who give God no glory by choice during this life will be forced to give him glory in the afterlife.

All people, thus, are either actively or passively useful to God. In heaven believers will actively praise his mercy. In hell unbelievers will be passively useful in bringing majesty to his justice. Just as a barren tree is useful only for firewood, so the disobedient are only fuel for an eternal fire (ibid., 2.126). Since unbelievers prefer to keep at a distance from God in time, why should we not expect this to be their chosen state in eternity?

Hell Is Only a Threat, Not a Reality. Some critics believe hell is only a threat that God will not carry out. But it is blasphemy to hold that a God of truth uses deliberate lies to govern human beings. Further, it implies that "those who think hell is a deception have outwitted God Himself by uncovering it" (Davidson, 53). As Edwards stated it, "They suppose that they have been so cunning as to find out that it is not certain; and so that God had not laid His design so deep, but that such cunning men as they can discern the cheat and defeat the design" (Edwards, 2.516).

Can Saints Be Happy if a Loved One Is in Hell? The presupposition of this question is that we are more merciful than is God. God is perfectly happy in heaven, and he knows that not everyone will be there. Yet he is infinitely more merciful than are we. What is more, if we could not be happy in heaven knowing anyone was in hell, then our happiness is not in our hands but someone else's. But hell cannot veto heaven. We can be happy in heaven the same way we can be happy eating knowing others are starving, if we have tried to feed them but they have refused the food. Just as we can have healing of bad memories here on earth, even so God will "wipe away all tears" in heaven (Rev. 21:4).

Edwards noted that to suppose God's mercy does not permit suffering in hell is contrary to fact. God allows plenty of suffering in this world. It is an empirical fact that God and creature-pain are not incompatible (Gerstner, 80). If God's mercy cannot bear eternal misery, then neither can it bear lesser amounts (Edwards, 2.84). God's mercy is not a passion or emotion that overcomes his justice. Mercy so construed is a defect in God. It would make him weak and inconsistent with himself, not fit to be a Judge.

The attitudes and feelings of the saints in heaven will be transformed and correspond more to God's. Hence, we will love only what God loves and hate what he hates. Since God is not miserable at the thought or sight of hell, neither will we—even if it holds people we loved in this life. Edwards devoted a sermon to this: "The End of the Wicked Contemplated by the Righteous." In Gerstner's digest of it, "it will seem in no way cruel in God to inflict such extreme suffering on such extremely wicked creatures" (Gerstner, 90).

Why Did God Create People Bound for Hell? Some critics of hell argue that if God knew that his creatures would reject him and eventuate in such a horrible place as hell, then why did he create them in the first place? Wouldn't it have been better to have never existed than to exist and go to hell?

It is important to note that nonexistence cannot be said to be a better condition than any kind of existence, since nonexistence is nothing. And to affirm that nothing can be better than something is a gigantic category mistake. In order to compare two things, they must have something in common. But there is nothing in common between being and nonbeing. They are diametrically opposed.

Some one may *feel* like being put out of a life of misery, but such a one cannot even consistently think of nonbeing as a better state of *being* . True, Jesus said it would have been better if Judas had never been born (Mark 14:21). But this is simply a strong expression indicating the severity of his sin, not a statement about the superiority of nonbeing over being. In a parallel condemnation on the Pharisees, Jesus said Sodom and Gomorrah would have repented

had they seen his miracles (Matt. 11:20–24 ; *see* MIRACLE). This does not mean that they actually would have repented (or God would surely have shown them these miracles— 2 Peter 3:9). It is simply a powerful figure of speech indicating that their sin was so great that “it would be *more tolerable* ” (vs. 24) in the day of judgment for Sodom than for them.

Further, simply because some will lose in the game of life does not mean it should not be played. Before the Super Bowl ever begins both teams know that one of them will lose. Yet they all will to play. Before every driver in America takes to the road each day we know that people will be killed. Yet we will to drive. Parents know that having children could end in great tragedy for their offspring as well as for themselves. Yet the foreknowledge of evil does not negate our will to permit the possibility of good. Why? Because we deem it better to have played with the opportunity to win than not to have played at all. It is better to lose in the Super Bowl than not to be able to play in it. From God’s standpoint, it is better to love the whole world (John 3:16) and lose some of its inhabitants than not to love them at all.

But People Can’t Help Being Sinners. The Bible says we are born sinners (Ps. 51:5) and are “by nature the children of wrath” (Eph. 2:3). If sinners cannot avoid sinning, is it fair to send them to hell for it?

People go to hell because they are born with a bent to sin, and they choose to sin. They are born on a road that leads to hell, but they also fail to heed the warning signs along the way to turn from destruction (Luke 13:3 ; 2 Peter 3:9).

While human beings sin because they are sinners (by nature), their sin nature does not force them to sin. As Augustine correctly said, “We are born with the propensity to sin and the necessity to die.” Notice, he did not say we are born with the necessity to sin. While sin is *inevitable,* since we are born with a bent in that direction, sin is not *unavoidable* .

The ultimate place to which sinners are destined is also avoidable. All one needs to do is to repent (Luke 13:3 ; Acts 17:30 ; 2 Peter 3:9). All are held responsible for their decision to accept or reject God’s offer of salvation. And responsibility always implies the ability to respond (if not on our own, then by God’s grace). All who go to hell could have avoided going there if they had chosen to. No pagan anywhere is without clear light from God so that he is “without excuse” (Rom. 1:19–20 ; cf. 2:12–15 ; *see* “HEATHEN,” SALVATION OF). As God sent a missionary to Cornelius (Acts 10:35), so he will provide the message of salvation for all who seek it. For “without faith it is impossible to please God, because anyone who comes to him must believe that he exists and that he rewards those who earnestly seek him” (Heb. 11:6).

Reasonableness of Hell. While many believe hell is unreasonable, following Jonathan Edwards , a good argument can be made for its rationality:

> It is a most unreasonable thing to suppose that there should be no future punishment, to suppose that God, who had made man a rational creature, able to know his duty, and sensible that he is deserving punishment when he does it not; should let man alone, and let him live as he will, and never punish him for his sins, and never make any difference between the good and the bad. . . . How unreasonable it is to suppose, that he who made

> the world, should leave things in such confusion, and never take any care of the governing of his creatures, and that he should never judge his reasonable creatures. [Edwards, 2.884]

Reasons Hell Is Rejected. As surveys show, people are far more willing to believe in heaven than in hell. No good person wants anyone to go to hell. But, as Sigmund Freud would say, it is an illusion to reject something simply because we *wish* not to believe in it. Indeed, as even some atheists have observed, the belief in hell eliminates the charge that it is merely an illusion. Whether there is a hell must be determined on the basis of evidence, not desire. The evidence for the existence of hell is strong.

If the evidence for hell is substantial, why then do so many people reject it? Edwards listed two main reasons for the unwillingness to accept hell: (1) It is contrary to our personal preference; (2) we have a deficient concept of evil and its deserved punishment.

Actually, a denial of hell is an indication of human depravity. Edwards draws attention to our inconsistency. We are all aware of the heinous nature of wars and acts against humanity. Why are we not equally shocked at how we regularly show contempt for the majesty of God (Edwards, 2.83). Our rejection of hell and God's mercy are an indication of our own depravity—and therefore we are deserving of hell. Edwards wrote, "Doth it seem to thee incredible, that God should be so utterly regardless of the sinner's welfare, as to sink him into an infinite abyss or misery? Is this shocking to thee? And is it not at all shocking to thee that thou shouldst be so utterly regardless as thou hast been to the honour and glory of the infinite God?" (ibid., 2.82).

Henotheism. *Henotheism* is a type of polytheism that believes there is one supreme god among the many gods that exist, such as Zeus in Greek polytheism. It is not to be confused with theism or monotheism (*see* MONOTHEISM, PRIMITIVE) which believes there is only one supreme God and no other gods.

Hick, John. *The Life and Works of Hick.* John Hick is one of the most important philosophers of religion of the late twentieth century. His literary output and influence has been a strong force against orthodox Christianity at several crucial junctures. This includes the questions of the existence of God, the problem of evil, the destiny of human beings, and the deity of Christ.

The Views of Hick. Hick strongly defends pluralism and unitarianism. His theodicy (*see* EVIL, PROBLEM OF) involves both universalism and reincarnationism . All of these, including Hick's views, are discussed in other articles. Hick's main works and some evaluations of these are listed below.

Hinduism, Vedanta. *Hinduism* represents a broad category of religious beliefs, most of which are pantheistic (*see* PANTHEISM) or panentheistic (*see* PANENTHEISM). One of the oldest forms of pantheism is found in the last section of the Vedas, the Hindu scriptures. This final section is called the *Upanishads* . Because the *Upanishads* came at the end of each of the four Vedas, the *Upanishads* came to be spoken of as the Vedanta, meaning end or goal of the Vedas. "Thus it is that when a modern Hindu speaks of the Vedanta he may have both senses more or less in mind, the scriptures referred to being for him that last part of the Vedas and at the same time their ultimate reason for existence, their perfect culmination—in a word, their highest wisdom" (Prabhavananda, *Spiritual Heritage,* 39).

The author and date of the *Upanishads* are unknown. They consist of the recorded experiences of Hindu sages (ibid., 39, 40). The *Upanishads* , along with the *Bhagavad-Gita* , lay the foundation for Vedanta Hinduism, which is a classic example of pantheism (*see also* MONISM ; ONE AND MANY, PROBLEM OF ; PARMENIDES ; PLOTINUS).

Vedantic View of God. Not all forms of Hinduism believe in an impersonal God. Bhakti Hinduism does not. Nor does Hare Krishna. However Vedanta pantheism teaches that only one God (Brahman) exists. This God is at once infinite in form, immortal, imperishable, impersonal, all-pervading, supreme, changeless, absolute, and indivisibly one, and at the same time none of these. For God is beyond all thought and speech:

> Him [Brahman] the eye does not see, nor the tongue express, nor the mind grasp. Him we neither know nor are able to teach. Different is he from the known, and . . . from the unknown. He truly knows Brahman who knows him as beyond knowledge; he who thinks

that he knows, knows not. The ignorant think that Brahman is known, but the wise know him to be beyond knowledge. [see *Upanishads,* 30, 31]

Brahman is inexpressible and indefinable. Nothing can be truly said or thought of Brahman. This is graphically illustrated by the Hindu philosopher Sankara in his commentary on the Upanishads: " 'Sir,' said a pupil to his master, 'teach me the nature of Brahman.' The master did not reply. When a second and a third time he was importuned, he answered: 'I teach you indeed, but you do not follow. His name is silence' " (Prabhavananda, *Spiritual Heritage,* 45).

Vedantic View of the World. Vedanta pantheism also teaches that all is God and God is all. There is only one reality. The world that we see, hear, touch, taste, and smell does not actually exist. It appears to exist, but it is in fact an illusion, or *maya* . The universe we perceive is like walking through a dense forest at night and seeing what appears to be a snake. But when we return to the same spot in the light of the day, we see that the snake really was a rope. The rope looked like a snake, but it actually was not a snake. Just as the snake *appeared* to exist, so the universe *appears* to exist but it actually does not. Instead the universe is *maya,* an illusion superimposed upon the only true reality, Brahman.

As the *Upanishads* state: "Brahman alone is—nothing else is. He who sees the manifold universe, and not the one reality, goes evermore from death to death" (Prabhavananda, *Upanishads,* 21). "Meditate, and you will realize that mind, matter, and Maya (the power which unites mind and matter) are but three aspects of Brahman the one reality" (ibid., 119).

Vedantic View of Humanity. Vedanta pantheism says that humankind is Brahman. *Maya,* or the illusory universe, has deceived us into thinking that each person is a particular in the universe. But if the person would clear the senses and mind of *maya* and meditate upon the true Self *(Atman),* then the realization would come that Atman is Brahman, the one true reality. The depth of a person's soul is identical to the depth of the universe.

Having attained to Brahman, a sage declared: "I am life. . . . I am established in the purity of Brahman. I have attained the freedom of the Self. I am Brahman, self-luminous, the brightest treasure. I am endowed with wisdom. I am immortal, imperishable" (ibid., 54).

Vedantic View of Ethics. According to Vedanta pantheism, people must transcend the world of illusion to discover the true Self (Prabhavananda, *Spiritual Heritage,* 55). This is accomplished by going beyond good and evil. "When the seer beholds the Effulgent One, the Lord, the Supreme Being, then, transcending both good and evil, and freed from impurities, he unites himself with him" (*Upanishads,* 47). When a person unites himself with Brahman, he no longer will be plagued by such thoughts as " 'I have done an evil thing' or 'I have done a good thing.' " For to go beyond good and evil is to be troubled no more by what has been done (ibid., 111). It is to become unattached to personal (or anyone else's) past, present, or even future actions. Even the results of any actions will be viewed with indifference. "When your intellect has cleared itself of its delusions, you will become indifferent to the results of all action, present or future" (Prabhavananda, *Bhagavad-Gita,* 41).

This drive toward indifference to any action is explained most clearly in the *Bhagavad-Gita* . In the *Gita* a long dialogue occurs between Krishna, a manifestation of Brahman, and his friend and disciple, Arjuna. Arjuna tells Krishna of his reluctance to fight against a people among whom he has many friends. He asks Krishna how killing his friends could possibly be justified. Krishna tells Arjuna that he must detach himself from the fruits of his actions, no matter what they are. Thus states Krishna:

He whose mind dwells

Beyond attachment,

Untainted by ego,

No act shall bind him

With any Bond:

Though he slay these thousands

He is no slayer. [ibid., 122]

Krishna explains to Arjuna that this state of union with Brahman can be achieved by following one or any combination of the following paths:

1. *Raga yoga*— the path of union through meditation and mind control;

2. *Karma yoga* —the path of union through work;

3. *Jnana yoga* —the path of union through knowledge; or

4. *Bhakti yoga*— the path of union through love and devotion (Prabhavananda, *Spiritual Heritage,* 98, 123–29).

But any path one follows must be accompanied by unattachment or indifference to any action. Only then will good and evil be transcended and union with Brahman attained.

Human Destiny. Realizing one's oneness with Brahman is essential in Vedanta pantheism, for apart from this realization one is doomed forever to the cycle of *samsara* . *Samsara* is the wheel of time and desire, or birth, death, and rebirth (*see* REINCARNATION). It is the wheel to which everything in the world of illusion is shackled. And *samsara* "itself is subject to and conditioned by endless cause, the *dharma* of the universe" (Corwin, 22).

One's life is also determined by the law of *karma* or action. This is the moral law of the universe. Huston Smith explains that *karma* is "the moral law of cause and effect." It is absolutely binding and allows no exceptions. *Karma* says that every decision made by an

individual in the present is caused by all prior decisions in past lives and will in turn affect every future decision (Smith, 76).

A person whose *karma* is good may follow one of two possible paths. One who manages to free self from *samsara*— the cycle of birth and rebirth—will attain to higher planes of existence or consciousness until becoming one with the divine being "in his impersonal aspect and so reaches at last the end of his journey" (*Spiritual Heritage,* 70).

One who has been good, but not good enough to become free from *samsara* will go "to one or another heaven, where he enjoys the fruits of his good deeds which he has done in the body . . . and when these fruits are no more, he is born again, that is, reincarnated" on earth in "a new body appropriate to a new and higher realm of being" (ibid., 70–71). If a person's *karma* is largely evil, then he "goes to the regions of the wicked, there to eat the bitter fruits of his deeds. These fruits once exhausted, he too returns to earth" in a reincarnated state (ibid., 71).

Concerning the law of *karma* and the cycle of *samsara* , "it is on this earth that a man determines his spiritual destiny and achieves his final realization" (ibid.). Salvation is solely of personal efforts. Higher states of existence offer rewards of happiness and lower states are punishments that each person earns on his own. "The history of a particular individual, the number of times he experiences rebirth, or reincarnation as it is called, depends entirely upon the quality of his will, upon the moral effort he puts forth" (ibid., 27) (*see* HELL).

Ultimately all humankind will achieve liberation from *samsara* and union with *Brahman* . Some people may return to earth often, but eventually they will all earn their salvation. As Prabhavananda says, "The Upanishads know no such thing as eternal damnation—and the same is true of every other Hindu scripture" (ibid., 71 [see HELL]).

Vedanta pantheism is the absolute pantheism of the East. Hinduism has found more popular expression and favor in the West through such religious groups and practices as Transcendental Meditation and the International Society for Krishna Consciousness. Vedanta pantheism is an absolute monism, declaring that God is all and all is One.

Evaluation. Like other worldviews, monism has positive and negative dimensions. Although its view of ultimate reality is wrong, Vedantic Hinduism can be commended for its quest to know ultimate reality. There is more to reality than the world of our senses perceive. The desire to negate all limitations of ultimate reality is also good. The ultimate cannot be limited by human sensations or perceptions. Hinduism grapples with the basic problem of evil (*see* EVIL, PROBLEM OF). It acknowledges that evil must be explained and dealt with.

Since Vedantic Hinduism is a form of monism and pantheism, it is evaluated under those topics.

Its basic metaphysical error lies in a rejection of the analogy of being (*see* ANALOGY). All being is not univocal—the same thing. There is Infinite Being, and there are finite beings, and these are different kinds of beings. There is an analogy of being.

Likewise, the denial of the reality of evil is a classic form of illusionism . But one cannot know the world is an illusion who does not know what is real. Knowing the real is a prerequisite for knowing what is not real.

In order to maintain an absolute pantheism, monists must deny the validity of sense knowledge. The senses tell us there are many things and that they are physical. The monist must deny both of these pieces of information about reality. But the denial of all sense knowledge is self-defeating. One could not know the senses were being deceptive without trusting in the senses to tell this. We see a crooked stick in the water and know that our senses are playing a trick on us. How do we know the stick is really straight? We must use our senses. The sense of sight tells what it looks like when out of the water and touch tells what it feels like in the water.

A monist expects us to trust our senses when we look at their books or listen to their lectures so that we will understand them. They fail to recognize that while knowledge is more than sensation, it begins with sensation. Everything in the mind was first in the senses except the mind itself. So, we know more than sensation, but we do not know the world without sensation. Sensation is basic to all understanding of reality.

Epistemologically, monistic Hinduism is subject to many of the same criticisms as agnosticism . It is self-defeating, for it uses the basic laws of thought in order to express its views about what it claims is inexpressible. It uses first principles in its rejections of first principles and finite reality.

The ethics of Vedantic Hinduism is a form of relativism, since it denies that there are moral absolutes (*see* MORALITY, ABSOLUTE NATURE OF). This too is self-defeating. One cannot avoid all moral absolutes without affirming the moral absolute that there are no moral absolutes. The claim that one "ought" to avoid absolutes is a moral "ought" of its own. One cannot claim that ultimate reality goes beyond all good and evil unless there is an ultimate moral principle by which to measure good and evil. But in this case there is an ultimate moral standard.

Historical Apologetics. Historical apologetics stresses the historical evidence as the basis for demonstrating the truth of Christianity (*see* APOLOGETICS, TYPES OF). At this point it overlaps with classical apologetics. The crucial difference between the two is that historical apologetics does not believe that it is necessary to first establish the existence of God. Historical apologists believe that the truth of Christianity, including the existence of God, can be proven from the foundation of historical evidence alone.

This assumption places historical apologetics within the broad class of *evidential apologetics* , but it differs in that it stresses the importance, if not necessity, of beginning with the historical evidence for the truth of Christianity. Usually, the historical apologist sees the resurrection of Christ as the linchpin of apologetics. In this sense, it can be called *resurrection apologetics* .

Proponents of Historical Apologetics. Christianity is an historical religion, so it is understandable that it would have an historic emphasis from the very beginning. The earliest apologists, including Justin Martyr, Tertullian , Clement of Alexandria, and Origen , defended the historicity of Christianity. Likewise, the classical apologists (*see* CLASSICAL APOLOGETICS), such as Augustine , Anselm , and Thomas Aquinas, considered historical apologetics as an important part of their overall strategy in defending the Christian faith.

However, what distinguishes historical apologetics as a discipline is its belief that one can defend the whole of the Christian faith, including the existence of God and the fact of miracles, strictly from the historical evidence, without the necessity of any prior appeal to theistic arguments (although some use theistic evidences in a supplementary way). This emphasis appears to be largely a modern phenomenon. Contemporary apologists who fall into this category include John Warwick Montgomery and Gary Habermas (*see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE).

Contrast with Other Systems. Historical apologetics differs from both presuppositional apologetics and classical apologetics, although it has things in common with them.

Historical versus Presuppositional Apologetics. Historical apologetics disagrees with the various forms of presuppositional apologetics (*see* APOLOGETICS, PRESUPPOSITIONAL) over the nature of evidence itself and the nature of historical evidence in particular.

The historical apologists, in agreement with the classical apologists, begin with evidence to demonstrate the truth of Christianity. Presuppositionalists, on the other hand, begin with the unbeliever's presuppositions. At issue is the validity of evidence to support truth. The pure (revelational) presuppositionalists insist that no evidence, historical or otherwise, makes any sense unless it is interpreted in the grid of one's overall Christian worldview. The historical apologist believes that the historical facts are self-interpreting in their historical context. Pure presuppositionalists, on the other hand, insist that no facts are self-interpreting; all facts are interpreted and require a Christian worldview framework for proper understanding.

Historical versus Classical Apologetics. Historical apologetics has much in common with classical apologetics. Both believe in the validity of historical evidence. Both see historical evidence to be crucial to the defense of Christianity. However, they sharply disagree over the need for theistic apologetics as logically prior to historical apologetics. Classical apologetics believes it makes no sense to speak about the resurrection as an act of God unless one had first established that a God exists who can first act. The historical apologists, on the other hand, argues that one can show that God exists by demonstrating from the historical evidence alone that an act of God occurred, as in the resurrection of Jesus Christ.

The Historical Approach. The basic approach of historical apologetics is to begin with the historicity of the New Testament documents and then to use the miracles of Christ, particularly the resurrection, to demonstrate that Christ is the Son of God (thereby establishing that a theistic God exists who can work miracles).

A typical approach of historical apologetics might begin by attempting to show the historicity of the New Testament documents. This usually includes arguments for the authenticity of the New Testament documents (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT MANUSCRIPTS) and the reliability of the New Testament witnesses (*see* NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT, NON-CHRISTIAN SOURCES).

The second step would be to examine the New Testament claims of Christ to be the Son of the theistic God who offers miraculous proofs for his claims. The most important of these proofs is that Christ was resurrected from the dead (*see* MIRACLES, ARGUMENTS AGAINST).

Third, a defense of the miracles of Christ, particularly his resurrection, is given. Sometimes this is supported by historical arguments outside the New Testament, but the basic reliability of the New Testament documents is the usual (and essential) focus.

From these premises alone it is concluded that Jesus is the Son of the one, true, theistic God who alone can account for these miraculous events in Jesus' life. From the deity of Christ it can be, and often is, argued that the Bible is the Word of God, since Jesus (who is God) affirmed it to be so (*see* BIBLE, EVIDENCE FOR ; BIBLE, JESUS' VIEW OF). In this way, God, miracles, the deity of Christ (*see* CHRIST, DEITY OF), and the inspiration of the Bible are all supported by way of a historical argument.

Evaluation. Critiques of historical apologetics come from two sides, the presuppositionalists and the classical apologists.

Bare Facts? Presuppositionalists, and even some classical apologists, object that historical apologetics begin with the false assumption that the historical facts "speak for themselves." The historical approach wrongly assumes that there are "bare facts" that are "self-interpreting." These are facts which any fair-minded person can see and from which draw the proper conclusions. But all "facts" gain meaning from their ultimate worldview context. A worldview is like a pair of tinted glasses that color everything seen through their lenses. All facts are interpreted facts. So-called bare facts are like dots scattered over a sheet of paper. No connecting lines are there, and

the dots are meaningless unless the mind connects them. How the lines are drawn depends on one's perspective.

As noted among objections to classical apologetics, only a theist understands the resurrection of Jesus of Nazareth as a supernatural act of the theistic God and that this act demonstrates that Jesus is the unique Son of a theistic God (*see* THEISM). That only theists, or tacit theists, come to these conclusions indicates that a theistic worldview is logically prior to the identification even of a resurrection from the dead as supernatural (*see* RESURRECTION, EVIDENCE FOR). The event cannot be a special act of God unless there is a God who can perform such special acts (*see* GOD, NATURE OF).

This is not to say that *psychologically* an event like this could not trigger belief in God, were some skeptic or agnostic to come to believe it actually happened. It only means that only one who accepts at least the possibility, if not plausibility, of a theistic view would come to this conclusion. The vast majority of people who come to believe in Christianity because of the miracles of Christ and the apostles do so only because they already have an explicit or implicit theistic worldview. For example, members of preliterate people groups are often converted to Christianity after they come to believe in such miraculous events. But these people already held a tacit theism that worshiped a high god or sky God (*see* MONOTHEISM, PRIMITIVE). Even deists (*see* DEISM) believe God performed the big miracle of creating the world (*see* CREATION AND ORIGINS). Thus, a resurrection from the dead could evoke their belief that God could do other miracles as well. But the fact remains, both in principle and in practice, that belief in a miracle working God is logically prior to belief that any given event is a miracle, including the event of someone being raised from the dead.

Whose Fingerprint? Other gaps in the historical apologetic approach can only be filled if one holds a theistic worldview. For example, a crucial step in the overall apologetic is to be able to identify a given event as a miracle. But how does one know that a miracle is the "fingerprint of God" to confirm a truth claim of a prophet of God unless one already knows that there is a God and what his "fingerprints" are like? Only if one knows what God is like can he identify god-like acts. The very identifiability of an unusual act as a miracle depends on prior knowledge of such a God (*see* MIRACLES, IDENTIFIABILITY OF).

What Sort of God? Unless one assumes the existence of a theistic God (who is morally perfect and would not deceive), the historical argument does not work. Suppose there were not a morally perfect God who, nonetheless, had the ability to perform miracles. Could he not deceive people by performing miracles for an impostor? Crucial to the historical argument is the premise that *God would not perform a miracle through or for someone who is making a fraudulent claim in his Name* (*see* MIRACLES AS CONFIRMATION OF TRUTH). Unless one has prior assurance that the God who performs such miracles is an essentially perfect Being (i.e., a theistic God) who would not so deceive us, then one cannot be sure that the historical evidence for a miracle actually supports the claim of the one through whom or for whom the miracle is being performed.

History, Objectivity of. The overall argument in defense of Christianity (*see* APOLOGETICS, ARGUMENT OF) is based on the historicity of the New Testament documents (*see* NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT, HISTORICITY OF). But this in turn is grounded in the assertion that history is objectively knowable. Since this is strongly challenged by contemporary historians, it is necessary to counter this claim in order to secure the defense of Christianity.

Objections to Objective History. Many arguments have been advanced against the position that history is objectively knowable. The discussion here follows generally an excellent summary found in an unpublished master's thesis by William L. Craig (see Craig). There are at least ten arguments against the objectivity of history to be examined (see Beard, 323–25).

If these arguments are valid, it will make verification of Christianity via a historical method impossible. These ten arguments fall into four broad categories: methodological, epistemological, axiological, and metaphysical.

Epistemological Objections. Epistemology deals with how one knows, and the historical relativist contends that the very conditions by which one knows history are so subjective that one cannot have an objective knowledge of history. Three main objections are offered.

The nonobservability of history. Historical subjectivists argue that the substance of history, unlike that studied by empirical science, is not directly observable. The historian does not deal with past events, but with statements about past events. This fact enables the historian to deal with facts in an imaginative way. Historical facts, they insist, exist only within the creative mind of the historian. The documents do not contain facts, but are, without the historian's understanding, mere ink lines on paper.

Further, once the event is gone it can never be fully recreated. The historian must impose meaning on the fragmentary and secondhand record. "The event itself, the facts, do not say

anything, do not impose any meaning. It is the historian who speaks, who imposes a meaning" (Becker, "What Are Historical Facts?" 131).

Two reasons allow the historian only indirect access to the past. First, the historian's world is composed of records and not events. This is why the historian must contribute a "reconstructed picture" of the past. In this sense the past is really a product of the present. Second, the scientist can test his view, whereas experimentation is not possible with historical events. The empirical scientist has the advantage of repeatability; he may subject his views to falsification. The historian cannot. The unobservable historical event is no longer verifiable; it is part of the forever departed past. Hence, what one believes about the past will be no more than a reflection of imagination. It will be a subjective construction in the minds of present historians but cannot hope to be an objective representation of what really happened.

The fragmentary nature of historical accounts. At best a historian can hope for completeness of documentation, but completeness of the events themselves is never possible. Documents at best cover a small fraction of the events (Beard, 323). From only fragmentary documents one cannot validly draw full and final conclusions. The documents do not present the events but only an interpretation of the events mediated through their recorders. At best we have a fragmentary record of what someone else thought happened. So "what really happened would still have to be reconstructed in the mind of the historian" (Carr, 20). Because the documents are so fragmentary and the events so distant, objectivity becomes a will-o'-the-wisp for the historian. Too few pieces of the puzzle remain, and the partial pictures on the few pieces only suggest the mind of the one who passed the pieces down.

Historians are historically conditioned. Historical relativists insist that the historian is a product of a time and is subject to unconscious programming. It is impossible to stand back and view history objectively because the observer is part of the historical process. Historical synthesis depends on the personality of the writer as well as the social and religious milieu in which the writer lives (Pirenne, 97). In this sense one must study the historian before one can understand the historian's history.

Since the historian is part of the historical process, objectivity can never be attained. The history of one generation will be rewritten by the next, and so on. No historian can transcend historical relativity and view the world process from the outside (Collingwood, 248). At best there can be successive, less than final, historical interpretations, each viewing history from the vantage point of its own generation of historians. There is no such person as a neutral historian.

Methodological Objections. Methodological objections relate to the procedure by which historians do their work. Three major methodological objections attack the concept that history is objective enough to establish the truth of Christianity.

The selective nature of research. Not only does the historian lack access to events and must work with their fragmentary interpretations; what makes objectivity more hopeless is that the historian selects from among these fragmentary reports. Historians do not even touch some volumes in archives (Beard, 324). The actual selection among the fragmentary accounts is influenced by subjective and relative factors, including personal prejudice, availability,

knowledge of languages, personal beliefs, and social conditions. The historian becomes inextricably a part of the history written. What is included and what is excluded in interpretation will always be a matter of subjective choice. No matter how objective a historian, it is practically impossible to present what really happened. A "history" is no more than an interpretation based on a subjective selection of fragmentary interpretations of past and unrepeatable events.

So, it is argued, the facts of history do not speak for themselves. "The facts speak only when the historian calls on them; it is he who decides to which facts to give the floor, and in what order or context" (Carr, 32). Indeed, when the "facts" speak, it is not the original events that are articulating, but rather later fragmentary opinions about those events. The original facts or events have perished. So, by the very nature of the project, the historian can never hope for objectivity.

The need to structure the facts. Partial knowledge of the past makes it necessary for the historian to "fill in" gaping holes with imagination. As a child draws the lines between the dots on a picture, the historian supplies the connections between events. Without the historian the dots are not numbered, nor arranged in an obvious manner. Imagination provides continuity.

Furthermore, the historian is not content to tell us simply what happened, but feels compelled to explain why it happened (Walsh, 32). This makes history fully coherent and intelligible. Good history has both theme and unity, which are provided by the historian. Facts alone do not make history any more than do disconnected dots make a picture. Herein, according to the subjectivist, lies the difference between chronicle and history. The former is merely the raw material. Without the structure provided by the historian, the "stuff" of history would be meaningless.

The study of history is a study of causes. The historian wants to know *why* , to weave a web of interconnected events into a unified whole. So subjectivity is inevitably interjected. Even if there is some semblance of objectivity in chronicle, nonetheless there is no hope for objectivity in history. History is, in principle, nonobjective because the very thing that makes it history (as opposed to mere chronicle) is the interpretive structure of framework given to it from the subjective vantage point of the historian. Hence, it is concluded, the necessity of structure inevitably makes objectivity impossible.

The need to select and arrange. The historian views fragmentary documents indirectly through the interpretation of the original source. In the process a selected amount of material from available archives is hung on an interpretive structure by the use of the historian's own value-laden language within an overall worldview. Events come to be understood from the relative vantage point of the historian's generation, and even the topics studied accord with the researcher's subjective preferences. The dice are loaded against objectivity from the start. In the actual writing an historian covers non-repeatable events from fragmentary, secondhand accounts from a personal point of view while subjectively arranging the material (Collingwood, 285–90).

The selection and arrangement will be determined by personal and social factors. The final written product will be prejudiced by what is included and by what is excluded. It will lack objectivity by how facts are arranged and emphasized. The selection in terms of the framework given will either be narrow or broad, clear or confused. Whatever its nature, the framework

reflects the mind of the historian (Beard, 150–51). This moves one still further away from objectively knowing what really happened.

Subjectivists conclude that hopes of objectivity are dashed at every point in the process.

An Axiological (Value) Objection. The historian cannot avoid making value judgments (*see* TRUTH, NATURE OF). This, argue historical relativists, renders objectivity unobtainable. For even in the selection and arrangement of materials value judgments are made. Titles of chapters and sections imply values of the writer.

As one historian put it, the very subject matter of history is "value-charged" (Dray, 23). The facts of history consist of murders, oppression, and other evils that cannot be described in morally neutral words. By use of ordinary language, the historian is forced to impose values. Whether, for instance, one is called a "dictator" or a "benevolent ruler" is a value judgment. How can one describe Adolf Hitler without making value judgments? And if one were to attempt a kind of scientifically neutral description of past events without any stated or implied interpretation of human purposes, it would not be history but mere raw-boned chronicle without historical meaning.

There is no way for the historian to keep out of the history. Perspectives and prejudices will be expressed in value language by which and through which the world is viewed. In this sense objectivity is unattainable. Every writer will inevitably evaluate things from a subjective perspective and chosen words.

Metaphysical Objections. Three metaphysical objections have been leveled against the belief in objective history. Each is predicated, either theoretically or practically, on the premise that worldview colors the study of history.

The unavoidability of worldviews. Every historian interprets the past in the overall framework of a *Weltanschauung.* Every historian operates from inside one of three philosophies of history: (1) History is a *chaotic* jumble of meaningless events; (2) the events of humankind's story repeat themselves in some sort of *cycle* ; and (3) events are pushing forward the story in a *linear* fashion toward an endpoint (Beard, 151). Which one of these the historian adopts will be a matter of faith or philosophy. Unless one view or another is presupposed, no interpretation is possible. The *Weltanschauungen* determine whether the historian sees the events as a meaningless maze, a series of endless repetitions, or a purposeful advance. These worldviews are both necessary and inevitably value oriented. Without a worldview the historian cannot interpret the past; but a worldview makes objectivity impossible.

A worldview is not generated from the facts. Facts do not speak for themselves. The facts gain meaning only within the overall context of the worldview. Without the structure of the worldview framework, the "stuff" of history has no meaning. Augustine, for example, viewed history as a great theodicy, but W. F. G. Hegel saw it as an unfolding of the divine. It is not an archaeological or factual find but simply the religious or philosophical presuppositions which prompted each person to develop a view. Eastern philosophies of history are even more diverse; they involve a cyclical rather than a linear pattern.

Once one admits the relativity or perspectivity of one worldview instead of another, the historical relativists insist that all rights to claim objectivity have been waived. If there are different ways to interpret the same facts, depending on the overall perspective, then there is no single objective interpretation of history.

Miracles are suprahistorical. Even if one grants that *secular* history could be known objectively, there still remains the problem of the subjectivity of *religious* history. Some writers make a strong distinction between *Historie* and *Geschichte* (Kahler, 63; *see* KAHLER, MARTIN). The former is empirical and objectively knowable to some degree; the latter is spiritual and unknowable in a historical or objective way. But as spiritual or suprahistorical, there is no objective way to verify it. Spiritual history has no necessary connection with the spatiotemporal continuum of empirical events. It is a "myth" (*see* MIRACLES, ARGUMENTS AGAINST ; MIRACLES, MYTH AND ; MYTHOLOGY AND THE NEW TESTAMENT). It offers subjective religious significance to the believer but lacks objective grounding. Like the story of George Washington and the cherry tree, *Geschichte* is a story made up of events which probably never happened but which inspire men to some moral or religious good.

If this distinction is applied to the New Testament, then even granted that the life and central teachings of Jesus of Nazareth can be objectively established, there is no historical way to confirm the miraculous dimension of the New Testament (*see* MIRACLES IN THE BIBLE). Miracles do not happen as part of *Historie* and therefore are not subject to objective analysis; they are *Geschichte* events and as such cannot be analyzed by historical methodology. Many contemporary theologians have accepted this distinction. Paul *Tillich claimed that it is "a disastrous distortion of the meaning of faith to identify it with the belief in the historical validity of the Biblical stories" (Tillich, 87). Rather, with Soren Kierkegaard , Tillich believed the important thing is that it evoke an appropriate religious response. With this Rudolf Bultmann and Shubert Ogden would concur, as would much of contemporary theological thought.

Even such as Karl Jaspers, who oppose Bultmann's more radical demythologization view, accept the distinction between spiritual and empirical dimensions of miracles (Jaspers, 16–17). On the more conservative end of those maintaining this distinction is Ian Ramsey. According to Ramsey, "it is not enough to think of the facts of the Bible as 'brute historical facts' to which the Evangelists give distinctive 'interpretation.' " "No attempt to make the language of the Bible conform to a precise straight-forward public language—whether that language be scientific of historical—has ever succeeded." The Bible is about situations which existentialists call "authentic" or "existential-historical" (Ramsey, 118, 119, 122). There is always something "more" than the empirical in every religious or miraculous situation.

Miracles are historically unknowable. On the basis of Ernst Troeltsch 's principle of analogy, some historians have come to object to the possibility of ever establishing a miracle based on testimony about the past. As discussed more fully in Miracles, Arguments Against, Troeltsch stated the problem this way:

> On the analogy of the events known to us we seek by conjecture and sympathetic understanding to explain and reconstruct the past. . . . Since we discern the same process

of phenomena in operation in the past as in the present, and see, there as here, the various historical cycles of human life influencing and intersecting one another.

Without uniformity we could know nothing about the past, for without an analogy from the present we could know nothing about the past. In accord with this principle some have argued that "no amount of testimony is ever permitted to establish as past reality a thing that cannot be found in present reality" (Becker, "Detachment," 12–13). Unless one can identify miracles in the present there is no analogy on which to base understanding of alleged miracles in the past. The historian, like the scientist, must adopt a methodological skepticism toward alleged events for which there are no contemporary parallels. The present is the foundation of our knowledge of the past. As F. H. Bradley put it:

> We have seen that history rests in the last resort upon an inference from our experience, a judgment based upon our own present state of things . . . ; when we are asked to affirm the existence in past time of events, the effects of causes which confessedly are without analogy in the world in which we live, and which we know, we are at a loss for any answer but this, that . . . we are asked to build a house without a foundation. . . . And how can we attempt this without contradicting ourselves? [Bradley, 100]

A Response to Historical Relativism. Despite these strong objections to the possibility of historical objectivity, the case is by no means closed. There are flaws in the historical relativists' position. The responses given are in the order of the above objections.

The Problem of Indirect Access. If by *objective* one means absolute knowledge, then no human historian can be objective. On the other hand, if *objective* means "a fair but revisable presentation that reasonable men and women should accept," then the door is open to the possibility of objectivity. In this latter sense, history is as objective as some sciences (Block, 50). Paleontology (historical geology) is considered one of the most objective of all sciences. It deals with physical facts and processes of the past. However, the events represented by fossil finds are no more directly accessible to the scientists or *repeatable* than are historical events to the historian. There are some differences. The fossil is a mechanically true imprint of the original event and the eyewitness of history may be less precise. But natural processes also can mar the fossil imprint. At least if one can determine the integrity and reliability of the eyewitness, one cannot slam the door on the possibility of objectivity in history any more than on objectivity in geology.

The scientist might contend that he can repeat the processes of the past by experimentation, whereas the historian cannot. But even here the situations are similar. In this sense history too can be "repeated." Similar patterns of events, by which comparisons can be made, recur today as they occurred in the past. Limited social experiments can be performed to see if human history "repeats." The historian, no less than the scientist, has the tools for determining what really happened in the past. The lack of direct access to the original facts or events does not hinder the one more than the other (*see* ORIGINS, SCIENCE OF).

Likewise, scientific facts do not "speak for themselves" any more than do historical facts. If *fact* means "original event," then neither geology nor history is in possession of any facts. *Fact* must be taken by both to mean information about the original event, and in this latter sense facts do not exist merely subjectively in the mind of the historian. What one does with data, what meaning or interpretation is given to them, can in no way eliminate the data. There remains for both science and history a hard core of objective facts. The door is thereby left open for objectivity. One may draw a valid distinction between propaganda and history. Propaganda lacks sufficient basis in objective fact but history does not. Without objective facts no protest can be raised either against poor history or propaganda. If history is entirely in the mind of the beholder, there is no reason one cannot decide to behold it any way he desires.

This brings us to the crucial question as to whether "facts speak for themselves" because they are objective. An argument might be advanced that, yes, they do. It is self-defeating to affirm that facts are without meaning, since the affirmation about the allegedly meaningless fact is a meaningful statement about fact. All facts are meaningful; there are no so-called bare facts. But this argument does not really prove that facts speak for themselves. It does show that facts can and do bear meaning. But what it must prove (and fails to prove) is that facts bear only one meaning and that they bear it evidently. The fact that no meaningful statement about facts can be made without attributing some meaning to the facts does not prove that the meaning emanated from the facts. It is possible that the meaning was assigned to the facts by the one making the meaningful statement about them. Indeed, only "mean-ers" (i.e., minds) can emanate meaning.

It is not at all clear in what sense an objective fact can mean anything in and of itself. It is a subject (e.g., a mind) that utters meaning about objects (or about other subjects), but objects as such are not subjects that are emitting meaning. This is so unless we assume that all objective facts are really little minds transmitting meaning or transmitters through which some other minds or a Mind is communicating. But to assume this would be to invoke one particular worldview over another in order to prove that "facts speak for themselves." And even then it could be argued that the facts are not speaking for themselves but for the Mind (God) who is speaking through them.

It seems best to conclude, then, that objective facts do not speak for themselves. Finite minds may give differing interpretations of them or an infinite Mind may give an absolute interpretation of them, but there is no one objective interpretation a finite mind can give to them. Of course, if there is an absolute Mind from whose vantage point the facts are given absolute or ultimate meaning, then there is an objective interpretation of the facts which all finite minds should concur is the ultimate meaning. If this is the correct worldview (*see* GOD, EVIDENCE FOR ; THEISM), then there is an object meaning to all facts in the world. All facts are theistic facts, and no nontheistic way of interpreting them is objective or true. Hence, objectivity in history is possible, since in a theistic world history would be His-story. Objectivity, then, is possible within a worldview.

The Fragmentary Nature of Historical Accounts. The fact that the fossil record is fragmentary does not destroy the objectivity of paleontology. The fossil remains represent only a very tiny percentage of the living beings of the past. This does not hinder scientists from attempting to reconstruct an objective picture of what really happened in geological history.

Likewise, human history is transmitted through partial records. Not every bone is necessary to make some qualified judgments about the whole animal. The reconstruction of both science and history is subject to revision. Subsequent finds may provide new facts that call for new interpretations. But at least there is an objective basis in fact for the meaning attributed to the find. Interpretations can neither create the facts nor can they ignore them, if they would approach objectivity. We may conclude, then, that history need be no less objective than geology simply because it depends on fragmentary accounts. Scientific knowledge is also partial and depends on assumptions and an overall framework which may prove to be inadequate upon the discovery of more facts (*see* SCIENCE AND THE BIBLE).

Whatever difficulty there may be, from a strictly scientific point of view, in filling in gaps between the facts, once one has assumed a philosophical stance toward the world, the problem of objectivity in general is resolved. If there is a God, then the overall picture is already drawn; the facts of history will merely fill in the details of its meaning. If the universe is theistic, the artist's sketch is already known in advance (*see* THEISM); the detail and coloring will come only as all the facts of history are fit into the overall sketch known to be true from the theistic framework. In this sense, historical objectivity is most certainly possible within a given framework such as a theistic worldview. Objectivity resides in the view that best fits the facts consistently into an overall theistic system which is supported by good evidence (*see* GOD, EVIDENCE FOR).

Historical Conditioning. It is true that every historian is time bound. Each person occupies a relative place in the changing events of the spatiotemporal world. However, it does not follow that because the historian is a product of a time that the person's historical research is also a product of the time. Simply because a person cannot avoid a relative place in history does not preclude objectivity. The criticism confuses the content of knowledge and the process of attaining it (Mandelbaum, 94). Where one derives a hypothesis is not essentially related to how its truth is established.

Further, if relativity is unavoidable, the position of the historical relativists is self-refuting. For either their view is historically conditioned, and therefore unobjective, or else it is not relative but objective. If the latter, it thereby admits that it is possible to be objective in viewing history. On the contrary, if the position of historical relativism is itself relative, then it cannot be taken as objectively true. It is simply subjective opinion that has no basis to claim to be objectively true about all of history. If it is subjective it cannot eliminate the possibility that history is objectively knowable, and if it is an objective fact about history then objective facts can be known about history. In the first case, objectivity is not eliminated and in the second, relativity is self-defeated. In either case, objectivity is possible.

The constant rewriting of history is based on the assumption that objectivity is possible. Why strive for accuracy unless it is believed that the revision is more objectively true than the previous view? Why critically analyze unless improvement toward a more accurate view is the assumed goal? Perfect objectivity may be practically unattainable within the limited resources of the historian. But the inability to attain 100 percent objectivity is a long way from total relativity. Reaching a degree of objectivity which is subject to criticism and revision is a more realistic conclusion than the relativist's arguments. In short, there is no reason to eliminate the possibility of a sufficient degree of historical objectivity.

The Selectivity of Materials. The fact that the historian must select from among all possible materials does not automatically make history purely subjective. Jurors make judgments "beyond reasonable doubt" without having all the evidence. Availability of the relevant and crucial evidence is sufficient to attain objectivity. One need not know everything in order to know something. No scientist knows all the facts, and yet objectivity is claimed. As long as no important fact is overlooked, there is no reason to eliminate the possibility of objectivity in history, any more than in science.

The selection of facts can be objective to the degree that the facts are selected and reconstructed in the context in which the events represented actually occurred. Since it is impossible for any historian to pack into an account everything available on a subject, it is important to select the points representative of the period (Collingwood, 100). Condensation does not necessarily imply distortion. Further, the evidence for the historicity of the New Testament from which Christian apologetics draw is greater than for the truth of any other document from the ancient world (*see* NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT, HISTORICITY OF). If the events behind it cannot be known objectively, it is impossible to know anything from that time period.

There remains, however, the question of whether the real context and connections of past events are known, or, are knowable. Unless there is an accepted framework or structure for the facts, there is no way to reconstruct in miniature what really happened. The objective meaning of historical events is dependent on knowing the connection that the events really had when they occurred. But the events are subject to various combinations, depending on the structure given to them by the historian, the relative importance placed on them, and whether prior events are considered causal or merely antecedent. There is really no way to know the original connections without assuming an overall hypothesis or worldview by which the events are interpreted. Of course objectivity of bare facts and mere sequence of antecedent and consequent facts are knowable without assuming a worldview . But objectivity of the meaning of these events is not possible apart from a meaningful structure, such as that provided by an overall hypothesis or worldview. Hence, the problem of finding objective meaning in history, like the problem of objective meaning in science, is dependent on one's *Weltanschauung* . Objective meaning is system-dependent. Only within a given system can the objective meaning of events be understood. Once that system is known, it is possible by fair and representative selection to reconstruct an objective picture of the past. Thus within an established theistic structure objectivity is possible.

Structuring the Material of History. All the historian could possibly know about past events without assuming the truth of one interpretive framework over another is the sheer facticity and sequence of the events. When the historian moves beyond bare facts and mere order of events and begins to speak of causal connections and relative importance, an interpretive framework is needed through which to understand the facts. Whether the facts are determined to have originally had the assumed causal connection and the attributed importance will depend on whether the given worldview is correct. To affirm that facts have "internal arrangement" begs the question. The real question is, How does one know the correct arrangement? Since the facts can be arranged in one of at least three ways (chaotic, cyclical, and linear), it begs the question merely to assume that one of these is the way the facts were really arranged. The same set of dots

can have the lines drawn in many ways. The fact is that the lines are not known to be there apart from an interpretive framework through which one views them. Therefore, the problem of the objective meaning of history cannot be resolved apart from appeal to a worldview. Once the skeletal sketch is known, then one can know the objective placing (meaning) of the facts. However, apart from a structure the mere "stuff" means nothing.

Apart from an overall structure, there is no way to know which events in history are the most significant and, hence, there is no way to know the true significance of these and other events in their overall context. The argument that importance is determined by which events influence the most people is inadequate. It is a form of historical utilitarianism subject to the same criticisms as any utilitarian test for truth. The most does not determine the best; great influence does not mean great importance or value. Even after most people have been influenced, one can still question the truth or value of the event that influenced them. Of course, if one assumes as a framework that the most significant events are those that influence the most people in the long run, then utilitarian ideals will be determinative. But what right does one have to assume a utilitarian framework any more than a nonutilitarian one? Here again, it is a matter of justifying one's overall framework or worldview.

The argument advanced by some objectivists is that past events must be structured or else they are unknowable and faulty. All this argument proves is that it is necessary to understand facts through some structure, otherwise it makes no sense to speak of facts. The question of which structure is correct must be determined on some basis other than the mere facts themselves. If there were an objectivity of bare facts, it would provide only the mere "what" of history. But objective meaning deals with the why of these events; this is impossible apart from a meaning-structure in which facts may find their placement of significance. Objective meaning apart from a worldview is impossible.

However, granted that there is justification for adopting a theistic worldview, the objective meaning of history becomes possible (*see* THEISM ; GOD, EVIDENCE FOR). Within the theistic context, each fact of history becomes a theistic fact. Granted the factual order of events and known causal connection of events, objective meaning becomes possible. The chaotic and the cyclical frameworks are eliminated in favor of the linear. And within the linear view of events, causal connections emerge as the result of their context in a theistic universe. Theism provides the sketch from which history paints the complete picture. The pigments of mere fact take on real meaning as they are blended on the theistic sketch. Objectivity means systematic consistency. That is, the most meaningful way all the facts of history blend into the whole theistic sketch is what really happened. In this way, theism can provide an objective framework for historical facts.

Selecting and Arranging Materials. The historian can rearrange data about the past without distorting it (Nagel, 208). Since the original construction of events is available to neither the historian nor the geologist, the past must be reconstructed from available evidence. But reconstruction does not require revision. The historian must arrange the material. The important thing is whether it is arranged or rearranged in accordance with the events as they really occurred. As long as the historian consistently incorporates all the significant events in accordance with an overall established worldview, objectivity is secure. Objectivity arranges

facts in accordance with the way things really were. Distortion comes when facts are neglected and twisted.

The historian may desire to be selective in the compass of study, to study only the political, economic, or religious dimensions of a specific period. But such specialization does not demand total subjectivity. One can focus without losing the overall context. It is one thing to focus on specifics within an overall field but quite another to ignore or distort the overall context in which the intensified interest is occurring. As long as the specialist stays in touch with reality rather than reflecting pure subjectivity, a measurable degree of objectivity can be maintained.

Value Judgments. One may grant the point that ordinary language is value laden and that value judgments are inevitable. This by no means makes historical objectivity impossible (Butterfield, 244). Objectivity means fair dealing with the facts, to present what happened as correctly as possible. Further, objectivity means that when one interprets why these events occurred, the language of the historian should ascribe to these events the value which they had in their original context. Granting within an established worldview that certain things have a given value, then an objective account of history must reconstruct and restructure these events with the same relative value. So objectivity demands making value judgments rather than avoiding them. The question is not whether value language can be objective, but which value statements objectively portray the events. Once the worldview has been determined, value judgments are not undesirable or merely subjective; they are essential. If this is a theistic world, then it would not be objective to place anything but a theistic value on the facts of history.

The Need for an Overall Worldview. Those who argue against the objectivity of history apart from an overall worldview must be granted the point. Meaning is system-dependent. Without a worldview it makes no sense to talk about objective meaning (Popper, 150f.). Without a context meaning cannot be determined, and the context is provided by the worldview and not by the bare facts.

But granted that this is a theistic universe, it follows that objectivity is possible. In a theistic universe each fact has objective meaning; each fact is a God-fact. All events fit into the overall context of an ultimate purpose. One can determine the facts and assign them meaning in the overall context of the theistic universe by showing that they fit most consistently with a given interpretation. Then one may lay claim to having arrived at the objective truth about history.

For example, given that this is a theistic universe and that the corpse of Jesus of Nazareth returned from the grave, then the Christian can argue that this unusual event is a miracle that confirms the associated truth claims of Jesus to be the Christ. Apart from this theistic framework, it is not even meaningful to make such a claim. Overarching hypotheses are necessary to determine the meaning of events, and a theistic hypothesis is essential to claim that any historical event is a miracle.

The Historical Unknowability of Miracles. Upon examination, Ernst Troeltsch 's principle of analogy turns out to be similar to David Hume 's objection to miracles built on the uniformity of nature. No testimony about alleged miracles should be accepted if it contradicts the uniform testimony of nature. Troeltsch also rejects any particular past event for which there is no analog

in the uniform experience of the present. There are at least two reasons for denying Troeltsch's argument from analogy. First, it begs the question in favor of a naturalistic interpretation of all historical events. It is a methodological exclusion of the possibility of accepting the miraculous in history. The testimony for regularity in general is in no way a testimony against an unusual event in particular. The cases are different and should not be evaluated in the same way. Empirical generalizations ("People do not rise from the dead in normal circumstance") should not be used as counter-testimony to worthy eyewitness accounts that in a particular case someone did rise from the dead. The evidence for any particular historical event must be assessed on its own merits, aside from generalizations about other events.

The second objection to the Troeltsch analogy type argument is that it proves too much. As Richard Whately convincingly argued, on this uniformitarian assumption not only miracles would be excluded, but so would any unusual event of the past. One would have to deny that the career of Napoleon Bonaparte occurred (see Whately). No one can deny that the probability against Napoleon's successes was great. His prodigious army was destroyed in Russia; yet in a few months he led another great army in Germany, which likewise was ruined at Leipzig. However, the French supplied him with yet another army sufficient to make a formidable stand in France. This was repeated five times until at last he was confined to an island. There is no doubt that the particular events of his career were highly improbable. But there is no reason on these grounds that we should doubt the historicity of the Napoleonic adventures. History, contrary to scientific hypothesis, does not depend on the universal and repeatable. Rather, it stands on the sufficiency of good testimony for particular and unrepeatable events. Were this not so, then nothing could be learned from history.

It is clearly a mistake to import uniformitarian methods from scientific experimentation into historical research. Repeatability and generality are needed to establish a scientific law or general patterns (of which miracles would be particular exceptions). But this method does not work at all in history. What is needed to establish historical events is credible testimony that these particular events did indeed occur (*see* WITNESSES, HUME'S CRITERIA FOR). So it is with miracles. It is an unjustifiable mistake in historical methodology to assume that no unusual and particular event can be believed, no matter how great the evidence for it. Troeltsch's principle of analogy would destroy genuine historical thinking. The honest historian must be open to the possibility of unique and particular events, regardless of whether they may be described as miraculous. One must not exclude *a priori* the possibility of establishing events like the resurrection of Christ without examining the evidence. It is a mistake to assume that the same principles by which *empirical* science works can be used in *forensic* science. Since the latter deals with unrepeated and unobserved events in the past, it operates on the principles of *origin science,* not on those of *operation science* . And these principles do not eliminate, but establish, the possibility of objective knowledge of the past—whether in science or history (*see* ORIGINS, SCIENCE OF).

The Superhistorical Nature of Miracles. A miracle is supernatural. Surely the Christian apologist does not contend that miracles are mere products of the natural process. Something is miraculous when the natural process does not account for it. There must be an injection from the realm of the supernatural into the natural, or else there is no miracle (*see* MIRACLE). This is specially true of a New Testament miracle, in which the processes by which God performed acts are unknown. This is also true to some degree of a second-class miracle, where we can describe

how the miracle occurred by scientific means but not why it occurred when it did. In either case, it seems best to admit that the miraculous dimensions of a historical event are in, but not of, the natural process.

Miracles do occur within history. In accordance with the objectivity of history, there is no good reason why the Christian should yield to the radical existential theologians on the question of the objective and historical dimensions of miracles. Miracles may not be of the natural historical process but they do occur inside it. Even Karl Barth made this distinction when he wrote, "The resurrection of Christ, or his second coming . . . is not a historical event; the historians may reassure themselves . . . that our concern here is with the event which, though it is the only real happening *in* is not a real happening *of* history" (Barth, 90, emphasis added).

Unlike many existential theologians, we must also preserve the historical context in which a miracle occurs, for without it there is no way to verify the objectivity of the miraculous. Miracles do have a historical dimension without which no objectivity of religious history is possible. And as was argued above, historical methodology can identify this objectivity just as surely as scientific objectivity can be established, within the accepted framework of a theistic world. In short, miracles may be more than historical but they cannot be less than historical. It is only if miracles do have historical dimensions that they are both objectively meaningful and apologetically valuable.

A miracle is significant in different areas. A miracle can be identified within an empirical or historical context both directly and indirectly, both objectively and subjectively. Such an event is both scientifically unusual and theologically and morally relevant. The scientific dimensions can be understood in a directly empirical way; the moral dimension is knowable only indirectly through the empirical. It is both "odd" and "evocative" of something more than its empirical data. A virgin birth is scientifically odd, but in the case of Jesus it is represented as a "sign" to draw attention to him as something "more" than human. The theological and moral characteristics of a miracle are not empirically objective. In this sense they are experienced subjectively. This does not mean, however, that there is no objective basis for the moral dimensions of a miracle. If this is a theistic universe (*see* THEISM), then morality is objectively grounded in God. Hence, the nature and will of God are the objective grounds by which one can test whether the event is subjectively evocative of what is objectively in accord with the nature and will of God. The same thing applies to the truth dimensions of a miracle. They are subjectively evocative of a response to an associated truth claim. However, the truth claim must be in accord with what is already known of God. If its message does not correspond with what we know to be true of God, we should not believe the event is a miracle. It is axiomatic that acts by a theistic God would not be used to confirm what is not the truth of God.

So miracles happen in history but are not completely of history. They are nonetheless historically grounded. They are more than historical but not less than historical. There are both empirical and superempirical dimensions to supernatural events. The empirical dimensions are knowable objectively, and the latter make a subjective appeal to the believer. But even here there is objective ground in the known truth and goodness of God by which the believer can judge whether the empirically odd are really acts of the true and good God.

The Complete Relativity of History. In addition to the invalidity of the arguments of historical relativism there are some strong arguments against their conclusions in general. Two of these arguments are sufficient to demonstrate why the possibility of objectivity in history has not—and cannot—be systematically eliminated.

Objective Knowledge by Facts and Worldview. A careful look at the arguments of the relativists reveals that they presuppose some objective knowledge about history. This is seen in at least two ways. First, they speak of the need to select and arrange the "facts" of history. But if they are really facts, they present some objective knowledge in themselves. It is one thing to argue about the *interpretation* of the facts but quite another to deny that there are any facts to interpret. It is understandable that one's worldview framework colors understanding of the fact that Christ died on a cross in the early first century. But it is quite another to deny that this is a historical fact (*see* CHRIST, DEATH OF).

Second, if relativists believe one's worldview can distort how one views history, then there must be a correct interpretation. Otherwise, it would be meaningless to say that some views are distorted.

Total Historical Relativity Is Self-defeating. In fact, total relativity (whether historical, philosophical, or moral) is self-defeating (*see* FIRST PRINCIPLES). How could one know that history is completely unknowable unless something is known about it? It requires objective knowledge to know that all historical knowledge is subjective. Total relativists must stand on the pinnacle of their own absolute in order to relativize everything else. The claim that all history is subjective turns out to be an objective claim about history. Thus, total historical relativism cuts its own throat.

Of course, some might claim that historical knowledge is not totally relative but only partially so. Then history, at least some history, is objectively knowable, and Christian claims are at least possibly knowable. The historical claims for the central truths of Christianity are more amply supported by the evidence than are claims of facticity for almost any other event in the ancient world. Therefore, this is also an admission that partial relativity does not eliminate the historical verifiability of Christianity. In brief, total historical relativism is self-defeating, and partial historical relativism admits that historical arguments are justified in defending Christian faith.

The Objectivity of Historiography. Several general conclusions may be drawn from the subjectivity-objectivity debate: Foremost is that absolute objectivity is possible only for an infinite Mind. Finite minds must be content with systematic consistency. Humans can only devise revisable attempts to reconstruct the past based on an established framework of reference which comprehensively and consistently incorporates the facts into an overall sketch. At this level of objectivity, the historian can be as accurate as the scientist. Neither geologists nor historians have direct access to, nor complete data on, repeatable events. Both must use value judgments to select and structure the partial material available.

In reality, neither the scientist nor the historian can attain objective meaning without a worldview by which to understand the facts. Bare facts cannot even be known apart from some

interpretive framework. Hence, the need for structure or a meaning-framework is crucial to the question of objectivity. Unless one can settle the question as to whether this is a theistic or nontheistic world on grounds independent of the mere facts themselves, there is no way to determine the objective meaning of history. If, on the other hand, there are good reasons to believe that this is a theistic universe, then objectivity in history is a possibility. For once the overall viewpoint is established, it is simply a matter of finding the view of history most consistent with that overall system. Systematic consistency is the test for objectivity in historical, as well as in scientific matters.

Summary. Christianity makes claims about historical events, including claims that God supernaturally intervened in it. Some historians complain, however, that there is no objective way to determine the past. And even if there were an objective basis, miracles do not fit it. The historian has fragmentary, secondhand material from which to select. These fragments cannot be objectively understood, because the historian inevitably imposes an interpretive value structure and worldview. Miracle-history is particularly unreliable, since it is neither empirical nor observable. Superhistory or myth, it is useful to evoke a subjective religious response but not to reliably describe the past.

These objections, however, fail. History can be as objective as science. The geologist also views second-hand, fragmentary, and unrepeatable evidence from a personal vantage point. Although interpretive frameworks are necessary, not every worldview must be relative and subjective.

As to the objection that miracle-history is not objectively verifiable, miracles can occur in the historical process, like any other event. The only difference is that the miracle cannot be explained by the flow of events. Christian miracles claim to be more than empirical, but they are not less than historical. Historically, miracles can be verified. Moral and theological dimensions of miracles are not totally subjective. They call for a subjective response but, there are objective standards of truth and goodness (in accordance with the theistic God) by which they can be assessed.

The door for the objectivity of history and thus the objective historicity for miracles is open. No mere question-begging, uniformitarian principle of analogy can lock it *a priori* . Evidence that supports the general nature of scientific law cannot rule out good historical evidence for unusual but particular events of history. Anti-miracle arguments are not only invincibly naturalistic in bias, but if applied consistently they rule out known and accepted secular history (*see* MIRACLES, ARGUMENTS AGAINST). The only truly honest approach is to examine carefully the evidence for an alleged miracle to determine its authenticity.

Hittites, Problem of. Genesis asserts that Heth was progenitor of the Hittites, whose kingdom arose in what is now Turkey. However, according to some archaeological evidence, the Hittites did not become a prominent force in the Middle East until the reign of Mursilis I, about 1620 B.C . It was Mursilis who captured Babylon in 1600 B.C .

However, several times in Genesis 23 , reference is made to Abraham’s encounter with the sons of Heth, who controlled Hebron in about 2050 B.C . How could the Hittites have controlled Hebron so long before they became a significant force in the area?

Cuneiform tablets have been found describing conflicts in Anatolia (Turkey) among Hittite principalities from about 1950 to 1850. Even before this conflict there was a race of non-Indo-

Europeans called Hattians. These people were subdued by invaders about 2300 to 2000. The Indo-European invaders adopted the name Hatti. In Semitic languages such as Hebrew, *Hatti* and *Hitti* would be written with the same letters. Only consonants were written, not vowels.

In the days of Ramses II in Egypt, the military strength of the Hittites was sufficient to precipitate a nonaggression pact between Egypt and the Hittite empire, setting a boundary between them. At this time the Hittite empire reached as far south as Kadesh on the Orontes River (modern Asi). However, additional evidence indicates that the Hittites actually penetrated farther south into Syria and Palestine.

Although the Hittite kingdom did not reach its zenith until the second half of the fourteenth century, there is sufficient evidence to substantiate a Hittite presence, significant enough for control, in Hebron at the time of Abraham.

Holy Spirit, Role in Apologetics. Most Christian apologists agree that the Holy Spirit witnesses to the individual with regard to their personal salvation. Romans 8:16 asserts: "The Spirit himself testifies with our spirit that we are God's children" (1 John 3:24 ; 4:13). Many also believe that the Holy Spirit bears witness to the truth of Christianity. One of several texts teaching that is 1 John 5:6–10 :

> This is the one who came by water and blood—Jesus Christ. . . . And it is the Spirit who testifies, because the Spirit is the truth. . . . We accept man's testimony, but God's testimony is greater because it is the testimony of God, which he has given about his Son. . . . Anyone who does not believe God has made him out to be a liar, because he has not believed the testimony God has given about his Son.

Some have charged that the use of reason relating to God, as apologetic arguments do (*see* APOLOGETICS, NEED FOR), is inconsistent with the biblical emphasis on the necessity of the Holy Spirit to convince someone of the truth of Christianity. But the Christian position is that there is no contradiction between reason and evidence on one hand and the work of the Holy Spirit on the other.

The Early Church Fathers. Early Christian apologists from Justin Martyr (100–165) to Clement of Alexandria (ca. 155–220) used reason in their defense. They also believed in the

necessity of divine revelation and the work of the Holy Spirit in bringing the truth about God to humankind. However, they provided no systematic treatment of the precise relationship between human reason and the ministry of the Holy Spirit. This was left to later theologians, especially Augustine , Thomas Aquinas, and the Reformers.

Augustine. Augustine (354–430) stressed the work of the Spirit to call depraved, dead-in-sin humans to new life in Christ. But he kept this work of the Spirit in tension with his belief that human reason is needed to judge and understand divine revelation. Without it we cannot know the truth of God. Each of five purposes served by reason in Augustine's thought is independent of the supernatural agency of the Holy Spirit.

Reason Comes before Faith. First, there is a sense in which reason comes before faith. Augustine declared that "no one indeed believes anything unless he has first thought that it is to be believed." Hence, "it is necessary that everything which is believed should be believed after thought has led the way" (*On Free Will* , 5).

Reason Distinguishes Human Beings. Second, reason is a distinguishing and superior faculty in human beings. "God forbid that He should hate in us that faculty by which He made us superior to all other beings. Therefore, we must refuse so to believe as not to receive or seek reason for our belief, since we could not believe at all if we did not have rational souls" (*Letters* , 120.1).

Reason Elaborates on Creation and Providence. Third, reason elaborates on the proofs God provides for his existence (*see* GOD, EVIDENCE FOR). "It will become clear that God exists, when, with His assistance, I shall prove, as I promised, that there exists something above human reason" (*On Free Will* , 2.6).

Reason Provides Commentary on the Gospel. Fourth, reason helps people understand the content of the Christian message. How can anyone believe the preacher without understanding the words the preacher speaks? Understanding contributes to belief.

Reason Removes Objections. Fifth, reason can be used to remove objections to faith. Speaking of someone who had questions prior to becoming a believer, he wrote: "It is reasonable that he inquire as to the resurrection of the dead before he is admitted to the Christian sacraments."What is more, "Perhaps he ought also to be allowed to insist on preliminary discussion on the question proposed concerning Christ—why He came so late in the world's history, and of a few great questions besides, to which all others are subordinate" (*Letters* , 102.38).

Augustine thus taught that reason is useful before, during, and after one exercises faith in the Gospel. Nevertheless, reason has shortcomings, and without the work of the Holy Spirit, humanity would be in darkness.

The Role of the Holy Spirit. The need for and superiority of divine revelation is made abundantly clear by Augustine. His famous statement is, "First believe, then understand" (*On the Creed* , 4). "If we wished to know and then believe, we should not be able to either know or

believe" (*On the Gospel of John* , 27.9). Since faith was a gift of the Spirit (*Enchiridion* , 31), there is no true understanding of the Christian faith apart from the work of the Holy Spirit.

Revelation Overcomes the Result of Sin. "Falsehood arises not because things deceive us. . . . It is sin which deceives the soul, when they seek something that is true but abandon or neglect truth" (*Of True Religion* , 36). This sin is inherited, for "the sin which they [Adam and Eve] committed was so great that it impaired all human nature—in this sense, that the nature has been transmitted to posterity with a propensity to sin and a necessity to die" (*City of God* , 14.1). Only divine revelation received by faith can overcome this. "Nor does anyone become fit to discover God unless he shall have first believed what he is later to come to know" (*On Free Will* , 2.6).

Revelation Is Superior to Reason. "What then we understand we owe to reason; what we believe to authority" (*On the Profit of Believing* , 25). Augustine made this most explicit when he confessed to God: "We were too weak by unaided reason to find out the truth, and for this reason needed the authority of the holy writings" (*Confessions* 6.5).

Not only is the Holy Spirit the means by which we receive God-written revelation (ibid., 7.21), but he is necessary for illuminating and confirming its truth. And the Spirit is truth of the presence of God in the Christian. "If in truth thou hast charity, thou hast the spirit of God in order to understand: for a very necessary thing it is" (*Homily VI*).

Thomas Aquinas. The question of the relation between the Holy Spirit and the use of human reason is really a subdivision of the broader topic of faith and reason. Aquinas (1224–1274) spoke extensively about both. He spoke of rational proofs for the existence of God and offered historical and experiential evidences in support of the truth of Christianity. Aquinas also believed that no one ever comes to faith in Christ apart from a special, gracious work of the Holy Spirit.

Philosophy Applies Reason. Aquinas saw three uses for reason in philosophy. Human reason can be used to prove natural theology (the existence and nature of one God). Also, it can be used to illustrate supernatural theology (the Trinity and incarnation), and it can be used to refute false theologies.

It demonstrates God's existence, oneness, and other propositions concerning God and creatures. "Such truths about God have been proved demonstratively by the philosophers, guided by the light of the natural reason" (*Summa Theologica* , 1a.3, 2). Philosophy uses teachings of the philosophers to explain Christian doctrines such as the Trinity. Even though demonstrative arguments are unavailable for supernatural theology, there are certain probable arguments that can make divine truth known. And philosophy can be used to oppose attacks against faith, by showing they are false or unnecessary.

Human Reason Can Support Faith. On the use of "reason" (*apologia*) in 1 Peter 3:15 , Aquinas argued that human reasoning in support of what we believe stands in a two-fold relation to the will of the believer. Sometimes someone does not have the will to believe unless moved by human reason. In this sense reasoning diminishes the merit that would come with faith, since the person "ought to believe matters of faith, not because of human reasoning, but because of the divine authority." Also, "human reason may be consequent to the will of the believer." For

“when a man has a will ready to believe, he loves the truth he believes, he thinks out and takes to heart whatever reasons he can find in support thereof; and in this way, human reasoning does not exclude the merit of faith, but is a sign of greater merit” (ibid., 2a2ae.2, 10).

Faith is supported by, not based on, probable evidence. “Those who place their faith in this truth, however, ‘for which the human reason of fers no experimental evidence,’ do not believe foolishly, as though ‘following artificial fables.’ ” Rather, “arguments confirm truths that exceed natural knowledge and manifest God’s works that surpass all nature” (*Summa Contra Gentiles* , 1.6). The kind of positive evidence Aquinas used included the raising of the dead, the conversion of the world, and miracles (*see* MIRACLES, APOLOGETIC VALUE OF).

The negative evidence encompasses arguments against false religions, including their fleshly appeal to carnal pleasures, teachings that contradict their promises, fables and falsities, the lack of attesting prophets and miracles to witness to divine inspiration of their holy book (for example, the *Qur’an*), use of arms to spread the message, the testimony of wise men who refused to believe, and perversions of Scripture.

It may surprise some who know their differences to note how closely Aquinas’s reasons why the Holy Spirit is needed parallel those of John Calvin.” Calvin closely studied Aquinas and the medieval scholastics, though he owed the most to Augustine.

The Spirit Overcomes Effects of Sin (*see* NOETIC EFFECTS OF SIN). With the later Calvin, Aquinas believed that sin profoundly distorts the mind. This distortion makes reason unable to contemplate God, and so find the faith that brings certitude. God wants his people to have confidence, so his Spirit delivers certain knowledge of him by way of faith (*Summa Theologica* , 2a2ae.1, 5, ad 4).

The Spirit Reveals Supernatural Truth. For Aquinas the sole way to overcome an adversary of divine truth is from the authority of Scripture—an authority divinely confirmed by miracles. For that which is above the human reason we believe only because God has revealed it. It is necessary “to receive by faith not only things which are above reason, but also those which can be known by reason.” Without the revelation of the Holy Spirit, we would be in darkness about such mysteries of the faith as the Trinity, salvation, and other matters revealed only in the Bible.

The Spirit Is Necessary to Give Faith. Not only are many things known only by faith, but the faith by which they are known is a gift of the Holy Spirit. Reason may accompany faith, but it does not cause faith. “Faith is called a consent without inquiry in so far as the consent of faith, or assent, is not caused by an investigation of the understanding.” Faith is produced by God. Commenting on Ephesians 2:8–9 , Aquinas contended that free will is inadequate for faith since the objects of faith are above reason. “That a man should believe, therefore, cannot occur from himself unless God gives it” (*Commentary on Ephesians* , 96). Faith is a gift of God, and no one can believe without it.

Reasoning accompanies the assent of faith; it does not cause it (*On Truth* , 14.A1, ad 6). One does not cause the other, but faith and reason are parallel. “Faith involves will (freedom) and

reason doesn't coerce the will" (ibid.). A person is free to dissent, even in the face of convincing reasons to believe.

The Spirit Gives a Motive to Believe. In order to believe in God, one must have the inner testimony of the Holy Spirit. For "one who believes does have a sufficient motive for believing, the authority of God's teaching, confirmed by miracles, and the greater motive of the inner inspiration (*instinctus*) of God inviting him to believe" (*Summa Theologica* , 2a2ae.6, 1). As to voluntary assent in matters of faith, we can look to two types of causes. A cause that persuades *from without* is attested to by something like a miracle witnessed or a human appeal. This is sufficient if there is not a cause that persuades *from within* . "The assent of faith, which is its principal act, therefore, has as its cause God, moving us inwardly through grace." The belief is a matter of the will that has been prepared by God through his grace to receive the knowledge that surpasses nature (ibid., 2a2ae.2, 9, ad 3).

The Spirit Makes Probable Evidence Certain. How we can be sure when the support of our faith rests on intermediary (fallible) testimonies? Aquinas responds that we believe prophets and apostles because their witness has been attested by miracles (Mark 16:20 ; *see* MIRACLES IN THE BIBLE). We believe other teachers only as they agree with the writings of the prophets and apostles (*On Truth* , 14.10, ad 11). The Bible alone, inspired by the Holy Spirit, gives certainty and infallible authority to faith (*see* CERTAINTY/CERTITUDE).

God Is the Basis for Faith. God alone, not reason, is the basis of faith. Reason can prove *that* God exists, but it cannot convince an unbeliever to believe *in* God (*Summa Theologica* , 2a2ae.2.2, ad 3). We may believe (assent without reservation) in something which is neither self-evident nor deduced from it (where the intellect is moved) by a movement of the will.

This does not mean that reason plays no prior role. "Faith does not involve a search by natural reason to prove what is believed. But it does involve a form of inquiry unto things by which a person is led to belief, e.g., whether they are spoken by God and confirmed by miracles" (ibid., 2a2ae.2.1, reply).

Demons, for example, are convinced by the evidence that God exists, but it "is not their wills which bring assent to what they are said to believe. Rather, they are forced by the evidence of signs which convince them that what the faithful believe is true." However, "these signs do not cause the appearance of what is believed so that the demons could, on this account, be said to see those things which are believed" (*On Truth* , 14.9, ad 4).

John Calvin. John Calvin (1509–1564) held that human reason was adequate to understand the existence of God, the immortality of the soul, and even the truth of Christianity. At the same time, he believed no one could come to certainty about these truths apart from the work of the Holy Spirit. Calvin did believe that many truths about God could be known, even apart from any special work of the Holy Spirit. These included a sense of deity, natural law, and evidence for the truth of the Bible.

The Innate Sense of Deity. Every human has a natural sense of God apart from the work of the Holy Spirit. Some sense of the person of God is built into the human mind and instincts.

“There is no nation so barbarous, no race so brutish, as not to be imbued with the conviction that there is a God” (*Institutes* , 1.3.1). This *sense of deity* is so naturally engraven on the human heart that even many unbelieving philosophers are forced to acknowledge it (ibid., 1.4.4).

God’s Existence and the Soul’s Immortality. Calvin spoke of “the invisible and incomprehensible essence of God” that has been made visible in creation. This proof extends to the soul’s immortality. “On each of his works his glory is engraven in characters so bright, so distinct, and so illustrious, that none, however dull and illiterate, can plead ignorance as their excuse” (ibid., 1.5.1–2). Regarding Romans 1:20–21 , Calvin concludes that “God has presented to the minds of all the means of knowing him, having so manifested himself by his works, that they must necessarily see what of themselves they seek not to know—that there is some God” (*Commentary on Romans and Thessalonians* , 2).

Natural Knowledge of Natural Law. The innate knowledge of God includes knowledge of his righteous law. Calvin held that since “the Gentiles have the righteousness of the law naturally engraven on their minds, we certainly cannot say that they are altogether blind as to the rule of life” (*Institutes* , 1.2.22). This moral awareness is *natural law* and is enough so that no mortal has an excuse for not knowing God. By this natural law the judgment of conscience is able to distinguish between the just and the unjust. This knowledge includes a sense of justice implanted by nature in the heart. It includes a natural discrimination and judgment which distinguishes justice and injustice, honesty and dishonesty. Calvin believed that such crimes as adultery, theft, and murder are known to be evil in every society, and honesty is esteemed (*Romans and Thessalonians* , 48). It is evident that God has left proofs of himself for all in both creation and conscience.

Evidence for Inspiration of Scripture. Calvin repeatedly spoke of “proofs” of the Bible’s inspiration (*see* BIBLE, EVIDENCE FOR). These include the unity of Scripture, its majesty, its prophecies, and its miraculous confirmation. Calvin wrote: “If we look at [Scripture] with clear eyes and unbiased judgment, it will forthwith present itself with a divine majesty which will subdue our presumptuous opposition, and force us to do it homage” (*Institutes* , 1.7.4). The evidence compels even unbelievers to confess (at some level of consciousness) that the Scripture exhibits clear evidence that it was spoken by God (ibid.).

The use of human reason, though not absolute, did bring a sufficient conviction about both the existence of God and the truth of Scripture. Calvin said proofs of the inspiration of Scripture may not be so strong as to produce and rivet a full conviction in the mind, but they are “most appropriate helps” (ibid., 1.8.1).

Calvin speaks of “the credibility of Scripture sufficiently proved, in so far as natural reason admits.” He offers rational proofs from various areas, including the dignity, truth, simplicity, and efficacy of Scripture. To this he adds evidence from miracles, prophecy, church history, and even the martyrs (ibid.).

The Need for the Holy Spirit. At the same time, Calvin believed that no one ever came to be convinced of the certainty of truths about God, Christ, and the Bible apart from the supernatural

work of the Holy Spirit. He saw no contradiction in what he said about the natural knowledge of God and Scripture.

The vitiating effects of depravity. Calvin believed human depravity obscures human ability to understand and respond to this natural revelation of God (*see* NOETIC EFFECTS OF SIN). He wrote: “Your idea of His [God’s] nature is not clear unless you acknowledge Him to be the origin and foundation of all goodness. Hence, would arise both confidence in him and a desire of cleaving to him, did not the depravity of the human mind lead it away from the proper course of investigation” (ibid., 1.11.2).

The testimony of the Spirit. Complete certainty comes only by the Spirit working through the objective evidence to confirm in one’s heart that the Bible is the Word of God. Calvin affirmed that “Our faith in doctrine is not established until we have a *perfect conviction* that God is its author. Hence, the *highest proof* of Scripture is uniformly taken from the character of him whose word it is.” Hence, “our conviction of the truth of Scripture must be derived from *a higher source than human conjecture, judgments, or reasons* ; namely, the secret testimony of the Spirit” (ibid., 1.7.1, cf. 1.8.1, 1.7.4; emphasis added). Using reason to defend Scripture is insufficient. “Although we may maintain the sacred Word of God against gainsayers, it does not follow that we shall forthwith implant the certainty which faith requires in their hearts” (ibid., 1.7.4).

Calvin insisted that the testimony of the Spirit is superior to reason. “For as God alone can properly bear witness to his own words, so these words will not obtain full credit in the hearts of men, until they are sealed by the inward testimony of the Spirit.” He adds, “The same Spirit, therefore, who spoke by the mouth of the prophets, must penetrate our hearts, in order to convince us that they faithfully delivered the message with which they were divinely entrusted” (ibid., 1.7.4).

> Let it therefore be held as fixed, that those who are inwardly taught by the Holy Spirit acquiesce implicitly in Scripture; that Scripture, carrying its own evidence along with it, deigns not to submit to proofs and arguments, but owes the full conviction with which we ought to receive it to the testimony of the Spirit. . . . Enlightened by Him, we no longer believe, either on our own judgment or that of others, that the Scriptures are from God; but, in a way superior to human judgment, feel perfectly assured . . . that it came to us, by the instrumentality of men, from the very mouth of God. [ibid., 1.7.5]

Calvin went on to say that the proof the Spirit gives transcends proofs and probabilities (*see* CERTAINTY/CERTITUDE). Its assurance does not ask for reasons; in such knowledge the mind rests more firmly and securely than in any reasoning. It is a “conviction which revelation from heaven alone can produce” (ibid.). Apart from this divine confirmation, all argument and support from the church is vain. “Till this better foundation has been laid, the authority of Scripture remains in suspense” (ibid., 1.8.1).

The Testimony of the Spirit and Evidence. It is important to remember, as R C. Sproul points out, that “the *testimonium* is not placed over against reason as a form of mysticism or subjectivism. Rather, it goes beyond and transcends reason” (Sproul, “Internal Testimony of the

Holy Spirit," 341). It is God working through the objective evidence, not apart from evidence, that provides the subjective certainty that the Bible is the Word of God. It is a combination of the objective and subjective, not an exclusion of the objective evidence by a subjective experience. See the comments below on B. B. Warfield .

Jonathan Edwards. Jonathan Edwards (1703–1758) provides further insight into the relation between apologetic evidence and the Holy Spirit. He too saw complementary relation between the two. Edwards saw eight functions in reason:

1. Reason must prove the existence of God, the Revealer.

2. Reason anticipates that there will be a revelation.

3. Reason can show that a "pretended" revelation is not from God.

4. Reason demonstrates the rationality of revelation.

5. Reason verifies a true revelation as genuine.

6. Reason argues for the dependability of revelation.

7. Reason anticipates that there will be mysteries in a genuine divine revelation, defends them, and refutes objections to their presence.

8. Reason comprehends what is illumined by revelation.

Reason Proves the Existence of God. Edwards outlines his own approach to God's existence in *Freedom of the Will* (2.3). The first proof is *a posteriori* from effects that there is an eternal cause. From arguments, such a being is shown to be necessarily existent. The necessity of this existence shows his perfections *a priori* . Cosmological and teleological proofs unite in this approach.

Reason Can Give Certainty. It is impossible that nothing could cause something. And since something now exists, there must be an eternal and Necessary Being. Edwards' firm conviction about this springs from the principle of causality, which he describes as a self-evident principle, a "dictate of common sense," "the mind of mankind," and "this grand principle of common sense" (ibid.). In "Miscellanies" he declares that " 'Tis acknowledged by all to be self-evident that nothing can begin without a cause." Thus, "When understood 'tis a truth that irresistibly will have place in the assent." This being the case, "if we suppose a time wherein there was nothing, a body will not of its own accord begin to be." For to hold that something can arise without a cause is "what the understanding abhors" ("Miscellanies" number 91).

So convinced was Edwards that something could not arise without a cause that, like Aquinas, he argued even an eternal world would need a cause. For "if we should suppose that the world is eternal, yet the beautiful, contrivance, and useful disposition of the world would not less strongly conclude for the being of an intelligent author." He uses the example of a great work of

literature. Such a work, even if it had existed from eternity, would require more explanation than that ink had fallen on paper (ibid., number 312).

We depend on metaphysics to show what that Necessary Being is like, to "demonstrate that God is not limited to a place, or is not mutable; that He is not ignorant, or forgetful; that it is impossible for Him to lie, or be unjust; and there is one God only and not hundreds or thousands" (*Freedom of the Will* , 4.13). Edwards was certain that reason demonstrates the divine attributes in their infinity (*see* GOD, NATURE OF).

Limited Reason Requires the Holy Spirit. In spite of the value placed on human reason, Edwards believed that significant limitations on human reason require the work of the Holy Spirit in the heart. Reason cannot make knowledge of God "real" to the unregenerate. It cannot yield a supernatural revelation that leads to salvation, or even sense one, because of human depravity. If it does receive a revelation, it cannot determine the full divine content of that revelation.

Nothing is more clear to Edwards than that, as valid as natural revelation is, there is an indispensable need for supernatural revelation:

> Were it not for divine revelation, I am persuaded, that there is not one doctrine of that which we call natural religion, which, notwithstanding all philosophy and learning, would not be for ever involved in darkness, doubts, endless disputes, and dreadful confusion. . . . In fact, the philosophers had the foundation of most of their truths, from the ancients, or from the Phoenicians, or what they picked up here and there of the relics of revelation. ["Miscellanies," 1.1.19]

In spite of Edwards' belief that natural reason could construct valid arguments for the existence of God, he denied that any non-Christian thinkers ever did this. "There never was a man known or heard of, who had an [right] idea of God, without being taught it" (ibid., 1.6.15).

The Spirit Breathes Life into Revelation. Christians can construct a valid natural religion where pagans fail because of the Holy Spirit's light. This is why

> the increase of learning and philosophy in the Christian world, is owing to revelation. The doctrines of revealed religion are the foundations of all useful and excellent knowledge. . . . The word of God leads barbarous nations into the way of using their understandings. It brings their minds into a way of reflecting and abstracting reasoning; and delivers from uncertainty in the first principles, such as, the being of God, the dependence of all things upon him. . . . Such principles as these are the basis of all true philosophy, as appears more and more as philosophy improves. [ibid.]

In view of this, it is unreasonable to suppose that philosophy itself could fill in the gap. Knowledge is easy, however, to those who understand by revelation.

It may seem inconsistent for Edwards to hold both that God may be proven by natural reason and that no unbelievers have really ever come to the true God in this manner. The reason, as

Edwards explained it, is that reason can demonstrate a point that has been proposed by someone else far easier than it can come upon the point in the first place. Would we have known the works of creation are effects had we not been told they had a cause? The greatest minds might be led into error and contradiction were they to try to come up with a description of the cause simply by studying the effects (ibid., 1.6.16).

Edwards believed it possible for an unbeliever to construct valid proof for the existence of the true God, but the fact that none ever had done so showed him that the mind must have the illumination of the Spirit. Once the mind has knowledge of the true God from revelation, it is possible to construct a valid argument for his existence on the basis of premises drawn from nature and reason alone (*see* REVELATION, GENERAL). So special revelation is not *logically necessary* to prove the existence of the true God, but it is in practice *historically necessary* .

Edwards asserts that, when we fully understand the difficulties involved in knowing the true God, we inevitably ascribe all true religion to divine instruction and all theological error to human invention (ibid., 1.6.22).

Subjective Illumination Is Necessary. All of his stress on rational and objective evidence notwithstanding, Edwards did not believe that either general or special revelation was sufficient to make depraved people open to truth. In addition to objective special revelation there had to be a subjective divine illumination. Only the supernatural light could open the heart to receive God's revelation. Without this divine illumination no one ever comes to accept God's revelation, regardless of how strong the evidence for it is. A new heart is needed, not a new brain. This is done by the illumination of the Holy Spirit. This divine light does not give any new truth or new revelations. Rather, it provides a new heart, a new attitude of receptivity by which one is able to accept God's truth.

B. B. Warfield. Classical apologetics (*see* CLASSICAL APOLOGETICS) was carried on by Benjamin Breckinridge (B. B.) Warfield (1851–1921). He, too, saw a need for both human reason and the work of the Holy Spirit to convince people of the truth of Christianity.

The Need for Rational Apologetics. Warfield defined apologetics as "the systematically organized vindication of Christianity in all its elements and details, against all opposition" (*Works* , 9:5). Or, more technically, "Apologetics undertakes not the defense, not even the vindication, but the establishment, not, strictly speaking, of Christianity, but rather of that knowledge of God which Christianity professes to embody and seeks to make efficient in the world, and which it is the business of theology scientifically to explicate" (ibid., 3).

He divided apologetics functionally:

1. Apologetics demonstrates the being and nature of God.

2. Apologetics reveals the divine origin and authority of Christianity.

3. Apologetics shows the superiority of Christianity (ibid., 10).

The first function properly belongs to philosophical apologetics, which undertakes to establish the being of God as personal Spirit, Creator, Preserver, and Governor of all things. To it belong problems of theism with the involved discussion of antitheistic theories.

Warfield believed apologetics a necessary prolegomena to theology. He wrote:

> Apologetical Theology prepares the way for all theology by establishing its necessary presuppositions without which no theology is possible—the existence and essential nature of God, the religious nature of man which enables him to receive a revelation from God, the possibility of a revelation from God, the possibility of revelation and its actual realization in the Scriptures. [*Works* , 9.64]

Warfield held that apologetics has "a primary part" and "a conquering part" in the spreading of the Christian faith. Christianity is distinctive in its mission of reasoning its way to dominion. Other religions appeal to the sword or seek another way of propagating themselves. Christianity appeals to reason and so is "the apologetic religion" (*Selected Shorter Writings* , 2.99–100).

The Role of the Spirit. The *indicia* or demonstrations of the Bible's divine character stand side by side with the Holy Spirit to convince people of the truth of the Bible. Warfield agreed with Calvin that they are not in themselves capable of bringing people to Christ or even convincing them of the complete divine authority of Scripture. Nonetheless, Warfield believed that the Holy Spirit always exercises his convincing power through the evidence.

On the relation of apologetics and the Bible, Warfield said, "It is easy, of course, to say that a Christian man must take his standpoint not *above* the Scriptures, but *in* the Scriptures. He very certainly must. But surely he must first *have* Scriptures, authenticated to him as such, before he can take his standpoint in them" (ibid., 2.98).

In this appeal to evidence, Warfield saw common ground with unbelievers. Facts are universally available, and all can be convinced of God's existence and the truth of Scripture through them by the power of reasoning of a redeemed thinker. In his 1908 article on "Apologetics," he said that, though faith is a gift, it is still a formal conviction of the mind. All forms of conviction must have evidence on which to rest. Reason investigates the nature and validity of this ground (*Works* , 9.15).

Reasoning saves no one, not because there is no proof for Christian faith, but because the dead soul cannot respond to evidence. "The action of the Holy Spirit in giving faith is not apart from evidence, but along with evidence; and in the first instance consists in preparing the soul for the reception of the evidence." Apologetics does not make men and women Christian, but apologetics supplies the systematically organized basis on which faith must rest (ibid.).

The relationship, then, between reason and evidence on the one side and the Holy Spirit on the other is complementary. It is not *either* the Holy Spirit *or* evidence. It is the Holy Spirit working *in* and *through* evidence to convince people of the truth of Christianity. There is both an outer (objective) dimension and an inner (subjective) dimension to the process by which people come to know Christianity is true. These may be called the *rational* and the *mystical* ,

respectively. But the two are never separated as many Christian mystics and inner-light subjectivists tend to do (see *Biblical and Theological Studies* , chap. 16).

Bernard Ramm. According to Bernard Ramm , there are three concentric circles of verification. These represent three stories in the confirmation of Christian truth claims.

Internal Witness. In the first circle of verification, internal witness, the sinner hears the Gospel and is convinced of its truth by the Holy Spirit. This is "a spiritual verification in that the primary verification of religion must be of this order else the case is deeded away to a method of verification alien to religion." This persuasive influence of the Holy Spirit is inward, but not subjective (*Witness of the Holy Spirit* , 44).

God's Action. The primary function of Christian evidence is to cultivate a favorable reception for the Gospel. The Gospel still must do its work, not the apologetic arguments. Proofs show that "this [biblical] God does come into our time, our history, our space, our cosmos, and make a difference. . . . Because God makes this difference, we know that we are believing truth and not fiction or mere religious philosophy" (ibid., 57). Thus, Christianity is confirmed by objective facts. The most exceptional acts of God, miracles and fulfilled prophecies, provide the best factual evidence for Christianity's truth claims (*see* MIRACLES, APOLOGETIC VALUE OF). Supernatural events validate the theological. Reason tests revelation (*see* FAITH AND REASON).

Worldview . Christianity is also tested by its ability to provide a vision of the whole of world, humankind, and God. Christian principles make the most sense out of life and the world. A worldview, or "synoptic vision," puts things together in the most meaningful way (ibid., 60). The choice of an appealing worldview does not make it true. Further, it must be internally coherent (ibid., 63, 67). Ramm's criteria of truth and coherence are similar to the criteria of factual fit and logical consistency proposed by John Carnell.

Ramm is convinced of the validity of the law of noncontradiction as a necessary test for truth (*see* FIRST PRINCIPLES). We cannot think without it (ibid., 68–69; *Protestant Christian Evidences* , 41, 54). However, Ramm does not put the kind of emphasis on logic as do other presuppositionalists such as Gordon Clark .

Certainty or Probability. Ramm distinguished between *certainty* and *certitude* . Divine revelation in Scripture and the internal witness of the Holy Spirit allows a Christian full spiritual certitude. This spiritual confidence extends to the existence and attributes of God, the truth of the claims of Jesus Christ, and personal salvation. Such facts are based upon what God has done in history. No historical fact is known with "certainty," since no one can return to the physical place and time to test the event empirically. It cannot be recreated in the lab. But that doesn't mean we must use the word *probably* . Historical facts can be known with a high degree of probability. With the evidence of Scripture, the testimony of the Holy Spirit, and the changes made by the actions of the living God in the cosmos, the Christian rests faith in the high degree of probability of full certitude.

Summary. Obviously not all of the apologists surveyed above agreed on every point, but there is a general agreement in contrast with Fideism , Mysticism , and other forms of Subjectivism.

The Role of Reason. Human reason, apart from special revelation (*see* REVELATION, GENERAL ; REVELATION, SPECIAL), can provide arguments in support of the existence of God, know many of God's essential attributes (*see* GOD, EVIDENCE FOR), offer evidence in support of Christian faith, defend Christianity against attacks, judge the truth of alleged revelations, and teach the content of a revelation from God.

There is general agreement on the limits of reason. It is marked by the effects of sin. It does not come to a proper knowledge of the true God apart from divine help. It cannot bring the highest certainty concerning truth about God. It cannot explain the mysteries of the incarnation and Trinity . It supports faith in God, but it is not the basis for that faith. Alone it cannot move anyone to believe in God or provide saving knowledge.

The Role of the Spirit. Most classical apologists would agree that the Holy Spirit plays several needed apologetic roles: The Spirit empowered the origin of Scripture. He gives understanding of Scripture's revealed truth and its implications to individuals. The Holy Spirit is necessary for full assurance of the truths of Christianity, and he alone prompts people to believe in God's saving truth. The Holy Spirit works in and through evidence, but not separate from it. As the Spirit of a rational God, he does not bypass the head on the way to the heart. The Spirit provides supernatural evidence (miracles) to confirm Christianity.

Hume, Criteria for Credible Witnesses. ***See*** **WITNESSES, HUME'S CRITERIA FOR .**

Humanism, Secular. Humanism focuses on the values and interests of human beings. There are Christian forms (*see* LEWIS, C. S .) and non-Christian forms. Secular humanism is the dominant form of the latter. Its confession is that "Man is the measure of all things." Rather than being *focused on* human beings, its philosophy is *based on* human values.

Secular humanists comprise a diverse group. They include existentialists (*see* SARTRE, JEAN-PAUL), Marxists (*see* MARX, KARL), pragmatists (*see* DEWEY, JOHN), and egocentrists (*see* RAND, AYN), and behaviorists (*see* B. F. Skinner under DETERMINISM). While all humanists believe in some form of evolution (*see* EVOLUTION, BIOLOGICAL ; EVOLUTION, CHEMICAL), Julian Huxley called his view "the religion of evolutionary humanism." Corliss Lamont could be called a "cultural humanist." Differences notwithstanding, non-Christian humanists share a core of beliefs. These have been summarized in two "humanist manifestos" and represent a coalition of various secular humanist viewpoints.

Humanist Manifesto I. In 1933, a group of thirty-four American humanists enunciated the fundamental principles of their philosophy in *Humanist Manifesto I* . Signatories included Dewey, the father of American pragmatic education; Edwin A. Burtt, a philosopher of religion, and R. Lester Mondale, a Unitarian minister and brother of the later U.S. vice-president, Walter Mondale.

The Affirmations. In the preamble the authors identify themselves as "religious humanists" and affirm that "to establish such a religion is a major necessity of the present" (Kurtz, *Humanist Manifestos*). The manifesto consists of fifteen basic affirmations which read in part:

" *First: Religious humanists regard the universe as self-existing and not created.* " These are nontheists (*see* THEISM) who deny existence of a Creator to bring into existence or sustain the universe.

" *Second: Humanism believes that man is a part of nature and that he has emerged as the result of a continuous process.* " Naturalism and naturalistic evolution are affirmed. The supernatural is denied.

" *Third: Holding an organic view of life, humanists find that the traditional dualism of mind and body must be rejected.* " Humans have no soul or immaterial aspect to their nature. Neither are they immortal (*see* IMMORTALITY). No existence extends beyond death.

" *Fourth: Humanism recognizes that man's religious culture and civilization . . . are the product of a gradual development.* " Further, "the individual born into a particular culture is largely molded to that culture." This implies cultural evolution and cultural relativity.

Cultural evolution means society has gradually become more sophisticated and complex; cultural relativity means that individuals are shaped largely by their respective cultures.

“ *Fifth: Humanism asserts that the nature of the universe depicted by modern science makes unacceptable any supernatural or cosmic guarantee of human values.* ” There are no God-given values to discover; therefore values are relative and subject to change (*see* MORALITY, ABSOLUTE NATURE OF).

“ *Sixth: We are convinced that the time has passed for theism, deism, modernism, and several varieties of ‘new thought.’* ” Framers of the first manifesto were atheists (*see* ATHEISM) or agnostics (*see* AGNOSTICISM) in the traditional senses of the terms. Even desupernaturalized beliefs are rejected (*see* MIRACLES, ARGUMENTS AGAINST).

“ *Seventh: Religion consists of those actions, purposes, and experiences which are humanly significant . . . all that is in its degree expressive of intelligently satisfying human living.* ” The essence of this affirmation is to define religion in purely humanistic terms. Religion is anything significant, interesting, or satisfying to humans.

“ *Eighth: Religious humanism considers the complete realization of human personality to be the end of man’s life and seeks its development and fulfillment in the here and now.* ” The hope of the humanist is this-worldly. The “chief end of man” is terrestrial, not celestial (*see* MATERIALISM).

“ *Ninth: In place of the old attitudes involved in worship and prayer the humanist finds his religious emotions expressed in a heightened sense of personal life and in a cooperative effort to promote social well-being.* ” The religious emotion is focused in the natural, personal, and social spheres, not in the spiritual or supernatural realms.

“ *Tenth: It follows that there will be no uniquely religious emotions and attitudes of the kind hitherto associated with belief in the supernatural.* ” This point carries out the naturalistic implications of earlier statements. Religious experience must be explained in purely materialistic terms.

“ *Eleventh: Man will learn to face the crises of life in terms of his knowledge of their naturalness and probability.* ” Humanists believe that humanistic education will promote social well-being by discouraging the wishful thinking and worry that stem from ignorance.

“ *Twelfth: Believing that religion must work increasingly for joy and living, religious humanists aim to foster the creative in man and to encourage achievements that add to satisfactions in life.* ” This stress on humanistic values of creativity and achievement shows the influence of Dewey.

“ *Thirteenth: Religious humanists maintain that all associations and institutions exist for the fulfillment of human life.* ” Humanists would rapidly reconstitute religious institutions, rituals, ecclesiastical organization, and communal activities around their worldview.

“ *Fourteenth: The humanists are firmly convinced that existing acquisitive and profit-motivated society has shown itself to be inadequate and that radical change in methods, controls, and motives must be instituted.* ” In lieu of capitalism, humanists suggest “a socialized and cooperative economic order.”

“ *Fifteenth and last: We assert that humanism will: (a) affirm life rather than deny it; (b) seek to elicit the possibilities of life, not flee from it; and (c) endeavor to establish the conditions of a satisfactory life for all, not merely for the few.* ” The prosocialist tendency continues in this summary statement, which presents re ligious humanism in a life-affirming framework.

The humanists who framed the manifesto affirmed that “the quest for the good life is still the central task of mankind” and that each person “has within himself the power for its achievement.” They were optimistic with respect to their goals and perfectionistic in their belief that humanity had the ability to achieve them.

An Evaluation of Humanist Manifesto I. Humanist Manifesto I can be summarized as:

1. atheistic (*see* ATHEISM) regarding the existence of God;

2. naturalistic regarding the possibility of miracles (*see* MIRACLES, ARGUMENTS AGAINST);

3. evolutionistic (*see* EVOLUTION) concerning human origins;

4. relativistic concerning values (*see* MORALITY, ABSOLUTE NATURE OF);

5. optimistic about the future;

6. socialistic in politico-economic policy;

7. religious in attitude toward life, and

8. humanistic with regard to the methods which it suggests to those who would achieve its goals.

The statement is not simply optimistic; it is overoptimistic about human perfectability. Even the framers of *Humanist Manifesto II* (1973) acknowledged that “events since [1933] make that earlier statement seem far too optimistic.”

Manifesto I studiously avoids use of the words *ought* and *should* . It does not, however, avoid *will* (art. 15) and *must* (arts. 3, 5, 12, 13, 14). The humanists’ affirmations of values they consider worthwhile implies that one “ought” to pursue those values. Hence the secular humanists are in effect offering a moral prescription they believe humans *ought to follow* .

Some moral prescriptions implied have a universal force because of the strong words used: *necessity* (preamble), *must* (arts. 3, 5, 12, 14), *insists* (art. 5), *no* or *nothing* (arts. 7, 10, conclusion), and even *demand* (art. 14) in connection with values advocated. In the preamble a universal obligation is euphemistically called an "abiding value." Likewise the values of freedom, creativity, and achievement are clearly regarded as universal and irrevocable.

It is worth noting that the religious tone of the first manifesto is very evident. The words *religion* or *religious* occur twenty-eight times. The authors consider themselves religious, wish to preserve religious experience, and even call themselves "religious humanists." Their religion, however, is without an ultimate personal object of religious experience.

Humanist Manifesto II. In 1973, forty years after the framing of *Humanist Manifesto I* , proponents of secular humanism from several countries felt an updating was necessary. "Humanist Manifesto II" was signed by Isaac Asimov, A. J. Ayer , Brand Blanshard, Joseph Fletcher, Antony Flew , Jacques Monod, and B. F. Skinner.

In the preface the authors deny that they "are setting forth a binding credo" but say that "for today it is our conviction." They acknowledge their continuity with earlier humanists in affirming that God, prayer, salvation, and providence are part of "an unproved and outmoded faith."

The Affirmations. The seventeen basic affirmations in *Humanist Manifesto II* appear under the headings "religion" (arts. 1–2), "ethics" (3–4), "the individual" (5–6), "democratic society" (7–11), and "world community" (12–17).

" *First: In the best sense, religion may inspire dedication to the highest ethical ideals. The cultivation of moral devotion and creative imagination is an expression of genuine 'spiritual' experience and aspiration.* " The authors quickly add "that traditional dogmatic or authoritarian religions . . . do a disservice to the human species." Moreover, they find insufficient evidence for existence of the supernatural. As "non-theists, we begin with humans not God, nature not deity." They could discover no divine providence. Hence, "no deity will save us; we must save ourselves."

" *Second: Promises of immortal salvation or fear of eternal damnation are both illusory and harmful.* " They distract from self-actualization and from concern over injustice. Science discredits belief in the soul (*see* IMMORTALITY). "Rather, science affirms that the human species is an emergence from natural evolutionary forces." Neither has science found evidence that life survives death. Humans should look after the welfare of this life, not the next.

" *Third: We affirm that moral values derive their source from human experience. Ethics is autonomous and situational, needing no theological or ideological sanction.* " Humanists base their values system on human experience, "here and now." Values have no suprahuman basis or goal (*see* MORALITY, ABSOLUTE NATURE OF).

" *Fourth: Reason and intelligence are the most effective instruments that humankind possesses.* " Neither faith nor passion will substitute. Humanists suggest that "the

controlled use of scientific methods . . . must be extended further in the solution of human problems.” A combination of critical intelligence and human caring is the best hope for resolving human problems.

“ *Fifth: The preciousness and dignity of the individual person is a central humanist value.* ” Humanists allow for as much individual au tonomy as is consistent with social responsibility. Accordingly, individual freedom of choice should be increased (*see* DETERMINISM ; FREE WILL).

“ *Sixth: In the area of sexuality, we believe that intolerant attitudes, often cultivated by orthodox religions and puritanical cultures, unduly repress sexual conduct.* ” The authors affirm rights to birth control, abortion, divorce, and any form of sexual behavior between consenting adults. “Short of harming others or compelling them to do likewise, individuals should be permitted to express their sexual proclivities and pursue their life styles as they desire.”

“ *Seventh: To enhance freedom and dignity the individual must experience a full range of civil liberties in all societies.* ” These include freedoms of speech and press, political democracy, oppose government policies, judicial process, religion, association, artistic expression, and scientific investigation. Rights must be protected and extended to die with dignity and use euthanasia and suicide. Humanists oppose the increasing invasion of individual privacy. This detailed list is a catalog of humanist values.

“ *Eighth: We are committed to an open and democratic society.* ” All persons should have a voice in developing values and setting goals. “People are more important than decalogues, rules, proscriptions, or regulations.” Here is manifest an opposition to divine moral law such as is found in the Ten Commandments (Decalogue).

“ *Ninth: The separation of church and state and the separation of ideology and state are imperatives.* ” Humanists believe that the state “should not favor any particular religious bodies through the use of public moneys, nor espouse a single ideology.”

“ *Tenth: . . . We need to democratize the economy and judge it by its responsiveness to human needs, testing results in terms of the common good.* ” This means that the value of any economic system is to be judged on a utilitarian basis.

“ *Eleventh: The principle of moral equality must be furthered through elimination of all discrimination based on race, religion, sex, age, or national origin.* ” Total elimination of discrimination would result in a more equitable distribution of wealth. There would be a minimum annual income, welfare to all who need it, and the right to a university education.

“ *Twelfth: We deplore the division of humankind on nationalistic grounds. We have reached a turning point in human history where the best option is to transcend the limits of national sovereignty and to move toward the building of a world community.* ” This would involve a supranational political entity which allows for cultural diversity.

“ *Thirteenth: This world community must renounce the resort to violence and force as a method of solving international disputes.* ” This article pronounces war to be absolute, and claims a “planetary imperative” to reduce military spending.

“ *Fourteenth: The world community must engage in cooperative planning concerning the use of rapidly depleting resources . . . and excessive population growth must be checked by international concord.* ” For humanists, then, conservation is a moral value.

“ *Fifteenth: It is the moral obligation of the developed nations to provide . . . massive technical, agricultural, medical, and economic assistance* ” to underdeveloped nations. This is to be done through “an international authority that safeguards human rights.”

“ *Sixteenth: Technology is a vital key to human progress and development.* ” This article speaks against indiscriminate condemnation of technology and its use to control, manipulate, or modify human beings without their consent.

“ *Seventeenth: We must expand communication and transportation across frontiers. Travel restrictions must cease.* ” This article ends with the warning: “We must learn to live openly together or we shall perish together.

The conclusion speaks out against “terror” and “hatred.” It holds out the values of reason and compassion, as well as tolerance, understanding, and peaceful negotiation. It calls for “the highest commitment [i.e., to these values] of which we are capable,”which “transcends . . . church, state, party, class, or race.” It is clear from this that humanists are calling for an ultimate commitment to transcendent moral values—a religious commitment.

An Evaluation of Humanist Manifesto II. Humanist Manifesto II is stronger, more detailed, and less optimistic than “Humanist Manifesto I.” It is less guarded in its use of moral terms such as *should* and in its call for an ultimate commitment. It is indeed a strong, urgent, moral, and religious call. Like its predecessor it is also atheistic, naturalistic, evolutionistic, socialistic, relativistic, and still optimistic that humankind can save itself. The internationalist emphasis is much stronger.

“The Secular Humanist Declaration.” A third coalition voice for secular humanism has been raised. Signers of the “Secular Humanist Declaration,” which appeared in the secular humanist journal *Free Inquiry* , included Asimov, Fletcher, Skinner, and some who did not sign *Manifesto II* , among them philosophers Sidney Hook and Kai Nielsen.

The Affirmations. The declaration espouses “democratic secular humanism.” It is clear from the opening paragraphs that humanists see established religion as their chief enemy: “Regrettably, we are today faced with a variety of anti-secularist trends: the reappearance of dogmatic, authoritarian religions; Fundamentalist, literalist, and doctrinaire Christianity.” In addition, the document complains of “a rapidly growing and uncompromising Moslem clericalism in the Middle East and Asia, the reassertion of orthodox authority by the Roman Catholic papal hierarchy, nationalistic religious Judaism; and the reversion to obscurantist religions in Asia.” The platform of these humanists is:

Free inquiry. "The first principle of democratic secular humanism is its commitment to free inquiry. We oppose any tyranny over the mind of man, any efforts by ecclesiastical, political, ideological, or social institutions to shackle free thought."

Separation of church and state. "Because of their commitment to freedom, secular humanists believe in the principle of the separation of church and state." In their view "any effort to impose an exclusive conception of Truth [*see* TRUTH, NATURE OF], piety, virtue, or justice upon the whole of society is a violation of free inquiry."

The ideal of freedom. "As democratic secularists, we consistently defend the ideal of freedom." The secular humanism concept of freedom includes not only freedom of conscience and belief from repressive ecclesiastical, political, and economic powers, but also "genuine political liberty, democratic decision-making based upon majority rule, and respect for minority rights and the rule of law."

Ethics based on critical intelligence. "The secular humanist recognizes the central role of morality in human life." Ethical conduct should be judged by critical reason, and their goal is to develop "autonomous and responsible individuals, capable of making their own choices in life based upon an understanding of human behavior." Although secular humanists are ostensibly opposed to absolutist morality, they maintain that "objective standards emerge, and ethical values and principles may be discovered, in the course of ethical deliberation."

Moral education. "We believe that moral development should be cultivated in children and young adults. . . ; hence it is the duty of public education to deal with these values." Such values include "moral virtues, intelligence, and the building of character."

Religious skepticism. "As secular humanists, we are generally skeptical about supernatural claims." While it is true that "we recognize the importance of religious experience: that experience that redirects and gives meaning to the lives of human [beings, we deny] that such experiences have anything to do with the supernatural." It is maintained that there is insufficient evidence for the claim that some divine purpose exists for the universe. Men and women are free and responsible for their own destinies, and they cannot look to any transcendent being for salvation.

Reason. "We view with concern the current attack by nonsecularists on reason and science." Although secular humanists deny reason and science can solve all human problems, they affirm that they know of no better substitute than human intelligence.

Science and technology. "We believe the scientific method, though imperfect, is still the most reliable way to understand the world. Hence, we look to the natural, biological, social, and behavioral sciences for knowledge of the universe and man's place within it."

Evolution. This article laments the attack by religious fundamentalists on evolution. While denying that evolution is an "infallible principle," secular humanists believe it "is supported so strongly by the weight of evidence that it is difficult to reject it." Consequently, "we deplore the efforts by fundamentalists (especially in the United States) to invade the science classrooms,

requiring that creationist theory be taught to students and requiring that it be included in biology text-books" (*see* ORIGINS, SCIENCE OF). Secular humanists consider this a serious threat both to academic freedom and educational integrity.

Education. "In our view, education should be the essential method of building humane, free, and democratic societies." The aims of education include the transmission of knowledge, occupational training, citizenship instruction and encouraging moral growth. Secular humanists also envision the broader task of embarking on "a long-term program of public education and enlightenment concerning the relevance of the secular outlook to the human condition."

The declaration concludes with the plea that "democratic secular humanism is too important for human civilization to abandon." It decries contemporary orthodox religion as "anti-science, anti-freedom, anti-human," pointing out that "secular humanism places trust in human intelligence rather than in divine guidance." It ends by deploring "the growth of intolerant sectarian creeds that foster hatred."

Evaluation of the "Secular Humanist Declaration." It may seem surprising that this declaration appeared so soon after *Humanist Manifesto II* (only eight years), especially since many of the same people signed both. Much of the content is similar to one or both manifestos. With previous humanist statements it stresses naturalism, evo lution, humankind's ability for self-salvation, as well as common humanistic ethical commitments to freedom, toleration, and critical intelligence.

However, the Declaration does have distinctives. The most significant aspects of this declaration are those areas in which it differs from previous efforts. First, these secular humanists wish to be called " *democratic* secular humanists." The stress on democracy is evident throughout. Second, nowhere do they claim to be religious humanists, as do the authors of the prior documents. This is strange, since humanists have pleaded for recognition as a religious group, and the U.S. Supreme Court so defined it in *Torcasso vs. Watkins,* 1961. Indeed, the declaration could be justly characterized as antireligious, for it particularly attacks the recent trend toward conservative religious beliefs. The bulk of the declaration, in fact, seems to be a reaction against the recent trends contrary to secular humanism. Finally, one cannot help but notice a strange inconsistency in that the declaration affirms academic freedom, yet insists that scientific creationism be excluded from school science classes.

Common Elements in Secular Humanism. A study of the humanist manifestos and declaration, and other writings of prominent secular humanists, reveals a common core of at least five beliefs:

1. Nontheism is common to all forms of secular humanism. Many humanists deny the existence of God altogether, but all deny the need for a Creator of the world. Thus secular humanists join in opposing all theistic religion.

2. Naturalism is essential to humanism, following from the denial of theism. Everything in the universe must be explainable in terms of natural laws alone.

3. Evolution is the secular humanist's way to explain origins. Either the universe and living things originated by means of the intervention of a supernatural Creator, or they evolved by purely naturalistic means. Nontheists thus have no choice but to defend evolution.

4. Ethical relativism unites secular humanists, for they have a distaste for absolutes (*see* ABSOLUTES, MORAL). There are no God-given moral values; humanity decides its own values. These standards are subject to change and relative to different situations. Since there is no absolute basis for values in God, there are no absolute values to be received from God.

5. Human self-sufficiency is a central tenet. Not all secular humanists are utopian, but all believe human beings can solve their own problems without divine help. Not all believe the race is immortal, but all hold that humanity's survival depends on personal behavior and responsibility. Not all believe that science and technology are the means of saving humankind, but all do believe human reason and secular education are the only hope if the race is to endure.

Conclusion. Secular humanism is a movement consisting mostly of atheists, agnostics, and deists. All are antitheists and antisupernatural. All are strongly naturalistic. These specific doctrines are challenged in other articles, among them: GOD, ALLEGED DISPROOFS OF ; GOD, EVIDENCE FOR ; GOD, OBJECTIONS TO PROOFS FOR ; EVOLUTION ; EVOLUTION, BIOLOGICAL ; EVOLUTION, CHEMICAL ; EVOLUTION, COSMIC ; MIRACLE , and MIRACLES, ARGUMENTS AGAINST . Morally humanists are relativists (*see* MORALITY, ABSOLUTE NATURE OF). Various kinds of nontheistic humanism are evaluated under the names of their leading proponents.

Hume, David. David Hume (1711–1776), philosopher and historian, was born and reared in Edinburgh, Scotland and attended Edinburgh University. He earned a degree in law but soon after decided not to practice. Instead, during the height of the European Enlightenment, Hume took up a rigorous study of philosophy. This study led to skepticism (*see* AGNOSTICISM) and a disdain for the miraculous (*see* MIRACLES, ARGUMENTS AGAINST). However, unlike Benedict Spinoza a century earlier, Hume attacked miracles from an empirical perspective, not a rationalistic one. In many ways the two men were opposites. Spinoza was dogmatic, and Hume was a skeptic. Spinoza was rationalistic, and Hume was empirical. Differences notwithstanding, they shared the conclusion that it is unreasonable to believe in miracles. For Spinoza, miracles are actually impossible; for Hume, they are merely incredible.

Hume's Empirical Skepticism. The skeptic believes in suspending judgment about metaphysical questions. Hume's skepticism was based in his epistemology. He believed that all ideas are based in sense experience. Since there were no sense experiences of concepts like *God* , Hume rejected these as meaningless.

Two Kinds of Propositions. All objects of human inquiry, Hume wrote, are either *Relations of Ideas* , or *Matters of Fact* . The first kind includes mathe matical statements and definitions; the second includes everything known empirically—through one or more of the senses. So emphatic was Hume about this distinction that he concluded *Inquiry Concerning Human Understanding* :

> When we run over libraries, persuaded of these principles, what havoc must we make? If we take in our hand any volume—of divinity or school metaphysics, for instance—let us ask, *Does it contain any abstract reasoning concerning quantity or number?* No. *Does it contain any experimental reasoning concerning matter of fact and existence?* No. Commit it then to the flames, for it can contain nothing but sophistry and illusion. [12.3.173]

Causes Known by Custom. For Hume "all reasoning concerning matters of fact seems to be founded on the relation of *cause* and *effect* . By means of that relation alone we can go beyond the evidence of our memory and senses" (ibid., 4.1.41). In view of this, the mind can never find the cause for a given event. Only "after the constant conjunction of two objects, heat and flame, for instance . . . we are determined by custom alone to expect the one from the appearance of the other" (ibid., 5.1.57). That is, we use causality, but we have no empirical grounds for doing so. In short, one cannot know causal *connections* between things; one can only believe in them based on customary *conjunctions* . "All inferences from experience, therefore, are effects of custom, not of reasoning" (ibid.).

According to Hume, we cannot even be sure the sun will rise tomorrow. We believe it will because it has customarily risen in the past. Some things happen so often in conjunction with others that it is foolish not to believe they will be so conjoined in the future. Hume would even call this uniform experience a "proof," by which he means "such arguments from experience as leave no room for doubt or opposition" (ibid., 6.1.69). Nonetheless, "all events seem entirely loose and separate. One event follows another; but we never can observe any tie between them. They seem *conjoined,* but never *connected* " (ibid., 7.2.85). But conjoined events do not prove

they are causally connected any more than there is a causal connection between the rooster crowing and the sun rising. All one can do is extrapolate based on oft-repeated occurrences.

An Evaluation of Hume's Skeptical Empiricism. It is self-defeating. Hume's skepticism is vulnerable to serious criticisms. Perhaps the most serious is that it is self-defeating. According to Hume, meaningful propositions are *empirical* or *analytical* . The empirical have content but tell us nothing about metaphysical reality, such as God. The *analytical* are empty and contentless. Like the principle of empirical verifiability based on Hume's two kinds of propositions, this is a self-destructive proposition (*see* LOGICAL POSITIVISM). For the statement that "only analytic or empirical propositions are meaningful" is not itself an analytic (true by definition) or empirical statement. Hence, by its own criteria, it is meaningless. If one allows that such statements are meaningful, then why cannot metaphysical statements be meaningful?

Atomism is contrary to experience. Another serious objection to Hume's skeptical empiricism is that it is based on an unjustified empirical atomism. Hume believed all sensations to be atomically separated. One event follows another; but we never can observe a tie between them. They seem *conjoined,* but never *connected* " (ibid., 7.2.85). But this is not how we experience them. We encounter them as a continuous flow. We do not get a staccato series of snapshots. Rather, we see a continuous flow motion picture of the external world. Only if one wrongly *assumes* that everything is atomically loose and separate is there a problem of connecting them.

Causality can be experienced internally. Hume is widely misunderstood. He did not deny the principle of causality. He denied the basis on which some people try to prove causality (*see* CAUSALITY, PRINCIPLE OF). Hume rejected intuition, dismissing causal connections we experience in our own consciousness that are not based on external events. I am the cause of this sentence as I am typing, and I experience that fact. Everyone experiences their own thoughts and actions. These are not atomically loose and separate. We experience them as a continuous flow of cause and effect.

Hume could not live his theory. Hume was not consistent with his skepticism in either the practical or the theoretical realm. In the practical area Hume admitted that he had to take a break from his depressing skeptical pursuits and play a game of backgammon. Indeed, no one can live a life of suspended judgment on all metaphysical and moral matters. Life demands certain commitments in these areas. No skeptic suspends judgment on whether the moral right exists to believe and express these views. Nor is there doubt about everything. (Hume was not skeptical of skepticism.) A complete skeptic could not eat, walk, or talk (*see* AGNOSTICISM).

More pointedly, Hume was not consistent with his own theory. When arguing that we do not know the connection between events, Hume insisted that we could not even be certain that the sun will rise tomorrow. Yet when arguing against miracles he insisted that the uniform experience to date that all men die and do not rise from the dead proves that no resurrection will occur tomorrow (*see* RESURRECTION, EVIDENCE FOR).

Hume never denied causality. What is more, Hume himself never denied that things have a cause for their existence. He wrote: "I never as serted so absurd a proposition as that anything

might arise without a cause" (Hume, *Letters,* 1:187). Indeed, in the same source Hume claimed that it would be "absurd" to deny the principle of causality. What Hume denied was the way some philosophers attempt to prove the principle of causality. For Hume, customary conjunction is the basis for positing a causal connection.

Hume's Rejection of Proofs for God. Hume's skepticism concerning the existence of God was based on his empiricism and is manifest in several objections that have been often repeated since his time. They are based on his famous *Dialogues Concerning Natural Religion* .

Arguments against a Theistic God. Hume argued that all attempts to prove God, at least a theistic God (*see* THEISM), fail for any of the following reasons (*see* GOD, OBJECTIONS TO PROOFS FOR):

Finite beings need only finite causes. According to Hume, positing an infinite Cause is metaphysical overkill. A finite universe needs only a finite cause.

The principle of causality is unprovable. There is no way to prove the principle of causality. Everything based on experience could be otherwise. And everything not based on experience is simply a tautology, that is, true only by definition.

Principle of analogy proves nontheistic God. Even if one grants there must be some kind of cause of the world, it would not be an infinitely perfect God. At best the argument from analogy leads us to a finite and imperfect God for a finite and imperfect world. If one insists that God must be like what he created, then is God like a cabbage or a rabbit, because he made them?

An infinite series of causes is possible. An infinite series of causes is possible. Hence, there is no need to come to a *First* Cause. Infinite series are possible in mathematics.

Necessity does not apply to existence, but only to concepts. A Necessary Being, such as the cosmological argument concludes, is a misapplication of the term "necessary." The reason is that necessity applies only to concepts or ideas, never to actual reality. Necessary statements are analytic and contentless. And statements about the real world are not necessary.

There is no need for a designer; chance can explain all (see TELEOLOGICAL ARGUMENT *).* There is no need to posit an intelligent cause (designer) of the world; chance can explain the apparent design in the world. Given enough time any "lucky" combination will result. The universe may be a "happy accident."

It is possible that nothing ever existed, including God. It is always possible to conceive of anything, including God, as not existing. Hence, nothing exists necessarily. Since God is said to be a necessary being, even he must not exist necessarily, hence God must not exist at all.

What is logically necessary does not necessarily exist. Some antitheists argue that it is logically necessary for a triangle to have three sides, but it is not necessary for any three-sided thing to exist. Hence, even if it were logically necessary for God to exist it would not mean that he actually does exist.

If all things were created, then so was God. If everything needs a cause, then so does God. And if all things do not need a cause, then neither does the world. But in neither case do we need a First Cause.

These arguments are answered and Hume's logic critiqued in the article God, Objections to Proofs for.

Conclusion. Hume was one of the most influential figures in modern philosophy. His clear and powerful presentation of skepticism and antisupernaturalism was a significant factor in molding the modern secularistic mind. However, a careful analysis of Hume's crucial positions reveals that they are both inconsistent and contrary to experience. Indeed, the heart of his skepticism is self-defeating, since he does not really suspend judgment on the many dogmatic positions he takes about God and miracles.

Huxley, Julian. Julian Sorell Huxley (1887–1975) was the grandson of Thomas Huxley, who was known for his support of Charles Darwin . Julian received his degree from Oxford in zoology and later taught there. In 1912 he was appointed Biology Department chair at Rice University. He became professor of zoology at Kings College, London, in 1925. In 1952 he became president of the British Humanist Association. He was a signer of the 1973 Humanist Manifesto II (*see* HUMANISM, SECULAR). His books included *Principles of Experimental Embryology* (1934), *Evolution, the Modern Synthesis* , and *Religion Without Revelation* (1928, rev. 1957).

Julian is noted for his *evolutionary humanism* . This view had its most complete expression in *Religion without Revelation* . Building on the evolutionary biology of Darwin, the evolutionary philosophy of Herbert Spencer, and the evolutionary ethics of his grandfather T. H. Huxley, Julian developed a complete system of belief he called "evolutionary humanism." He expressed views on the whole gamut of topics, including God, human origins, religion, values, science, the arts, and his hopes for the future possibilities of the human race.

God and Religion. Like other humanists, Huxley did not believe in a theistic God (*see* THEISM). He believed that evolution explained all (*see* ATHEISM ; EVOLUTION, BIOLOGICAL).

Huxley's Disbelief in God. Huxley was opposed to God but in favor of religion. He said, "I believe . . . that we quite assuredly at present *know* nothing beyond this world and natural experience." That is, "a personal God, be he Jehovah, or Allah, or Apollo, or Amen-Ra, or without name but simply God, I *know* nothing of." Nor did he want to know. "I am not merely agnostic on the subject. . . . I disbelieve in a personal God in any sense in which that phrase is ordinarily used" (Huxley, 17, 18).

Belief in God, Huxley held, was purely psychological. God the Father was a personification of nature; the Holy Spirit represented ideals; the Son personified ideal human nature. So "the gods are creations of man, personalized representations of the forces of destiny, with their unity projected into them by human thought and imagination" (ibid., 51).

Huxley believed that modern scientific understanding made the concept of God obsolete. "God can no longer be considered as the controller of the universe in any but a pickwickian sense. The god hypothesis is no longer of any pragmatic value," he said. Operationally, "God is beginning to resemble not a ruler, but the last fading smile of a cosmic Cheshire Cat" (ibid., 58, 59). In fact, Huxley believed "it will soon be as impossible for an intelligent, educated man or woman to believe in a god as it is now to believe that the earth is flat" (ibid., 62).

Disbelief brought Huxley great relief. "For my own part," he concluded, "the sense of spiritual relief which comes from rejecting the idea of God as a supernatural being is enormous." He passionately hoped others would join him in his belief (and relief). Then "the insufferable arrogance of those who claim to be in sole possession of religious truth would happily disappear." Along with this would go bigotry, religious war, religious persecution, the horrors of the Inquisition, attempts to suppress knowledge and learning, hastily to social and moral change (ibid., 33).

Huxley's Belief in Religion. Despite his strong disbelief in God, Huxley considered himself deeply religious. "I believe," said Huxley, "that it is necessary to believe something. Complete skepticism does not work" (ibid., 13). In the end he found that believing in the scientific method met some of his religious longing. So Huxley believed that the scientific method "is the only method which in the long run will give satisfactory foundation for beliefs" (ibid., 13).

When Huxley applied the scientific method to religious experiences, including his own, he concluded that "religion arose as a feeling of the sacred." The capacity for this feeling, he reckoned fundamental to humankind, something given in and by the construction of the normal human mind. Huxley spoke honestly and vividly of his own religious experiences;

> Another incident of the same year remains vividly with me. We were doing night exercises between Aldershot and Fleet: the warm June night was scented with broom: the monotony of exercise, enforced silence, and darkness, combined with the beauty of the hour, impelled to aimless meditation.
>
> Suddenly, for no particular reason, without apparent connection with other thoughts, a problem and its solution flashed across my mind. I had understood how it was that two views or courses of action could not only both be sincerely held as good, but both

> actually could *be* good—and when the two came into contact, the one could both appear and be evil. It can be so when both are aiming in the same general direction, but the one is moving so much more slowly that it becomes a drag on the other's wheel. Ideas and facts, particular examples and their general meaning, the tragedy of bitter conflict between two fine realities, two solid honesties, all jostled each other in my mind in that moment of insight, and I had made a new step towards that peaceful basis for action which is expressed by the French proverb, "Tout comprendre, c'est tout pardonner."
>
> It also had that definite quality of being thrown into consciousness, implied in the term revelation, which has been described for purely intellectual discovery by many mathematicians and men of science, notably Poincare in his essays on scientific method. It was an exaggeration of the sense that comes when one suddenly sees a point which had eluded comprehension, but without any accompanying sense of effort. The same general sense in the sphere of feeling one may have when one is suddenly transported to a complete and satisfaction by some sudden view of distant hills over plain; or by a sudden quality of light—"the light that never was on sea or land," and yet is suddenly here, transforming a familiar landscape; or by a poem or a picture, or a face. But only once before had I had such a complete sense of outside givenness in an experience—the only occasion on which I had a vision (of a non-hallucinatory but amazingly real sort: such, of a religious cast, abound in the records of mystics [*see* MYSTICISM] such as St. Theresa). [ibid., 86, 87]

Such vivid religious experiences left Huxley with passionate "beliefs in the supreme value of certain ideas and activities." He said, "these in the theological parlance are called Faith" (ibid., 76). In fact, Huxley confessed, "Life would have been intolerable but for [such] glimpses of the alternative state, occasional moments of great happiness and spiritual refreshment, coming usually through poetry or through beautiful landscape, or through people" (ibid., 77).

One day while browsing through a library in Colorado Springs, Huxley came across some essays by Lord Morley in which he found these words: "The next great task of science will be to create a religion for humanity." Huxley was challenged by this vision. He wrote, "I was fired by sharing his conviction that science would of necessity play an essential part in framing any religion of the future worthy of the name" (ibid., 82).

A Religion for Humanists. Huxley took up Morley's challenge to develop a scientific religion. He called it "evolutionary humanism." One of the foundational tenets, as the name would signify, is the theory of evolution.

Human Evolution and Destiny. The experience of the mystical led Huxley to reject a purely materialistic interpretation of the universe, such as he saw in Marxism (*see* MATERIALISM). He concluded, "the materialist hypothesis, in denying the importance of mental and spiritual factors in the cosmos, is to me as erroneous as, though more sophisticated than, the naive notion of the magic hypothesis, which projects spiritual forces into material events." But his rejection of pure materialism notwithstanding, Huxley was a complete naturalist. He insisted that discoveries of physiology, biology, and psychology necessitated naturalism. There was no longer room for the supernatural. Both material and "spiritual" forces in the cosmos were part of nature (ibid., 187).

Evolution is, of course, the only naturalistic explanation of the origin of life. Huxley wrote, “I personally believe in the uniformity of nature, in other words, that Nature is seen to be orderly . . . and that there are not two realms of reality, one natural, the other supernatural and from time to time invading and altering the course of events in the natural” (ibid., 45). Huxley added, “I believe also in the unity of nature.” Further, “I believe in unity by continuity. Matter does not appear or disappear, nor do living things arise except from previously existing things essentially like themselves” (*see* NATURALISM). Hence, “the more complex matter that is alive must at some time have originated from matter that was not alive” (ibid., 45).

As evolution moved onward it moved upward. For each new dominant type possesses improved general organization. This progressive replacement of dominant types and groups is most clearly shown in later vertebrates. “It is thus perfectly proper,” said Huxley, “to use terms like *higher* and *lower* to describe different types of organism, and *progress* for certain types of trend” (ibid., 192).

The culmination of the evolutionary biological process is humankind. Huxley believed that the only avenue of advance left was the improvement of brain and mind. “It is clear that man is only at the beginning of his period of evolutionary dominance, and that vast and still undreamt-of possibilities of further advance still lie before him” (ibid., 193). Biology has revealed human destiny as the highest form produced by evolution, the latest dominant type, and the only organism capable of further major advance. Human destiny is to realize new possibilities for the world and be the instrument of further evolutionary process (ibid., 193).

The Nature of Human Beings. Huxley was not a wide-eyed optimist about the nature of man. He recognized evil urges and activities, such as greed, arrogance, fanaticism, sadism, and self-indulgence (ibid., 196–97). He believed, however, that humanity was capable of saving itself from these evils.

Further, Huxley was not a strict materialist (*see* MATERIALISM). He believed in “spiritual” and “mental” aspects to the “stuff” of the universe as well as the “material” aspect (ibid., 186–87). He rejected Marxist (*see* MARX, KARL) materialism and spoke favorably about “mystical” experience. He was nonetheless, a committed naturalist in explaining the human phenomena.

Clearly Huxley was optimistic about humankind’s ability to achieve a great future. The human was the only hope for future evolution. Along with his grandfather, Huxley confessed: “My faith is in the possibilities of man” (ibid., 212). This hope was that *Homo sapiens* would continue to realize new potential through continuing evolution.

Evolution and Ethics. The evolutionary progress of the past provides guiding principles for the future. On this basis humanity should aim at those qualities that have succeeded. These principles include efficiency and control of environment, self-regulation and independence, individuation and levels of organization, harmony in work, increased awareness and knowledge, storage of experience, and mental organization (ibid., 193). Human beings would fulfill their destiny more successfully by exploiting reason, imagination and conceptual thought, and unique capacities of accumulating, organizing, and applying experience through culture and the exchange of ideas (ibid., 193). The most sacred duty, and the most glorious opportunity is to

promote the maximum fulfillment of the evolutionary process and fully realize the latent human possibilities (ibid., 194).

But even though “the flowering of the individual is seen as having intrinsic value, as being an end in itself,” the individual’s value is limited by the need to maintain and improve society (ibid., 194, 195). The individual has duties to develop personal potential and to help others singly and collectively realize their potential. Each person must contribute at least a little to promoting the evolution of the whole (ibid., 195).

According to Huxley, “the basic postulate of evolutionary humanism is that mental and spiritual forces . . . do have operative effect, and are indeed of decisive importance in the highly practical business of working out human destiny; and that they are not supernatural, not outside man but within him” (ibid.). These forces operate not only within individuals, but also through the social process. Since the human being is the only one in conscious control of these forces, alone people are responsible for realizing life’s further progress. “This applies,” said Huxley, “as much to the blind urge to reproduction as to personal greed or desire for power, as much to arrogance and fanaticism, whether nationalist or religious, as to straightforward sadism or self-indulgence” (ibid., 197).

In evolutionary humanism the general duty of the individual is to realize personal potential. The right kind of individual development leaves the way permanently open for growth. Three areas of personal development are possible: specialization, cultivation of personal abilities in every area of life, and cultivating inner harmony and peace (ibid., 199, 200).

Actually, evolutionary humanism has twin goals: present personal fulfillment and long-term cosmic progress. The latter value Huxley calls “the gospel of evolutionary humanism” which is a “transcendent value” (ibid., 201).

Science and the Future. Although Huxley did not believe in individual immortality (ibid., 18), he did expect the human race to continue on. He believed that science was the best organ for accomplishing this goal—not science without religion, but a scientific religion. He wrote:

> Twentieth-century man, it is clear, needs a new organ for dealing with destiny, a new system of religious beliefs and attitudes adapted to the new situation in which his societies now have to exist. The radically new feature of the present situation may perhaps be stated thus: Earlier religions and belief-systems were largely adaptations to cope with man’s ignorance and fears, with the result that they came to concern themselves primarily with stability of attitude. But the need today is for a belief-system adapted to cope with his knowledge and his creative possibilities; and this implies the capacity to meet, inspire and guide change. [ibid., 188]

Huxley’s humanistic religion, then, is the organ of destiny. Even so, Huxley had no delusions of grandeur about the immediate prospects of this kind of religion. “Like all other new religions . . . it will at the outset be expressed and spread by a small minority.” However, he predicted that “it will in the due course of time become universal, not only potentially and in theory, but actually and in practice.” Human psychological nature makes this inevitable. “Man cannot avoid

the process of convergence which makes for the integration of divergent or hostile human groups in a single organic world society and culture” (ibid., 208).

So an unavoidable evolutionary process will eventuate in a universal humanistic religion. This atheistic society will continue the evolutionary development in ever new intellectual, psychological, and social ways.

Huxley did not know what form his new religion would take, what rituals or celebrations it might practice, whether it would have a priesthood, erect buildings, or adopt symbols (ibid., 209). Whatever the form, it should be both “unified and tolerant” (ibid., 160). He was confident, however, that it would come. Since “the scientific spirit and the scientific method have proved the most effective agents for the comprehension and control of physical nature” it remains for coming generations to apply them toward controlling human destiny (ibid., 205).

Comparison and Contrast. Evolutionary humanism is much broader than Huxley’s variety of it. Virtually all humanists believe in some form of evolution. What they disagree about is what mechanism made it happen. Not all agree with Huxley that natural selection (the survival of the fittest) is the means by which evolution is accomplished. What further distinguishes Huxley’s variety is that he believed it should be made a universal religion and the basis for ethics. That is, whatever aids the evolutionary process is good and whatever hinders it is evil.

Evaluation. As a religion, Huxley’s dream has not caught on quickly. It would seem that many secular humanists do not really desire it to catch on. More recent humanists have admitted that Huxley was too optimistic (cf. “Humanist Manifesto II,” 1973). There is no good observational evidence to indicate the inevitability of the evolution of a universal humanistic religion.

The evolutionary ethic involves some serious problems. How does society preserve individual rights of those who are blocking social evolution (*see* MORALITY, ABSOLUTE NATURE OF)? How can an ethical “ought” be derived from a biological “is”? How can the assumed fact of evolution be the basis for moral value? Many bad things evolve too. If so, there must be some standard outside of the evolutionary process by which to know what is good or bad.

Huxley’s confession of transcendent, supreme values, mystical experience, and a destiny of the world will be welcomed by those who claim that these are verbal indicators of a surrogate “God.” They will insist that only minds can “destine” and only persons can be the object of religious commitments. They will contend that Huxley has avoided the name *God* but not his reality.

With the foundations of modern evolution crumbling (*see* EVOLUTION), the basis of Huxley’s evolutionary humanism is being destroyed too. Moreover, he is inconsistent. In one breath he states that the first life arose from nonlife (ibid., 45), yet in the next he ridicules belief in spontaneous generation (ibid., 62). Huxley erroneously uses operation science to explain origins (*see* ORIGINS, SCIENCE OF). He tries to explain the unrepeatable events of the past by the repeatable events of the present. Huxley misuses the scientific method he advances as the basis of evolutionary humanism. Such naturalism also lacks philosophical justification. He offered no

adequate arguments for denying the possibility of supernatural intervention (*see* MIRACLES, ARGUMENTS AGAINST).

Finally, like other nontheists, Huxley's critique of God (*see* GOD, OBJECTIONS TO ARGUMENTS FOR) is shallow and inadequate. He does not interact with the substantial evidence for the existence of a theistic God (*see* GOD, EVIDENCE FOR).

Illusion, Religious. ***See*** **FREUD, SIGMUND .**

Illusionism. Illusionism is the belief that the "world" only appears to be real. Our senses deceive us. The mind or spirit is the guide to true reality. Illusionism is closely associated with monism and pantheism. The Greek philosopher Parmenides is an example of a monist who believed everything other than an absolute One is an illusion (see ONE AND MANY, PROBLEM OF). Shankaristic Hinduism is an example of illusionist pantheism . Christian Science is pantheistic and illusionist.

Illusionism, solves the problem of evil (*see* EVIL, PROBLEM OF) by denying its existence. Illusionism affirms God and denies evil, whereas atheism affirms evil and denies God. Theism affirms the reality of both but denies that there is a contradiction.

In Hindu illusionism the illusion of the external world is call *maya* , and the illusion of diversity is called *mithya* . Ninth-century Hindu thinker, Sankara, argued that Brahman (the Hindu name for the Ultimate) is the sole reality. The external world only appears to be, the same way a rope seen at a distance appears to be a serpent. When we examine the world closely, we see that the only reality behind the illusion is Brahman. Brahman "causes" the world to appear diverse and evil only in the sense that the rope "causes" the serpent to appear.

Western illusionism has taken a number of forms. The first proponents of illusionism in the West were the Greeks Parmenides and Zeno. Parmenides (b. 515 B.C .) was one of the first philosophers to focus his attention on the metaphysical problem of whether reality was one or many. He argued that our senses could not be trusted (Parmenides, 266–67). Parmenides believed that things may appear to be many and evil, but they are ultimately one and good. The senses are easily deceived, and consequently humans falsely perceive of the world as diverse and evil.

One of Parmenides' pupils, Zeno (b. 490 B.C .), attempted to prove this through logic. His "race course argument" denied the existence of motion. A runner covering a set distance transverses a successive number of halves of the distance. To travel from A to B, one must travel past the midpoint (m1). But in order to travel from A to m1, one must travel past the midpoint (m2) of that distance. And in order to travel past midpoint m2, one must travel past midpoint (m3). Thus in order to travel in any direction, it appears that we must cross an infinite number of

midpoints, which seems impossible. That means, according to Zeno, that motion is impossible and therefore an illusion.

A modern form of illusionism in the West is Christian Science. According to Mary Baker Eddy, evil is not a real entity, but is instead a false perception; it is the "error of the mortal mind." Christian Science maintains that God is truth and that "there is no pain in truth, and no truth in pain." Sin, sickness, and death, therefore, are mortal illusions that do not exist in reality (Eddy, 113, 289, 480).

Evaluation. Many of the criticisms of illusionism are the same as those covered in the article PANTHEISM .

Illusionism is self-destructive. One can only know that all is an illusion against the backdrop of reality. Illusion means not-real. There must be a real standard by which the illusion is defined.

Of course an illusionist could claim that he is not denying all reality, just the reality of this world. Brahman is real. And the world is known to be unreal by contrast with this Reality. While this solves the logical problem of illusionism, it leaves an epistemological problem. Since we are in this world and are allegedly part of the illusion, how could we know that the whole world is an illusion?

The illusionist who claims we are Ultimate Reality (God) and, hence, are not part of the world, begs the question. How do we know we are God? Illusionists admit that they were not always con scious that they were God. But the assertion "I came to realize that I was always God" is a self-defeating statement. For God (Ultimate Reality) does not change. Change is only part of the illusion. Hence, God was always aware he was God. And since we were not, then it follows that we are not God.

Further, if evil is an illusion, where did the illusion originate? And why does everyone experience it from their first moments of consciousness? How did the illusion originate, and how is it passed down to successive generation? The origin, persistence, and universality of the so-called "illusion" argues for its objectivity and reality. What is the difference between saying everyone has it all the time and cannot get rid of it and saying it is objectively real?

It seems more reasonable to assert that illusionism is an illusion. There seems to be no practical difference between viewing pain or evil as illusion and viewing it as reality. Pain or evil is part of the human experience and is encountered by all. Viewed as illusory or real, the experience is the same. This being the case, it seems more sensible to conclude that some are engaging in wishful thinking to conclude that pain or evil is not real. To rephrase Sigmund Freud , one could ask: Why is it that we wish so desperately that evil is not real when it is so universal, persistent, and unavoidable? Could it be that our belief that evil is not real is the great illusion?

Those who believe all is an illusion do not live that way. They avoid pain like anyone else. They eat and drink like others. Those who don't soon experience the illusion of death. So, illusionism is literally an unlivable philosophy. It is denied in practice by those who affirm it.

Immortality. *Immortality* is the term commonly applied to the belief that human persons, at least in their spiritual dimension, consciously survive death and live on forever.

Greek versus Christian Concept of Immortality. Greek and Christian concepts of immortality differ (see Ladd). According to an ancient Greek concept of immortality (e.g., Plato), human beings *are* a soul and only *have* a body. The soul is to the body what a rider is to a horse. Salvation is in part deliverance *from* the body, which is the prison of the soul. There is a basic duality of soul and *soma* (body).

The Hebrew-Christian tradition, on the other hand, while acknowledging that the soul and body separate at death, holds to a unity of the spiritual and physical dimensions of human nature. The human being is a souled body. The soul is to the body what form is to matter, or shape is to a vase. Hence, salvation is not salvation *from* the body but salvation *in* the body (*see* RESURRECTION, PHYSICAL NATURE OF). Indeed, the word *immortality* is used of human beings in the New Testament exclusively in the context of the resurrection body (1 Cor. 15:53 ; 2 Tim. 1:10).

Biblical Evidence for Immortality. The doctrine of immortality was revealed progressively in the Bible, more explicitly in the New Testament.

Old Testament Affirmation of Immortality. As opposed to Greek thought, the Old Testament hope of life after death was definitely bodily. The Old Testament references to an immortal state are largely resurrection passages. The Jews looked toward resurrection as restoration to life on earth of the physical corpse that had been placed in the tomb. Jews not only believed that man was created "from the dust" (Gen. 2:7) and would return to dust (Eccles. 12:7), but that at the resurrection the dead would be reconstituted from the dust. This power to bring the dead back to life is expressed in many passages (see Deut. 32:39 ; 1 Sam. 2:6 ; Job 19:25–27 ; Ps. 49:14–15).

David spoke of the resurrection (in Psalm 16) by claiming that "the Holy One will not see decay" (vs. 10). According to the New Testament (Acts 2:25–27 ; 13), Peter said of David's prophecy that "seeing what was ahead, he spoke of the resurrection of Christ, that he was not abandoned to the grave, nor did his body *(sarx)* see decay" (Acts 2:31). Such a resurrection involved a physical body of "flesh" *(sarx*) (*see* RESURRECTION, PHYSICAL NATURE OF).

Jesus believed the Old Testament taught resurrection and cited it to support his position against the Sadducees who rejected it. He declared, “You are in error because you do not know the Scriptures or the power of God” (Matt. 22:29). Then he cited Exodus 3:6 , 15 : “I am the God of Abraham, the God of Isaac, and the God of Jacob” (Matt. 22:32), adding, “He [God] is not the God of the dead but of the living.”

Isaiah spoke of the resurrection of the dead body when he wrote, “Your dead will live; their bodies will rise. You who dwell in the dust, wake up and shout for joy” (26:19). That bodies would arise from the dust makes evident the identification with physical resurrection. Daniel foretold that “Multitudes who sleep in the dust of the earth will awake: some to everlasting life, others to shame and everlasting contempt” (Dan. 12:2). The reference to “dust of the earth” again supports the idea of a physical resurrection.

Though not part of the Old Testament (*see* APOCRYPHA, OLD AND NEW TESTAMENT), the Jewish intertestamental literature also speaks of a physical resurrection. The book of *Wisdom* promises that “in the time of their visitation” the departed “souls of the righteous will be restored and “they will govern nations and rule people” (3:7–8). Second Maccabees tells of the courageous Jewish believer who suffered his tongue and hands to be cut off, saying, “I got them from Heaven, and because of his laws I disdain them, and from him I hope to get them back again [at the resurrection]” (7:11). Second (Fourth) Esdras predicts that after the time of the Messiah “the earth shall give up those who are asleep in it, and the dust those who dwell silently in it” (7:32). Death is described here as a time when “we shall be kept in rest until those times come when thou [God] wilt renew the creation” (7:75).

In the apocalyptic *2 Baruch* , God is asked, “In what shape will those live who live in Thy day?” The answer is unequivocal affirmation of belief in the material resurrection: “For the earth shall then assuredly restore the dead [which it now receives, in order to preserve them]. It shall make no change in their form, but as it has received, so shall it restore them, and as I delivered them to it, so also shall it raise them” (49:1; 50:2).

The Pharisees in New Testament times believed in the physical resurrection of the corpse from the tomb. As the Sadducees denied the resurrection (Matt. 22:23), their opponents, the Pharisees, believed in a material resurrection body (cf. Acts 23:8). They conceived of the resurrection body as being so physical that it was meaningful to ask which of her seven earthly husbands the woman would be married to in heaven (Matt. 22:28).

Mary and Martha reflected the New Testament Jewish belief in the resurrection when they implied that their brother Lazarus would be raised in the last days while his body was still in the tomb. Even Murray Harris, who rejects the Jewish view of a material resurrection, acknowledges, nonetheless, that “it was impossible, for example, for Jews to believe that Lazarus, who had been dead for four days, could be raised without the removal of the stone that lay over his burial cave and his emergence from the tomb (cf. John 11:38–44)” (Harris, 39).

New Testament Affirmation of Immortality. While the New Testament provides abundant evidence of belief in bodily immortality after the resurrection (*see* RESURRECTION, EVIDENCE OF), it also affirms a conscious existence of soul between death and resurrection.

Jesus promised the repentant thief on the cross conscious bliss that very day of his death, saying: “I tell you the truth, today you will be with me in paradise” (Luke 23:43). Stephen prayed, “Lord Jesus, receive my spirit” (Acts 7:59). The Apostle Paul wrote: “We are confident, I say, and would prefer to be away from the body and at home with the Lord” (2 Cor. 5:8). Contemplating death, Paul added, “I am torn between the two: I desire to depart and be with Christ, which is better by far” (Phil. 1:23).

The “souls” of those who had just been martyred were conscious in heaven, for “When he [Christ] opened the fifth seal, I saw under the altar the souls of those who had been slain because of the word of God and the testimony they had maintained” (Rev. 6:9). Even the lost beast and false prophet who where thrown alive into the lake of fire (Rev. 19:20) were still conscious “a thousand years” later (Rev. 20:10).

Moses and Elijah, who had been dead for centuries, consciously engaged in conversation about Christ’s death on the mount of transfiguration (Matt. 17:3).

Objections to Immortality. Both Greek and Judeo-Christian varieties of immortal life have come under attack. Four arguments, mostly physiological, have dominated this battle: (1) the argument from self-consciousness and the brain; (2) the argument for the dependence of the conscious mind on the brain; (3) the similar argument that the brain alone gives access to the world, and (4) an argument from personhood.

The Nature of Self-Consciousness. In order for there to be immortal life, the mind must consciously survive death. But the mind cannot function without the brain. Therefore, when the brain dies, consciousness ceases. This materialistic (*see* MATERIALISM) argument makes several false assumptions.

First, it assumes that consciousness is a physical function, that “mind” is a function of matter, a process within the brain. There is no proof behind this assumption.

Second, the argument wrongly assumes that, simply because a mind and brain function together, they must be identical. But this is not necessarily so. They could interact without being the same.

Third, the argument assumes that the self is nothing without the brain. This is a reductionist fallacy. Things that go together are not necessarily the same, any more than my ideas expressed in these words are the same as these words.

Fourth, the materialist’s argument is self-defeating. “Nothing-but” statements assume “more-than” knowledge. How could I know I am nothing more than my brain unless I am more than it? I cannot put my brain in a test tube and analyze it unless I (my mind) am standing outside the test tube.

On the other hand, there are reasons to believe that the mind cannot be reduced to matter: (1) Whatever is material is limited to a particular region of space and time. If it moves, it moves in space and time. But the mind is not so limited. It roams the universe without leaving the room.

(2) Even a materialist speaks of "her" thoughts. But if strict materialism is correct, I have no discrete thoughts. They are a mere stream of electrons or some other material particle. (3) Materialists claim their doctrine is true and want others to agree with their conclusions. But this implies they are *free* to consider their arguments and change their view. This is not possible if they are mere material processes and not free beings.

The Dependence on the Brain. The mind is dependent on the brain to function. Without the brain it cannot be conscious. However, at death the brain ceases to function. Hence, consciousness must cease at this time as well. This modified materialism is known as epiphenomenalism. The mind is not identical to the brain, but it is dependent on the physical brain the way a shadow is dependent on a tree.

This argument assumes, but does not prove, dependence of mind on brain. Merely because certain mental functions can be explained in physical ways does not mean they are absolutely dependent on physical processes. There may be ways for the mind to think independently of the brain. After all, God does not have a body, and there are good reasons to believe that he exists as a sentient Being (*see* GOD, EVIDENCE FOR). The science of neurobiology is an empirical study. But this does not mean everything it examines is purely physical. It cannot explain the mind in totally physical ways, any more than the mind can be confined in a test tube. There is always the "I" standing outside the experiment. Just because certain things can be quantified does not mean that there are no qualities (such as love) that cannot be quantified. Likewise, simply because we can speak in material terms about certain functions of the mind does not mean the mind is material.

Argument from Access to the World. It is also argued that, even if materialism is false, there may still be no immortality. The mind (self) gains access to the world through the brain. But death destroys the brain. Therefore, death destroys a person's means of access to the world.

The fallacies in this argument are readily detected. The argument assumes (without proof) that the person's brain is the only way of access to the world. One could lose his body and gain another body (whether temporary or permanent) and still have access to the world. It also assumes without proof that there are no other worlds to which one can have access. Perhaps there are other worlds, physical or spiritual, or other dimensions through which one can have access.

This argument further assumes that there are no other ways to be conscious than through this world. Yet no argument is offered demonstrating that one cannot be conscious without some kind of body. God is, and we have good evidence that he exists (*see* GOD, EVIDENCE FOR). Spiritual beings are conscious, yet they have no physical bodies as we know them (Luke 24:39).

Argument from the Nature of Personhood. Some insist that what we mean by "person" involves embodiment. So no person can survive without a body. Hence, death destroys what it means to be a person.

This argument begs the question by defining "person" in a way that makes it impossible to survive death. If *person* is defined as "human person," "finite person," or "personal being," no

such conclusion follows. There may be other ways or other worlds through which a person can be conscious without a body.

Also, death only severs one dimension of consciousness—this-world consciousness. We could still be self-conscious, God-conscious, and/or other-world conscious (say, in a spirit world). No argument has been offered to show this to be impossible.

Argument from Self-Identity. The argument against immortality from self-identity takes the form: If Life after death is to involve individual immortality, then there must be some way of identifying an individual spirit. But spirits are not distinguishable since they have no bodies by which they can be distinguished. Therefore, there can be no individual immortality.

The assumption here is that physical characteristics are the only way to identify one person from another. This is not true, as blind acquaintances who have never touched each other know. So do pen pals who have no pictures of one another. Even if there are sound waves or Braille by which to get communications from others, these are only means of communication; they are not identifying physical characteristics.

There are things about individual human spirits (or minds) that differ from other human spirits. Each has a different history and memory. Each has a different personality or character, none of which is a physical difference. Beautiful music as understood in the mind (not the mere sounds in the air) is not physical. Yet we can distinguish one beautiful song from another, even in our mind.

Finally, one does not have to know what the identifying characteristics are to know that they do not have to be physical. It simply begs the question to say that they must be physical.

Nonbiblical Evidence for Immortality. Plato's arguments for immortality have since been supplemented by philosophers with other kinds of evidence. Peter Kreeft lists twenty-five arguments for immortality (*Handbook* , 235f.). Most arguments for immortality have encountered significant objections.

Weak or Fallacious Arguments for Immortality. Many of the weakest arguments for immortality seemed strong to some people at some time. Most are rejected by most thinking people.

Argument from universal belief. Others have argued from universal belief in immortality. Human beings anticipate immortality. The most ancient peoples used burial rites, embalming, and other practices. However, skeptics note that this belief is not really universal, since atheists and agnostics don't practice it. Even if it were, a universal belief is not necessarily true. The vast majority once believed the sun moved around the earth.

The argument can be revised to meet at least part of the objection. Kreeft observes that what the vast majority believe is probably true. Most believe in life after death, so life after death is probably true (ibid., 236). Even in this form the first premise admits that the statement is only

“probably” true. Even then this is questionable, since there are many things that the majority of people have believed.

The argument could be further qualified: What the sages believe is probably true. The sages believe in life after death. Therefore life after death is probably true (ibid.). This leaves us to ask who the “sages” are and whether sages have not also been wrong about many things.

Argument from innate knowledge. Plato pointed to the innate ability to know things one has never learned as proof that the soul existed prior to birth and would, therefore, survive after birth. In his book *Meno* , the slave boy was alleged to know geometry without ever having studied it.

Critics, however, insist that, while there may be innate capacities, there are not innate ideas (*see* HUME, DAVID). Even if there were, this does not prove that they were brought over from a preexistent state, since one could have been born with them. It is more likely that Socrates’ slave boy was led along by clever questions to use his natural ability to reason to these ideas. Other socalled “memories” of previous lives have been shown to be false. In the famous Bridie Murphy case, it was later demonstrated that this young lady had not lived centuries before in Ireland, but that her grandmother had read her stories of Ireland and spoke Gaelic to her when she was a child. Under hypnosis (the power of suggestion) these childhood experiences surfaced as “memories” from a previous life (Geisler, 75).

Argument from the soul as life principle. Another argument in *Phaedo* was that since the soul is the principle of life in the body, it cannot die. Life can never admit its opposite, which is death. Hence, the soul can never die. But this proves too much, for all animals and even plants are alive too. On this ground one would have to believe in the immortality of carrots and cabbages.

Argument from the immaterial soul. Plato argued in *Phaedo* from the immateriality of the soul. Since the soul is not material, he reasoned, it is not divisible or destructible. What is indestructible is immortal. However, even his prize pupil, Aristotle , denied the validity of this argument, denying the immortality of individual souls. After all, not every form (which is immaterial) survives death, as the form of a chair, vase, or even an animal demonstrates.

From a Christian point of view the soul is not indestructible, since whatever God creates he can also destroy. But if Plato’s argument is correct, even God could not annihilate a soul. Thus, if the soul is not indestructible, then even an immaterial entity could be destroyed.

Argument from near-death experiences. Some have argued from near-death experiences to immortality. Even the British humanist and logical positivist, A. J. Ayer, changed his mind about immortality after a near-death experience. In some of these experiences the consciousness is alleged to “pop out” of the body and observe things that could not have been observed from the body.

At best these experiences could only point to a brief survival of the soul, not an immortal existence of the person. Skeptics insist that these experiences are hallucinatory or imaginary, each person projecting personal images of the afterlife as a defense mechanism when facing possible death.

The so-called “hard-core” out-of-body experiences where the person allegedly saw or heard things it would have been impossible to witness can be explained from a Christian view as demonic. Many of these experiences are connected with occult activity and false teaching (cf. 1 Tim. 4:1f .). In any event, they do not prove immortality, since there are other explanations.

There is serious question from a Christian view whether the person was actually dead. The Christian definition of death (cf. Gen. 35:18 ; 2 Cor. 5:8 ; James 2:26) occurs when the soul leaves the body. If it did not leave the body, then the experience is not evidence of survival. If it did, then returning to the body would constitute a resurrection. Only God can raise the dead (Deut. 32:39 ; 1 Sam. 2:6 ; John 5:28–29 ; 11:25). But many non-Christians have had these experiences, which confirmed them in their anti-Christian beliefs. God would not perform a miracle to confirm people in error (*see* MIRACLES, APOLOGETIC VALUE OF). Further, leaving the body and returning is contrary to the Bible, which says we only die once (Heb. 9:27). By the argument that near-death experiences evidence life after death, such people would die twice.

Argument from mystical visions. Mystical (*see* MYSTICISM) experiences and visions of heaven are frequently reported in some parts of the church, which, if true, would constitute proof of an existence beyond life. Paul reported one such event in his own life (2 Corinthians 12), though he was careful not to characterize it as either vision or out-of-body experience.

If one is appealing to a revelation, proof must be offered for the reliability of that revelation (*see* BIBLE, EVIDENCE FOR). In the case of mystical experiences, there is no rational proof. If one stays in the body while having such a vision, the skeptic can argue that internal subjective experiences are just that—subjective—and have no binding evidential force on anyone else. If the person actually leaves the body and returns, this is contrary to the Bible’s teaching that we only die once. Any claim that God has raised the person from the dead runs headlong into the problem that God would not raise someone so they could teach things contrary to his Word. The majority of those who claim an out-of-body experience do teach contrary to Scripture (see Abanes).

Argument from communication with the dead. Another utterly unbiblical claim is that life after death can be substantiated through communication with the dead through mediums or in trances. This is common to occult and new age circles. Elizabeth Kubler-Ross, author of *Death and Dying,* claims to have had such experiences. Skeptics, however, explain such experiences as hallucinatory or an eruption of one’s subconscious mind. Christians point out that the Bible condemns contact with the dead (Deut. 18:11) and warns of deception by the demonic (1 Tim. 4:1 ; 1 John 4:1).

Argument from the purpose for life. Some have pointed to the meaning, purpose, or goal of life as proof of immortality. The argument has been stated: Life must have a worthwhile purpose. A life that ends in annihilation does not have a worthwhile purpose. Therefore, there must be life after death (Kreeft, *Handbook,* 248).

The answer from critics, of course, is that life need not have a worthwhile purpose (*see* CAMUS, ALBERT ; EXISTENTIALISM ; SARTRE, JEAN-PAUL). Others would challenge whether this worthwhile purpose cannot be the promotion of species survival in this life.

Plausible or Probable Arguments for Immortality. Apparently, the best ways to fill in this gap are to appeal to evidence which is proven in another argument. There are more plausible reasons to believe in immortality; some appear to be very strong. The strongest of all is the argument from the physical resurrection of Christ.

Argument from Christ's resurrection. Immortality is proven by the fact that Christ returned from the dead (*see* RESURRECTION, EVIDENCE FOR). That evidence is:

The New Testament (*see* NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF) reveals that more than 500 witnesses saw Christ after his resurrection (1 Cor. 15:6) on twelve different occasions, scattered over a forty-day period (Acts 1:3). He was seen and heard on each occasion. He was touched at least twice (Matt. 28:9 ; John 20:17 ; see also Luke 24:39 ; John 20:27). He ate (Luke 24:30 , 42–43 ; John 21:12–13 ; Acts 1:4 ; cf. 10:41). His crucifixion wounds were visible (Luke 24:39 ; John 20:27). The disciples saw his empty tomb and the cloths with which his body had been wrapped. These experiences transformed followers of Christ from scared, scattered skeptics to the world's greatest missionary society, preaching the resurrection. Nothing else accounts for all of this evidence except the literal bodily resurrection of Christ.

Naturalistic alternatives to the resurrection have been proposed, but none are plausible. They fall into two categories. One denies that Jesus really died, though the evidence for his actual death is more than substantial (*see* CHRIST, DEATH OF). The second group denies that he rose, offering a naturalistic alternative. These are all easily refuted by the evidence (*see* RESURRECTION, ALTERNATIVE THEORIES).

Argument from the existence of a personal God. Granted a theistic God exists, one could argue that a created human being with a rational, moral, and immaterial dimension would not have been created to be destroyed. The argument goes:

1. There is good evidence that a personal theistic God exists.

2. Human beings are created like God, as personal, rational, and moral beings.

3. A personal theistic God would not annihilate what is like himself in these most significant ways.

4. Therefore, human beings are immortal.

The evidence for the first two premises is given in the articles Cosmological Argument; God, Evidence for; God, Moral Argument for; Kalam Cosmological Argument. The third premise is defended under Annihilationism. Critics note correctly that this is an *a priori* argument. It is based on what we would expect God would do, but there is no necessity for him to do so. While this is correct, it does not take away the force of the argument in an existential or moral sense.

The kind of beings humans are—personal, rational, and moral—wards off the criticism that even Christians believe that God annihilates the souls of animals. Why does he not destroy humans? The answer seems plausible: Humans are made in his image.

Argument from God's love. A similar argument reasons from God's love. A theistic God is a good and loving God (*see* GOD, NATURE OF). But if God is loving he would will the good of those he loves. Immortality would seem to follow: A loving being does not annihilate another; it wills the continued existence of the object of its love. God is absolutely loving. Therefore God wills the continued existence of all persons (ibid., 246).

This argument does not prove too much, as some might object. It does not insist that God *must* will an immortal creature into existence, nor even necessarily will its immortal existence. It merely affirms that, given the fact that God has chosen to will into existence other persons, it is reasonable to assume that his personal love for other persons he had made would prompt him to continue to will their existence. Of course, in this form it is not a full proof of immortality, but only a reasonable expectation.

Argument from ultimate justice. A theistic God is also absolutely just. The argument from God's justice is stated:

1. God is the ultimate standard of justice.

2. There is no ultimate justice for many things in this life.

3. Therefore, there must be another life in which ultimate justice is achieved.

Attacks on the first premise overlook the argument for God's existence (*see* MORAL ARGUMENT FOR GOD), or they boomerang when pressed. For to insist, as antitheists do, that there are ultimate injustices in this world is to posit an ultimate standard of justice by which injustice is known (*see* ATHEISM ; EVIL, PROBLEM OF).

Likewise, one is hard-pressed to show that there is ultimate justice in this life. One could appeal to reincarnation by arguing that injustice will be taken care of in another incarnation. But this will not help, since reincarnationists believe in the survival of the soul and/or immortality. And without such a recourse it would seem that one must admit that there are unresolved injustices in this life. In view of this, one finds it difficult to explain why an absolutely just God would not rectify these in another life. If appeal is made to annihilationism as a punishment, then presumably at least some would receive eternal life.

Argument from moral duty . Immanuel Kant offered an argument from practical reason: The greatest good for all persons is that they have happiness in harmony with duty. But persons are not able to realize the greatest good in this life. Nor can they find this good without God. Therefore, we must postulate a God and a future life in which the greatest good can be achieved.

Critics of Kant say he did not really prove immortality. He only proved that immortality makes sense. We also perceive that a moral duty makes sense. But we have no proof that there

really is a real moral duty. These arguments have validity, but they do not really destroy the rational persuasiveness in the need to posit immortality as an explanation of morality. This ultimate reason often takes the form of the argument from ultimate justice.

Argument from the longing for heaven. C. S. Lewis (*Mere Christianity* , *Surprised by Joy* , *The Pilgrim's Regress* , *The Problem of Pain* , *The Weight of Glory*) stated an argument that runs:

1. Every natural innate desire has a real object that can fulfill it.

2. Human beings have a natural, innate desire for immortality.

3. Therefore, there must be an immortal life after death.

In defense of the first premise, it is argued that if there is hunger there is food, if thirst, drink; if *eros* , sexual fulfillment; if curiosity, knowledge; and if loneliness, society (Kreeft, *Handbook* , 250). The second premise is supported by an appeal to a strange, mysterious longing that differs from all other longings because it is undefinable and unobtainable in this life, and the mere presence of this desire is felt to be more precious and joyful than any other satisfaction. However inadvertently we express it, what we all long for is paradise, heaven, or eternity (ibid.).

If these premises are true, there is "more" than this life. The fact that we complain about this world, with its pain and death reveals a deep-seated desire for eternity. We may never attain it, but this no more disproves its existence than life-long singleness proves there is no marital bliss or starvation proves there is no food anywhere (ibid.). This argument was a positive moral force.

The "Pascal's Wager" argument for immortality. While Blaise Pascal 's wager was used primarily as an argument for God's existence, it can also be applied to immortality. In brief, if we have everything to gain and nothing to lose by believing in immortality, then it would be foolish not to believe in it. The criticism can be offered that this is not really a proof for immortality, but an argument for believing in it with or without proof. In this respect it is like Hume's argument against miracles. At best it only shows why people should *believe* miracles do not happen. It may be that there is no immortality, even though it is foolish not to believe in it.

Conclusion. Whatever intimations, anticipations, or conclusion about the afterlife might be inferred from human consciousness and experiences, the most sure proof (Acts 1:3 ; 2 Tim. 1:10) of immortality comes from the resurrection of Christ and those whom he and other prophets and apostles raised from the dead in the Scriptures. Other alleged resurrections are without verification (*see* RESURRECTION, CLAIMS IN NON-CHRISTIAN RELIGIONS), usually turning out to be fraudulent or mistaken claims (see Kole). The other plausible arguments supplement the resurrection, but do not appear to be definitive without it. However, some of them have merit. Taken together they provide some evidence from general revelation (*see* REVELATION, GENERAL) apart from Scripture for the immortality of human beings.

Indeterminacy, Principle of. Some have mistakenly taken Werner Heisenberg's "principle of uncertainty" or indeterminacy as support for an attack on the principle of causality (*see* CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES) and thereby on the arguments for the existence of God (*see* COSMOLOGICAL ARGUMENT). It is used to show that not all events have causes, that some things happen spontaneously and unpredictably, especially on the subatomic level. Thus, the principle is also used to support the view of human freedom known as indeterminism (*see* FREE WILL ; INDETERMINISM).

Understanding the Principle. Heisenberg's principle of uncertainty is a principle of quantum mechanics which states that "the position and speed of a particle cannot be simultaneously known with complete certainty. If one is known with high certainty, the other becomes very uncertain." For example, according to this theory, "it is possible to accurately predict what fraction of [uranium atoms] will radioactively disintegrate over the next hour, but it is impossible to predict *which* atoms will do so" (Lightman, 560).

However, this principle of uncertainty does not support the view that events arise without a cause or that human actions are uncaused. Heisenberg's principle of uncertainty does not say there is no cause of the events, but simply that one cannot predict the course of a given particle. Hence, it is not to be understood as the principle of *uncausality* but the principle of *unpredictability* . The principle of causality affirms that there is a cause, even if we do not know precisely what it is. Were there no cause, there would be no effect or event. In fact, modern science was built on the principle that things do not arise without a cause (*see* ORIGINS, SCIENCE OF).

Heisenberg's principle does not even deny predictability in general. It states only that "physical systems must be described in terms of probabilities" (Lightman, 553). That is, one can accurately predict what fraction of the particles will react in a certain way but not *which* atoms will do so (ibid.). Even though a particular particle's position cannot be predicted, the overall pattern can be predicted. That implies a causal connection. The point is that scientists, *with their limited instruments and observational abilities* cannot now predict the courses of individual subatomic particles.

An infinite Mind could predict both course and speed. If I empty a sack of ping-pong balls above several open bins, it is not possible for me to predict which of the falling balls will fall into which bins. *In practice* it is not possible to know and properly calculate all the physical factors involved in the falling and bouncing. We can only know that about twice as many will fall into the bins that are twice as large. This does not mean that, *in principle* , it is impossible to know which balls will fall in which bins.

Heisenberg's principle describes the subatomic realm, which is not known without investigator interference. Electron microscopes, by which the subatomic realm is observed, bombard the subatomic particles in order to "see" them. As Mortimer Adler noted, "At the same time that the Heisenberg uncertainty principles were established, quantum physics acknowledged that the intrusive experimental measurements that provided the data used in the mathematical formulations of quantum theory conferred on subatomic objects and events interdeterminate character. . . . It follows, therefore, that the indeterminacy cannot be intrinsic to subatomic reality" (Adler, 96–100). Hence, unpredictable behavior may result in part from the attempt to observe it.

Not all physicists accept quantum physics and the uncertainty theory. In response to it, Albert Einstein complained, "God does not play dice with the universe."

Misapplication of the Principle. It is a category mistake to apply a principle from physics to metaphysical and/or moral realms without justification. Even if there is indeterminacy in physics,

this would not mean indeterminacy automatically invades the *moral* realm. By definition, physics deals with what *is* (in the physical realm) and morality with what *ought to be* .

Mistakes of Indeterminacy. Neither do principles of physics automatically apply to the metaphysical. Etienne Gilson has shown the methodological fallacy of this kind of thinking in the history of Western philosophy (see Gilson). There are serious mistakes in assuming that the metaphysical (real) world operates without causality.

Presuming no causes for events makes science impossible, since both operation and origin sciences are dependent on the principle of causality. Assuming there are no causes for events makes the world irrational. It is contrary to reason to affirm that things happen without a cause. Other problems are noted in the article.

Indeterminism. Indeterminism is a view that some or all human actions are uncaused. Actions are totally contingent and spontaneous (*see* FREE WILL). Charles Pierce and William James were indeterminists. Some contemporary indeterminists appeal to Werner Heisenberg's principle of indeterminacy (*see* INDETERMINACY, PRINCIPLE OF) to support their position. According to this principle, events in the subatomic realm (like the specific course of a given particle) are unpredictable.

Opponents of indeterminism offer several objections. They contend

- that Heisenberg's principle is misapplied, since it does not deal with *causality* but *predictability* .
- that it would make all science impossible, since all depend on the principle of causality.
- that it makes the world irrational if things happen without a cause.
- that the principle of causality is well established and undeniable (*see* CAUSALITY, PRINCIPLE OF).

- that it robs humans of moral responsibility if they have no stake in their actions.
- that, at least on a cosmic scale, it denies God's role as Originator and Sustainer of all things (Genesis 1 ; Col. 1:15–16 ; Heb. 1:3).

Conclusion. Indeterminism asserts that actions are unconnected to free choices or any other "cause." This may be compared with the theories of Determinism, which asserts that all actions are determined by forces outside the individual and self-determinism, which affirms that all actions are self-caused, with no outside factors. Each is based on an inadequate foundation. Indeterminism violates fundamental laws of thought and, if true, would eliminate moral responsibility.

Inductive Method. Inductive and deductive logic are quite different. Deductive logic reasons from general ideas to particular instances. Human beings are mortal. Therefore John, a human being, is mortal.

Inductive logic reasons from particular instances to general conclusions. Socrates, Aristotle, Moses, Adam, Tom, Dick, and Harry are all mortal. This is evidence that all human beings are mortal.

While deductive logic looks at the cause (or condition) and determines its effects/consequents, inductive logic observes the effects and tries to find the causes.

Deductive logic is *a priori* reasoning and inductive logic is *a posteriori* . These Latin terms mean that deductive logic draws its conclusions before, or prior to, examining experience. Inductive logic draws conclusions only *after* (posterior to) looking at experience. Of course, an inductive premise or procedure can be put in a deductive form: Humans who are born eventually die. Mary was just born. Therefore, Mary will eventually die. The form of this whole argument is deductive, but the major premise is based on an inductive survey.

The canons for deductive logic were laid down by Aristotle in the fourth century B.C . The rules were first set forth by Francis Bacon in *Novum Organum* in 1620 and later elaborated on by John Stuart Mill (1806–1873).

The Nature of Inductive Reasoning. One of the major differences between deductive and inductive logic is the kinds of conclusions reached. In contrast to the certainty of deductive reasoning, inductive reasoning provides degrees of probability.

Degrees of Probability. In deductive logic, if the premises were true, then the conclusion *must* be true (*see* CERTAINTY/CERTITUDE). The only certain induction is a *perfect induction* , such as "All the coins in my right hand are dimes." If there are only three and we can see and count all three, then we have a perfect induction and certainty. The reason inductions usually yield only probable conclusions is that they are usually argued by analogy or a generalization. An analogy is an assertion that, because there is a similarity between two things, they will be similar in other respects also. If we were to diagram such an argument it might look like this:

A, B, C, and D all have qualities p and q.

A, B, and C all have quality r.

Therefore, D has quality r also.

This seems reasonable, as long as there is some connection between qualities p and q and quality r. But this usually cannot be known for sure. For example, suppose we choose sparrows, sea gulls, and humming birds for A, B, and C above as animals having wings (p) and feathers (q). Now if D is Canadian honkers, then it follows and is true that they do also have quality r, the ability to fly. For almost all birds, this argument works fine. But what if D is a penguin? It has wings and feathers, but it can't fly. Here we see that our conclusion must remain only probable, and we can never claim it to be the absolute truth. The stronger the analogies we draw, though, the more probable our conclusions will be.

The Nature of Probability. Because induction argues from analogy, extending observations of some to the whole class, it usually involves an *inductive leap* . It must extend beyond its particular findings to make broad, general statements. Usually, inductive conclusions cannot be called uni versally true because they are generalizations, and exceptions are always possible. Rather than being true or false, they involve degrees of probability. Sometimes, these degrees can be measured as to their percentage of accuracy; other times, a percentage can be guessed. Inductive conclusions should be evaluated for where they stand on this scale:

99 percent—Virtually certain: overwhelming evidence. Example: the law of gravity.

90 percent—Highly probable: very good evidence. Example: No two snowflakes have identical structures.

70 percent—Probable: sufficient evidence. Example: The efficacy and safety of medicines that have been tested and approved.

50 percent—Possible: no evidence or about equal evidence pro and con. Example: Our team will win the coin toss.

30 percent—Improbable: insufficient evidence in its favor. At this point, no one believes it except the few for whom it worked.

10 percent—Highly improbable: very little evidence in its favor. The theory that Jesus spent his early years studying with a Hindu guru falls into this category.

1 percent—Virtually impossible: almost no evidence in its favor. The evidence for the existence of unicorns is at this level.

Sometimes there are real numbers to calculate the probability. This is *statistical probability* . When the numbers are not there, evidence must be weighed by *empirical probability* .

Statistical Probability. When figuring the degree of probability for a statistical problem, there are rules to follow:

Clearly define terms. One cannot meaningfully debate whether "all men are created equal" until the terms *all men* , *created* and *equal* are clarified.

Sufficient classes must be devised to cover all data . Classes *Catholic* , *Protestant* , and *Jewish* are insufficient to cover all the data of American religion. These categories leave out Muslims, Hindus, Buddhists, secular humanists, and a plethora of minor religions. The categories *monistic* , *polytheistic* , *theistic* , and *nontheistic* would likely be sufficient to cover American religions.

Only one principle of classification can be used . Only one question should be raised at a time. If the question is: "Are you Republican or Democrat?" then one should not ask as part of the same question: "Are you conservative or liberal?" This confuses the categories.

Classes cannot overlap . Republican and Democrats contain both conservatives and liberals. If two answers are possible for some people, both will be received from some, none from others, and still others will answer one or the other without letting us know that there is an overlap. Such statistics are worthless, because there is no way to know which answers give the information desired.

The most appropriate method for reporting the results must be selected . There are three ways that statistics can be stated. The *mean* (average), the *mode* (most frequent), and the *median* (the halfway number). The *mean* is the average that can be found by adding together all of the figures and dividing by the number of figures we added. (The mean of 5, 6, 7, 8, 9 is 7 [5 + 6 + 7 + 8 + 9 = 35 ÷ 5 numbers = 7].) It can be used to find out where the group as a whole stands, such as for the average score of an examination. If you want to find out what score most people earned on the exam, the *mode* is more appropriate. It is found by simply finding what number occurs most often. If the grades are 5, 6, 7, 8, 8, 8, 8, 8, 9, then 8 is the mode.

Sometimes it is helpful to know where the middle of the road is for a given question. This is the *median* of the group which represents the halfway point between the highest and lowest numbers in our data. The median of our 5, 6, 7, 8, 9 series is 7, the same as the average. Often the median will be close to the mean, but not in cases where there is one piece of data that is much higher or much lower than the other numbers. The median of 1, 2, 3, 49, 50, is 3. That may not be the best way to represent the data.

Empirical Probability. There are four basic questions that must be asked of every inductive argument where empirical data is given.

1. *How many cases were examined?* How broad is the sample?

2. *How representative is the evidence?* How well did those chosen represent the spectrum of economic, social, racial, and religious ideas found in this country? The more

differences there are among cases, the stronger the conclusion. If the cases studied don't reflect what the real world is like, the conclusion will not hold true.

3. *How carefully was the evidence examined?* How were the similarities studied? How many differences were studied? Were all possible explanations accounted for? Were effected results isolated from other causes? Was all the evidence presented? Just how critically was the evidence evaluated?

4. *How does information gained correlate with preexisting knowledge?* Does it contradict any certainties? Does it help explain things better? Sometimes new evidence can rock the foundations of issues that we thought were settled, but their degree of probability and explanatory usefulness make them welcomed discoveries.

Kinds of Probability. Other than a perfect induction, inductive reasoning yields one of two kinds of probability: *a priori* or *a posteriori* .

A Priori Probability. A priori or mathematical probability has to do with working out odds and possible combinations. It offers a mathematical way to evaluate the likelihood of an event. There are various mathematical formulas for finding the odds of different kinds of events. For example, some events are simple and exclusive: Either this happens or something else happens. When you flip a coin, you get either heads or tails. Other events are more complex, like finding how many possible combinations of amino acids there are that would combine to make the proteins necessary for life (*see* CHANCE).

A priori probability for exclusive events. An exclusive event is not in combination with or dependent on other events. A single coin has two sides. So when it is flipped the chances are one in two (or one out of two) for getting heads. Likewise, there are six faces on a single die, so the odds for rolling any of the numbers are one in six. The odds of drawing the ace of spades from a deck of cards is one in fifty-two. This does not mean of course that it will actually take fifty-two draws to get it. It might show up on the first draw. It only means that the a priori probability of getting it in advance of drawing is one in fifty-two. It means that if one drew an infinite number of times, that he would get it on the average about every fifty-two times.

A priori probability for independent events. This deals with the mathematical probability in advance of the results of two or more coins, or die. These are separate and independent events and, hence, the odds must be multiplied together. This means that the probability of getting two heads from flipping two coins is 1/2 times 1/2 = 1/4 or one in four. Likewise, the probability of rolling a six on two dice is 1/6 times 1/6 = 1/36 or one in thirty-six. If one coin and one die are used then the odds are 1/2 times 1/6 or one in twelve.

A priori probability for dependent events. Sometimes one event is dependent on another, in which case we must know how many different combinations or permutations are possible. For a simple permutation, where we want to find how many combinations there are for a given number of known events, we multiply that number (n) by (n – 1) x (n – 2) x (n – 3) and so on until we reach 1. Stated another way, we multiply every whole number between 1 and n together to find out how many combinations there are. For example, to find out how many permutations there are

for a string of three letters we multiply 3 x 2 x 1 = 6. For example, the possible combinations are for the letters A, B, and C. They are:

ABC	BAC	CAB
ACB	BCA	CBA

If a magician passes out four cards to four people, there are twenty-four possible combinations of what order those cards might appear (4 x 3 x 2 x 1 = 24). If a security system has ten digits on the keypad and each is to be used once, then there are 10 x 9 x 8 x 7 x 6 x 5 x 4 x 3 x 2 x 1 = 3,628,800 possible entry codes. In music there are 479,001,600 possible twelve-tone rows (a series of notes that uses each step of the chromatic scale once).

A series in which several possibilities might fit into each place is a *complex permutation* . Rather than a simple combination where each number is used only once, numbers may be repeated in a complex permutation. Instead of just punching in ten numbers in a specific order (a simple permutation), a complex permutation is more like the lock on a brief case that has three dials, each of which has the numbers 1 to 10. Any of those numbers can drop in to any position in the series. So the total number of possible combinations is 10 x 10 x 10 = 1000.

To figure the number of possible combinations for a complex permutation, you must take the number of options for each position and raise it to the power of the number of positions. For instance, in a face-making toy that has four possible noses, four chins, four mouths, four sets of eyes, four hair sets, and four foreheads, then there are four options for each position and six positions in all. We take the number of options (4) and multiply it by itself the same number of times as the number of positions (6). So we get 4 x 4 x 4 x 4 x 4 x 4 (or 46) = 4096 different faces.

Apologetic value of a priori probabilities. There are many applications of mathematical probability to apologetics. For example, according to Fred Hoyle (in *Evolution from Space*), a former atheist, when the possible combinations are taken into account, the chances that the first living cell could emerge without a Creator are about 1/1040,000. With odds like that how can anyone deny that the universe was created and still be called reasonable? Likewise, astronomer Hugh Ross has figured the odds for the simplest life form to have occurred by pure chance. He says that it would require a minimum of 239 protein molecules. Each of these molecules is composed of (on the average) 445 amino acids linked together. Now each one of those links must be made by a particular 1 of 20 different amino acids. So the chance that even the simplest life form came together at random is 1 in 20445 x 239–239 or 1/10137,915. Is it reasonable to believe that, not only the simplest life form, but all complex life forms arose from a fortunate accident?

Evolutionist Julian Huxley once calculated that the odds for the evolution of the horse were 1 in 10001,000,000. He admitted that no one would ever bet on anything so improbable (Huxley, 45–46). Of course, many evolutionists know about these odds and say, "Well, given enough time, anything can happen." But is there enough time? Suppose the entire universe were made of amino acids (which is far from the truth). There would be 1077 molecules to work with. If we linked all these amino acids together at random at a rate of one per second for the widely

accepted age of the universe (about 15 billion years), then the chances of that simple life form appearing shrink to 1/1014,999,999,905. That's one in ten to the fifteen billionth power. Twenty billion years is just not long enough even if the universe were packed with the building blocks to produce life.

To counter this attack, an evolutionist might respond, "But it only had to happen once. Being dealt a perfect bridge hand is a highly unlikely event too, but it has happened." This is true. It is possible; but is it probable? What is the degree of probability that the evolutionary hypothesis is true? David Hume said, A wise man always proportions his belief to the evidence. All of the evidence says that the universe is too small and too young to permit the random assembly of life, even in a simple form. Following Hume's maxim, how can a wise man believe that life came about spontaneously and by chance when the evidence says that is virtually impossible?

On the other hand, what are the chances that Moses' record of creation just happened to put the events of creation in the right order? Suppose there are eight successive events (creation of the universe, light, water, atmosphere, seas and land, sea life, land animals, and man) which could have been put into any order. This is a simple permutation (8 x 7 x 6 x 5 x 4 x 3 x 2 x 1 = 40,320). Then the odds for Moses recording these events in the right order was only 1 in 40,320.

Further, it has been calculated that there are 191 prophecies in the Old Testament about the Messiah. These include where he would be born (Micah 5:2), how he would die (Isaiah 53), when he would die (Daniel 9), that he would rise from the dead (Psalm 16). The odds that forty-eight of these prophecies were fulfilled in one man is about 1/10157. That is a 1 with 157 zeros after it. If a gambler had managed to guess forty-eight horses right without a single mistake, it would be reasonable to suspect that he had inside information. Likewise, it is highly probable that the Old Testament prophets had some help to know so much about events that happened hundreds of years after their deaths. It is certainly the reasonable thing to believe.

A Posteriori Probability. A posteriori probability is empirical probability. Unlike *a priori* probability, it is not probability known in advance of the mathematical likelihood an event will occur. Rather, it is the actual probability after the fact that an event has occurred. Such probability is known by use of the scientific method. In origin science (*see* ORIGINS, SCIENCE OF) it is known primarily by means of the principles of causality (*see* CAUSALITY, PRINCIPLE OF) and analogy or uniformity.

Infants, Salvation of. Many critics have impugned the justice of God because of the status of the unborn. Belief is considered a necessary condition for salvation (John 3:18–19 ; Acts 16:31), and yet innocent young children have not yet reached the age at which they can believe. But it seems eminently unjust to condemn innocent infants who have not yet committed a sin nor are even old enough to believe and be saved.

Christians have struggled with the issue of the eternal status of infants. Yet nowhere does the Bible directly treat the issue. Hence, we are left to arguments based on general principle and inference from Scripture.

Baptized Infants Only. This view is held by sacramentalists, who believe that baptism is necessary for salvation. Some Roman Catholics, some Lutherans, and Anglicans espouse the position.

Statement of the View. Ambrose set forth this position: “no one ascends into the kingdom of heaven, except by means of the sacrament of baptism. . . . Moreover to this there is no exception, not the infant, nor he who is unavoidably prevented.” He adds mercifully, “They have however immunity from pains” (cited by Sanders, 291). In Ambrose’s notion that babies sent into damnation would at least be immune from pain is found the beginnings of a doctrine of “limbo.”

Augustine was less charitable. Born within the fall, infants inherit real depravity, so the wrath of God abides on unbaptized babies (Augustine, 1.28, 33–35). He did allow, however, that unbaptized infants must not suffer as severely as those who lived to adulthood and committed actual sins (ibid., 1.21). The argument for this position is straightforward: Baptism is essential for salvation. No unbaptized person—including infants—can be saved.

Augustine’s nemesis Pelagius reacted against this harsh view on unbaptized infant damnation, saying, “where they are not, I know; where they are, I know not” (cited in Sanders, 292). Pelagius was certain infants were not in hell, although he was not certain where they were. Eventually he conceived of a middle place between heaven and hell later called limbo. Thomas Aquinas held Au gustine’s view but softened it by claiming that unbaptized infants do not experience the pain of hell.

Other theologians have used the Catholic idea of “baptism of desire” to solve the problem—that is, that some can be saved who desired baptism but were prevented from obtaining it. Since it is difficult to see how infants could desire baptism, some posited that their parents’ or the

church’s desire was sufficient. This idea goes back at least to Hincmar Rheims (A.D . 860; ibid., 293). But how can the desire of someone else be effective for infants?

Critique of the View. This entire scenario depends on a sacramental theology which demands infant baptism as a condition for salvation. The Reformed and most Anabaptists (except those in the Campbellite theological tradition) reject this in favor of the biblical exhortation that personal faith is the only condition for salvation (John 3:16 , 36 ; 5:24 ; Acts 16:31 ; Rom. 1:17 ; 4:5). After all, baptism is a “work of righteousness” (Matt. 3:15), and the Bible makes it clear that we are not saved by works of righteousness (Rom. 4:5 ; Eph. 2:8–9 ; Titus 3:5–7). Those in the Campbellite theological tradition, for example, Disciples of Christ, are sacramentalists regarding adult baptism, but they do not accept infant baptism or regard it as needed for salvation.

The sacramental view of infant salvation seems harsh and cruel, whereas the Bible reveals a God of infinite mercy and grace. Some have asked how a child innocent of any personal fault can be banned from heaven? Are not people held responsible only for their personal sins and not those of others? Did not Ezekiel write: “The soul who sins is the one who will die. The son will not share the guilt of the father, nor will the father share the guilt of the son. The righteousness of the righteous man will be credited to him, and the wickedness of the wicked will be charged against him” (Ezek. 18:20). While such passages are about personal righteousness, not inherited depravity from the fall, nonetheless, many hold that the principle seems to apply.

“Elect Infants” Only. Another view asserts that among infants only “elect” babies go to heaven. Since Protestants believe in only two possible destinies, this implies that all nonelect infants go to hell. Many who hold this view are agnostic about whether some or all infants are “elect.” They state the issue thus because the Bible is silent on the issue. Christians who take this view are in the covenant theology tradition.

Statement of the View. In his interaction with the Augustinian doctrine of salvation, John Calvin rejected the idea that only baptized infants are saved. He included in his soteriology a provision that elect infants go to heaven (Calvin, 4.16.17). He contended that while salvation is ordinarily obtained through hearing the Word of God, nonetheless, God is not limited to that means. Infants who are saved are not saved because they are innocent. They are radically depraved in Adam (Rom. 5:12). Some elect die in infancy and others grow to become adults. Thus, Calvin implied that nonelect infants go to hell .

Except among the Puritans, most Reformed writers have avoided the issue of what happens to the nonelect infants and have stressed God’s ability to save infants as he elects to do so in his wisdom and mercy. The Canons of Dort reassure that “godly parents ought not to doubt the election and salvation of their children whom it pleased God to call out of this life in their infancy” (art. 17). The Westminster Confession of 1646 affirms that “elect infants, dying in infancy, are regenerated and saved by Christ” (10.3). The Westminster divines had no consensus about what extent of infants might be “elect.” Some have argued that elect infants are those born to parents who are themselves inside the covenant community.

The rationale for only elect infants being saved is that since God chose the elect before they were born, even before the foundation of the world (Eph. 1:4 ; cf. Rom. 8:29), it is reasonable

to infer that he chose at least some infants to be saved, though perhaps not all. Ultimately, salvation does not come from the will of man (Rom. 9:16). Indeed, God has to give faith to the elect (Eph. 2:8–9 ; Phil. 1:29). So, it is possible that, through the blood of Christ, he can impute righteousness to elect infants who are not old enough to believe for themselves.

As for the justice of God according to this view, it is argued that God justly condemns the whole human race because of Adam's sin (Rom. 5:12–21). We are all sinners by nature (Eph. 2:3), from the moment of conception (Ps. 51:5), who deserve eternal hell. God has no obligation to save anyone. Only by his grace and Christ's sacrifice can he give some the righteousness necessary to stand in his presence. Christ's death was sufficient to atone for all human beings, although it efficiently applies only to those the Holy Spirit draws to him. Among these, God is at least able and is surely willing to include infants. But just as with adults, only those who are justified can go to heaven.

Critique of the View. The elect infant view has not found a home outside of very strong Calvinistic circles. It denies universally accessible salvation. The Bible affirms that Christ did not just die for the elect but for all. And salvation is not offered only to the elect; it is offered to all. The Bible clearly affirms that Christ died for all, not just for some. John wrote that Christ "is the propitiation for our sins: and not for ours only, but also for [the sins of] the whole world" (1 John 2:2). In the same context he adds that "world" means the entire unbelieving, fallen world (vss. 15–17). Peter spoke of the apostate as being "bought" by Christ's blood (2 Peter 2:1). But if salvation is for all, then why limit its availability only to elect infants?

These passages must be taken in light of Scripture at large so as not to advance universal salvation. For adults at least, Christ's atonement saves only those who accept him as Savior and Lord.

The Bible states that God desires to save everyone. Peter wrote: God "is patient with you, not wanting anyone to perish, but everyone to come to repentance" (2 Peter 3:9). Paul speaks of God "who wants all men to be saved and to come to a knowledge of the truth" (1 Tim. 2:4). But if God really desires all to be saved, and it is possible to save some infants apart from their personal faith, then why does he not elect all of them to salvation? In other words, if there can be universal salvation for the children of the elect apart from their personal faith, then why not a universal salvation for the children of nonelect parents?

It is of no comfort to know that elect infants are saved. Limiting salvation to only infants of believing parents, as some do, would offer no hope for the heathen (*see* "HEATHEN," SALVATION OF). This problem is especially acute in view of the fact that the heathen have not heard the Gospel. It is reassuring to believe that God could still be calling out a people for his sake from "every tribe, kindred and nation" (Rev. 7:9), from among infants in nations that have not heard the Gospel.

The elect-infant-only view entails a very severe concept of God's justice. While all orthodox theologians accept that humans are born in sin, not all see this as sufficient grounds for excluding God's mercy from anyone. That is, while there is nothing in fallen humans that merits salvation,

there is something in an all-loving God that prompts him to try to save all, namely, his infinite love (John 3:16 ; Rom. 5:6–8 ; 1 Tim. 2:4).

This view fails to distinguish between an inherited sin nature (on which all orthodox Christians agree) and a personal rebellion against God which only those old enough to sin can do consciously (John 9:41). That is, the natural bent toward sin is one thing but personal rebellion against God is another. Since infants have not exercised the latter, they are not in the same category as rebellious adults.

Admittedly, it is difficult to reconcile the infant election view with the seemingly universal demand that one believe in order to be saved (John 3:36 ; Acts 16:31 ; Rom. 10:17). Yet there seems to be no way a tiny infant can express conscious explicit faith in God. So-called implicit faith will sooner or later have to become explicit and conscious in heaven—otherwise they would be in eternal limbo. Further, the verses that seem to say faith is a gift of God are rejected as support of this view on two grounds. First, none of them clearly teach that faith is a gift which God gives only to some. For example, in Ephesians 2:8–9 it is not faith that is the gift but salvation. For the "it" in the phrase "It is the gift of God" is neuter in form as opposed to "faith" which is feminine. Further, it would contradict the rest of Scripture to say faith is a gift given only to some, since the Bible everywhere calls on people to believe (Rom. 10:13–14) and condemns them for not believing (John 3:18–19). This presumes they have the ability to believe.

Those God "Foreknows." According to this position, God, as an omniscient Being, foreknew which infants would have believed if they had lived long enough. God saved only those infants. The rest are lost, since they would not have believed if they had lived long enough to do so.

Statement of the View. This view has common aspects with the elect-infant-only view (above) and the evangelization-after-death view (below). It argues that the Bible declares that God is omniscient (Ps. 139:1–6). As such, he knows "the end from the beginning" (Isa. 46:10). Indeed, he "foreknew" the elect (Rom. 8:29). And there seems to be no logical reason why these could not have included persons who would die in infancy among the elect.

One advantage over the elect-infant view is that the foreknowledge approach avoids the criticism that God is unmerciful and/or unjust in not trying to save all he possibly can. It takes account of the need for faith as a condition for receiving salvation (John 3:16–19). That is, it avoids the criticism that God saves some apart from their willingness to receive salvation. Another value of the view is that it preserves God's omnibenevolence, his manifest love for all.

Critique of the View. There are some drawbacks to this position. God's foreknowledge is *based on* human free will rather than in himself as the sovereign God. That is, it holds that God saves these infants *because of* foreseen faith. This negates the unmerited grace of God who acts solely "out of the good pleasure of his will" (Eph. 1:5) and not based on anything we do (Eph. 2:8–9).

However, since one need not hold that God's foreknowledge is *based on* anyone's free choice but simply, as the Scripture's say, *in accord with* it (cf. 1 Peter 1:2). They are simply coordinate, coeternal acts of God with no dependence of God on anything we do. God could have simply and graciously ordained that their potential free choice would be the means through which he would elect them. It is difficult to understand just how God could save people simply in view of their potential faith. If the free choice of believing is a necessary condition for receiving salvation, then it is difficult to understand how the fact that God knew that they would have believed is sufficient. This is knowledge of an alternative reality and so not knowledge in the sense of precognition. Of course, on the assumption that ba bies "grow up" in heaven they have a chance to actually believe. This would resolve the difficulty of how potential belief can count for actual belief. But if this is the case, it is no longer a matter of infant salvation, since they would have been actually saved after they were infants when they were old enough to believe for themselves. Also, salvation would be effected, not by potential or implicit faith, but through explicit faith.

Like the first view, this view lacks clear biblical support. It seems to be merely a theological possibility. There are no Scriptures declaring this is what God will do with infants.

Can someone be saved by potential faith? If faith is an absolute condition for salvation, then simply knowing that they could have believed is not enough. And responding that they not only would but do believe after death (when they "grow up") is to reduce the view to the view that only those infants who believe when evangelized after death are saved (see below).

Some modern Catholic theologians speak of infants as exercising "implicit faith," but it is very difficult to make sense out of the concept. How can someone whose faculties are not even developed enough to think or make moral choices possibly express any kind of faith? Certainly babies are dependent on their parents for food and other things, but they make no deliberate choice to do this. It is instinctive. But faith, at least conscious faith, is not automatic; it is voluntary. And this infants cannot do as infants.

This foreknowledge view involves the seemingly horrible injustice of condemning to eternal damnation tiny infants who have never sinned, which seems harshly unjust. A proponent of this view could argue that *all who die in infancy would have believed had they lived long enough* . Of course, one cannot deny this possibility. But then this modified position fades into the next one, that God in his mercy will save all infants.

All Infants. Since the seventeenth century the view that all infants are saved has become the most popular in varying theological traditions. Some believe that all infants will eventually believe. Others believe that God will save infants apart from the condition that they would believe.

Statement of the View. According to proponents of this teaching, there is no heaven for those who *will not believe* . Those who willingly reject God's offer of salvation will perish (John 3:18 ; 2 Peter 3:9). But there is no verse that says those who *cannot believe* because they are not old enough to do so will be excluded from heaven (see Lightner). They appeal to a number of verses for support.

Jesus said “little children” are part of “the kingdom of God.” Mark wrote Jesus’ words, “Let the little children come to me, and do not hinder them, for the kingdom of God belongs to such as these” (Mark 10:14b). Yet Jesus made it clear that “no one can see the kingdom of God unless he is born again” (John 3:3). It would follow, therefore, that these little children would all be in heaven.

Those who object point out that there is no proof that the term “children” refers to infants or those prior to an age of belief. Further, the phrase “the kingdom of God belongs to these” could refer to the fact that all must become as little children (and humble themselves) in order to enter the kingdom (Matt. 18:4).

King David prayed for his fatally ill child until the child died. Then he immediately ceased praying and said, “But now that he is dead, why should I fast? Can I bring him back again? I will go to him, but he will not return to me” (2 Sam. 12:23). King David went to heaven (Ps. 16:10–11 ; Heb. 11:32). And surely his hope that he would see the child again encompassed more than their bodies being in the same grave. Hence, it would follow that David’s baby went to heaven.

Critics of this interpretation point out that the phrase might mean no more than “The dead do not return; we go to be with the dead.” In the Old Testament, the conception of life after death was not explicit. But David clearly anticipated resurrection (Ps. 16:10–11) as did Job (cf. Job 19:25–26).

Psalm 139:13–16 speaks to God of creating and knowing him in his mother’s womb. His life was recorded before it began. David refers to himself as a person, an “I” in the womb. This is taken by some to mean that God not only personally knows little embryos and infants but he covers them with his love so that they are written in his book in heaven.

Critics note that the “book” may be a figure of speech of God’s omniscience or the book of his remembrance. There is no clear indication that it refers to the book of life of Revelation 20:12 .

As to the age of accountability, Isaiah spoke of a little child before “he knows enough to reject the wrong and choose the right” (Isa. 7:15). This seems to imply that there is an age of moral accountability. Jesus said even of adults, “If you were blind, you would not be guilty of sin; but now that you claim you can see, your guilt remains” (John 9:41). How much more would this apply to infants who do not yet know moral right from wrong?

In response, critics observe that even if this referred to an age of accountability, it would not thereby prove all infants are saved. For there are still at least two other issues that must be settled before one can prove this, namely, that inherited depravity in itself is not enough to send one to hell and that faith is not an absolute essential to salvation. In short, Isaiah’s reference to a young child not yet knowing good and evil may refer only to personal or social guilt, not to inherited sin.

Paul declared explicitly that “just as through the disobedience of the one man the many [i.e., all] were made sinners, so also through the obedience of the one man *the many [i.e., all] will be*

made righteous" (Rom. 5:19 , emphasis added). Since the text is clear that all are made righteous by Christ's death, it remains to ask in what sense were all saved by Christ's death.

Since universalism is clearly excluded by the context and by other Scriptures, this can not mean they were all *actually* made righteous. Further, it does not appear to refer to declaring us righteous in the sense of justification, for that comes only by faith (Rom. 1:17 ; 3:21–26). It can mean, however, that original sin brought about by Adam is canceled by Christ. If so, then no human being is hell-bound because of Adam's sin. They must commit sins of their own to go there. In this case, since infants have not committed personal sins, they could all be saved even though they are not yet old enough to believe. The judicial condemnation brought by Adam (Rom. 5:12) was reversed, and God is free to save any and all. This being the case, there is no reason that God must condemn infants. Christ died for them. God can save them if he wishes to do so. But since God is long-suffering, not willing that any should perish (2 Peter 3:9), and since the infants cannot believe, God saves them through the finished work of Christ.

Critics of this view point to its novelty and deny its necessity. It is possible and traditional to interpret the verse in other ways. They also observe that this view tends toward universalism. In fact, universalists take all being "made righteous" to support their view. Most importantly, it eliminates faith as a necessary condition of salvation.

Critique of the View. The merits of this view is that it both satisfies the justice of God and magnifies God's omnibenevolence. In addition, it offers some plausible basis in Scripture. Nonetheless, it is hard to find clear scriptural justification for it and plenty of statements that faith is a necessary condition for receiving the gift of eternal life (John 3:36 ; Acts 16:31 ; Heb. 11:6). In response, it can be argued that faith is a *normative* requirement for salvation but not an *absolute* one. That is to say, faith may normally be a condition for salvation; it is the way God requires of all adults. But there may be no inherent necessity that little children must believe in order to be saved.

It is argued that, by its very nature, salvation of free creatures involves a free consent. It is not possible to force someone to be saved. Saving infants against their will is no more possible than saving adults against their will. Free creatures cannot be forced into the fold.

In response, proponents note that infants are not saved *against their will* but simply *apart from their will*— because they are too young to believe. They insist that there is a significant difference in God saving persons who *will not* believe and saving those who *cannot believe*— because they are not yet old enough to believe. The fact remains that they are saved *without believing*— which violates the belief that faith is necessary for salvation.

It is always possible that all infants are the class of those who would have believed had they been old enough to do so. And that they will be given the opportunity to do so when they "mature" in heaven. In this case, the problem of faith and freedom is resolved.

Critics point out that nowhere does the Bible spell out any age of accountability. Thus, it is purely speculative. In response, it is noteworthy that there is some evidence in Scripture that there is some point of moral responsibility in one's life. In addition, both experience and

common consent inform us that tiny children are not morally responsible. This is why small children do not stand trial for wrongs they do. Psychologically, when they are infants and small children, their rational faculties have not even developed to discern good from evil. Finally, the fact that it is difficult to point to a precise age at which this occurs is not an insurmountable problem. Like self-consciousness, even if we do not know precisely when it occurs, we know that it occurs. In fact, the precise age of accountability may differ individually, depending on their moral development. Perhaps it is earlier for those who are exposed to concepts of moral right and wrong earlier. At any rate, it probably occurs sometime between ages four and twelve. The point at which it occurs is when the individual is old enough to understand the difference between moral right and wrong and the consequences of making moral choices. In biblical terms, when they are aware of the "law written in their hearts" (Rom. 2:15). They are morally accountable when they are old enough to know that what they do is against the moral law of God. Or, as Isaiah said, they are morally responsible when they are old enough to "to reject the wrong and choose the right" (Isa. 7:15).

Criticisms of this view are not definitive. It is theologically possible and biblically plausible. The most problematic issue is the need for these infants to eventually exercise conscious faith of their own. This, however, is not insurmountable, especially in view of the possibility that God foreknew that they would be among those who would eventually "grow up" and believe. At this point, of course, the view merges with both the foreknowledge view and the evangelization after death view.

In Limbo. The above views all assume there are only two possible places for infants to go. Perhaps there is a third place or condition—limbo.

Statement of the View. Some Roman Catholic theologians have posited limbo for babies who die unbaptized (= unsaved). It is possible to detach limbo from a sacramental theology and simply argue that all nonelect babies go there or all babies who would not have believed had they been old enough to exercise it.

Even proponents find it difficult to adduce Scripture in support of limbo. It is more a result of theological speculation. The argument seems to be that God cannot justly allow them into heaven nor can he mercifully send them to hell . Hence, he sends them to a kind of neutral place, or at least a painless condition.

Critique of the View. Many contemporary Catholic theologians reject limbo as purely speculative. There is a total lack of references to any such view in the Bible. All references that can be appealed to in support speak merely about the baby having not yet reached a state of consciousness or one where they are no longer conscious of this world (cf. Job 3). And why should not God do the same for the heathen who have not heard the Gospel? After all, like infants they have not rejected Christ, since they have not even heard about him. Yet there is no evidence that God has a limbo for the heathen.

The very status of limbo is nondescript. Would it be a place of annihilation? If so, there are serious objections (*see* ANNIHILATIONISM). Are individuals alive but not conscious—as in a coma? There are more questions than answers.

Evangelization after Death. The remaining position contends that infants will mature or grow up after death, at which time they will be given an opportunity to believe. Those who believe will go to heaven. Those who do not (if there are any) will be lost.

Statement of the View. A minority view holds that young children will be allowed to "grow up" in heaven, hear the Gospel, and decide for themselves where they will spend eternity. This belief goes back at least to Gregory of Nyssa in the fourth century. Some Roman Catholic theologians now hold it (Boros, 109–11). Sanders summarizes it: "People are condemned to hell for their own willful sin. Jesus died for all people, including young children who die. All people receive sufficient grace for salvation. The act of faith is necessary for salvation" (Sanders, 298). The belief that young children who die receive an opportunity to accept Christ is one of the few positions that does justice to all four premises.

Critique of the View. Admittedly, there is an absence of any biblical text which states that infants will "grow up" in heaven, although this is not an uncommon belief as applied to the size and shape of the resurrection body. In response, proponents point out that neither are there biblical texts explicitly stating the doctrine of the Trinity, but that does not mean it has no foundation in Scripture. Doctrines can be properly deduced or inferred from other biblical teachings.

However, even if infants do mature in heaven, there is no evidence that they will be evangelized there. The only place for evangelism mentioned in the Bible is earth (Matt. 28:18–20). It is explicitly stated in Scripture that there is no hope for salvation beyond the grave. For "man is destined to die once, and after that to face judgment" (Heb. 9:27 ; cf. Luke 16:26–31 ; John 8:24). In response, it is argued that these texts apply only to those who have lived to an age of accountability and have rejected the light God has given them, not to those who have not.

Conclusion. All the views have difficulties. The foreknowledge, salvation for all, and evangelization after death views seem to be the best options, having the most merit and indirect biblical and theological support.

If faith is not absolutely essential, then a distinction must be drawn between personal innocence and conscious rejection by adults. If so it makes more sense to speak of all infants being saved. If faith is an absolute essential for salvation—and numerous Bible passages seem to affirm that it is—there is no heaven for those who cannot believe. All must believe to enter. In this case, belief that infants will mature in heaven and be given a chance to believe makes more sense.

If God does not offer a real opportunity to believe, then the views that affirm only baptized or elect infants go to heaven makes sense. But the Bible seems to say that God genuinely offers salvation to all. If so, then it would follow logically that those who would believe, if they die before they can, will be given a chance after they die. God's love and/or justice would seem to demand that this be so.

Inherited Depravity and Condemnation. If innate, radical depravity is inherited from the womb, then it would seem that only baptized infants or elect infants might go to be with God. If,

however, one's own personal decision in rejecting God's message is needed before one goes to hell, then they lose plausibility. The salvation-for-all view depends on the fact that children have not had the opportunity to reject Christ, and that makes the difference.

It is worth noting that the views that allow for the possible salvation of all infants are not only compatible with God's justice and love, but they also help solve the problem of heathen salvation. Since God is just and since one cannot be saved without the Gospel (*see* CHRIST, UNIQUENESS OF ; PLURALISM, RELIGIOUS ; WORLD RELIGIONS AND CHRISTIANITY) and since many heathen lands have not had the Gospel, it is reasonable to infer that God's elect will be taken from every tribe, kindred, and tongue could have been taken from the infants who die. Since it is estimated that in heathen countries one-half of the babies born die before the age of accountability, then it follows that there will be innumerable heathen in heaven who never heard the Gospel—possibly all the infants who died before they could even understand the Gospel.

Infinite Series. An infinite series is a beginningless or endless (or both) series of events, points, entities, or causes. It is often used of a series that has no beginning, that is, that has no beginning going backwards. In this sense it is more proper to speak of an infinite regress.

There are two kinds of infinite series: mathematical and metaphysical (actual). Mathematical infinities are abstract. The line between A and B can have an infinite number of points or dimensionless intersections of two lines. Actual infinities are concrete, and it is not possible to get an infinite number of actual entities between A and B no matter how small these entities may be.

An actual infinite series (regress) is impossible. Since an infinite series has no beginning and since a series of moments succeed one another, no matter how long the series it would always be possible to add one more. But one more cannot be added to an infinite number. Hence, one can never reach an infinite number. One can only indefinitely add one more. Infinity can never be achieved. Second, an infinite number of moments can never be traversed. But the number of moments before today has been traversed. Otherwise, today would never have come. Hence, there was not an infinite number of moments before today. Time began. This fact is used to prove the existence of a First Cause in the *kalam cosmological argument* for God's existence. Briefly stated: Everything that had a beginning had a cause. The universe had a beginning (since there could not have been an infinite number of moments before today). Therefore, the universe had a Cause.

An infinite series of causes may be actual or potential. An actual infinite series is one that is completed. A potential infinite series is one that continues to go on without end.

An infinite mathematical series can go forward or backward. A series of causes reaching backward to infinity is not possible because there needs to be a cause to get the series of causality going. However, a potential series of causes or events is possible going forward into eternity, since there is no reason why a cause cannot continue to produce a series of effects without end forever. Such a series, however, would not be actually infinite but only potentially infinite. That is, it would never be complete, always being capable of having one more added to its series.

Not only is an infinite series of moments or events impossible but so is an infinite series of causes. Atheists sometimes argue that even if the world needs a cause there is no reason to stop positing a cause for that cause and so on infinitely. However, this is a misunderstanding of what it means to be a cause of the existence of something. For in every infinite series of causes of existence *at least one* cause must be actually causing the existence of the world. But by definition in every infinite series of causes *every* cause is being caused by a prior cause. If this is so, then the one cause that is causing existence is also causing its own existence, since every cause in the series, including itself, is being caused. But it is impossible to cause one's own existence, for a cause is ontologically prior to its effect, and something cannot actually be prior to itself. Therefore, an infinite series of causes of existence is impossible.

There are two ways to avoid this dilemma, both of which fall into the hands of the theists. First, the causality could come from outside the series so as to avoid a self-caused cause in the series. But in this case we either have another self-caused cause outside the series (which is impossible) or an uncaused Cause (which is theistic), or else we have another infinite series behind this cause (which is impossible). Or the atheist can claim that not every cause in the series is being caused. But in this case then at least one cause in the series is an uncaused Cause (which is theistic). No matter which way the atheist turns he runs either into impossibilities or into a First uncaused Cause (God).

There are other objections to the impossibility of an infinite series of events or causes. Two call for comment.

Some defenders of the possibility of an infinite series contend that they must be possible since the future is infinite, and God can know the future. If he cannot, then he is limited and theism is wrong. This objection confuses an *actual* infinite series in the future, which is not possible with an endless or *potential* infinite series, which is possible. While it is always possible to add one more event or moment to the future (a potential infinite series), it is not possible to achieve a completed number of events in the future to which one more cannot be added (i.e., an actual infinite series). Second, as has been shown, an actual infinite series of causes is impossible. And God cannot know the impossible. He can only know the actual and the possible. Hence, God cannot know an actual infinite series of causes.

Information Theory. *See* ANTHROPIC PRINCIPLE ; EVOLUTION, CHEMICAL .

Ingersoll, Robert G. American agnostic Robert G. Ingersoll (1833–1899) was born in Dresden, New York. Ingersoll popularized higher criticism of the Bible (*see* BIBLE CRITICISM), as well as humanistic thought (*see* HUMANISM, SECULAR). With little formal education, he became an attorney in 1854 and enjoyed a prosperous profession. He was a popular national orator. Ingersoll considered himself an agnostic (*see* AGNOSTICISM). His principal popular lectures were published as *Some Mistakes of Moses (* 1879) and *Why I Am an Agnostic* (1889). His complete writings are found in *The Works of Robert G. Ingersoll* (12 vols., 1902), edited by Clinton P. Farrell.

Innate. *Innate* means "inborn; natural to; possessing independent of experience." Innate ideas are those with which one is born or has prior to any sensory experience. Plato believed in innate ideas. Aristotle rejected them, claiming that we are born a *tabula rasa* or blank slate; all ideas are derived from our sense experience (*see* HUME, DAVID).

Isaiah, Deutero. Isaiah includes amazingly specific prophecies that came true centuries later with exact accuracy (*see* PROPHECY, AS PROOF OF THE BIBLE). The apologetic value of this prophecy, however, has been blunted by the critic's charge that there were at least two Isaiahs. They claim that the second, later Isaiah records history, rather than sets out predictive prophecy.

The traditional view of the book of Isaiah is that it was written by Isaiah, son of Amoz, between 739 and 681 B.C . However, negative critics argue that "Proto-Isaiah" encompasses chapters 1 through 39 , while Deutero-Isaiah wrote chapters 40 to 66 in the fifth century B.C . If so, then the amazing prediction by Isaiah including the one that a king named Cyrus (Isa. 45:1) would be raised up by God to discipline Israel loses its prophetic punch. For if one and the same Isaiah did not write this some 150 years before Cyrus was born, but after he had lived, then there is nothing amazing about knowing his name.

A Response to the Hypothesis. The traditional view that the book of Isaiah is a single work written by the prophet Isaiah is supported by several arguments.

The critical view that separates Isaiah into two or more books is based on the assumption that there is no such thing as predictive prophecy. Modern scholars claim that the prophecies in chapters 40–55 concerning Cyrus must have been written after Cyrus ruled in Persia. This view is antisupernatural and tries to explain these sections of Isaiah as history. However, since God knows the end from the beginning (Isa. 46:10), it is not necessary to deny the supernatural element in Isaiah's prophecies (*see* MIRACLES, ARGUMENTS AGAINST).

Differences between the two halves of the book can be explained in ways other than the two-author approach. Chapters 1 through 39 prepare the reader for the prophecies contained in chapters 40 through 66 . Without these preparatory chapters, the last section of the book would make little sense. Chapters 1 through 35 warn of the Assyrian menace that threatens to destroy God's people. Chapters 36–39 form a transition from the previous section to chapters 40–66 , by looking forward to the invasion of Sennacherib (chaps. 36–37), and at the spiritual decline that is causing the downfall of Jerusalem (chaps. 38–39). These four intervening chapters (36–39) are not in chronological order because the author is using them to prepare the reader for what is to follow.

The difference in words and style of writing between the two sections of the book has been used by critical scholars to substantiate their claim that there are at least two different books. However, these differences are not as great as has been claimed, and the differences that do exist can be explained as a difference in subject matter and emphasis. No author writes in exactly the same style using precisely the same vocabulary when writing about different subject matter. Nevertheless, a number of phrases found in both sections attest to the unity of the book. For example, the title "the Holy one of Israel" is found twelve times in chapters 1 through 39 and fourteen times in 40 through 66 .

Similar Phrases in the Two Parts of Isaiah

Chapters 1–39	Chapters 40–66
1:15b —"Your hands are full of	59:3a —"For your hands are defiled with blood."

blood.”

28:5 —“In that day the Lord Almighty will be a glorious crown, a beautiful wreath for the remnant of his people.”	62:3 —“You will be a crown of splendor in the Lord’s hand, a royal diadem in the hand of your God.”
35:6b —“Water will gush forth in the wilderness and streams in the desert.”	41:18 —“I will make rivers flow on barren heights, and springs within the valleys. I will turn the desert into pools of water, and the parched ground into springs.”

In Luke 4:17 Jesus rose to read in the synagogue and “was handed the book of the prophet Isaiah.” The people in the synagogue and Jesus himself assumed that this book was from the prophet Isaiah. Other New Testament writers accepted Isaiah as the author of the entire book. John 12:38 states that Isaiah was the one who made the statement that is found in Isaiah 6:1f . and 53:1 . Other instances where the New Testament ascribes portions of chapters 40–66 to Isaiah include Matthew 3:3 ; Mark 1:2–3 , and John 1:23 (Isa. 40:3); Matthew 12:17–21 (Isa. 42:1–4); Acts 8:32–33 (Isa. 53:7–8); and Romans 10:16 (Isa. 53:1).

The Dead Sea Scrolls include the earliest complete copy of the book of Isaiah, and there is no gap in the scroll between chapters 39 and 40 . This indicates that the Qumran community accepted the prophecy of Isaiah as a seamless book in the second century B.C . The Greek version of the Hebrew Bible, which dates from the second century B.C ., treats the book of Isaiah as a single book by a single author, Isaiah the prophet.

Even if the critic could show that part or all of Isaiah was written in the fifth century or later, it would not disprove the supernatural nature of the predictions about Christ. Those were fulfilled centuries later than even the latest possible date for its appearance. Isaiah predicted the virgin birth of the Messiah (Isa. 7:14), his ministry (Isaiah 11 ; 61), and his death for our sins (Isaiah 53 ; *see* CHRIST, DEATH OF). Isaiah 53 is so specific and so messianic that even rabbinical interpretation of it before the time of Christ viewed it as a prediction about the coming Messiah (see Driver). Indeed, even if the writing is dated to the late fifth century B.C ., it is a clear and specific supernatural prediction about Christ given hundreds of years in advance. If Isaiah had a supernatural source for this prophecy, then there is no reason to believe he did not have the same supernatural source for his predictions about Cyrus.

Conclusion. The attempt by Bible critics to posit a second and later Isaiah does not negate the supernatural nature of his specific predictions. They do not even succeed in proving that there was a later Isaiah who wrote 40–66 . Hence, Isaiah’s predictions which mention Cyrus by name over 150 years before he was born still stand. Even were Isaiah dated later in part or in whole, the book is filled with specific predictions, especially those literally fulfilled by Christ that were made centuries in advance.

Isaiah, Virgin Birth in. *See* VIRGIN BIRTH .

Islam. *Islam* means "submission." A follower of this religion is called a *Muslim* , "a submitted one." Muhammad, the founder of the Islamic faith, was an Arabian trader from Mecca who was born around 570 and died in 632. As Christians measure history from the birth of Christ, so Muslims set the hinge date of history at 622, the year Muhammad fled from Mecca to Medina. This *Hijra* (*hijj* means "flight" in Arabic) marked Muhammad's turning point of submission to God and his proclamation of a new revelation from God. Muslims believe Muhammad to be the last prophet of God, superseding Christ, the prophet who was before him.

Muslims believe in submitting to the one and only one God, named *Allah* . They are categorically opposed to the Christian belief in the tri-unity of God (*see* TRINITY). To believe that there is more than one person in God is an idolatry and blasphemy called *shirk* .

Beliefs. *The Word of God.* Although Muslims hold that God revealed himself in the Jewish Law (*tawrat*), the Psalms (*zabur*), and the Gospels (*injil*), they claim that today's Christian Bible is corrupted, or *tahrif* . They assert that the *Qur'an* is the final Word of God (*see* QUR'AN, ALLEGED DIVINE ORIGIN OF). It is divided into 114 chapters or *suras* and is about the size of the New Testament.

Doctrines. There are five basic Muslim doctrines:

1. There is one and only one God.

2. There have been many prophets, including Noah, Abraham, Moses, Jesus, and Muhammad.

3. God created angels (jinn), some of which are good and others evil.

4. The *Qur'an* is God's full and final revelation.

5. A final day of judgment is coming, followed by heaven for the faithful and hell for the lost.

Besides these five central beliefs, there are five basic pillars of Islamic practice:

1. All that is necessary to become a Muslim is to confess the *shahadah* : "There is no God but Allah, and Muhammad is his messenger."

2. One must pray the *salat* , usually five times a day.

3. One keeps an annual fast (*sawn*) through the ninth lunar month of *Ramadan* .

4. One gives alms (*sakat*) to the needy, one-fortieth of one's income.

5. Every able Muslim must make one pilgrimage during life to Mecca.

Muslims also believe in jihad or holy war, which some radical groups have exalted to the level of a pillar. While this may involve killing infidels for their faith, more moderate Muslims think of it as being a sacred struggle with the word, not necessarily with the sword.

Many doctrines are shared with Christianity, such as creation (*see* CREATION, VIEWS OF), angels, heaven, hell , and the resurrection of all people. As for Christ, they affirm his prophethood, virgin birth , physical ascension, second coming, sinlessness (*see* CHRIST, UNIQUENESS OF), miracles , and messiahship.

Muslims deny the heart of the Christian message, namely, that Christ died on the cross for our sins (*see* CHRIST, DEATH OF ; CHRIST'S DEATH, MORAL OBJECTIONS TO ; CHRIST'S DEATH, SUBSTITUTION LEGEND) and that he arose from the grave physically three days later (*see* RESURRECTION, EVIDENCE FOR ; RESURRECTION, PHYSICAL NATURE OF).

God as Absolute One. Allah is described by Muslims in terms of several basic attributes. Fundamental to all is the attribute of absolute unity. Of all the Islamic God's attributes, the most important is his undivided unity. To deny this is blasphemous.

The Islamic God is his absolute and indivisible unity. In sura 112, Muhammad defines God in these words: "Say: He is God, The One and Only; God, the Eternal, Absolute; He begetteth not, Nor is He begotten; And there is none Like unto Him." This sura is held to be worth a third of the whole *Qur'an* . The seven heavens and the seven earths are founded upon it. Islamic tradition affirms that to confess this verse sheds one's sins "as a man might strip a tree in autumn of its leaves" (Cragg, 39).

Two words are used in the *Qur'an* to describe the oneness of God: *ahad* and *wahid* . *Ahad* is used to deny that God has any partner or companion. In Arabic, this means the negation of any other number. The word *wahid* may mean the same as the first word or it may also mean "the One, Same God for all." That is to say, there is only one God for Muslims, and he is the same God for all peoples. God is a unity and a singularity.

God's Oneness is such a fundamental aspect of Islam that, as one Muslim author put it, "Islam, like other religions before it in their original clarity and purity, is nothing other than the declaration of the Unity of God, and its message is a call to testify to this Unity" (Mahmud, 20). Another Muslim writer adds, "The Unity of Allah is the distinguishing characteristic of Islam. This is the purest form of monotheism, that is, the worship of Allah Who was neither begotten nor beget nor had any associates with Him in His Godhead. Islam teaches this in the most unequivocal terms" (Ajijola, 55).

It is because of this uncompromising emphasis on God's absolute unity that the greatest of all sins in Islam is the sin of *shirk,* or assigning partners to God. The *Qur'an* sternly declares "God forgiveth not (the sin of) joining other gods with Him; but He forgiveth whom He pleaseth other sins than this: one who joins other gods with God, hath strayed far, far away (from the Right)" (sura 4:116).

God as Absolute Ruler. In the words of the *Qur'an* ,

> God—there is no god but He—the Living, The Self-subsisting, Eternal. No slumber can seize Him nor sleep. His are all things In the heavens and on the earth. Who is there that can intercede in His presence except As He permitteth? He knoweth What (appears to His creatures As) Before or After Or Behind them. Nor shall they compass Aught His knowledge Except as He willeth. His Throne doth extend Over the heavens and the earth, and He feeleth no fatigue in guarding and preserving them For He is Most High, The Supreme (in glory). [sura 2:255]

God is self-sustaining and does not need anything but everything needs him. This attribute is known as aseity, or self-existence. God is The Mighty and The Almighty. He is The Willer of existing things and the things which will exist; and nothing happens apart from his will. He is the Knower of all that can be known. His knowledge encompasses the whole universe which he has created and he alone sustains. God is completely sovereign over all his creation.

Many of God's ninety-nine Islamic names speak of his sovereignty. He is:

Al-Adl, the Just, whose word is perfect in veracity and justice (6:115);

Al-Ali , the High One, he who is high and mighty (2:225–26);

Al-Aziz , the Sublime, mighty in his sublime sovereignty (59:23);

Al-Badi , the Contriver, who contrived the whole art of creation (2:117);

Al-Hakim , the Judge, who gives judgment among his servants (40:48–51);

Al-Hasib , the Accounter, who is sufficient as a reckoner (4:6–7);

Al-Jabbar , the Mighty One, whose might and power are absolute (59:23);

Al-Jalil , the Majestic, mighty and majestic is he;

Al-Jami , the Gatherer, who gathers all men to an appointed day (3:9);

Al-Malik , the King, who is King of kings (59:23);.

Al-Muizz , the Honorer, who honors or abases whom he will (3:26);

Al-Muntaqim , the Avenger, who wreaks vengeance on sinners and succors the believers (30:47);

Al-Muqsit , the Observer of Justice, who will set up the balances with justice (21:47–48);

Al-Mutaali , the Self-Exalted, who has set himself high above all (13:9–10);

Al-Qadir , the Able, who has the power to do what he pleases (17:99–101);

Al-Quddus , the Most Holy One, to whom all in heaven and on earth ascribe holiness (62:1);

Al-Wahid , the One, unique in his divine sovereignty (13:16); the Unique, who alone has created (74:11);

Al-Wakil , the Administrator, who has charge of everything (6:102);

Malik al-Mulk , Possessor of the Kingdom, who grants sovereignty to whom he will (3:26).

God as Absolute Justice. Several of God's names bespeak his absolute justice: the Majestic, the Gatherer, the Accounter, the Judge, the Just, the Most Holy One, to whom all in heaven and on earth ascribe holiness, the Observer of Justice, and the Avenger.

God as Absolute Love. Contrary to a popular misunderstanding, Allah is a God of love. Indeed, some of God's names depict this very characteristic. For example, God is *Ar-Rahman* , the Merciful, the most merciful of those who show mercy (sura 1:3; 12:64), and *Al-Wadud* , the Loving, compassionate and loving to his servants (11:90, 92). He has imposed the law of mercy upon himself (sura 6:12). He says, "My mercy comprehends all" (7:156). Muhammad said in the *Qur'an* , "If you do love God, Follow me:, and God will love you And forgive you your sins. For God is Oft-Forgiving, Most Merciful" (sura 3:31).

God as Absolute Will. There is a certain mystery about God's names. Historian Kenneth Cragg affirms that these names "are to be understood as characteristics of the divine will, rather than laws of his nature. Action, that is arising from such descriptives, may be expected, but not as a matter of necessity." What gives unity to all God's actions is that he wills them all. As Willer he may be recognized by the descriptions given him, but he does not conform to any. The action of his will may be identified from its effects, but his will of itself is inscrutable. This accounts for the antithesis in certain of God's names (see below). For example, God is "the One Who leads astray," as well as "the One Who guides."

God as Absolutely Unknowable. Since everything is based in God's will and since his effects are sometimes contradictory and do not reflect any absolute essence, God's nature is utterly unknowable. Indeed, "the divine will is an ultimate beyond which neither reason nor revelation go. In the Unity of the single will, however, these descriptions co-exist with those that relate to mercy, compassion, and glory" (Cragg, 64) God is named from his effects, but he is not to be identified with any of them. The relation between the Ultimate Cause (God) and his creatures is

extrinsic, not intrinsic. That is, God is called good because he causes good, but goodness is not part of his essence.

Evaluation. Muslim monotheism is vulnerable to many criticisms, particularly from a Christian perspective. Crucial is their rigid idea of absolute unity.

The Problem of Absolute Unity. Islamic monotheism is rigid and inflexible. Its view of God's unity is so strong that it allows for no plurality at all in God. Hence, it sees nothing between monotheism and tritheism (three gods), and Christians are placed in the latter category. There are several reasons for this misunderstanding. For one thing there appears to be a misunderstanding of the biblical text related to God (MUHAMMAD, ALLEGED BIBLICAL PREDICTIONS OF). Muslims also have a rather grossly anthropomorphic view of what it means for Christ to be a "Son" of God. This often seems to demand some kind of sexual generation, according to their thinking. But the terms "Father" and "Son" no more necessitate physical generation than the term *alma mater* implies that the school from which we were graduated was our physical womb. Paternity can be understood in more than a biological sense.

There is a deeper and more basic philosophical problem. In the final analysis God has no (knowable) essence or nature from which one can distinguish his three persons or centers of consciousness (*see* TRINITY). This position is known as nominalism . God is absolute will, and absolute will must be absolutely one. A plurality of wills (persons) would make it impossible to have any absolute unity. And Muslims believe God is absolutely one (both from revelation and by reason). Reason informed Muhammad that unity is prior to plurality. As Plotinus put it several centuries earlier (205–70), all plurality is made up of unities. Thus unity is the most ultimate of all. Accepting this neoplatonic way of thinking leads logically to a denial of the possibility for any plurality of persons in God. Hence, by the very nature of his philosophical commitment to the kind of neo-Platonism prevalent in the Middle Ages, Islamic thought about God was solidified into an intractable singularity which allowed no form of trinitarianism.

This rigid monotheism is not entirely consistent with some of Islam's own distinctions. Muslim scholars, consistent with certain teachings in the *Qur'an* , have made distinctions within God's unity. For example, they believe the *Qur'an* is the eternal Word of God. Sura 85:21–22 declares, "Nay, this is a Glorious *Qur'an* , (Inscribed) in a Tablet Preserved! [in heaven]" And in sura 43:3–4, we read, "We have made it a *Qur'an* in Arabic, that ye may able to understand (and learn wisdom). And verily, it is in the Mother of the Book, in Our Presence, high (in dignity), full of wisdom" (cf. sura 13:39). This eternal original is the template of the earthly book we know as the *Qur'an* .

Muslims insist the true *Qur'an* in heaven is uncreated, and perfectly expresses the mind of God. Yet they acknowledge that the *Qur'an* is not identical to the essence of God. Some Muslim scholars even liken the *Qur'an* to the divine *Logos* view of Christ, held by orthodox Christians (*see* CHRIST, DEITY OF). As Professor Yusuf K. Ibish stated of the *Qur'an* , "It is not a book in the ordinary sense, nor is it comparable to the Bible, either the Old or New Testaments. It is an expression of Divine Will. If you want to compare it with anything in Christianity, you must compare it with Christ Himself." He adds, "Christ was the expression of the Divine among men, the revelation of the Divine Will. That is what the *Qur'an* is" (Waddy, 14).

Orthodox Islam describes the relation between God and the *Qur'an* by noting that speech is an eternal attribute of God, which as such is without beginning or intermission, exactly like His knowledge, His might, and other characteristics of His infinite being (see Golziher, 97). But if speech is an eternal attribute of God that is not identical to God but is somehow distinguishable from him, then does not this allow the very kind of plurality within unity which Christians claim for the Trinity? Thus, it would seem that the Islamic view of God's absolute unity is, by their own distinction, not incompatible with Christian trinitarianism. The basic Muslim logic of either monotheism or polytheism is invalid. They themselves allow that something can be an eternal expression of God without being numerically identical to him. Thus, to use their own illustration, why can't Christ be the eternal "expression of Divine Will" without being the same person as this Divine Will?

The Problem of Voluntarism. At the very basis of the Islamic view of God is a radical voluntarism (*see* ESSENTIALISM) and nominalism. For traditional Islam, properly speaking, God does not have an essence, at least not a knowable one (*see* GOD, NATURE OF). Rather, he is Will. True enough, God is said to be just and loving, but he is not essentially just or loving. And he is merciful only because "He has imposed the law of mercy upon Himself" (sura 6:12). But since God is Absolute Will, had he chosen to be otherwise he would not be merciful. There is no nature or essence in God according to which he must act.

There are two basic problems with this radical nominalism: one metaphysical and one moral.

The metaphysical problem. The orthodox Islamic view of God claims, as we have seen, that God is an absolutely Necessary Being. He is self-existent, and he cannot not exist. But if God is by nature a necessary kind of being, then it is of his nature to exist. He must have a nature. Orthodox Islam believes that there are other essential attributes of God, such as, self-existence, uncreatedness, and eternality. But if these are all essential characteristics of God, then God must have an essence. Otherwise the attributes could not be essential. This is precisely how essence is defined, namely, as the essential attributes or characteristics of a being.

The moral problem. Islamic voluntarism poses a serious moral problem. If God is only will, without an essence, then he does not do things because they are right; rather, they are right because he does them. God is arbitrary about what is right and wrong. He does not have to do good. He does not have to be loving to all; he could hate, if he chose to do so. Indeed, in sura 3:32 we read, "God will love you. . . . God is Oft-Forgiving, Most Merciful," but verse 33 says that "God loveth not those Who reject Faith." So love and mercy are not of the essence of God. God could choose not to be loving. This is why Muslim scholars have such difficulty with the question of God's predestination.

The problems of agnosticism . Since God has no essence, at least not one that the names (or attributes) of God really describe, the Islamic view of God involves a form of agnosticism. Indeed, the heart of Islam is not to *know* God but to *obey* him. It is not to *meditate* on his essence but to *submit* to his will. As Pfander correctly observed of Muslims, "If they think at all deeply, they find themselves absolutely unable to know God. . . . Thus Islam leads to Agnosticism" (Pfander, 187).

Islamic agnosticism arises because Muslims believe God caused the world by extrinsic causality. Indeed, "the Divine will is an ultimate, beyond which neither reason nor revelation go. In the Unity of the single Will, however, these descriptions co-exist with those that relate to mercy, compassion, and glory" (Cragg, 42–43). God is named from his effects, but he is not to be identified with any of them. The relation between the Ultimate Cause (God) and his creatures is extrinsic, not intrinsic. That is, God is called good because he causes good, but not because goodness is part of his essence.

Among the significant weaknesses inherent in this agnosticism, a moral, a philosophical, and a religious problem stand out immediately.

First, if God is not essentially good, but only called good because he does good, why not also call God evil, since he causes evil? (*see* EVIL, PROBLEM OF) Why not call him sinful and faithless, since he causes people not to believe? It would seem consistent to do so, since God is named from his actions. If Muslims reply that something in God is the basis for calling him good, but nothing in him is the basis for calling him evil, then they admit that God's names do tell us something about his essence. In fact, they admit an intrinsic relation between the cause (Creator) and the effect (creation). This leads to a metaphysical problem with the Islamic view of God.

Second, at the root of medieval views of God, an entrenched neo-Platonism springs from Plotinus. Plotinus ' belief that the Ultimate [God] was absolutely an indivisible One heavily influenced Muslim monotheism. Further, Plotinus held that the One is so utterly transcendent (above and beyond all) that it cannot be known, except by mystical experience. This influenced both orthodox Muslim agnosticism and Sufi mysticism. The fundamental reason there can be no similarity between the One [God] and what flows from It (the universe) is because God is beyond being, and there is no similarity between being and what is beyond it.

Thomas Aquinas provided the definitive answer to plotinian agnosticism and mysticism. Aquinas argued that an effect must resemble its cause. "You cannot give what you have not got." Hence, if God causes goodness, he must be good. If he caused being, he must be (Geisler, *Thomas Aquinas,* chap. 9).

Objections to this view generally confuse either a material or instrumental cause with an efficient cause. The efficient cause of something is that *by which* it comes to be. The instrumental cause is that *through which* it comes to be. And the material cause it that *out of which* it is made. Material and instrumental causes do not necessarily resemble their effects, but efficient causes do. The painting does not resemble the artist's paint brush, but it does resemble the artist's mind. The brush is the instrumental cause, whereas the artist is the efficient cause.

Another mistake is to confuse material and efficient causality. Hot water is soft, yet it can cause an egg to get hard, because of properties in the egg. The same hot water softens wax. The difference is the material receiving the causality. Thus an infinite God can and does cause a finite world. God is not thereby finite because he caused a finite cosmos. Nor is he contingent because he, as a Necessary Being, caused a contingent universe. Finiteness and contingency are part of the very material nature of a created being. God is unlike creation in these kinds of ways. On the

other hand, everything that exists *has* being, and God *is* Being. There must be a similarity between Being and being (*see* ANALOGY, PRINCIPLE OF). God is pure actuality, with no potentiality whatsoever. Everything else that exists has the potential not to exist. So all created things have actuality, since they actually exist, and potentiality, since they could possibly not exist. God is like creatures in their actuality but unlike them in their potentiality. This is why when we name God from his effects we must negate whatever implies finitude and limitation or imperfection, and attribute to him only the pure attribute or perfection. This is the reason that evil cannot be attributed to God but good can. Evil implies imperfection or privation of some good characteristic. Good, on the other hand, does not in itself imply either limitation or imperfection (*see* EVIL, PROBLEM OF). So God is good by his very nature but he cannot be or do evil.

Third, religious experience within a monotheistic context involves the relation between two persons, the worshiper and God. It is, as Martin Buber correctly observed, an "I-Thou" relationship. But how can a person worship someone about which he can know nothing? Even in Islam, one is supposed to love God. But how do we fall in love with someone of which we know nothing? As atheist Ludwig Feuerbach put it, "The truly religious man can't worship a purely negative being. . . . Only when a man loses his taste for religion does the existence of God become one without qualities, an unknowable God" (Feuerbach, 15).

Some critics have suggested that the extremely transcendent Muslim view of God has led some Muslim sects to deify Muhammad. Since relationship with the transcendent God is seen to be distant, it is only through Muhammad that one even dares to approach the throne of God. In *Qawwalis* (a popular cultural event), Muhammad is praised in verse. This often takes the form of deification: "If *Muhammad* had not been, God himself would not have existed!" This is an allusion to the close relationship Muhammad is supposed to have with God. Muhammad is often given titles like "Savior of the World" and "Lord of the Universe." The popular deification of Muhammad, who so violently opposed any such idolatry, only shows the theological bankruptcy of the Muslim view of a God so distant and so unknowable that the devotee must make contact with something they can understand, even to the extent of deifying the prophet who condemned idolatry.

The problems of extreme determinism. Since in Islam the relationship between God and human beings is that of Master and slave, God is the Sovereign Monarch and humans must submit (*see* DETERMINISM ; FREE WILL). This overpowering picture of God in the *Qur'an* has created its own tension in Muslim theology regarding God's absolute sovereignty and human free will. Despite protests to the contrary, Orthodox Islam teaches the absolute predestination of both good and evil, that all our thoughts, words and deeds, whether good or evil, were foreseen, foreordained, determined, and decreed from all eternity, and that everything that happens takes place according to what has been written for it. Sura 6:18 says "He is the Irresistible." Commenting on these kinds of *Qur'anic* statements, Cragg points out that God is the *Qadar,* or "determination," of all things and his *taqdir,* or "subjection," covers all people and all history. Nature, whether animate or inanimate, is subject to his command and all that comes into existence—a summer flower or a murderer's deed, a newborn child or a sinner's disbelief—is from Him and of Him." In fact if "God so willed, there need have been no creation, there need have been no idolatry, there need have been no Hell, there need have been no escape from Hell" (Cragg, 44–45).

There are four basic problems with this extreme form of predetermination: logical, moral, theological, and metaphysical. In order, it involves a contradiction; it eliminates human responsibility; it makes God the author of evil, and it gives rise to pantheism.

The logical problem with Islamic determinism is that even Muslim commentators are forced to acknowledge that God performs contradictory actions (*see* FIRST PRINCIPLES). Islamicist Ignaz Golziher summarizes the situation, “There is probably no other point of doctrine on which equally contradictory teachings can be derived from the *Qur’an* as on this one” (Golziher, 78). One Muslim scholar notes, “The *Qur’anic* doctrine of Predestination is very explicit though not very logical” (Stanton, 54–55). For example, God is “the One Who leads astray,” as well as “the One Who guides.” He is “the One Who brings damage,” as also does Satan. He is “the Bringer-down,” “the Compeller” or “Tyrant,” and “the Haughty.” When describing people, all these concepts have an evil sense.

Muslim scholars sometimes attempt to reconcile this by pointing out that these contradictions are not in God’s nature (since he does not really have one), but are in the realm of his will. They are not in his essence but in his actions. However, this is an inadequate explanation. God does have a knowable nature or essence. Hence, Muslim scholars cannot avoid the contradiction that God has logically opposed characteristics by placing them outside his essence within the mystery of his will. Further, actions flow from nature and represent it, so there must be something in the nature that corresponds to the action. Salt water does not flow from a fresh stream.

Others attempt to downplay the harsh extremes of Muslim determinism by creating a distinction, not found in the *Qur’an* , between what God *does* and what he *allows* his creatures to do by free choice. This solves the problem, but, only through rejecting clear statements of the *Qur’an* , tradition, and creeds.

These statements can be seen in connection with the moral problem with Islamic determinism. While Muslim scholars wish to preserve human responsibility, they can only succeed in doing so by modifying what the *Qur’an* actually says. Sura 9:51 declares: “Say, Nothing will ever befall us save what Allah has written for us.” Sura 7:177–79 adds, “He whom Allah guides is he who is rightly guided, but whom he leads astray, those are the losers. Indeed, We have assuredly created for Gehenna many of both jinn and men.” Sura 36: 6–10 reads: “Verily the sentence comes true on most of them, so they will not believe. We, indeed, have set shackles on their necks which reach to the chins so that they perforce hold up [their heads]. And We have set a barrier in front of them, and a barrier behind them, and We have covered them over so that they do not see. Thus it is alike to them whether thou warn them or dost not warn them; they will not believe.”

The *Qur’an* frankly admits that God could have saved all, but did not desire to do so. Sura 32:13 declares: “Had we so willed We should have brought every soul its guidance, but true is that saying of Mine: ‘I shall assuredly fill up Gehenna with jinn and men together.’ ” It is extremely difficult to understand how, holding such a view, one can consistently maintain any kind of human responsibility.

There is also a theological problem with this severe view of God’s sovereign determination of all events: It makes God the author of evil. In the *Hadith* traditions Muhammad declares “the decree necessarily determines all that is good and all that is sweet and all that is bitter, and that is my decision between you.” According to one tradition, Muhammad slapped Abu Bakr on the shoulder and said: “O Abu Bakr, if Allah Most High had not willed that there be disobedience, he would not have created the Devil.” Indeed, one of the most respected Muslim theologians of all time, Al-Ghazzali, frankly acknowledges that “He [God] willeth also the unbelief of the unbeliever and the irreligion of the wicked and, without that will, there would neither be unbelief nor irreligion. All we do we do by His will: what He willeth not does not come to pass.” And if one should ask why God does not will that men should believe, Al-Ghazzali responds, “ ‘We have no right to enquire about what God wills or does. He is perfectly free to will and to do what He pleases.’ In creating unbelievers, in willing that they should remain in that state; . . . in willing, in short, all that is evil, God has wise ends in view which it is not necessary that we should know” (Haqq, 152).

In the metaphysical problem with Islamic determinism, this extreme view led some Muslim scholars to the logical conclusion that there is really only one agent in the universe—God. One Muslim theologian wrote, “Not only can He (God) do anything, He actually is the only One Who does anything. When a man writes, it is Allah who has created in his mind the will to write. Allah at the same time gives power to write, then brings about the motion of the hand and the pen and the appearance upon paper. All other things are passive, Allah alone is active” (Nehls, 21). This pantheism is at the heart of much of medieval thought. Thomas Aquinas wrote *Summa contra Gentiles* to help Christian missionaries dealing with Islam in Spain.

This radical predeterminism is expressed in Muslim creedal statements. One reads: “God Most High is the Creator of all actions of His creatures whether of unbelief or belief, of obedience or of rebellion: all of them are by the Will of God and His sentence and His conclusion and His decreeing” (Cragg, 60–61). Another confesses:

> God’s one possible quality is His power to create good or evil at any time He wishes, that is His decree. . . . Both good things and evil things are the result of God’s decree. It is the duty of every Muslim to believe this. . . . It is He who causes harm and good. Rather the good works of some and the evil of others are signs that God wishes to punish some and to reward others. If God wishes to draw someone close to Himself, then He will give him the grace which will make that person do good works. If He wishes to reject someone and put that person to shame, then He will create sin in him. God creates all things, good and evil. God creates people as well as their actions: *He created you as well as what you do* (*Qur’an* 37:94). [Rippin & Knappert, 133; emphasis added]

Conclusion. The attitude of God’s absolute control over every aspect of his creation profoundly influences Islamic theology and culture. Persian poet, Omar Khayyam, reflected the fatalistic strain of Muslim theology when he wrote:

> ‘Tis all a chequer-board of night and days
> Where destiny with men for pieces plays;
> Hither and thither moves and mates and slays,

And one by one back in the closet lays.
